Administration & Programming Manual

Please read this manual carefully before operating System.
Retain it for future reference.

iPECS is an Ericsson-LG Brand

Revision History

ISSUE	DATE	DESCRIPTION OF CHANGES
1.0	Sep., 2013	Initial Release
1.1	Dec., 2013	Changed Ericsson-LG to Ericsson-LG Enterprise
1.2	Feb., 2015	Update contents according to S/W integration for both eMG80 & eMG800
1.3	May, 2015	<p>S/W version 1.2.x.</p> <ul style="list-style-type: none"> - On-line user guide - Terminal attributes (Small popup use, large popup timer, SLT open loop time) - Web Access Authorization - NTP attributes - Digit Conversion Table - System attributes - U-LOOP, PBX code insertion for emergency call - Disconnect with Inband information - Temp License expiration notify - Trace Log via Web - Add System Date and Time to Installation wizard
1.4	Jan., 2016	<p>S/W version 2.0.x.</p> <ul style="list-style-type: none"> - Added Speed code number plan in PGM100. - IPCR announce only for incoming call. - Updated Strong password in PGM 160/161. - Updated 'Do not overwrite station name in PGM 211. - Added Attendant ring mode in PGM 257. - Added the more item for Alarm in PGM 163. - Added Flexible button default table (PGM 239) - Added Preset flexible button default (PGM 240) - Added System DST mode in PGM 439. - Added LDAP server setting in PGM 160/161. - Added Arabic language. - Updated Message wait indication LED in PGM 112. - Updated Company directory in Station Name Display. - Added Station User Greeting in Station Data. - Added the search box in Maintenance. - Added MOH Management in Maintenance. - Updated DB management by adding Comment field. - Updated Install wizard - DTMF repeat tone does not have nothing to do with PSTN in PGM160-15 - Added Call wait signal and duration in PGM 113. - Added some admin (Alternate/Secondary signal port, Local route ID, Remote route ID, Sending Name option) in PGM 324. - Added SLT Pulse and SLT pulse-MW type in PGM 110. - Added Lift Handset for Page & Privacy in PGM 111. - Added Short Modem in PGM 112. - Added NFC Authorization Code use in PGM 112. - Added rel 180 after 183 and "Add 'user=phone' param" in PGM 133.

		<ul style="list-style-type: none"> - Added Short Modem Timer in PGM 182~182, 186 - Added Alarm mode to send email to the address in PGM 163. - Added the special character to DB management. - Added Ring detection register setting in Analog parameter. - Added LCD Dimming for LIP-9000 Series & LDP-9240D in PGM 112. - 'Go to assignment' function added to Personal group overview and can check the master & member list at a glance. - Added Station ICR scenario (1201) to Station Data. - Changed the name from UCS Standard to UCS data. - Added MOH management in Maintenance. - Added Keypad admin password to Install Wizard.
1.5	Apr, 2016	<p>S/W version 2.0.x.</p> <ul style="list-style-type: none"> - 'Unified SMB A&P manual' by integrating eMG and UCP.
1.6	Aug, 2016	<p>S/W version 2.1.x.</p> <ul style="list-style-type: none"> - The type of Speed numbering is added more in PGM 100. - 'DDNS usage of Firewall' & 'Domain name of Firewall' is added in PGM 102. - The LCD LED is changed to the option 'MWI/Ring' or 'Ring'. - The ACD & CRM function is added for UCS Client: CRM function and ACD login/out & ACD On/Off duty in PGM 112. - UCS Dialing Rule Use for Standard UCS in PGM 112. - UCS Mobile Dial Use (Android) for Standard UCS in PGM 112. - The description of CLI Name Display is changed, refer to PGM 113. - Display full CLI function is added in PGM 113. - SMTP Server Address fills out up to 64 characters in PGM 127. - Proxy Server Address fills out up to 64 characters in PGM 133. - The range for ICLID Usage is changed to Disable, CLI, Name/CLI in PGM 140. - Web hacking block is added in PGM 160; Web admin login failure count to block, Web admin hacking block period, Web admin hacking Email notification. - UCS Ring ACK count is added in PGM 160 and UCS Ring ACK timer is added in PGM 180. - SLT Line monitor and SLT Line Monitor time is added in PGM 160. - Dial Back to Caller from Remote VM Access is added in PGM 160. - Alarm Display is added in PGM 163. - The range about Alarm is changed to Off, On, Alarm only, Alarm/Email. Especially, the default of Maintenance Expire Notify is Email only. - Message wait (Call back) for LED flash is added in PGM 170. - Outgoing Call type is added for All call or Answered call in PGM 177. - Call log/Directory Auto Idle Timer is added in PGM 180. - The range of Hot Desk for eMG and UCP is changed in PGM 250: eMG80 (100), eMG800 (300), UCP (1200). - Advice of Charge is added in PGM 133. - SIP Profile is added in PGM 211. - Signaling port, TLS Version, First & Second TLS crypto, SRTP usage, First & Second SRTP crypto are added in PGM 212. - Interworking system is added in PGM 322. - Name option is deleted in PGM 327.

		<ul style="list-style-type: none"> - Alarm display is added in PGM 335. - Firewall IP is added in PGM 441. - MS Excel-like table data management is to be extended. - User Greeting is added to Maintenance. - Company Directory is added to Maintenance. - Web Certificate is added to Maintenance. - Custom 1 and Custom 2 are added in Web Access Authorization and User management. - Line Echo added to SLT attributes in PGM 112. - DSS in use added to LED Flashing Rates in PGM 170.
1.7	Nov, 2016	<p>S/W version 2.2.x.</p> <ul style="list-style-type: none"> - The search box is enhanced by adding Attribute search and highlighting the result. - The virtual registration is available up to 25 devices at one time and can copy/paste/drag like excel. - 'DSS LED service' for indicating the other station status is added in PGM 111. - 'Collect call block' is added in PGM 111. - 'Add 1st CO Group Access Code in Call log' is added in PGM 113. - Call Log Attribute is added in PGM 113. - 'Dial Digit' is added as the flexible button type in PGM 115/129. - The checkbox is added in PGM 117, PGM 118, and PGM 119. - The call forward type in PGM 120 is updated; changed Unconditional to Internal Unconditional and added External Unconditional. - Station ICR Scenario (PGM 1201) is updated about Call Profile Usage, Call Profile Timer, and Call Profile Apply Option. - Station CLI Program is added to Station Data. - CID/CPN Attributes (PGM 151) added. - Alarm Receiver E-Mail Address (To) & Notification E-Mail Address (To) is updated in PGM 160~161. - Resource Monitoring is added in PGM 160~161. - 'Display Forward Reason' is added in PGM 160~161. - 'CCR No Digit Error Timer' is added in PGM 180~182, 186. - Net Station as CO Type is added in System Speed Dial. - LIP-9050S and LIP-9071S are added to CONF TYPE in PGM 212. - 'Changed CLI' is added in PGM 270. - 'Register LM Device directly' is added in PGM 331. - 'Use Firewall IP' is added in PGM 441.
1.8	Jan, 2018	<p>S/W version 3.0.x.</p> <ul style="list-style-type: none"> - virtualized UCP - Mitel PMS Interface - User Base License - Multi-login support - Push service for iOS/Android mobile - Automatic failover for UCS Premium - Automatic failover for LIP-9000 (IPKTS) - Multi-zone for WTIM4/8 and WTIM24

		<ul style="list-style-type: none"> - User password length control - Access Control on PGM / MENU buttons - Improve UI of Message - Automatic alarm call and play pre-recorded announcement - Emergency Page option - Outbound PRI Name Display - EXEC/SEC - add secretary call option - SMDR info for incoming call to a group - Add an option for video call - Add base call cost option - Analog CO Call Charge with NPR metering - Add an option for built-in VM/VOIP channel (eMG80) - RTP/SRTP SSRC filtering - PPP over ISDN (eMG80/800) - CIQ Alert Announcement in case of being CPU Redundancy - Print Destination in CLI Print - Add '+' in Outgoing Call in SIP - SIP Name Display - Improved LDAP Attributes
1.9	July,2018	<p>S/W version 3.1.x.</p> <ul style="list-style-type: none"> - "Config Encryption" - Added "Conference room expansion" - Add "USB serial usage" - Change the Range of Web Admin Login Failure count to block - Change the max characters length of "E-Mail Account Password" - Added "UCS PUSH POLLING Use" - Add "Key Pad Tone" option - Removed the "Cascade Apply Type" - Added "Clear Missed Call Log" - Change the max characters length of "E-Mail Account Password" - Changed the range of "Ring Group Indication" - Added "T1 Timer" - Change to max 64 characters of the email address field - Change to max 32 characters of the unique ID field
2.0	Jan,2019	<p>S/W version 3.5.x.</p> <ul style="list-style-type: none"> - Added " Phone Lock/Unlock ", "Flexible Page Prefix" - Added "Auto Transfer By Button To Last Call" and "DTMF tone for Flexible button" at the Tone/Ring Attributes - Added "PHONE Lock Status(Force to Set), "PHONE Auto Lock Usage", "PHONE Auto Lock Timer", "PHONE Lock Action for Hot-Desk", "Allow to Stop - Flexible Paging" - Added " Coverage Call Log ", "Page Call Log", "Busy/DND/VM Log" - Added "REST API Service Port", "REST API Session Timeout", "Security (option for MSVC XML Port)", "CALL TRACKING Enable", "SLT conference hook switch time"

		<ul style="list-style-type: none"> - Added "UCS Server Link Down", "PUSH Server Link Down", "System Act on Slave" - Added "Flexible Page Feature" - Added "Silent Text Message" - Added " SMDR REST API Service " - Updated "Button Idle Timer" - Added "Personal Group Individual Agent" - Added "Extend Wrap-Up Usage", "Extended Wrap-Up Count", "RING TONE" - Added "PAGE/PTT Receive" - Added "Print Destination in CLI Print " - Added " TGID Usage ", " Local Address Selection", "ALTC Usage", "INVITE(Replace) Usage" - Added " SIP MULTIHOMES Option " - Added " CO Access Code " and "ALTC Usage" - Added the "suffix code" - Updated "Customer Call Routing Table" - Added "Redundancy IP address" - Added "Security (option for UCS XML Port)" - Added "REST API" - Added "LCD language download" at the Multi Language File Download Refer to the "What's New" for more detail
2.1	Nov.,2019	<p>S/W version 3.6.x.</p> <ul style="list-style-type: none"> - Added eMG100 System
2.2	Dec., 2019	<p>S/W version 4.0.x.</p> <ul style="list-style-type: none"> - Added "Private Mode for External Mobile or External Forwarded" and "Transfer for uncomplete call and Silent intercom busy service" and " Hot Desk Emergency Call Identity" - Added "Default flexible button page and Headset button" - Added the "Internal COS, External COS" of Call forward Type - Added "IPDECT Message Server Port", "XSI Service Port", "ICM Hold Preference" - Added "Maintain Text Display" and "Do Not Prompt Paging EXT" - Added "Group Ring Back Tone" at the Terminal, ACD, Ring Group Attributes - Added "Intercom Busy Service" and "Incoming Trunk Choice" at the Miscellaneous Option, "System IPV6 Usage" at the SIP MULTIHOMES Option - Updated the "Re-routed destination types" - Updated the Access and use REST API features - Updated "Attendant User Program Codes"
	Feb., 2020	<ul style="list-style-type: none"> - Added 1000i Series IP phone
2.3	Sep., 2020	<p>S/W version 4.1.x.</p> <ul style="list-style-type: none"> - Added "DSS LED service on other station" and "Block Transferred Call" - Changed E-Mail Account Password Range. (Max. 64 characters) - Added the "Intercom busy service" - Added "Timeslot Full" - Added "ANNC Play Start Delay" - Added "SMDR ICM Ring Info" and "SMDR ICM CPN Info"

		<ul style="list-style-type: none">- Added "Web Connection" and "Telnet Connection"- Added MOH (after connection) option at the Group Ring Back Tone" of the Terminal, ACD, Ring Group Attributes- Added the "Digit Conversion table index"- Enhanced VSF Range (VSF MOH4~30)
2.4	Mar., 2021	S/W version 5.0.x. <ul style="list-style-type: none">- Refer to the "What's New" for more detail information

3.3.3.15	Station VM Attributes – PGM 127.....	65
3.3.3.16	Station CCR Table – PGM 128.....	68
3.3.3.17	LSS Label Edit – PGM 129.....	69
3.3.4	BOARD DATA – PGM 130 to 132.....	70

3.3.4.1	H.323 VoIP Attributes – PGM 130	70
3.3.4.2	T1/E1/PRI Attributes – PGM 131	73
3.3.4.3	Board Base Attributes – PGM 132.....	74
3.3.5	CO LINE DATA – PGM 140 to 151	76
3.3.5.1	CO Service Type – PGM 140	76
3.3.5.2	CO/IP Attributes I ~ III - PGM 141~143	76
3.3.5.3	CO/IP Ring Assignment – PGM 144.....	86
3.3.5.4	DID Service Attributes – PGM 145	87
3.3.5.5	DISA Service – PGM 146	88
3.3.5.6	CO Line Preset Forward Attributes – PGM 147.....	89
3.3.5.7	CO Additional Attributes – PGM 148	90
3.3.5.8	NA ISDN Line Attributes – PGM 150.....	92
3.3.5.9	ISDN CO Line Attributes – PGM 151.....	94
3.3.5.10	T1 Line Timers – PGM 152.....	96
3.3.5.11	DCOB CO Attribute – PGM 153	98
3.3.6	SYSTEM DATA –PGM 160 to 182.....	99
3.3.6.1	System Attributes I &II–PGM 160 to 161	99
3.3.6.2	System Password – PGM 162.....	109
3.3.6.3	Alarm Attributes – PGM 163	110
3.3.6.4	Attendant Assignment – PGM 164	111
3.3.6.5	Multi-cast RTP/RTCP Ports – PGM 165.....	111
3.3.6.6	DISA COS – PGM 166.....	116
3.3.6.7	DID/DISA Destination – PGM 167	117
3.3.6.8	External Control Contacts – PGM 168.....	118
3.3.6.9	LCD Display Mode -PGM 169.....	119
3.3.6.10	Button LED Flash Rate – PGM 170.....	120
3.3.6.11	Music Sources – PGM 171	123
3.3.6.12	PABX Access Codes – PGM 172	125
3.3.6.13	Ringling Line Preference Priority – PGM 173.....	125
3.3.6.14	RS-232 Port Settings – PGM 174.....	126
3.3.6.15	Serial Port Function Selections – PGM 175	127
3.3.6.16	Break/Make Ratio – PGM 176	129
3.3.6.17	SMDR Attributes – PGM 177	129
3.3.6.18	System Date, Time and Daylight Saving Time (DST) – PGM 178	135
3.3.6.19	Multi Language – PGM 179	136
3.3.6.20	System Timers I to III - PGMs 180-182	137
3.3.6.21	In-Room Indication – PGM 183	143
3.3.6.22	DCOB SYS Timers – PGM 186	144
3.3.6.23	NTP Attributes – PGM 195	145
3.3.6.24	CRR Attributes – PGM 252.....	146
3.3.6.25	VM COS Attributes – PGM 253	147
3.3.6.26	Personal Group – PGM 260.....	148
3.3.6.27	Personal Group Attribute – PGM 261	148
3.3.7	STATION GROUP DATA – PGM 190 & 192	149
3.3.7.1	Station Group Assignment -PGM 190	149
3.3.7.2	Station Group Attributes – PGM 191	150
3.3.7.3	Pick Up Group Assignment – PGM 192	165
3.3.8	ISDN LINE & ICLID ROUTING DATA – PGM 200-206.....	167
3.3.8.1	ISDN Attributes – PGM 200.....	167
3.3.8.2	CLIP/COLP Table – PGM 201	168
3.3.8.3	MSN Table – PGM 202.....	169
3.3.8.4	ICLID Route Table – PGM 203.....	170

3.3.8.5	ICLID Ring Assignment – PGM 204	171
3.3.8.6	PPP Attributes – PGM 205	172
3.3.8.7	Prefix Dialing Table – PGM 206	173
3.3.9	TABLES DATA – PGM 220 to 235	175
3.3.9.1	LCR Assignment Tables - PGM 220 to 223.....	175
3.3.9.2	Toll Tables – PGM 224	181
3.3.9.3	Emergency Code Table – PGM 226.....	182
3.3.9.4	Authorization Codes Table – PGM 227	183
3.3.9.5	Customer Call Routing/VSF AA Table – PGM 228	184
3.3.9.6	Executive/Secretary Table – PGM 229.....	186
3.3.9.7	Flexible DID Conversion Table – PGM 231	187
3.3.9.8	System Speed Zone Table – PGM 232	189
3.3.9.9	Auto Ring Mode – PGM 233.....	189
3.3.9.10	Voice Mail Dialing Table – PGM 234	191
3.3.9.11	Registration & Fractional Module Table – PGM 235	192
3.3.9.12	Mobile Extension Table – PGM 236	193
3.3.9.13	Hot Desk Attributes – PGM 250.....	195
3.3.9.14	CO Call Rerouting – PGM 252	196
3.3.9.15	Digit Conversion Tables – PGM 270	197
3.3.10	NETWORKING DATA –PGM 320 to 324.....	199
3.3.10.1	Network Basic Attribute – PGM 320	199
3.3.10.2	Network Supplementary Attribute – PGM 321	200
3.3.10.3	Network CO LINE Attribute – PGM 322.....	201
3.3.10.4	NET Numbering Plan Table – PGM 324.....	202
3.3.10.5	Network Feature Code Table – PGM 325	204
3.3.11	TNET (Centralized Networking) – PGM 330 ~ 336	205
3.3.11.1	TNET Basic Attributes – PGM 330	205
3.3.11.2	TNET CM Attributes – PGM 331	205
3.3.11.3	TNET LM ATTRIBUTES – PGM 332.....	207
3.3.11.4	FoPSTN Attributes – PGM 333.....	208
3.3.11.5	TNET LM External Contact Attributes – PGM 334	209
3.3.11.6	TNET LM Music Attributes – PGM 335.....	210
3.3.11.7	TNET LM Alarm Attributes – PGM 336.....	211
3.3.12	Zone Data – PGM 436 - 441, 444	212
3.3.12.1	Zone Holiday Assignment – PGM 444.....	212
3.3.13	GREEN MODE	213
3.3.13.1	Green mode activation – PGM 500	213
3.3.13.2	Green mode time setting – PGM 501	213
3.3.14	INITIALIZATION — PGM 450	215
3.3.15	PRINT-OUT DATABASE — PGM 451	217
3.3.16	VIRTUAL TRACE DIP-SWITCH — PGM 452.....	219
3.3.17	VIRTUAL DIP-SWITCH — PGM 453	221
3.3.18	3.3.18 DECT ATTRIBUTES — PGM 4913	222

What's New?

This document includes new and modified information for the iPECS eMG80/100& eMG800 & UCP & vUCP Administration & Programming Manual. Click the links under each phase to see of what is new.

Unified v5.0

Category	Features	Description
System ID & Numbering Plans	System IP Plan	Added "System IPV6 Usage/ Address/ Router/ Net Prefix" Link to System IP Plan - PGM 102 section
Board Based Data	Board Base Attributes	Added "IP Address" and "IPv6 Address" Link to Board Base Attributes - PGM 132 section
CO Line Data	ISDN Attributes	Added "ISDN Clock Sync" Link to ISDN Attributes - PGM 143 section

1 Introduction

1.1 Manual Application

This document provides detailed information covering the configuration of the eMG/UCP database and maintenance of the eMG/UCP.

The manual also details the power-up and initialization routines and the Station Web Portal.

The manual is written for the experienced installer with knowledge of telephony terms, and functions of small and mid-sized business telecommunications systems.

Virtual machine UCP provides most features except the following features:

- 1) DB Backup to USB monthly / DB Backup to USB weekly - System Attributes
- 2) External Control contact - PGM168
- 3) Music Sources - PGM 171
- 4) RS-232 Port Settings - PGM174
- 5) Serial Port Selections - PGM175

1.2 Manual Organization

This manual is organized in four (4) major sections including:

Section 1 Introduction:

This section introduces the content and organization of the manual.

Section 2 System & Admin Information

In this section general information on System capacities, power-up routines and the system initialization process are detailed. Also, this section discusses the process for registration of IP and softphones with the system.

Section 3 Station Administration for eMG

This section provides details on configuring the eMG system employing a station allowed administrative access. Step by step procedures are given along with brief but concise descriptions of the various configuration parameters and available settings. We recommend that you use Section 4 Web administration.

Section 4 Web Administration

Similar to the Station Administration section, the Web Administration section gives step by step procedures and descriptions for the configuration parameters and settings available using a Web browser.

- **Section 4.5 Maintenance:** The Maintenance section provides details on managing the eMG including database upload and download, software upgrade, and user access management using the Web browser interface.
- **Section 4.6 Station Program:** This section discusses the configuration of the features and functions available in the portal.

- **Section 4.7 On-line web user guide:** This section explains the frequent use of features to a user. We didn't describe this section because you can easily get the information on the web by clicking [User's guide] of login page.

Appendix A

The Station and Attendant Station User Program codes are listed with the associated function. These fixed codes are available at the iPECS IP or LDP phones to configure basic functions such as ring tones, activate features and assign features and functions to Flex buttons.

Appendix B

A complete listing of the nine basic Flexible Numbering Plans. One is selected as the system's Flexible Numbering Plan. Each of the basic Numbering Plans includes all feature and resource access codes, and any individual code can be changed.

Appendix C

This Appendix includes a detailed listing of all the configurable parameters by Program group and includes the default values for each parameter. It is only for eMG Station Administration.

2 System& Admin Information

2.1 System capacities for eMG and UCP

iPECS eMG is available in several hardware configurations based on the Main board of the KSU. Upon initialization, the software will structure a database for the maximum possible station and CO/IP Line configurations. Thus, the software port count capacities will differ from the hardware count however, the hardware limitations always apply.

The total System ports supported by the software include the Station ports, CO/IP Line ports and ports for various options including the integrated AA/VM, Miscellaneous ports, etc. Other than the Station and CO/IP Line ports, the hardware and software capacities are the same. The capacities relative to the software are provided in the table below.

Table 2.1-1 eMG80Software Capacities

Item	Capacity
CO/Trunk lines	Max. 74
Stations	Max. 140
Attendants	4
LAN port	2(1 each, KSU and VVMU)
Modem Channel	1(MODU)
Serial Port(RS-232C)	1
USB(2.0) Host port	1
Alarm/Doorbell input	2 (1 per KSU)
External Control Relays	2 (1 per KSU)
Music Source Inputs	1 Internal: select one of 13 melodies 1 External source input 5 SLT ports 3 VSF announcements
Power Fail Circuit	Max. 6 (1 per KSU, EKSU, CH204, CH408, CS416)
VSF Device 1: Built-in AA/VM - w/MEMU - w/MEMU2	8 channels(2 Chan. by default, 1Channel by license), 1 hour 15 hours(no license needed) 60 hours(no license needed)
VSF Device 2 (VVMU)	8 channels (by license) & 15 hours(by license), 1 hour(by default)
Conference channels	148 channels/13 party per group
Max. WTIB	1
DECT Phones	48
Built-in VoIP channels	8(2 channels by default, 6 channels by license)
VVMU VoIP channels– eMG80	8(by license)
IP Stations and SIP Trunks	48 port (32 Stations+16 SIP Trunks)
External Page	1 port
Internal Page	35 zones
System Speed Dial	3000 numbers, 25 digits each

Table 2.1-1 eMG80 Software Capacities

Item	Capacity
System Speed Dial Zones (Groups)	10 zones
Station Speed Dial	100 per station, 25 digits each(Max. 4000 numbers)
Last Number Redial	10 numbers
Save Number Redial	1 number
DSS Consoles per Station	3
Serial DSS - System	100
Serial DSS – Station (LIP-8000)	4
Serial DSS – Station (LIP-9000)	1
Serial DSS – Station (1000i)	1
SMDR buffer	10,000
CO Line Groups	20
Station & Station Groups	40
Station & Station Group Members	70
Pickup Group	50
Pickup Group Member	140
Conference Groups - System	40
Conference Groups - Station	20 per station
Executive/Secretary pairs	36
Authorization Codes	500 (Station: 140, System: 360)
Transparent Networking Table	15
ICLID Routing table	250
Tenancy (ICM) Group	15
Attendant Station	4
DID Digits Analysis	4
MSN Table	500
BHCC	7200(2CPS)

Table 2.1-2 eMG100 Software Capacities

Item	Capacity
CO/Trunk lines	Max. 74
Stations	Max. 140
Attendants	4
LAN port	2(1 each, KSU and VOIB48)
Modem Channel	1(MODU)
Serial Port(RS-232C)	1
USB(2.0) Host port	1
Alarm/Doorbell input	2 (1 on KSU, 1 on MISB)
External Control Relays	4 (1 on KSU, 3 MISB)
Music Source Inputs	1 Internal: select one of 13 melodies 1 External source input (1 on KSU, 1 on MISB) 5 SLT ports 3 VSF announcements

Table 2.1-2 eMG100 Software Capacities

Item	Capacity
Power Fail Circuit	none
VSF Device 1: Built-in AA/VM	KSUD,KSUS:16 (4channels. by default, 12channels by license), 2 hour
- w/MEMU	KSUSC:16(2 channels by default, 14channels by license), 2hour
- w/MEMU2	15 hours(no license needed)
Conference channels	60 hours(no license needed)
Conference channels	148 channels/13 party per group
Max. WTIB	none
DECT Phones	none
Built-in VoIP channels	KSUD,KSUS:16 (2 channels by default, 14 channels by license)
	KSUSC:16(0 channel by default, 16channels by license)
IP Stations and SIP Trunks	Simultaneously 100 Calls
External Page	2 port (1 on KSU, 1 on MISB)
Internal Page	35 zones
System Speed Dial	3000 numbers, 25 digits each
System Speed Dial Zones (Groups)	10 zones
Station Speed Dial	100 per station, 25 digits each(Max. 4000 numbers)
Last Number Redial	10 numbers

NOTE)

- 1) iPECS UCP-100 is equipped with two (2) FXS ports, and one of several built-in CO Line units may be factory or field installed.

4 analog CO Lines (UCP-COIU4), uses two (2) VoIP DSP channels

2 BRI Lines, 2B+D each, (UCP-BRIU2) , uses two (2) VoIP DSP channels

4 BRI Lines, each 2B+D, (UCP-BRIU4) , uses four (4) VoIP DSP channels

- 2) Note the built-in PSTN interfaces require dedicated DSP resources. These DSP resources reduce the maximum VoIP DSP resources available shown in the above chart.

The built-in VoIP Switching channels implement agent and packet relay functions. Remote device and network interfaces send RTP traffic to the VoIP channel, which forwards traffic to the appropriate local iPECS device. The VoIP Switching channel also forwards multi-cast packets to the remote end-points and local non-iPECS devices. Only the g.711 codec is allowed unless there is an available VoIP DSP channel.

- 3) The number of VoIP Switching channels can be increased to the maximum with license installation.
- 4) Approximately 35 minutes (16 Mbytes) of the VSF and UVM memories are used to provide basic system prompts, the remaining memory can be used for announcements and voice message storage. Note the built-in VSF supports the g.711 Codec only; the UVM supports g.711, g.729, g.723, and g.722 Codec.
- 5) For the detail vUCP System capacity, refer to the Virtual UCP(vUCP) Installation Manual

2.2 Initialization

2.2.1 eMG Initialization

The system should be initialized before starting the configuration to assure a known starting point and automatically register installed boards. Also, if the Nation Code requires modification, the system will be initialized in the process so as to establish tones and gains appropriate for the region. You can initialize the system using the Initialization switch (Dip-switch SW1, pole-2) in the KSU or using the software Initialization PGM 450. Note the former must be used to change the Nation Code as detailed section 3.3.1.

Basic Power-Up Routine

When the KSU power switch is turned On or the KSU Reset button is pressed with power ON, the system will initiate the “Power-up” routine. During the Power-Up routine the system checks the Initialization switch and, if the switch is in the Off position, the system will perform the basic Power-up routine; clear all scratch-pad memory, load run-time programs, establish communications with each registered Interface board, Function board, iPECS IP Phone and LDP Phone, send Restart commands and load appropriate settings to the boards and terminals.

The KSU also will attempt to communicate and register the EKSU. If a registered board or terminal does not respond after several attempts, the system places the device in an out-of-service mode but maintains the configuration of the device. Once the Power-up routine is complete, the system will conduct normal operations.

Registration of Boards

If the Initialization switch is in the ON position, in addition to the Power-Up routine, the system will perform the full Initialization procedure. During initialization, the system attempts to communicate with the board in each Slot, starting with Slot 1 and progressing sequentially through the slots, to determine the installed equipment.

If the board is installed, the Slot number (“Sequence Number”) is registered, an “Order number” is determined and the MPB MAC and IP address are assigned. Using “Order number”, which is the order that devices of the same type (CO/IP Line, Station, VSF device, etc.) register, the system assigns the Station numbers and CO/IP Line numbers.

An exception to the above is the MAC and IP address of the VOIB which covers the VoIP channels on the VVMU. The VOIB has a separate MAC address and the IP address is assigned from the system. Note this IP address can be modified at a later time.

Once the system is operational and the database configured, the system can be expanded manually by registering the optional boards as detailed in PGM 235, Registration Table.

Initial Station and CO Numbering

The default Station Numbering Plan assigns a Three-digit number to each station port. Starting at the first (left) port of Slot 1, the system assigns the Station Numbers beginning at “100 (eMG80/100) or 1000 (eMG800)”. The Station number increments for each port in the slot, moving to the right until reaching the last port. The process is repeated for each Station slot (1 to 6) in sequence assigning consecutive Station Numbers.

Note the Station Number Plan can be two to four digits and the Station Number for each port can be modified individually.

Slots 7 to 14 are then registered and, since they are CO/IP Lines, the Order numbers 1 to 8 are used to number the CO/IP Lines. The process is repeated for each device type.

IP Phone Registration

Unregistered iPECS IP Phones attempt to discover and register with a local (on the same LAN) iPECS system, in this case the eMG. The phone will send a registration request to the MPB IP address. If no response is received, the phone will send a multi-cast request. With the request, the phone will send the MAC address. This address must be assigned in the PGM 235.

When the system receives the request, the MAC address received is compared to the Registration table and, if matched, the phone is registered, it is given the next available sequence number starting at "19", and assigned the next available Station Number.

If the iPECS IP Phone is configured as a remote device, it will send a registration request to the iPECS system at the configured IP address. When the system receives the request, it is processed normally except the MAC address must be assigned in PGM 442 Remote Device Register.

Default Database

Based on the installed equipment, the system populates the database with the default values, refer to Appendix C based on Keyset administration as numbering plan 1. Once the database is set to default, the system will conduct normal operations.

2.2.2 UCP Initialization

When power is applied to the UCP or the UCP Reset button is pressed, the system will initiate the "Power-up" routine. During the Power-Up routine, the system will check the Initialization switch (pole 4th of UCP Mode Dip Switch). If the switch is in the OFF position, the system will perform a simple Power-Up routine; clear all scratch-pad memory, load run-time programs, establish communications with each registered gateway Module and iPECS terminal, send RESTART commands and load appropriate settings to the Modules and terminals. If a Module or terminal does not respond after several attempts, the system places the device in an out-of-service mode but maintains the database settings. Once the Power-up routine is complete, the system will conduct normal operations.

If the Initialization switch is in the ON position, in place of the Power-Up routine, the system will perform the full Initialization procedure. The initialization procedure will set the system database to default values. Further, during the full initialization procedure, the system will establish communications with each gateway Module and iPECS terminal for registration. This communication will use the default device IP address and the UCP MAC address for system identification. The system will maintain IP addresses and Sequence Numbers for previously registered gateway Modules and iPECS terminals. These values are employed for subsequent communication and logical assignments of numbering plans, respectively. In addition, the system sends commands to modify all settings to the default values, including IP addresses but maintains the existing Sequence Numbers.

After successful initialization, should a device not respond to several attempts by the system to communicate, the system places the device in an out-of-service mode but maintains the database. Once initialization is complete, set the initialization switch to the OFF position to protect the database. The system must be restarted to complete the initialization.

2.2.2.1 Normal Registration Process

Module & Terminal

When power is applied and an Ethernet link is established, an unregistered device will attempt to discover and register with a local (on the same LAN) iPECS system. The Module or terminal will send a registration request

to the assigned iPECS system (UCP) IP address. If no response is received, the device will generate a Multi-cast discovery request for registration.

Remote iPECS Phone & Remote Services Module

A remote device, iPECS Phone or gateway Module, registers with the system using the MAC address of the device. The MAC address must be assigned in the system database and the IP address of the system must be assigned in the remote device. Using this address, the remote device will attempt to register with the assigned iPECS system. When the system receives the registration request, the MAC address is compared with the database to authenticate the remote device. With a matching MAC, the system will accept the registration request and provide the remote device with the appropriate settings. Note that the position of the UCP Registration switch does not affect remote registration.

iPECS Softphone or SIP Phone

iPECS softphones (iPECS UCS Client) and SIP phones register with the system employing the User Id and Password. When the system receives the registration request, the Id and password are compared to the Station Login parameters. If a match is found in the Station Login Table, the system registers the device and assigns the phone the Station Number requested (Desired number), if available. As with remote registration, the position of the UCP Registration switch will not affect Softphone or SIP Phone registration.

iPECS system

When power is applied, an Ethernet link is established, and the Registration switch (UCP DIP Switch position 3) is in the ON position, the UCP will send a Multi-cast request to unregistered gateway Modules and iPECS terminals for registration.

When the system receives a valid registration or discovery request, and the Registration switch (UCP DIP Switch position 3) is in the ON position, the system will respond to the gateway Module or terminal with a Registration command including the system IP and MAC address. During the registration process, the Module or terminal will receive data from the system including a Sequence Number, IP address, RTP characteristics, etc., as well as default settings appropriate to the type of Module or terminal. Once registered, the Module or terminal will maintain the system IP and MAC address in non-volatile memory and will not attempt further registrations. If the Registration switch is in the OFF position, the system will not respond to normal registration requests from a local device.

Sequence Number

Sequence numbers are allocated to the different device types and are assigned sequentially to devices of the same type as shown in the Table 2.3.1 below.

Table 2.3.1 Sequence Number Allocation

Device Type	Start Sequence Number	End Sequence Number
Station	1	2400
CO line	2401	3000
VSF	3001	3100
MISC	3101	3200
MCIM	3201	3230
UCS server	3231	3246
IPCR and 3rd party server	3247	3256
WTIM	3257	3388

2.2.2.2 Replacement Module Registration

Under certain situations, it is necessary to force the registration of gateway modules and terminals specifically when an UCP, gateway Module or iPECS Terminal is replaced. When replacing a UCP module, gateway Modules and iPECS terminals must be forced to register with the new system. With Module or terminal replacement, the system must recognize the “replacement” status to transfer the existing database values.

When replacing a UCP, the local Web interface is used to access the system. The user may update the system database using the database downloaded from the previous UCP memory.

Using the Terminal mode Command Line interface (“maint > reset ip”), the user provides the new UCP with the IP address of the previous UCP, and issues the Register command. The new system will then send a Uni-cast Register command to each gateway Module and iPECS terminal registered to the previous system. This Register command will include the previous system IP address. These commands are repeated several times only. As communication is established, the new UCP will update the settings of the gateway Modules and iPECS terminals appropriately. When the gateway Modules and terminals respond, they are registered to the new system.

When replacing a gateway Module, use PGM 103 “Device IP Plan” in Web admin to change the service mode to “Out of Service”, change the MAC information for the new module, change the service mode to in-service and install the new gateway Module.

When replacing an iPECS terminal, using PGM 103 “Device IP Plan” in Web admin change the service mode to “Out of Service” change the MAC information for the new iPECS terminal, change the service state to in-service, and install the new terminal.

2.3 General Admin and Menu Structure

The iPECS system can be configured to meet each customer's individual needs. System configuration may be accomplished by entering the “Program mode” at an assigned Admin Station or by pointing a Web Browser at the IP address of the MPB/UCP. Section 3 provides a description of eMG system for data entry using the Admin Station. Section 4 discusses configuration employing the Web browser. Note that some parameters are available through Web Admin and not the Keyset Admin.

Configurable items are organized as “Data” groups with a common affect, i.e. station, system, numbering plan, etc. Items are further grouped into “Programs” forming a multi-layered menu structure as the following list.

Each of the Program groups is assigned a three digit “Program” (PGM) code used to access the group. The top level Data groups include:

- System ID& Numbering Plans
- Station Data
- Board Based Data
- CO Line Data
- System Data
- Station Group Data
- ISDN Line Data
- SIP Data
- Tables Data
- Networking Data

- H.323 Routing Table
- T-NET Data
- Zone Data
- Device Login
- UCS Data
- DECT Data
- Redundancy Data (for UCP600 & UCP2400)
- Hotel Data
- Green Mode for eMG
- Initialization

The default and range of values for each configurable parameter are provided in Section Web admin programming. The index and charts are helpful references when entering data into the system's database.

3 Station Admin ProgrammingforeMG

3.1 General

3.1.1 LCD & Button Functions

While in the Program mode, the Liquid Crystal Display (LCD) and Flex button LEDs of an Admin Station are used to guide and indicate status of the feature. The dial-pad is most often used to enter data after selecting a data item using the Flex buttons. In some cases, pressing a Flex button will toggle the entry with the Flex button LED indicating the status (On/Off).

For Programs with multiple Flex button selections, the volume controls (**[VOL UP]** and **[VOL DOWN]** buttons) may be used to select the next or previous item. The **[SPEED]** button is generally employed as a delete button to erase existing entries. However, where noted, it may be used to confirm a range input. Pressing the **[CONF]** button, returns to the 1st step of the data entry procedure for the Program without storing unsaved entries.

The **[Save]** button is used to store data after entry. If there are no conflicts in the entered data, confirmation tone will be received and the data stored. If a conflict exists, error tone is provided and newly entered data are not saved. Generally, corrected data may be entered and stored without restarting the entry procedure from the 1st step.

3.1.2 Alphanumeric Data Entries

In some cases, an alphanumeric entry is required. Two (2) dial-pad digits represent each character of an alphanumeric entry, as shown in Table 3.1.2–1 below. Use the Table to determine the two digits that must be entered from the dial-pad for each character.

Table 3.1.2-1 ALPHANUMERIC DIAL-PAD ENTRIES

1	Q - 11 Z - 12 . - 13 1 - 10	2	A - 21 B - 22 C - 23 2 - 20	3	D - 31 E - 32 F - 33 3 - 30
4	G - 41 H - 42 I - 43 4 - 40	5	J - 51 K - 52 L - 53 5 - 50	6	M - 61 N - 62 O - 63 6 - 60
7	P - 71 R - 72 S - 73 Q - 7* 7 - 70	8	T - 81 U - 82 V - 83 8 - 80	9	W - 91 X - 92 Y - 93 Z - 9# 9 - 90
*	Blank - *1 :- *2 , - *3	0	0-00	#	#

3.2 Data Entry Mode

Limited data entry can be accomplished from an Admin Station or station assigned for data entry (Station Attributes III PGM 113, Flex button 1). After initialization and registration, any enabled iPECS IP or LDP Phone may access the system database. In addition, as default, there is no Station Admin password defined. To enter the Program mode from the Admin Station follow the procedure below. In the left column of the chart are the LCD displays and in the right column are step-by-step instructions to modify database items.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> STATION 100 (T) 04 SEP 01 02:49 PM </div>	Press the [PGM] button and Dial '*' and '#'.
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> ENTER ADMIN PASSWORD </div>	Enter the Admin password. Confirmation tone is received. As a default there is no password and this step is skipped.
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> ADMIN PROGRAM START </div>	
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> ENTER PGM NUMBER </div>	To select a program, use the instructions in the following sections, starting with "Press the [PGM] button" and dial the specified Admin Program code.

3.3 Procedure for Data Entry

The following sections provide specific instructions for entering data from the Admin Station once in the Program mode. Each section provides descriptive information, step-by-step instructions and Tables for determining appropriate entries.

3.3.1 System ID —PGM 100

Under System ID, the country is identified using the international dial codes (NATION CODE). If the NATIONC\defaults, gain, frequencies and other system characteristics specific to the country and regional regulatory pgm

To change the NATION Code on eMG:

- 1) Set the MPB Dip-switch 1 pole 2 to the ON position,
- 2) Follow the procedure below to modify the NATION code
- 3) Press the reset button on the KSU, power the system Off and On, or use PGM 450 to initialize the system.
- 4) After initialization, reset switches as needed, Dip-switch 1 pole 2 should be OFF.

A twenty-four (24) character SITE NAME and the local Area Code are also defined in this program. The SITE NAME is primarily useful for the installer/programmer as a reference to the customer.

In addition, under this program the system can be programmed to select one of eight (8) Flexible Number Plans, refer to Appendix B. Individual items from the selected Numbering Plan can be changed under Flexible Numbering Plan part A to D – PGM 106 to 109- in section 3.3.2.5.

PROCEDURE	
SYSTEM ID PRESS FLEX KEY (1-6)	Press the [PGM] button and dial 100.
	Select the desired Flex button (1~5), refer to Table 3.3.1-1. For COUNTRY CODE, refer to Table 3.3.1-2 for appropriate entries.
	Use the dial-pad to enter desired System Id data. For System Reset, button 5, press [Save] to reset the System Id to default.
	To store the System Id data press the [Save] button.

Table 3.3.1-1 SYSTEM ID (PGM 100)

BTN	DISPLAY	REMARK	RANGE	DEFAULT
1	COUNTRY CODE 1	Refer to Table 3.3.1-2 below. Note system must be re-initialized if changed.	4 digits	1
2	CUSTOMER SITE NAME	Refer to Table 3.1.2-1 for alphanumeric dial-pad entries.	24 character	
3	MY MULTI AREA CODE ENTER TABLE NO(00-40)	Enter the area code of the installed site.	6 digits

Venezuela	58	Y.A.R.	967				

3.3.2 NUMBERING PLANS DATA — PGM 102 to 109

3.3.2.1 System IP Address Plan — PGM 102

The System IP Address Plan sets several IP addresses including the KSU LAN port IP address (MPB IP Address) required for external VoIP calls, the IP address for the router, and the system's internal private IP address Plan. Note that the MPB and Router addresses and sub-net mask must be a routable IP address for access to an external VoIP network, remote access by a gateway/board or terminal and remote Web access. The VOIB must also have a routable IP address for access to/from an external VoIP network or remote user.

When Automatic IP Assignment, button 7, is enabled, the system will assign IP addresses to each local terminal and the VOIB using the assigned System IP address range. These addresses are used for communications between the system and the VOIB and terminals. The system may be connected to a LAN that is segmented by two separate private IP address schemes. This segmenting technique is often used to separate voice and data devices. However, with this segmenting technique, the system would normally treat the segmented Terminals such as iPECS Soft Phones, as remote devices, using valuable WAN bandwidth. Assigning the "Second Sys IP address" with valid IP address from the second segment permits the system to communicate with the devices directly over the LAN. iPECS can be installed behind a NAPT server, if the NAPT server provides fixed address translation and port forwarding to the system. In this case, the system will employ the "Firewall IP address", button 10, as the fixed public IP address for communication with remote devices. This address must be assigned as the "MPB" address in the remote device.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; display: inline-block;"> SYSTEM IP ADDRESS PLAN PRESS FLEX KEY (01-17) </div>	Press the [PGM] button and dial 102.
	Select the desired button 1~19, refer to Table 3.3.2.1-1.
	Use the dial-pad to enter desired IP addresses.
	Use an "*" to enter a dot (".")
	Press the [Save] button to store IP address entries.

Table 3.3.2.1-1 SYSTEM IP ADDRESS PLAN (PGM 102)

1	MPB IP ADDRESS 10 .10 .10 .2	10.10.10.2	This is the IP address of the KSU LAN port A. A Public IP Address is required for remote user and external VoIP network access. IPv4 format.
2	MPB SUB NET MASK 255.255.255.0	255.255.0.0	
3	ROUTER IP ADDRESS 10 .10 .10 .1	10.10.10.1	IP Address of router for external network (WAN) access. Required for shared voice and data LAN, external VoIP and remote Web access.
4	SYSTEM START IP ADDRESS 10.10.10.10	10.10.10.10	Start of range for private IP addresses assigned by the system to Modules/Terminals.
5	SYSTEM END IP ADDRESS 10.10.10.254	10.10.10.254	End of range for private IP addresses assigned by the system to Modules/Terminals.

Table 3.3.2.1-1 SYSTEM IP ADDRESS PLAN (PGM 102)

BTN	DISPLAY	DEFAULT	REMARK
6	SYSTEM SUB NET MASK 255.255.255.0	255.255.0.0	
7	AUTOMATIC IP ASSIGN (1:ON/0:OFF): ON	ON	The system will automatically assign IP addresses to modules and terminals (ON) or, when OFF, IP addresses are assigned manually in PGM 103 Device IP Address Plan.
8	SECOND SYS IP ADDRESS 0 .0 .0 .0	0.0.0.0	When devices are located on a different private address on the same net, enter the MPB IP address for the second LAN.
9	SECOND SYS SUB NET MASK 255.255.255 .0	255.255.255.0	
10	FIREWALL IP ADDRESS 0 .0 .0 .0	0.0.0.0	When the system is installed behind a NAPT server, the fixed IP Address provided by the NAPT server must be assigned in this field. Also, use this IP address for the MPB address in remote devices.
11	FIRST START MAC ADDR 000000000000	00.00.00.0 0.00.00	A range of MAC addresses can be entered to register devices. This entry is the start address of the first range.
12	FIRST END MAC ADDR 000000000000	00.00.00.0 0.00.00	A range of MAC addresses can be entered to register devices. This entry is the end address of the first range.
13	SECOND START MAC ADDR 000000000000	00.00.00.0 0.00.00	A range of MAC addresses can be entered to register devices. This entry is the start address of the second range.
14	SECOND END MAC ADDR 000000000000	00.00.00.0 0.00.00	A range of MAC addresses can be entered to register devices. This entry is the end address of the second range.
15	SYSTEM IP ADDRESS PLAN SYSTEM RESET		Returns System IP Address Plan to default values.
16	MPB DNS IP ADDR 0 .0 .0 .0	0.0.0.0	IP Address of Domain Name Server, which iPECS will use to resolve URL to an IP address. The DNS provides the resolution after receiving the name from iPECS.
17	MPB DHCP (1:ON/0:OFF) : OFF	OFF	Enable/Disable DHCP client function for the MPB.

3.3.2.2 Device IP Address Plan -PGM 103

TDM board is registered with own slot number. It is registered automatically without any configuration.

To register an IP device:

As IP gateway/board and terminals register to the iPECS, a logical slot number is assigned, which indicates the order of registration. Also, based on the type of device (CO/IP gateway/board, Terminal) the system assigns a logical Sequence Number.

Thus, Sequence Numbers for CO gateway/board, Terminals are independently assigned based on the type of gateway/board. These Sequence Numbers are employed to provide a relationship between the physical MAC address and the logical port numbers of the device.

The system may assign a default private IP address to each Sequence Number. If desired, this program may be used to modify the assigned IP address for each gateway/board and iPECS Phone.

Each local gateway/board and terminal can be assigned for "Direct Send". With Direct Send enabled, the system will employ the Ethernet MAC address, layer 2 switching to eliminate the need for IP traffic overhead, reducing overall LAN traffic. The system normally employs IP multi-cast protocol to respond to a registration request from a gateway/board or terminal.

When the device is separated from the system by a router, the system must use the IP uni-cast protocol. This is established by the "Local Device" assignment. When disabled (Off), the system will send an IP uni-cast message to the device in response to a registration request.

PROCEDURE	
DEVICE IP ADDRESS PLAN PRESS FLEX KEY (1-7)	Press the [PGM] button and dial 103.
	Select the desired Flex button. <ul style="list-style-type: none"> - Button 1: CO & VOIP Gateway/Board - Button 2: Stations - Button 3: MISU - Button 4: VMIU, VMIB - Button 5: MCIB - Button 6: SYSTEM RESET - Button 7: WTIB
	Use the [VOL UP] and [VOL DOWN] buttons to see next/ previous IP Address. Refer to Table 3.3.2.2-1 for display information.
	Press Flex 1~6 to select the Sub-menu item desired. See Table 3.3.2.2-1. <ul style="list-style-type: none"> - Button 1: IP address - Button 2: MAC address - Button 3: ARP - Button 4: REGISTRATION - Button 5: CPU Type - Button 6: Device (Board) ID
	Use the dial-pad to enter desired data. For IP and MAC addresses, an "*" is used to enter a dot (".")
Press the [Save] button to store the data entry.

7-6	DEVICE(BOARD) ID WTIB	Flex button 6 displays the type designation, WTIB.	

3.3.2.3 CO Device Sequence Number -PGM 104

The system uses the Sequence Number to assign logical (software) port numbers. This Sequence Number relates the hardware and software port numbers for each device.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> 001 002 003 004 005 006 009 007 008 013 014 . . . </div>	Press the [PGM] button and dial 104.
	Press the Flex button (1~6) for the desired Sequence Number, use the [VOL UP] and [VOL DOWN] buttons for the next/previous set of six Sequence Numbers.
	Using the dial pad, enter new slot numbers. Note slot numbers cannot be duplicated and duplicates will cause an error. The [SPEED] button may be used to erase the slot number associated with the selected Sequence Number.
	Press the [Save] button to store the new Slot data.

3.3.2.4 Flexible Station Numbering Plan -PGM 105

Each LDP Phone, iPECS IP Phone and SLT is assigned a Sequence Number during the registration process.

The station Sequence Number is a 3-digit number starting at 001, which is incremented as each terminal device is registered.

At registration, station numbers increment sequentially with the Sequence Number and are assigned starting at station 100 for Sequence Number 001.

The Station Numbering Plan allows the station numbers to be Three (3) to eight (8) digits in length.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> 001 002 003 004 100 101 102 103 </div>	Press the [PGM] button and dial 105.
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> 001 002 003 004 </div>	Use either of the two methods below to change the station number associated with a Sequence Number. Note pressing the [SPEED] button twice clears all station number assignments. The [VOL UP] / [VOL DOWN] buttons are used to view the next/previous 2 station Sequence Numbers.
	Range entry: Using the dial-pad, enter a station number range (first & last station number). The two station numbers must be of the same length, 2~8 digits. The range assignment begins with the first station number shown by the LCD and continues to the end of the entered range.
	Single entry: 4.1 Press Flex button 1~4 to select the desired Sequence Number from the two shown by the LCD. 4.2 Dial new station number.
	Press the [Save] button to store the new station numbers.

3.3.2.5 Flexible Numbering Plan part A to D - PGM 106 to 109

Feature dial codes for the system can be assigned using the system's Flexible Numbering Plan. Feature codes should be one (1) to four (4) digits in length and must not conflict. For example, Feature dial codes 53 and 536 represent a conflict. The system will generate error tone and will not update the database.

Table 3.3.2.5-1 to Table 3.3.2.5-4 below show the defaults for the 1st base Numbering Plan. Appendix B provides the default values for each of the 9 basic Numbering Plans, select the base Numbering Plan in PGM 100. The default is based on Numbering plan 1.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> FLEX NUMBERING PLAN A PRESS FLEX KEY (01-24) </div>	Press the [PGM] button and dial: <ul style="list-style-type: none"> - 106 for part A - 107 for part B - 108 for part C - 109 for part D.
	Select the desired button (01~24); refer to Table 3.3.2.5-1 to Table 3.3.2.5-4 for PGM 106 to 109 respectively.
	Use the dial-pad to enter desired data. Where a range is required, input the first and last numbers in the range.
	Press the [Save] button to store the new Numbering Plan data.

3.3.2.6 8-Digit Table

We can support it more 4 digits for station number. Station numbering should not conflict with numbering plan. It is consist of prefix digits and add digits. Prefix digits can have up to 4 digits and Add digits can have up to 4 digits.

PROCEDURE	
DIGIT 8 TBL ENTER TBL NO(01-10)	Press the [PGM] button and dial 238.
Digit 8 TBL 1 : Empty	Use the dial-pad to enter the desired table number.
	Press the desired Flex button; refer to Table 3.3.2.6-1.
	Use the dial-pad to enter the required data.
	Press the [Save] button to store the data entry.

Table 3.3.2.6-1 8-Digit Table (PGM 238)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	TBL 1 : SET 8 digit 8 digit 1:	The user may be allowed to enter the prefix digits using character assign method. (ex : 4+0 → 4)	Up to 4digits	N/A
2	TBL 1: SET ADD DIGIT ADD DIGIT : 0	The user can be allowed to add digits. (ex: if it's set 3, prefix digits + xxx)	Up to 4 digits	0

3.3.3 Station Data –PGM 110-125

3.3.3.1 Station Type -PGM 110

Each station is assigned a type, which is used by the system to recognize the station's capabilities and default Flex button configuration. In addition, for the iPECS DSS/BLF Consoles, the associated station number is identified here. Note that the maximum of three (3) DSS Consoles(LIP DSS & LDP DSS) can be associated and connected to a station.

PROCEDURE	
STATION TYPE ASSIGN ENTER STA RANGE	Press the [PGM] button and dial 110.
100-110 F1:TY F2:ASC IPKTU	Use the dial-pad to enter a station range (Ex 100~110). For a single station, enter the same number twice; use this procedure for an iPECS DSS Select Flex button 1, to set the station type and, for iPECS DSS Consoles (types 2~4), Flex button 2 assigns the associated station. Use the dial-pad to enter desired data: - 4-1. For Flex button 1 (TYPE), enter the station TYPE; refer to 3.3.3.1-1.
111-111 F1:TYPE F2 :ASC DSS MAP2 : STA	- 4-2. For Flex button 2 (Associated station), enter the number of the station used with the console. Flex button 2 is only available for iPECS DSS Consoles (Types 2~4), see Table 3.3.3.1-2 for default configurations. Press the [Save] button to store the data entries.

3.3.3.2 Station Attributes I to III -PGM 111-113

Station Attributes define features and functions available to the station. Generally, the entry will turn the feature ON (enable) or OFF (disable). Refer to Table 3.3.3.2-1 to Table 3.3.3.2-3 for a description of the features and the input required.

PROCEDURE	
STATION ATT 1 ENTER STA RANGE	Press the [PGM] button and dial: - 111 for Station Attributes I - 112 for Station Attributes II - 113 for Station Attributes III
100-110 STATION ATT 1 PRESS FLEX_KEY (01-24)	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
	Press the desired Flex button; Refer to Table 3.3.3.2-1 to Table 3.3.3.2-3.
	Use the dial-pad to enter desired data for the attribute setting, refer to Table 3.3.3.2-1 to Table 3.3.3.2-3.
	Press the [Save] button to store the data entry.

Table 3.3.3.2-1 STATION ATTRIBUTES I (PGM 111)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	100-110 AUTO SPKR (1:ON/0:OFF) : ON	Enables [SPEAKER] activation when a CO/IP, DSS or other feature button is pressed, no need to lift handset.	0: OFF 1: ON	ON
2	100-110 CALL FWD (1:ON/0:OFF) : OFF	Enables Call Forward activation by the station.	0: OFF 1: ON	OFF
3	100-110 DND (0-3) : 0(OFF)	Enables DND activation by the station. 0: OFF, 1: ALL, 2:ICM call only 3:CO call only	Refer to description	OFF
4	100-110 DATA SECURITY (1:ON/0:OFF) : OFF	Disables override and camp-on tones to the station when busy.	0: OFF 1: ON	OFF
5	100-110 HOWLING TONE (1:ON/0:OFF) : ON	Permits Howler tone to be sent to a SLT when left off-hook.	0: OFF 1: ON	ON
6	100-110 NO TCH ANS (1:ON/0:OFF) : OFF	Enables No-touch answer; this will automatically connect transferred calls to the station's speakerphone.	0: OFF 1: ON	OFF
7	100-110 PAGE ACCESS (1:ON/0:OFF) : OFF	Allows station to access paging.	0: OFF 1: ON	OFF
8	100-110 HEADSET RING (1:S/2:H/3:BOTH) : SPKR	This item selects device to receive incoming ring signals, Speaker, Headset or Both.	1: Speaker 2: Headset 3: Both	SPKR

Table 3.3.3.2-1 STATION ATTRIBUTES I (PGM 111)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
9	100-110 SPKR/HEAD (1:SPKR/0:HEAD): SPKR	Selects Speakerphone mode or Headset mode	0: Headset 1: Speaker	SPKR
10	100-110 LCD DISP LED (1:RING/0:MWI): MWI	The LCD LED, upper left of LCD, may be used for Intercom Call ring Indication or Message Wait Indication.	0: MWI 1: Ring	MWI
11	100-110 LOOP LCR ACCT (1:ON/0:OFF) : OFF	Station based LOOP LCR authorization; this is used for LOOP LCR operation.	0: OFF 1: ON	OFF
12	100-110 CALL COVERAGE (1:ON/0:OFF) : OFF	The Call Coverage feature permits an iPECS Phone user to receive ring and answer calls to other stations.	0: OFF 1: ON	OFF
13	100-110 CALL COVERAGE DELAY RING: 0	When a covered station rings, the {CALL COVERAGE} button LED will flash at the covering station and will receive ring (immediate or delayed, 0 to 9 ring cycles).	0~9	0
14	100-110 OFFNET FWD (1:DIS/0:EN):ENABLE	A station must be allowed Off Net Fwd to forward external incoming calls outside the system or otherwise establish a CO-to-CO connection (Unsupervised Conference). (Except USA version)	0: Enable 1: Disable	Enable
15	100-110 FORCED ICM (1:ON/0:OFF) : OFF	When placing an intercom call, a user can change the ICM signaling mode, Tone Ring to Hands free answer mode or HF Answer to Tone Ring.	0: OFF 1: ON	OFF
16	100-110 ACT PTT GRP ACTIVE PTT GROUP:	A station can be assigned to a PTT group and the group enabled so the station can place and receive PTT announcements for the group.	0~9	.
17	100-110 ICM GROUP (01-15): 01	Assigns station to an ICM Tenancy Group, refer to PGM 125. eMG80/100:1~15, eMG800:0~32	Refer to description	1
18	100-100 VMIU/VMIB BOARD USE 1ST VMIU/VMIB	Assigns the VMIU or VMIB where messages for the station are stored.	Sequencen umber.	
19	100-110 SIP UID TBL (000-140) : 000	Index to SIP User ID table, PGM 126, for the station. Note PGM 126 is accessible by Web only.	000-140	000
20	100-110 CAMP ON TONE (1:ON/0:OFF) : ON	Permits camp on tone to be sent to a station when the station receives camp-on request.	0: OFF 1: ON	ON

Table 3.3.3.2-1 STATION ATTRIBUTES I (PGM 111)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
21	100-110 SERIAL DSS (1:EN/0:DIS):ENABLE	Assigns Serial DSS usage authority.	0: Disable 1: Enable	Enable
22	100-110 DLTN (00-37) DIAL TONE (00)	Each station can choose one of below dial tone sources <ul style="list-style-type: none"> • 00: dial tone, • 01: INT music • 02: EXT music, • 03: VSF MOH • 04~08: SLT MOH1~5, • 09~37: VSF MOH2~30 	Refer to description	dial tone

24-16	100-110 PREPAID MONEY 000000	Prepaid Money can be entered. By Call Metering signal, pre-paidmoney can be calculated.	000000 - 999999	0
24-17	100 – 110 DEFAULT VM NO	Default VM group numberused when users press the [Msg/Call Back] button and there is no message.		
24-18	100 – 110 SLT MODE (0-3) : DEFAULT	SLT configuration mode.SLT gain is changed cording tothis configuration. It is used only for South Africa.	0: Default 1: Short 2: Long 3: Far	Default
24-19	100 – 110 OFF HOOK RING (0-3) : REFER TO SYS	Off hook ring type could be selected by station base. 0: BURST, 1: MUTE, 2: SYSTEM, 3:SILENCE	Refer to description	SYSTEM
24-20	100-110 SIP COLOR RING	Color ring is provided from assigned SIP VM (UMS). SIP extension number that is connected to SIP VM (UMS) server should be assigned.		
24-21	100 – 110 FORCED ACNT (1:ON/0:OFF) : OFF	User should enter an Account Code prior to placing an outgoing call when this value has "ON".	0: OFF 1: ON	OFF
24-22	100 – 110 FLEX BTN PGM (1:ON/0:OFF) : ON	A user can program Flex buttons at station.	0: OFF 1: ON	ON
24-23	100 – 110 STNWEB_LEVEL (1-3) : LEVEL 1	There are 3 access levels that can be assigned to station. The station with level 1 can view/access all programs in station web. The station with level 2/3 follows Station Web Authorization menu (System Data -> Station Web Authorization).	LEVEL 1 ~ LEVEL 3	LEVEL 1
24-24	100 – 110 HEADSET PAGE (1:S/2:H/3:BOTH): SPKR	Paging is provided on selected devicewhile in the headset mode. 1:SPKR, 2:HEADSET, 3.Both	Refer to description	1: SPKR

3.3.3.3 Station Attributes IV -PGM 114

When a station uses an ISDN Line, various parameters relating to ISDN Calling Line Identification and Connected Line Identification can be assigned for each station.

In addition, when the station is an SLT, several parameters must be set to indicate the capabilities related to the station, such as 3.1 KHz audio for ISDN use. Refer to Table 3.3.3.3-1 for a description of the attributes and the inputs available.

PROCEDURE	
STATION ATT 4 ENTER STA RANGE	Press the [PGM] button and dial 114.
100-110 STATION ATT4 PRESS FLEX_KEY (01-24)	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.3.3-1.
	Use the dial-pad to enter desired data for the attribute, refer to Table 3.3.3.3-1.
	Press the [Save] button to store the data entry.

Table 3.3.3.3-1 STATION ISDN ATTRIBUTES (PGM 114)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	100-110 CLIP DISPLAY (1:ON/0:OFF) : OFF	CLIP (Calling Line Identification Presentation), an ISDN service, sends the number of the calling party to the system in the call SETUP message. If enabled here, the number will be shown in the iPECS Phone LCD.	0: OFF 1: ON	OFF
2	100-110 COLP DISPLAY (1:ON/0:OFF) : OFF	COLP (Connected Line Id Presentation), an ISDN service, sends the number of the answering party to the system in the call CONNECT message. If enabled here, the number will be shown in the iPECS Phone LCD.	0: OFF 1: ON	OFF
3	100-110 PROGRESS IND (1:ON/0:OFF) : OFF	When employing a non-ISDN terminal, specifically a modem or analog FAX, the ISDN call SETUP message must include this message and the Progress Indication parameter should be set to "ON".	0: OFF 1: ON	OFF
4	100-11- CLIR SERVICE (1:ON/0:OFF) : OFF	CLIR (Calling Line Identification Restriction), an ISDN service, removes calling party Id sent from the PSTN to the called party with a RESTRICT instruction in the SETUP message. If enabled here, the system will send the RESTRICT instruction to the PSTN when an outgoing ISDN call is placed.	0: OFF 1: ON	OFF

Table 3.3.3.3-1 STATION ISDN ATTRIBUTES (PGM 114)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
5	100-110 COLR SERVICE (1:ON/0:OFF) : OFF	COLR (Connected Line Id Restriction), an ISDN service, removes connected party Id sent from the PSTN to the calling party with a RESTRICT instruction in the CONNECT message. If enabled here, the system will send the restrict instruction to the PSTN when the station answers an ISDN call.	0: OFF 1: ON	OFF
6	100-110 STN CLI 1 100	When not restricted (button 4 & 5 above) and entry 00 of the CLIP/CLOP Table is selected in PGM 143-button 1& 2, this entry is added to the number sent in the ISDN call SETUP or CONNECT message in place of the station number.	12 digits	Station number
7	100-110 3.1 kHz AUDIO (1:ON/0:OFF) : OFF	When an analog device (SLT or FAX) uses an ISDN Line in the system, the Information Element of the ISDN SETUP message must indicate it only has 3.1 KHz audio capabilities. If a SLT or analog FAX will be allowed access to the ISDN Lines, this parameter must be "ON".	0: OFF 1: ON	OFF
8	100-110 CLI NAME DISP (1:ON/0:OFF) : OFF	When the CLI data from the PSTN in the call SETUP message matches a number in Speed Dial, the system can display the name associated with the Speed Dial bin, if set to ON.	0: OFF 1: ON	OFF
9	100-110 CLI/REDIRECT (1:RED/0:CLI) : CLI	When an incoming ISDN call is Redirected by the ISDN, the call SETUP message will contain an original and redirected CLI. This selection determines if the iPECS Phone will display the original or redirected number.	0: CLI 1: Redirect	CLI
10	100-110 CLI MSG-WAIT (1:ON/0:OFF) : OFF	A log of caller identification can be maintained for the user, permitting the user to call back the identified party. System-wide, up to 1000 entries can be maintained in the log.	0: OFF 1: ON	OFF
11	100-110 EXTOR ATD (1:ATD/0:EXT) : EXT	When the system sends a station number with CLIP or COLP, the number can be either the Attendant number or the number of the station.	0: EXT 1: ATD	EXT

Table 3.3.3.3-1 STATION ISDN ATTRIBUTES (PGM 114)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
12	100-110 MSN WAIT (1:ON/0:OFF) : OFF	When a call that is corresponding to a MSN Telephone Number comes in to system, the call is basically routed to idle stations that have free MSN button that is assigned for the corresponding Telephone Number. And also the call can be routed to busy stations in the following condition. OFF : if a keyset is in a busy status, cannot receive incoming MSN Telephone Number corresponding call even though it has a free(idle) corresponding MSN LOOP Button ON : if a keyset is in a busy status, can receive incoming MSN Telephone Number corresponding call if it has a free(idle) corresponding MSN LOOP Button	0: OFF 1: ON	OFF
14	100-110 DID RESTRICT (1:ON/0:OFF) : OFF	Enable station receive DID call.	0: OFF 1: ON	OFF
15	100-110 DISA RESTRICT (1:ON/0:OFF) : OFF	Enable station receive DISA call.	0: OFF 1: ON	OFF
17	100-110 MODEM ENABLE (1:ON/0:OFF) : OFF	It is used to set modem attributes.	0: OFF 1: ON	OFF
18	100-110 FAST XFER CLI (1:ORI/0:TRN) : TRN	If a user transfers a CO call with CLI to SLT or DECT, CO CLI can be seen instead of station number when this option is set to ORI.	0: TRN 1: ORI	TRN
20	100-110 PICKUP BY BTN (1:ON/0:OFF) : ON	It is used to set pick up by flex button.	0: OFF 1: ON	ON
21	100-110 MULTI LANG (1-6):PROMPT1 A.AMERICA	Selected language prompt is played to the user when accessing the VMIU or VMIB. The range is as below 1: US , 2:KOREA , 3:TURKIYE 4:RUSSIA , 5:AUTRALIA, 6:GERMANY	Refer to description	1
22	100-110 P-MSG DND (1:ON/0:OFF) : OFF	If it is ON, the pre-selected station doesn't receive the ring and the caller hears DND tone.	0: OFF 1: ON	OFF

Table 3.3.3.3-1 STATION ISDN ATTRIBUTES (PGM 114)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
23	100-110 P-MSG LANG (1-6):PROMPT1 U.S	Select voice enabled preselected message for a station playing toward an incoming CO call. The range is as below 1: US , 2:KOREA , 3:TURKIYE 4:RUSSIA , 5:AUTRALIA, 6:GERMANY	Refer to description	1
24	ADDED STATION ATT4 PRESS FLEX KEY (01-23)			
24-1	100-110 STN CLI 2	Station CLI 2 can be programmed. If a CO line is set to Station CLI 2, then this CLI is used for outgoing CLI.	16 Chars	None
24-2	100-110 STN CLI 3	Station CLI 3 can be programmed. If a CO line is set to Station CLI 3, then this CLI is used for outgoing CLI.	16 Chars	None
24-3	100-110 STN CLI 4	Station CLI 4 can be programmed. If a CO line is set to Station CLI 4, then this CLI is used for outgoing CLI.	16 Chars	None
24-4	100-110 STN CLI 5	Station CLI 5 can be programmed. If a CO line is set to Station CLI 5, then this CLI is used for outgoing CLI.	16 Chars	None
24-5	100-110 SLT CID TYPE (0:FSK/1:DTMF) : FSK	SLT can send CID by programming options.	0:FSK 1:DTMF	FSK
24-6	100-110 WAKEUP ANNC 00	Wakeup Announce can be programmed.	0-200	0
24-7	100-110 CAMP ON ENABLE (1:ON/0:OFF) : ON	If it is ON (enabled) then this station will receive camp on. But if it is OFF(Disabled) then this station will not receive camp on by other person.	0: OFF 1: ON	ON
24-8	100-110 GAIN TBL (1-3) : 1	TDM gain table can be programmed.	1-3	1
24-9	100-110 TONE TBL (1-5) : 1	Tone table can be programmed.	1-5	1
24-10	100-110 DGT CONV TBL (01-15) : 00	Set the digit conversion table. eMG80/100:1-15, eMG800/UCP:1-32	Refer to description	0

Table 3.3.3.3-1 STATION ISDN ATTRIBUTES (PGM 114)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
24-11	100-110 VIDEO ON CALLING (1:ON/0:OFF) : OFF	Video show to called party when calling (ex. IP Video Door Phone)	0: OFF 1: ON	OFF
24-12	100-110 E.164 CLI TO (1:ON/0:OFF) : OFF	Send CLI with E.164 format if it is ON.	0: OFF 1: ON	OFF
24-13	100-110 FLEX PAGE (1-3) : 3 PAGE	Some newly supported stations have physical flex buttons & also have flex button pages. That means a station have 8 physical flex button and have 3 flex button pages, then total 24 flex buttons are available. The Navigation Up/Down button is used to scroll through the Flex buttons pages assigned. This feature is supported as below types. <ul style="list-style-type: none"> LIP-9030, LIP-9040 LIP-9071 1020i, 1030i, 1040i, 1050i, 1080i 	1-3 1-4(9071, 1080i)	3 PAGE
24-14	100-110 ALIGN LCD (0-2) : NOT ALIGN	For the iPECS LIP 9000 series and 1000i series, character alignment for messages to the phone can be right or left aligned by the system, or alignment controlled by the phone ("Not Align").	0: Not align 1: Left 2: Right	Not Align
24-15	100-110 TWOWA REC AN 00	The two way record announcement can be recorded to play to the station as Announcement.	0-200	00
24-16	100-110 LDT ZONE (001-100) : 001	If the LDT Zone Number of a LDT table (LCR LDT(221)) is equal to this value, the LDT table is available to this CO Line.	001-100	001
24-17	100-110 ECM FAX(T.38) (1:ON/0:OFF) : ON	ECM stands for Error Correction Mode. If you failed to send something via Faxes, you can send it again until it is successful.	0: OFF 1: ON	ON
24-18	100-110 DISP RESTRICT (1:ON/0:OFF) : OFF	When {Display Restricted Caller Number} in CLI Attributes(113) of a station is ON, Although the caller number is restricted in ISDN message, the ringing station displays the caller number.	0: OFF 1: ON	OFF
24-19	100-110 SMALL WIN USE (1:ON/0:OFF) : OFF	If this option is set to ON, small popup is displayed on the LCD of LIP-9030/9040 and 1010i/1020i/1030i/1040i/1050i. If it is set to OFF, top bar is displayed instead of small popup.	0: OFF 1: ON	OFF

Table 3.3.3.3-1 STATION ISDN ATTRIBUTES (PGM 114)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
24-20	100-110 LARGE WIN TMR (0-5) : 0	When Large popup timer is set to any value from 1 to 5 except 0, the display of large popup is disappeared after the timer expired and then the large popup information is displayed at top bar.	0-5	0
24-21	100-110 MWI LED (0-4) : ALL MWI	User can program Message wait lamp for each type, refer to the range. 0: All MWI , 1: VM MWI, 2: CLI MWI, 3: SMS MW, 4: ICM MWI	Refer to description	ALL MWI
24-22	100-110 NFC AUTH USE (1:ON/0:OFF) : ON	If this option is ON, User enters Authorization code to use NFC function only for LIP-9071.	0: OFF 1: ON	ON
24-23	100-110 SHORT MODEM (1:ON/0:OFF) : OFF	If this value of SLT is ON, SLT is the modem mode in seizing a co line. When the CO line is CO Board, the {short modem timer} is starting when the SLT seizes the CO line. And if the {short modem timer} is expired, the SLT goes to the original mode. When the CO line is ISDN, the {short modem timer} is starting after receiving the ISDN connect message. And if the {short modem timer} is expired, the SLT goes to the original mode.	0: OFF 1: ON	OFF

3.3.3.4 Flexible button Assignment -PGM 115

Each Flex button for each iPECS IP and LDP Phone, and DSS Console is assigned a function (Type) and an associated Value as shown in Table 3.3.3.4-1.

For assignments to an DSS Console, the **[VOL UP]/[VOL DOWN]** buttons shift the Flex button appearance on the Admin station to the next or previous group of 24 buttons as they appear on the iPECS DSS Console.

When multiple DSS Consoles are associated with a station, **[VOL UP]/[VOL DOWN]** are used to access and assign a function to the console buttons. Each console contains entries for 48 buttons even though the console may only have 12 buttons. In this case, assignments for buttons 13 to 48 are ignored.

Table 3.3.3.4-2 shows the default button assignments for the iPECS IP and LDP Phones and Table 3.3.3.4-3 and Table 3.3.3.4-6 provides default assignment for the various DSS Console button maps.

PROCEDURE	
FLEX BUTTON ASSIGN ENTER STA RANGE	Press the [PGM] button and dial 115.
100-110 BTN ASSIGN PRESS FLEX_KEY (1-24)	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
	Press the desired Flex button (1~24).
	Use the dial-pad to enter the desired button TYPE (1~6) and value, if required. <ul style="list-style-type: none"> • Refer to Table 3.3.3.4-1 for types and value range. • Defaults for the iPECS IP and LDP Phones are shown in Table 3.3.3.4-2, for DSS Console defaults refer to Table 3.3.3.4-3. In addition, for the DSS Console, use [VOL UP]/[VOL DOWN] buttons to access the next/previous 24 flex buttons.
	Press the [Save] button to store the Flex button data entry.

Table 3.3.3.4-1 FLEX BUTTON TYPE & VALUE CODES (PGM 115)

TYPE	DESCRIPTION	Remarks
1	Empty Button	Empty (unassigned) button, may be defined by the user.
2	User Program Fixed Numbering Plan	Assigns button to perform a User Program function from the Fixed Numbering Plan, Appendix A.
3	{{[SPEED] XXX}}	Station or System Speed Dial bin.
4	Flexible Numbering Plan Code	Assigns button to dial a code from the Flexible Numbering Plan, see Appendix B.
5	Station or Network Station	Assign network station number from network table.
6	MSN	Enter desired MSN Table index.
7	U-LOOP	U-Loop button for call wait of internal & external call

3.3.3.5 Station Class-of-Service – PGM 116

All stations are assigned a Class-of-Service (COS), which determines the ability of the user to dial certain types of calls, refer to Table 3.3.3.5-1. Separate COS assignments are made for Day, Timed and Night Mode system operation. As a default, all stations are assigned with a Station COS of 1, no restrictions for all three modes. The station COS interacts with the CO Line COS to establish overall dialing or Toll restrictions. This interaction and the resulting restrictions are given in Table 3.3.3.5-2.

Long distance calls are determined by the 1st dialed digit (“0”) and/or the number of digits dialed. If the 1st digit dialed is an LD code, default “0”, or, if the number of digits dialed exceeds the assigned LD digit counter (SMDR Attributes PGM 177 button 4), the call is consider a Long Distance call and appropriate restrictions are applied.

PROCEDURE	
STATION COS ENTER STA RANGE	Press the [PGM] button and dial 116.
100-110 STATION COS DAY=01 NIGHT=01 TIMED=01	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice. Press desired Flex button, - 1: Day mode COS - 2: Night mode COS - 3: Timed mode COS Use the dial-pad to enter desired data for the Station COS, refer to Table 3.3.3.5-1 & Table 3.3.3.5-2. Press the [Save] button to store the data entry.

Table 3.3.3.5-1 STATION CLASS-OF-SERVICE (PGM 116)

STATION COS	RESTRICTIONS
1	No restrictions are placed on dialing from the station.
2	The assignments in Exception Table A are monitored for allow and deny numbers.
3	The assignments in Exception Table B are monitored for allow and deny numbers.
4	The assignments in both Exception Tables A & B are monitored for allow and deny numbers.
5	The leading digit dialed cannot be a Long Distance code, default “0”, and further denied/allowed based on Exception Table C.
6	The leading digits dialed cannot be a Long Distance code & digit count cannot exceed the LD digit counter, default 8 digits, and further denied/allowed based on Exception Table C.
7	Intercom and paging calls are allowed. No outgoing dialing except for emergency calls is allowed on CO Lines.
8	The assignments in the Exception Table D are monitored for allow and deny numbers.
9	The assignments in the Exception Table E are monitored for allow and deny numbers.
10	The assignments in the Exception Table D & E are monitored for allow and deny numbers.
11	The assignments in the Exception Table A & B and D & E are monitored for allow and deny numbers.

3.3.3.6 CO/IP Group Access – PGM 117

Stations can be allowed or denied access to CO Lines and IP Channels by group(eMG80/100: 20 /eMG800:200), refer to CO Line Attributes, PGM 141, button 1.

As a default, all stations are allowed access to all groups except Private Lines (group 00) and unused CO Lines.

The CO Line of an RSGM is assigned as a Private Line by default.

PROCEDURE	
<div style="border: 1px solid black; padding: 2px;">CO/IP GROUP ACCESS ENTER STA RANGE</div>	Press the [PGM] button and dial 117.
	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
<div style="border: 1px solid black; padding: 2px;">100 – 110 CO/IP GRP PRESS FLEX KEY (01-20)</div>	The first 20 Flex button LEDs indicate group access for eMG. Press the desired Flex button to toggle CO/IP Group access, - LED on: group access allowed - LED off: group access not allowed
	Press the [Save] button to store the data entry.

3.3.3.7 Internal Page Zone Access – PGM 118

Each iPECS IP and LDP Phone is assigned to receive announcements from each Internal Page Zone.

A station can be assigned to any, all or no zones. Note a remote station or a station not assigned to any Internal Zone will not receive any page announcements including Internal All Call.

As a default, all stations except remote stations are assigned to zone 1.

PROCEDURE	
<div style="border: 1px solid black; padding: 2px;">INTERNAL PAGE ZONE ENTER STA NUMBER</div>	Press the [PGM] button and dial 118.
	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
<div style="border: 1px solid black; padding: 2px;">100-110 I-PAGE ZONE PRESS FLEX KEY (001-024)</div>	The LEDs indicate the status for Page Zones 1 to 24, Use the [VOL UP]/[VOL DOWN] button to display Page Zones 25 to 35. Press the desired Flex button to toggle Internal Page Zone assignments, - LED On: station receives announcement - LED Off: station does not receive announcement.
	Press the [Save] button to store the Page Zone data.

3.3.3.8 PTT (Push-To-Talk) Group Access – PGM 119

Each iPECS Phone is assigned to receive PTT announcements from any combination of the nine PTT groups. Note remote stations and stations not assigned to a group will not receive PTT page announcements including All PTT group page.

As a default, all stations except remote stations are assigned to group 1.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> PTT GROUP ACCESS ENTER STA NUMBER </div>	Press the [PGM] button and dial 119.
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> 100-110 PTT GRP ACC PRESS FLEX_KEY (01-10) </div>	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice. The first 10 Flex button LEDs indicate assigned zones. Press the desired Flex button to toggle Push-To-Talk group assignments, <ul style="list-style-type: none"> - LED On: station receives announcement - LED Off: station does not receive PTT announcement Flex button 10 assigns group 0, all groups. Press the [Save] button to store the PTT group data.

3.3.3.9 Preset Call Forward – PGM 120

This assignment allows an external or internal call to initially ring at a station and forward to a pre-determined destination. Preset Call Forward can be assigned separately for internal and external calls forwarding for all calls (Unconditional), Internal Busy, No-Answer or DND, or External Busy, No-Answer or DND. Calls can set as Preset Forward to a Station, Hunt group, System Speed dial for Off-net, or Station ICR. For the “Transfer to Mail-Box” enter the Station Group number of the Voice Mail group (external VM, VSF or Feature Server Voice Mail group). This will permit other iPECS IP Phone and LDP users to transfer a call directly to the desired user’s Voice Mail-Box.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px;">CALL FWD PRESET ENTER STA RANGE</div>	Press the [PGM] button and dial 120.
<div style="border: 1px solid black; padding: 5px;">100 – 110 STA PRES FWD CONDITION CHOICE (F1 –F8)</div>	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
<div style="border: 1px solid black; padding: 5px;">F1:S F2:H F3:SPD F4:ICR UNCONDITION :</div>	Press Flex Button for the desired type of forward: <ul style="list-style-type: none"> - 1. Unconditional - 2. Internal Busy - 3. Internal No Answer - 4. External Busy - 5. External No Answer - 6. Transfer to Mailbox (destination must the VM Group). - 7. Internal DND - 8. External DND
<div style="border: 1px solid black; padding: 5px;">ENTER FWD STA NO. UNCONDITION : STA</div>	Select Flex button for the Destination type: <ul style="list-style-type: none"> - 1. Station - 2. Hunt Group - 3. System Speed Bin for Off-net - 4. Station ICR Use the dial pad to enter the value associated with the selected type: <ul style="list-style-type: none"> - For Station & Net Station, enter station number, - For Hunt Group, enter Station Group Number, - For System Speed Bin for Off-Net enter Speed bin number. Press the [Save] button to store the data entry.

3.3.3.10 Idle Line Selection – PGM 121

When a station goes to an off-hook condition (lifts handset or presses [**SPEAKER**] button), the system normally provides intercom dial tone.

In place of the dial tone, the station can be programmed to access a CO Line, CO/IP Group or call a Station or Station Group as described in Table 3.3.3.10-1. The Idle Line Selection (Prime Line) can be either immediate or delayed after going off-hook.

The immediate/delay selection is based on the Hot/Warm assignment in Station Attributes III Prime Line PGM 113, button 7 and System timers PGM 182, button 6.

PROCEDURE	
IDLE LINE SELECTION ENTER STA RANGE	Press the [PGM] button and dial 121.
100-110 IDLE LINE NOT ASSIGNED (1-7)	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice. Use the dial-pad to enter the type and value for the desired Idle Line selection, refer to Table 3.3.3.10-1. Press the [Save] button to store the data entry.

Table 3.3.3.10-1 IDLE LINE SELECTION TYPE & VALUE (PGM 121)

TYPE	VALUE	DESCRIPTION
1	Flex button	Flex button, activates Flex Number as if dialed.
2	CO line	CO/IP path seizes CO line.
3	CO group	CO/IP Group seizes CO line from the CO/IP Group.
4	Station	Station, calls the assigned station
5	Hunt Group	Call to Hunt Group
6	Station Speed	Call to Station Speed
7	System Speed	Call to System Speed

3.3.3.11 Station IP Attributes – PGM 122

Stations are allowed access to the systems H.323 VoIP resources based on the Station IP Attributes. Refer to Table 3.3.3.11-1 for a description of the attributes and the inputs available.

PROCEDURE	
STATION IP ATTRIBUTE ENTER STA RANGE	Press the [PGM] button and dial 122.
100-110 STA IP ATT PRESS FLEX KEY (1)	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.3.11-1.
	Use the dial-pad to enter desired data for the Station IP Attribute, refer to Table 3.3.3.11-1.
	Press the [Save] button to store the data entry.

Table 3.3.3.11-1 STATION IP ATTRIBUTES (PGM 122)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	100-110 DTR IP CALL (1:EN/0:DIS) : ENABLE	Enables station to access an IP channel directly by dialing the IP Group access code to place H.323 or SIP VoIP calls.	0: Disable 1: Enable	Enable

3.3.3.12 Station Timers – PGM 123

Certain timers can be assigned on a station basis. Available timers, description and valid inputs are given in Table 3.3.3.12-1.

PROCEDURE	
STATION TIMERS ENTER STA RANGE	Press the [PGM] button and dial 123.
100-110 STATION RANGE PRESS FLEX KEY (1-2)	Use the dial-pad to enter a station range (Ex. 100~110). For a single station, enter the same number twice.
	Press the desired Flex button.
	Use the dial-pad to enter desired data for the Station IP Attribute, refer to Table 3.3.3.12-1.
	Press the [Save] button to store the data entry.

Table 3.3.3.12-1 STATION TIMERS (PGM 123)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	STA FWD NO ANS TMR (sec) (000-600) : 000	This timer determines the duration the station will ring prior to Ring-No-Answer Forward. This setting affects both manual and Preset Call Forward and overrides the System Ring No Answer timer PGM 181-button 1.	000-600 seconds	000
2	CUT OFF (Min) (00-99) : 00	Allowed length of CO/IP calls when station is assigned Call Time restriction in Station Attributes II, PGM 112, button 3	00-99 minutes	00

3.3.3.13 Linked Station Table – PGM 124

A station can be linked to another station so that the two stations effectively act as a single station with the attributes of the primary station number.

An unregistered or registered station may be linked to a primary station. When unregistered station linking is used, the linked station does not reduce the system’s capacity.

PROCEDURE	
LINKED STA TABLE ENTER STA NUMBER	Press the [PGM] button and dial 124.
STA 110 IS LINKED PAIR PRESS FLEX KEY (1-3)	Use the dial-pad to enter primary station number for the Linked pair. (Ex. 110).
	Press the desired Flex button.
	Use the dial-pad to enter desired data, refer to Table 3.3.3.13-1.
	Press the [Save] button to store the data entry.

Table 3.3.3.13-1 LINKED STATION ATTRIBUTES (PGM 124)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
1	SET IP ADDRESS IP: IP NOT ASSIGNED	IP Address of the linked station not required.	
2	ROUTER IP ADDRESS IP: ROUTER IP NOT ASSIGN	Set Router IP address associated with linked station.	
3	STA 110 : SET MAC ADDR MAC: NOT ASSIGNED	Set MAC address of linked un-registered station, required data. Note the secondary station must not be registered in the system prior to linking. If needed, delete the device from the system.	

3.3.3.14 ICM Tenancy Group – PGM 125

Stations can be assigned to an ICM Tenancy group under Station Attributes II PGM 111, button 17. Up to 15 Tenant groups for eMG80/100 and up to 32 for eMG800 can be defined. Each group is configured to allow or deny placing intercom calls to stations in other groups and an Attendant station can be defined for each group. The Attendant will receive “dial 0” calls and controls Day/Night mode for the Group.

PROCEDURE	
ICM TENANCY GROUP ENTER GRP NUMBER (01-15)	Press the [PGM] button and dial 125.
ICM TENANCY GRP 01 F1:ATD F2:ACCESS	Use the dial-pad to enter the group number (Ex. 01)
	Press the desired Flex button; refer to Table 3.3.3.14-1.
	For Attendant assignment, use the dial-pad to enter the station number of the Group Attendant.
	To assign accessible ICM Tenancy groups for the group, the Flex button indicates the current Tenant group access. Press the Flex. Buttons to toggle Group access settings. - LED ON: group access allowed - LED OFF: group access denied
	Press the [Save] button to store the data entry.

Table 3.3.3.14-1 ICM TENANCY GROUP ATTRIBUTES (PGM 125)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ICM TENANCY GRP 01 ATD:	Attendant station for the ICM tenancy group. ATD. Receives dial '0' calls and controls Day/Night mode.	STA No	-
2	ICM TENANCY GRP 01 PRESS ACCESS GRP(1-15)	ICM Tenancy groups allowed access to the selected group. eMG80/100:01-15, eMG800/UCP:01-32	Refer to description	GROUP 1

3.3.3.15 Station VM Attributes – PGM 127

Voice Mail attributes can be assigned on a station basis. The description and valid inputs are given in Table 3.3.3.15-1.

PROCEDURE	
ENTER PGM NUMBER	Press the [PGM] button and dial 127.
STATION VM ATT ENTER STA RANGE	Enter Station Range.
100-110 STA VM ATT PRESS FLEX KEY (01-20)	Press the desired Flex button.
	Use the dial-pad to enter desired data, refer to Table 3.3.3.15-1.
	Press the [Save] button to store the data entry.

Table 3.3.3.15-1 STATION VM Attributes (PGM 127)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	VM COS (1-5) : 1	Voice Mail COS (Grade) can be set on each station. Each COS attributes can be set at PGM 253.	1-5	1
2	ADMINISTRATOR MAILBOX (1:EN/0:DIS):DISABLE	If this option is set to ON, Administrator Voice Mail feature can be accessed.	0: Disable 1: Enable	Disable
3	ANNC. ONLY MAILBOX (1 :EN/0 :DIS) :DISABLE	If this option is set to ON, no message can be left and only the greeting is played.	0: Disable 1: Enable	Disable
4	ANNC. ONLY OPTION (0-1):PREVIOUS MENU	This option is available only ANNC. ONLY MAIL BOX is set to ON. <ul style="list-style-type: none"> Previous: after greeting message is played, go to previous menu. Hang Up: after greeting message is played, call is hanged up. 	0: Previous 1: Hang Up	Previous menu
5	COMPANY DIR FIRST NAME	This field is first name of a station for Company Directory feature.	Max 12 Char	N/A
6	COMPANY DIR LAST NAME	This field is last name of a station for Company Directory feature.	Max 12 Char	N/A
7	USER-MSG RW/FF TIME (03-99):04 Sec	User Message Rewind / Fast Forward are supported by this time.	03-99	04
8	NOTIFY REPEAT COUNT (00-99) : 03	It is used to transfer call to attendant if retry count is over this for VM notification.	00-99	03
9	NOTIFY DIAL TIME (00-99) : 15 Sec	It is dial waiting time after provide VMIU/VMIB announcement for VM notification.	00-99 (seconds)	15
10	FORWARD OPTION (0-1) : MOVE	When a left message is forwarded, this option is applied.	0:Move 1: Copy	Move
11-15	CASCADE MAILBOX1-5	Message cascading is a feature that copies messages left for the originating mailbox to another mailbox. This field is destination mail box station.	Station No.	N/A
16	CASCADE METHOD (0-2): DISABLE	Cascade method is determined. 0:Disable, 1: Copy, 2: Move	Refer to description	Disable

17	CASCADE MSG TYPE (0-2): NORMAL ONLY	Cascade Message Type is determined. 0:Normal Only, 1: Urgent Only, 2:All	Refer to description	Normal only
18	CASCADE TMR(min) (000-250): 000	Cascade Apply Timer is set.	000 ~250 (min)	0
19	MSG WAIT NOTICE (0-2): TONE	When a user has voice mail, system can provides this as voice prompt instead of dial tone according to option based on station. Disable: System provides normal dial tone when a user goes to off hook status. Tone: System provides warning tone instead of dial tone to give indication when a user goes to off hook status.	0: OFF 1:Tone 2:Prompt	Tone
19	MSG WAIT NOTICE (0-2): TONE	Prompt: System provides message indication as voice prompt when a user goes to off hook status.	0: OFF 1:Tone 2:Prompt	Tone
20	CASCADE FOR READ MSG (0-1): ENABLE	If this value is set to Enable, the left message can be cascaded to next destination regardless the message is read or not.If this value is set to Disable, cascading action is stopped when the left message is read.	0 : Disable 1 : Enable	Enable

3.3.3.16 Station CCR Table – PGM 128

CCR Table can be assigned on a station basis. The description and valid inputs are given in Table 3.3.3.16-1.

PROCEDURE	
ENTER PGM NUMBER	Press the [PGM] button and dial 128.
STATION CCR ENTER STA RANGE	Enter Station Range (Ex. 100~110).
100-110 STA CCR PRESS FLEX KEY (01-14)	Press the desired Flex button. Press the desired Flex button; refer to Table 3.3.3.16-1.

Table 3.3.3.16-1 STATION CCR Table (PGM 128)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1-10	101 – 110 STA CCR INPUT 0 : NOT ASSIGNED	Button 1 to 10 means outside user press 1 to 0. This dialing is matched with this table destination. The destination is 14 kinds.		NA
11	101 – 110CCR TBLUSAGE (1:ON/0:OFF) : OFF	If this option is set to ON, this CCR table is worked. If this option is set to OFF, this CCR table is not worked, instead of that, outside caller's dialed digit can be regarded as DISA dialing.	OFF ON	OFF
12	101 – 101 CCR 1 DGT ONLY (1:ON/0:OFF) : OFF	If this option is set to ON, Only the first digit that is user entered is affected to the CCR routing. If this option is set to OFF, the following next digits are also affected to the DISA routing.	ON/OFF	OFF
13	101 – 101 * USED AS (0-3): NUMBERING PLAN	While listening User Greeting, * button working is followed by this attribute. <ul style="list-style-type: none"> • 0 : Numbering Plan • 1 : Replay Greeting • 2 : Access Mail Box • 3 : Leave Message 	Refer to description	Numbering Plan
14	101 – 101 # USED AS (0-3): ACCESS MAILBOX	While listening User Greeting, # button working is followed by this attribute. <ul style="list-style-type: none"> • 0 : Numbering Plan • 1 : Replay Greeting • 2 : Access Mail Box • 3 : Leave Message 	Refer to description	Access Mailbox

Table 3.3.3.16-1 CCR DESTINATIONS (PGM 128)

TYPE	DESCRIPTION
1	Route to a Station
2	Route to a Hunt Group
3	Route with System Speed Dial
4	Route as PBX Transfer with System Speed Dial (Flash then dial speed dial digits)
5	Route to VSF Announcement
6	Route to VSF Announcement and disconnect
7	Route to Networked Station
8	Conference Room
9	Internal Page
10	External page
11	All Call Page
12	Route to voice mail (Hunt group/station number)
13	Company Directory
14	Record VM Greeting
15	Room Type Conf Group Join (Value: system conference group number) (Value Range: eMG80/100(0 or 100~139), eMG800/UCP(0 or 100~259))

3.3.3.17 LSS Label Edit – PGM 129

The LIP-8012 LSS 12 button DSS Console incorporates an LCD used to label the function of each button. The label, which can be up to 12 characters, is assigned in this program.

PROCEDURE	
LSS LABEL EDIT ENTER STA NUMBER	Press the [PGM] button and dial 129.
STA 100 LSS LABEL ENTER LSS IDX(1-4)	Use the dial-pad to enter the station number associated with the console (Ex. 100).
STA 100 LSS 1 ENTER BTN NO (01 – 12)	Consoles are indexed, allowing multiple consoles to be associated with a station. Use the dial-pad to enter the index of the LSS console (1 ~ 4).
STA 100 LSS 1 BTN 1 LABEL IS EMPTY	Use the dial-pad to enter the desired LSS console button number (1 ~ 12). Edit the label referring to Table 2.1.2-1 Alpha-numeric Entry Chart. Press the [Save] button to store the data entry.

3.3.4 BOARD DATA – PGM 130 to 132

3.3.4.1 H.323 VoIP Attributes – PGM 130

The VOIP channels are used for Distributed Networking, access to SIP or H.323 networks and for remote iPECS devices. When the standard H.323 VoIP protocol is employed for an external VoIP call, several attributes of these channels can be assigned. The H.323 call set-up mode and tunneling (H.245 Encapsulation) can be established. Also for H.323 support, a RAS (Registration, Admissions and Status) channel can be defined. The RAS channel IP addresses (uni-cast and multi-cast) as well as the IP port Numbering Plan and other H.323 set-up characteristics are defined.

This PGM also allows setting the IP TOS bit for Diffserv, a commonly recognized packet prioritization protocol. Higher priority packets are given priority in the Router or Layer 3 Switch queue. However, they are the first to be discarded in the event of long queue delays, which may cause excess packet loss and poor voice quality.

Refer to Table 3.3.4.1-1 for a description of the features and the input required.

PROCEDURE	
H323 VOIP ATTRIBUTE ENTER SEQ NO(001-300)	Press the [PGM] button and dial 130. eMG800 range is 0001-2890.
001 H323 VOIP ATTR PRESS FLEX KEY (01-24)	Use the dial pad to enter the VoIP board sequence number.
	Press the desired Flex button; refer to Table 3.3.4.1-1.
	Use the dial pad to enter the desired data, refer to Table 3.3.4.1-1.
	Press the [Save] button to store the data entry.

Table 3.3.4.1-1 H.323 VOIP ATTRIBUTES (PGM 130)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	H.323 SETUP MODE (1:FAST/0:NORM): FAST	H.323 IP calls can be set-up using the H.323 normal or Fast Start mode.	0: Fast 1: Norm	Fast
2	H.323 TUNNEL MODE (1:ON/0:OFF) : ON	H.323 IP calls can be set-up using the H.245 encapsulation (Tunneling).	0: OFF 1: ON	ON
3	H.323 DTMF PATH (0:IN/1:OUT/2:2833): 0	During a connection, DTMF Digits can be sent in-band or out of band (H.245). 0: In band, 1: Out band, 2: 2833	Refer to description	0
4	DIFFSERV PRETAG TAG (00-63) : 04	Diffserv pre-tagging for Voice packet. Note high values may cause high packet discard levels.	0~63	4
5	RAS USAGE (1:ON/0:OFF) : OFF	Determine whether VOIU/VOIB Board will be used as a Gatekeeper.	0: OFF 1: ON	OFF
6	RAS MULTICAST IP 224.0.1.41	Multi-cast IP address for RAS Information of Gatekeeper.	IP Address	224.0.1.41

Table 3.3.4.1-1 H.323 VOIP ATTRIBUTES (PGM 130)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
7	RAS MULTICAST PORT (00001-65535): 01718	Multi-cast IP Port for RAS Information of Gatekeeper.	IP Port #	1718
8	RAS UNICAST IP 82.134.80.2	Uni-cast IP address for RAS Information of Gatekeeper.	IP Address	82.134.80.2
9	RAS UNICAST PORT (00001-65535): 01719	Uni-cast IP Port for RAS Information of Gatekeeper.	IP Port #	1719
10	RAS KEEP_ALIVE TM (001-999) : 120 (sec)	The time between exchange of RAS Information between GK and VOIB/VOIU.	001-999 (SEC)	120
11	RAS NUM PLAN PREFIX 9	The numbering plan for Calling Number in RAS Setup.	Number (24 digits)	9
12	RAS GATEWAY ID ONLY POSSIBLE BY WEB ADM	The Gatekeeper ID (This can be programmed only via WEB Admin).	128 Character	
13	RAS LIGHT RRQ (1:ON/0:OFF) : OFF	The system can be assigned to use the simple RRQ (Registration Request) message (ON) or the full RRQ message (OFF).	0: OFF 1: ON	OFF
14	TCP KEEP ALIVE (1:ON/0:OFF) : ON	The system will send a polling message every 75 seconds to assure the status of the TCP connection.	0: OFF 1: ON	ON
15	FAIL OVER USAGE (1:ON/0:OFF) : OFF	The H.323 call will be failover to another line (FAIL OVER USAG: ON).	0: OFF 1: ON	OFF
16	FAIL OVER TIME(sec) (03-10) : 05	The H.323 call will be failover. The time will be set.	03-10 (Sec.)	5
17	FAIL OVER CO GRP (01-21) : . .	If the H.323 call will be failover, assign another CO group.	01-21	
18	Q931 START PORT (00001-65535) : 02048	IP-Binding H.323 signaling option: Q.931 TCP Start Port in case of outgoing call.	00001-65535	2048
19	Q931 END PORT (00001-65535) : 02559	IP-Binding H.323 signaling option: Q.931 TCP End port in case of outgoing call.	00001-65535	2559

Table 3.3.4.1-1 H.323 VOIP ATTRIBUTES (PGM 130)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
20	H245 START PORT (00001-65535) : 02560	P-Binding H.323 signaling option: H.245 TCP Start Port.	00001-65535	2560
21	H245 END PORT (00001-65535) : 03071	IP-Binding H.323 signaling option: H.245 TCP End Port.	00001-65535	3071
22	RAS START PORT (00001-65535) : 02048	IP-Binding H.323 signaling option: RAS UDP Start Port.	00001-65535	2048
23	RAS END PORT (00001-65535) : 03071	IP-Binding H.323 signaling option: RAS UDP End Port.	00001-65535	3071

24-2	MEDIA END PORT (00001-65535) : 07036	IP-Binding media option: Media UDP End Port.	00001-65535	7036
24-3	DATA START PORT (00001-65535) : 08500	IP-Binding option: Data Sharing TCP Start Port.	00001-65535	8500
24-4	DATA END PORT (00001-65535) : 08548	IP-Binding option: Data Sharing TCP End Port.	00001-65535	8548
24-5	H.245 SETUP (1:ON/0:OFF) : OFF	This feature is the ability of two user endpoints to communicate before call is actually established in normal call mode.	0: OFF 1: ON	OFF
24-6	H.245 PROCEEDING (1:ON/0:OFF) : OFF	This feature is not used when 'H323 Setup Mode' is 'Fast'. Setup: Caller party tries to open early media on receiving the Setup message.	0: OFF 1: ON	OFF
24-7	H.245 ALERTING (1:ON/0:OFF) : OFF	Proceeding: Calling party tries to open early media on receiving the Proceeding message. Alerting: Calling party tries to open early media on receiving the Alerting message.	0: OFF 1: ON	OFF

3.3.4.2 T1/E1/PRI Attributes – PGM 131

Each T1/PRI module can be assigned for various attributes of the interface. The T1 interface framing and line coding can be selected and, for the PRI, TE or NT operation and CRC check can be selected. Refer to Table 3.3.4.2-1 for a description of the features and the input required. Note that the Sequence Number can be determined in PGM 103, Button 1.

PROCEDURE	
T1 /E1/PRI ATTRIBUTE ENTER SEQ NO (001 –300)	Press the [PGM] button and dial 131 and enter sequence number (Ex. 001). eMG800 range is 0001-2890.
001 T1 /PRI ATTR PRESS FLEX KEY (1 – 7)	Use the dial pad to enter the Sequence Number of the desired T1/PRI module. Use PGM 103 to determine Sequence Numbers. (e.g. enter the sequence number
	Press the desired Flex button; refer to Table 3.3.4.2-1.
	Use the dial pad to enter the desired data, refer to Table 3.3.4.2-1.
	Press the [Save] button to store the Table data entry.

Table 3.3.4.2-1 T1/PRI MODE (PGM 131)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	T1 SETUP MODE (1:ESF/0:D4) : D4	Select T1 Setup mode. <ul style="list-style-type: none"> D4 frame: Use In-Band Control Protocol. ESF: Use Data link Message. 	0: D4 1: ESF	D4
2	T1 LINE MODE (1:AMI/0:B8ZS) : B8ZS	Select T1 line mode (AMI/B8ZS).	0: B8ZS 1: AMI	B8ZS
3	PRI LINE MODE (1:TE/0:NT): TE	Select TE/NT mode.	0: NT 1: TE	TE
4	PRI/E1 CRC CHECK (1:ON/0:OFF): OFF	For PRI lines the CRC(Cyclical Redundancy Check) can be disabled (OFF).	0: OFF 1: ON	OFF
5	E1 R2DSP CHECK (1:ON/0:OFF): OFF	Used for R2-E1 board or E1 board.	0: OFF 1: ON	OFF
6	DCO PX TYPE (0-3): STANDARD (2)	Reserved for future use with R2 E1 board. 0: S1240, 1: TDX1B, 2: STANDARD, 3: CONGES	Refer to Description	STANDARD
7	CALLER NAME TYPE (1:DISP/0:FAC) : FACILIT	If the caller has a name, the Caller Name is sent to the network according to the option. (USA only)	0:FACILITY 1:DISPLAY	FACILITY

3.3.4.3 Board Base Attributes – PGM 132

Appliances (Boards and IP Phones) can be connected to the iPECS over a managed WAN without the need to employ a VoIP channel.

In this case, the system does not implement security (IPSec) or QoS treatment over the link. To implement the managed WAN connectivity, the iPECS must be assigned with the IP address of the router for all appliances that may attempt a point-to-point connection over the managed WAN, including devices on the iPECS LAN.

Note that if the device’s Router IP address is not defined, the system will use the Router IP address defined in PGM 102.

The default codec employed by each device can be specifically defined as G.711, G.723, G.729, G.722 or the system default codec PGM 161 can be defined. Note that the Sequence Number can be determined in PGM 103, Button 1.

PROCEDURE	
BOARD BASE ATTRIBUTE ENTER RANGE (001–300)	Press the [PGM] button and dial 132 and enter Range (Ex. 001–002). eMG800 range is 0001-2890.
001-002 BOARD ATTRIBUTE PRESS FLEX KEY (01–13)	Use the dial pad to enter the Sequence Number range of the desired module. Use PGM 103 to determine Sequence Numbers.
	Press the desired Flex button; refer to Table 3.3.4.3-1.
	Use the dial pad to enter the desired data, refer to Table 3.3.4.3-1.
	Press the [Save] button to store the Table data entry.

Table 3.3.4.3-1 BOARD ATTRIBUTES (PGM 132)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	001-002 ROUTER IP ADDR 0 . 0 . 0 . 0	Enter the default Router IP address associated with the selected devices.		0.0.0.0
2	001-002 DEV CODEC TYPE (0-4): SYSTEM CODEC	Select the CODEC type for theselecteddevices: 0: G.711,1: G.723,2: G.729,3: G.722 4: System Codec refer toPGM 161-button 9.	0-4	4
3	001-002 FIRWALL IP ADDR 0 . 0 . 0 . 0	Enter the Firewall IP addressassociated with the selecteddevices.		0.0.0.0
4	001-002 RTP SECURITY (1:ON/0:OFF) : ON	Remote iPECS IP & LDP phones use IPSec to assure a secure connection. To reducebandwidth use, IPSec may be disabled.	0: OFF 1: ON	ON

3.3.5 CO LINE DATA – PGM 140 to 151

3.3.5.1 CO Service Type – PGM 140

Each CO Line is assigned a type, Normal or DID. Normal CO Lines can be employed for DISA Service PGM 146. DID lines are for incoming only operation and provide call routing based on signaling from the carrier, refer to section 3.3.5.4 DID Service Attributes - PGM 145.

PROCEDURE	
COL SERVICE ATT ENTER COL RANGE	Press the [PGM] button and dial 140 and enter the range (Ex. 0102).
01-02 SVC TYPE PRESS FLEX KEY (1-1)	Press the desired Flex button.
01-02 SVC TYPE (1-4) NORMAL CO (1)	Use the dial pad to enter a CO Line range. For a single CO Line, enter the same number twice. Use the dial pad to enter the desired service type: - 1. Normal CO line, 2. DID line, 3. TIE line, 4. Unused Press the [Save] button to store the data entry.

3.3.5.2 CO/IP Attributes I ~ III - PGM 141~143

CO/IP Attributes define various characteristics of the CO lines and IP facilities under control of the system. Most require a dial pad input of 1 or 0 to set the characteristic, refer to Table 3.3.5.2-1 to Table 3.3.5.2-3.

Specific descriptions for Class-of-Service and CO line Call Metering tones are provided in Table 3.3.5.2-4 and Table 3.3.5.2-5 respectively.

PROCEDURE	
CO/IP ATTRIBUTE 1 ENTER COL RANGE	Press the [PGM] button and dial: - 141 for CO/IP Attributes I - 142 for CO/IP Attributes II - 143 for CO/IP Attributes III.
01-02 CO/IP ATT 1 PRESS FLEX KEY (01-24)	Use the dial-pad to enter a CO/IP line range. For a single CO/IP Line, enter the same number twice. Press the desired Flex button; refer to Table 3.3.5.2-1 to Table 3.3.5.2-3. Use the dial-pad to enter desired data for the Attribute, refer to Table 3.3.5.2-1 through Table 3.3.5.2-5. Press the [Save] button to store the data entry.

Table 3.3.5.2-1 CO/IP ATTRIBUTES I (PGM 141)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
1	01-02 CO/IP GROUP GRPNO (01-20) : 01	Each CO Line is assigned to a group; grouping should be based on the Line type and COS.	01

Table 3.3.5.2-1 CO/IP ATTRIBUTES I (PGM 141)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
2	01-02 CO LINE COS COS (1-5) : 1	Each CO Line is assigned a Class-of-Service which will interact with the Station COS, refer to section 3.3.5.2. <ul style="list-style-type: none"> • CO COS 1: Station COS applies • CO COS 2: Exception Table A governs • CO COS 3: Exception Table B governs • CO COS4: Restricts LD calls and Except Table C • CO COS 5: Overrides Station COS 2~6 with no restrictions. 	1
3	01-02 CO START SIGNAL (1:GND/0:LOOP) : LOOP	The system can recognize a loop closure or a ground as the "connect" (start) signal on an analogue CO Line.	LOOP
4	01-02 CO LINE TYPE (1:PBX/0:CO) : CO	Each CO Line can be assigned as connected to a CO Line or a PBX/CTX Line.	CO
5	01-02 CO LINE SIGNAL (1:DTMF/0:PULSE):DTMF	Each analogue CO Line can be assigned to send either DTMF or Pulses for dialed digits to the PSTN.	DTMF
6	01-02 UNSED		
7	01-02 UNIVERSAL ANS (1:ON/0:OFF) : OFF	Universal Night Answer (UNA) allows any station to answer a call on the CO Line by dialing the UNA code.	OFF
8	01-02 CO/IP GRP AUTH (1:ON/0:OFF) : OFF	Each CO/IP Group can be assigned to require the user enter an Authorization Code for access.	OFF
9	01-02 DATA STATION NO FAX :	Each CO/IP line can be assigned to recognize a FAX call when a specified station answers.
10	01-02 TENANCY GROUP (00-15) : 00	Only stations in the assigned Tenancy group are permitted access to the defined CO Line.	00
11	01-02 CO VOIP MODE VOIP MODE(1-6):COMMON	The VOIB channels can support iPECS, H.323 or SIP protocols. This field defines the protocol for the VoIP channel(s). 1: COMMON, 2:H.323 ONLY, 3: SIP ONLY, 4:RTP RLY, 5:H.323/RTP RLY, 6:SIP/RTP RLY	COMMON
12	01-02 PROCTOR ON/OFF (1:ON/0:OFF) : OFF	Each analogue CO line can be assigned to send the station number as DTMF digits for Proctor service.	OFF

Table 3.3.5.2-1 CO/IP ATTRIBUTES I (PGM 141)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
13	01-02 WAIT IF VSF BUSY (1:ON/0:OFF) : ON	When a DID/DISA call assigned to receive a VMIU/VMIB announcement arrives and all channels are busy, the call may wait with Ring back until a channel is available (ON) or route to the DID/DISA Destination - PGM 167.	ON
14-15	01-02 UNUSED		
16	01-02 RING TONE (00-12, 0:N/A) : 00	Ring Tone can be programmable by CO-line base admin.	00
17	01-02 UNUSED		
18	01-02 GAIN TABLE (1-3) : 1	TDM gain table can be programmed.	1
19	01-02 TONE TBL (1-5) : 1	Tone table can be programmed.	1
20	01-02 DGT CONV. TBL (01-15) : 01	Select digit conversion table.	01
21	01-02 PREPAID CALL (1:ON/0:OFF) : OFF	Enables Pre-paid Call feature.	OFF
22	01-02 PREPAID MONEY 0 (USED:0)	An amount can be associated with the station as prepayment for outgoing calls. The assigned "Pre-paid Money" is reduced by the calculated call cost (Call Metering or cost/minute). This parameter displays the remaining funds for outgoing calls. Prepaid Money is often used in small hospitality businesses. The "Used Pre-paid Money" displays the money that has been used.	
23	01-02 LDT ZONE (001-100) : 001	If the LDT Zone Number of a station/co line is equal to this value, this LDT table is available to the station/co line.	001
24	ADDED CO/IP ATTRIBUTE 1 PRESS FLEX KEY (1-2)		

Table 3.3.5.2-1 CO/IP ATTRIBUTES I (PGM 141)

19	01-02 REJECT ANONYMOUS (1:ON/0:OFF) : OFF	When REJECT ANONYMOUS "ON", incoming call without Caller ID will be rejected.	OFF
20	01-02 PREFIX TABLE ID (0-6) : 0	If prefix table ID is set to 0, then prefix dialing call cannot be applied.If prefix table ID is set to (1-6), then prefix dialing call can be applied with PREFIX DIALING TABLE (PGM 206)	0
21	01-02 CO CUT OFF TMR (00-99 MIN) : 00	Co base call cut off timer can be set at this field.	00
22	01-02 DISA DELAY TMR (0-9 SEC): 0	It is only used for Russia. System is connected to DISA call immediately, and DISA announcement is played after this timer.	0
23	01-02 LDT TBT INDEX (00-10) : 01	LCR will be operated with LDT table index.	1
24	01-02 DISA ANS TMR (0-9 SEC) : 0	It is only used for Russia. When DISA incoming call, System is connected after DISA Answer Timer.	0

Table 3.3.5.2-3 CO/IP ATTRIBUTES III (PGM 143)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
1	01-02 COLP TABLE IDX INDEX : NOT ASSIGNED	When an incoming call on an ISDN Line is answered, the system will send caller id using the number from the CLIP/COLP Table –PGM 201- entry defined by this parameter.	None
2	01-02 CLIP TABLE IDX INDEX : NOT ASSIGNED	When a call is placed on an ISDN Line, the system will send caller id using the number from the CLIP/COLP Table –PGM 201- entry defined by this parameter. For entry 00, the CLI STA NO entered in PGM 114-button 6 will be used in place of the station number. For other entries, the station number is added as a suffix to the entry in PGM 201.	None
3	01-02 ENBLOCKSENDING (1:ON/0:OFF) : OFF	This entry determines if the system sends dialed digits to the ISDN line as they are received (Overlap) or collects all digits and forwards them in a block, enblock. <Default>eMG80/100 : OFF,eMG800: ON	Refer ro description

Table 3.3.5.2-3 CO/IP ATTRIBUTES III (PGM 143)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
4	01-02 TYPE OF NO(0-4) NATIONAL (2)	For outgoing calls on the ISDN Line, this parameter defines the "Type of Number Plan" provided in Calling Party Information Element of the ISDN call SETUP message. 0: UNKNOWN, 1: INTERNATIONAL 2: NATIONAL, 3: Unused, 4: SUBSCRIBER	2
5	01-02 DID REMOVE NO (00-99) : 00	When a DID call is received on an ISDN Line, this entry determines the number of digits that will be removed starting with the first received digit.	00
6	02 TEI TYPE (1:AUTO/0:FIX) : AUTO	The TEI (Terminal Endpoint Identifier) is a unique identifier for each device attached to the ISDN line. When the system shares an ISDN connection with other devices, the TEI should be automatic to assure no conflict with other attached devices. When the ISDN connection is not shared, the Fixed identifier option should be employed.	AUTO
7	02 ISDN-SS CD/CR (1:EN/0:DIS) : DISABLE	Permits a user access to ISDN Supplementary Call Deflection or Call Re-route Service. (Except USA version)	Disable
8	02 ISDN 1 DGT RM (1:ON/0:OFF) : OFF	Select one digit remove mode in ISDN Called Digits (for Italy).	OFF
9	001-002 AOC TYPE (0-5) NO SERVICE (0)	When assigned, the system will analyze the Advice of Charge information in the Facility Message according to the ETSI specifications with appropriate regional protocol support.	No Service
10	001-002 ISDN LINE TYPE (1:U/0:A): U_LAW	The system will encode voice using the A-law or u-law PCM format and should be set to match the ISDN Back bone type.	u-Law
11	01-02 CALLING SUBADDR (1:ON/0:OFF) : OFF	For outgoing calls, the user's station number may be included in the ISDN call SETUP message Sub-address field.	OFF
12	01-02 IN PREFIX INS (1:ON/0:OFF) : OFF	Regional ISDN providers may use the Local Area Prefix code for special services. In cases where the code is not provided in the incoming call SETUP message, the system can insert the Local Prefix and Area code in SMDR, LNR, displays, etc.	OFF
13	01-02 OUT PREFIX INS (1:ON/0:OFF) : ON	Regional ISDN providers may use the Local Area Prefix code for special services. The system can insert the Local Prefix in the outgoing call SETUP message.	ON

Table 3.3.5.2-3 CO/IP ATTRIBUTES III (PGM 143)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	DEFAULT
14	01-02 INT ACCESS CODE	When an incoming call includes the international Country code in the ISDN call SETUP message, the Country code will be included in the station display. To include the Country code, Incoming Prefix insertion (button 12 above) and CLI Display for the station (PGM 114-button 1) must be On.	
15	01-02 AREA CODE	Regional ISDN providers may use the Local Prefix and Area codes for special services. The system will insert this Local Area Code in the call SETUP messages defined under button 13 above.	-
16	01-02 PREFIX CODE	Regional ISDN providers may use the Local Prefix and Area codes for special services. The system will insert this Local Prefix Code in the call SETUP messages defined under button 13 above.	-
17	01-02 CLI TRANSIT (1:ORI/0:CFW):CFW	When the system must send CLI to the ISDN for an off-net call, the CLI can be either the original caller's CLI or the CLI of the Off-net forwarding/transferring station.	CFW
18	01-02 PRESERVE NAME (1:ON/0:OFF): OFF	For DID lines, the CLI is normally displayed only during ringing. If enabled here, the CLI will be displayed for the entire call duration.	OFF
19	01-02 REDIRECT INFO NO SERVICE (0)	When the system needs to send Redirecting number to the ISDN for an off-net call, the Redirecting number can be either the original caller's CLI or the CLI of the Off-net forwarding/transferring station. If it is no service then system will not send this information. If it is OGR CLI (original CLI) then system will send original CLI that is received from incoming CO line. If it is CFW CLI then system will send redirecting CLI that is CLI for call off-net call forwarded station.	NO SERVICE
20	01-02 INC CLI CHOICE (1:ORI/0:TRANSIT):TRS	Incoming CLI Choice – When ISDN setup message have two CLI (Transit Point CLI / Original CLI), by using this option, CLI can be chosen.	Transit
21	01-02 CALLING NUM PLAN (0-6):ISDN/TELEPHONY (1)	ISDN Calling Party Numbering Plan can be programmable. <ul style="list-style-type: none"> • 0: Unknown. • 1: ISDN / Telephony. • 2: Data / Numbering. • 3: Telex. • 4: National Standard. • 5: Private. • 6: Reserved. 	ISDN/ Telephony

Table 3.3.5.2-3 CO/IP ATTRIBUTES III (PGM 143)

Table 3.3.5.2-5 CALL METERING FUNCTION

ENTRY	CALL METERING TYPE
00	- None
01	- 50 Hz
02	- 12 KHz
03	- 16 KHz
04	- Singular Polarity Reverse (SPR)
05	- Plural Polarity Reverse (PPR)
06	- No Polarity Reverse (NPR)

3.3.5.3 CO/IP Ring Assignment – PGM 144

Each CO/IP line is assigned to signal a station or group for an incoming call (Ring). Separate ring assignments are made for Day, Night, and Timed Ring modes.

When assigned to ring to a VSF announcement, the call can be dropped automatically after the assigned announcement by entering '#' after the VSF announcement number.

When CO Lines are programmed to Ring an external AA/VM or Feature Server Group as an Automated Attendant, the Ring signal can be on an immediate or delayed basis allowing other stations/groups to be assigned Ring and answer prior to signaling the AA.

The delay is defined in seconds from 00 to 30.

PROCEDURE	
<div style="border: 1px solid black; padding: 2px; width: fit-content;"> CO RING ASSIGNMENT ENTER COL RANGE </div>	Press the [PGM] button and dial 144.
<div style="border: 1px solid black; padding: 2px; width: fit-content; margin-top: 20px;"> 01-02 PRESS KEY DAY NIGHT TIMED-R </div>	Use the dial-pad to enter a CO Line range. For a single CO Line, enter the same number twice. Press the desired Flex button: <ul style="list-style-type: none"> - Button 1: Day Ring - Button 2: Night Ring - Button 3: Timed Ring Use the dial pad to select the destination type: <ul style="list-style-type: none"> - Dial 1: Station - Dial 2: Hunt Group - Dial 3: VSF - Dial 4: AA Ring Time - Dial 5: Net number Use the dial pad to enter a value for the selected destination type. For: <ul style="list-style-type: none"> - Dial 1: Enter a station range (enter the same station number twice to assign a single station) and the ring delay if any, in ring cycles (0-9). - Dial 2: Enter a hunt group number. - Dial 3: Enter the VSF announcement number and, if desired '#' to drop the call after the announcement. - Dial 4: For AA Ring Time, enter the desired delay from 00 to 30 seconds. Press the [Save] button to store the data entry.

3.3.5.4 DID Service Attributes – PGM 145

PSTN DID lines can be assigned the type of “Start” signaling and treatment of any received digits.

Digits can be used “as is” to route the call within the system, digits can be converted and used to route the call, or digits can be converted to a Table index to determine the call routing based on the assigned conversion method, see Table 3.3.9.7-1 (PGM 231).

PROCEDURE	
DID ATTRIBUTES ENTER COL RANGE	Press the [PGM] button and dial 145.
01-02 DID ATTRIBUTES PRESS FLEX KEY(1-4)	Use the dial-pad to enter the DID Line range. For a single DID Line, enter the same number twice.
	Select the desired Flex button; refer to Table 3.3.5.4-1.
	Use the dial-pad to enter the desired value for the selected Attribute, refer to Table 3.3.5.4-1.
	Press the [Save] button to store the data entry.

Table 3.3.5.4-1 DID LINE ATTRIBUTES (PGM 145)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 SIG. TYPE: 1-3 WINK (2)	Assigns the type of DID start signaling, Immediate, Wink or Delayed.	1: Immediate 2: Wink 3: Delayed	Wink
2	01-02 DID CONV TYPE (0 – 2) : 1	The received DID digits can be treated to determine call routing, simple conversion (PGM 230), “use as is” (no treatment), or modify using look-up Table (PGM 231).	0: Convert 1: Use as is 2: Look-up	Use as is
3	01-02 DID DGT RCV NO 3 (2 – 4)	Number of digits expected from the PSTN DID circuit.	2~4	eMG80/100:3 eMG800:4
4	01-02 DID DGT MASK #***	DID digit modification sequence: “#” deletes the digit, “*” accepts the digit as is, a digit (0~9) replaces the digit. The modification is based on the position of the digit (1~4) in the received number.	(0~9, *, #)	#***

3.3.5.5 DISA Service – PGM 146

DISA Service can be enabled on CO lines based on the system operation mode (Day, Night, and Timed).

DISA calls may be routed to dial tone and await user dialing (simple routing) or through a multi-layered Audio Text menu assigning a VSF Announcement/Customer Call Route (CCR) Table Index.

The system can be instructed to disconnect after the announcement or follow the CCR Table routing with a user-recorded announcement requesting specific inputs from the user.

PROCEDURE	
DISA ATTRIBUTES ENTER COL RANGE	Press the [PGM] button and dial 146.
01-02 DISA ATTRIBUTE F1:DAY F2:NIGHT F3:TIME	Use the dial-pad to enter the CO Line range. For a single CO Line, enter the same number twice.
001-002 DISA ATTRIBUTE DAY SERVICE 00 (00 – 71)	Select the desired Flex button: <ul style="list-style-type: none"> - Button 1: Day - Button 2: Night - Button 3: Timed
	Use the dial-pad to enter the desired VSF AA Announcement, (00: disabled, 01~70 CCR Table index PGM 228, or 71: await user digits). Enter '#' after the entry to include a "drop after announcement instruction".
	Press the [Save] button to store the data entry.

3.3.5.6 CO Line Preset Forward Attributes – PGM 147

The CO Line Preset Forward feature enables a CO line to initially ring at multiple stations and forward to a pre-determined destination (PGM 204).

The destination can be a station, Voice Mailbox, ACD group, or Hunt group. Each CO line has a Preset Forward Timer. Each CO line also can be assigned a VMID (Voice Mail Id) to allow sending specific VM digits when a CO line forwards to an external VM group.

PROCEDURE	
CO PRESET FWD ATT ENTER COL RANGE	Press the [PGM] button and dial 147.
01-02 CO PRE-FWD PRESS FLEX KEY(1-3)	Use the dial-pad to enter the CO Line range. For a single CO Line, enter the same number twice.
	Select the desired Flex button; refer to Table 3.3.5.6-1.
	Use the dial-pad to enter the desired value for the selected Attribute, refer to Table 3.3.5.6-1.
	Press the [Save] button to store the data entry.

Table 3.3.5.6-1 CO LINE PRESET FORWARD ATTRIBUTES (PGM 147)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 PRESET FWD TMR (00-99 SEC) : 00	An incoming call, which remains unanswered for this timer, is routed to the pre-determined Ring Table Index, PGM 147-button 2.	00-99 Sec	00
2	01-02 RING TBL INDEX INDEX : NOT ASSIGNED	If an incoming call remains unanswered after the Preset Fwd time the call is routed as defined in the ICLID Ring Assignment table bin entered here, refer to PGM 204.	001-250	
3	01-02 VMID NUMBER	Each CO/IP line can be assigned a VMID (Voice Mail Id) that is sent to the VM group to identify the desired Mailbox for the CO/IP line.	0000~9999	

3.3.5.7 CO Additional Attributes – PGM 148

CID Attributes are assigned for Analog CO Line Caller Id services.

PROCEDURE	
CO ADDITIONAL ATTR ENTER COL RANGE	Press the [PGM] button and dial 163.
01-02 CID SETTING PRESS FLEX_KEY (01-13)	Use the dial-pad to enter a CO line range. For a single CO Line, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.5.7-1.
	Use the dial-pad to enter desired data for the Attribute.
	Press the [Save] button to store the data entry.

Table 3.3.5.7-1 CO Additional Attributes (PGM 148)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 CID MODE SELECT (0-4) : FSK	CID signal type can be assigned according to the CID type PSTN provides. 0:Disabled, 1:FSK, 2 :DTAS FSK, 3:DTMF, 4:Russia CID	Refer to description	FSK
2	01-02 RCID DETECT (1: ALL/0: LOCAL) : ALL	Russia CID Detect Mode.	0: LOCAL 1: ALL	ALL
3	01-02 RCID REQUEST (1: AUTO/0: USER) : AUTO	Russia CID Request Mode.	0: USER 1: AUTO	AUTO
4	01-02 RCID REQ TMR(10ms) (010-150) : 030	Russia CID First Delay Timer.	010-150 (10msec)	030
5	01-02 RCID NOANS TMR(s) (001-300) : 020	Russia CID NO-Answer Timer.	001-300 (sec)	020
6	01-02 RCID DGT NUMBER (04-10) : 07	Russia CID Digit Number.	04-10	07
7	01-02 RCID REQ COUNT (1-3) : 1	Russia CID Request Count.	1-3	1
8	01-02 RCID REQ DELAY (10-30) : 10 (10ms)	Russia CID Retry Delay Timer.	10-30 (10msec)	10

Table 3.3.5.7-1 CO Additional Attributes (PGM 148)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
9	01-02 CC BLOCKING (0-2): DISABLED	It's for only Brazil R2, it blocks for collect call if double answer or with indication is selected. 0: Disabled, 1: Double Answer, 2: With Indicator	Refer to description	Disabled
10	01-02 CC ANS TMR (001-250): 010 (100ms)	If it is set to Double Answer for collect call blocking, this timer is sending dummy answer signal.	1-250 (100ms)	10
11	01-02 CC IDLE TMR (001-250): 020 (100ms)	If it is set to Double Answer for collect call blocking, this timer is sending dummy idle signal.	1-250 (100ms)	20
12	01-02 LINE MONITORING (1: ON / 0: OFF): ON	This determines that detect line fault or not.	0: OFF 1: ON	ON
13	01-02 RING DETECT REG (000-255): 015	In the web admin, it is located in the Maintenance page [Appliances Control] > [Analog CO Parameter Set].	000-255	015

3.3.5.8 NA ISDN Line Attributes – PGM 150

To comply with the North American ISDN standards, certain attributes must be defined for the system. These include Directory (telephone) Number and Service Profile (SPID) for the device. Note that this programming is required only for “Country Code” 1, USA installations.

PROCEDURE	
COL NA ISDN ATT ENTER CO RANGE	Press the [PGM] button and dial 150.
01-02 COL NA ISDN ATT PRESS FLEX KEY (1-8)	Use the dial-pad to enter a CO Line range. For a single CO Line, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.5.8-1.
	Use the dial-pad to enter desired data for the Attribute, refer to Table 3.3.5.8-1.
	Press the [Save] button to store the data entry.

Table 3.3.5.8-1 NA ISDN ATTRIBUTES (PGM 150)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 TYPE OF PX(1-4) NI1 (1)	The type of PSTN determines several specifics of the protocol and is required for proper operation. 1: NI 1, 2: NI 2, 3: 5 ESS, 4: NORTEL	Refer to description	NI 1
2	01-02 SPID NUMBER	The Service Profile Identifier (SPID) is a number assigned to a fully initializing ISDN terminal and enables the Stored Program Control switching System (SPCS) to identify the ISDN terminal at layer 3 of the D-channel signaling protocol. The SPID is a free-formatted numeric string composed of 9 to 23 numeric {0-9} and International Alphabet (IA5) characters. The SPID uniquely identifies a particular set of subscription parameters assigned to a TSP.	9-23 digits	
3	01-02 DN NUMBER	Initializing terminals are required to store a 7-digit DN in order to perform the compatibility checking procedures that are part of call termination.	23 digits	-
4	01-02 EKTS MODE (1: EKTS/0: NONE) : NONE	The EKTS (Electronic Key Telephone Service) terminal permits a user to operate those features that are specific to EKTS, as well as voice features that may function distinctly in the EKTS environment. EKTS allows a DN to be shared by more than one terminal, on the same or on different interfaces.	0: None 1: EKTS	NONE

Table 3.3.5.8-1 NA ISDN ATTRIBUTES (PGM 150)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
5	01-02 TYPE FOR 1/2/3 UNKNOWN (0)	ISDN CALLED NO is made with the International format, National format, Network format, Subscriber format, or Abbreviated format when user dials 1~3 digits. <ul style="list-style-type: none"> • 0: Unknown • 1: International • 2: National • 3: Network • 4: Subscriber • 5: Abbreviated 	Refer to description	Unknown
6	01-02 TYPE FOR 4/5/6 UNKNOWN (0)	ISDN CALLED NO is made with the International format, National format, Network format, Subscriber format, or Abbreviated format when user dials 4~6 digits. <ul style="list-style-type: none"> • 0: Unknown • 1: International • 2: National • 3: Network • 4: Subscriber • 5: Abbreviated 	Refer to description	Unknown
7	01-02 TYPE FOR 7/8/9 UNKNOWN (0)	ISDN CALLED NO is constructed with the International format, National format, Network format, Subscriber format, or Abbreviated format when user the dials 7~9 digits. <ul style="list-style-type: none"> • 0: Unknown • 1: International • 2: National • 3: Network • 4: Subscriber • 5: Abbreviated 	Refer to description	Unknown
8	01-02 TYPE FOR 10/11 UNKNOWN (0)	ISDN CALLED NO is constructed with the International format, National format, Network format, Subscriber format, or Abbreviated format when user the dials more than 10 digits. <ul style="list-style-type: none"> • 0: Unknown • 1: International • 2: National • 3: Network • 4: Subscriber • 5: Abbreviated 	Refer to description	Unknown

3.3.5.9 ISDN CO Line Attributes – PGM 151

ISDN standards require that the ISDN terminating device, in this case the iPECS eMG, include various “adjustable” timers and counters as described below.

PROCEDURE	
COL ISDN ATT ENTER CO RANGE	Press the [PGM] button and dial 151.
01-02 COL ISDN ATT PRESS FLEX KEY (01-16)	Use the dial-pad to enter a CO Line range (Ex. 01-02). For a single CO Line, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.5.9-1.
	Use the dial-pad to enter desired data for the Attribute, refer to Table 3.3.5.9-1.
	Press the [Save] button to store the data entry.

Table 3.3.5.9-1 ISDN CO LINE ATTRIBUTES (PGM 151)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 T200 (1- 5) (1-5) : 1 (sec)	The terminal must support one T200 timer for each data link supported.	1~5 (seconds)	1
2	01-02 T201 (1- 5) (1-5) : 1 (sec)	The minimum time between TEIID check messages.	1~5 (seconds)	1
3	01-02 T202(1-5) (1-5) : 2 (sec)	When the terminal transmits a TEI Identify Request message, it must provide one T202 timer for each logical link supported.	1~5 (seconds)	2
4	01-02 T203 (05 – 15) (05-15) : 10 (sec)	If the terminal initiates the link monitoring function, it must provide one T203 timer for each logical link supported. T203 defines the maximum time between message exchanges.	5~15 (seconds)	10
5	01-02 T204 (05 – 15) (05-15) : 10 (sec)	The T204 timer defines the minimum time between transmissions of XID messages.	5~15 (seconds)	10
6	01-02 T302 (10 – 30) (10-30) : 15 (sec)	In the Overlap dial mode, when the system receives incomplete dialing information from the ISDN, the system will wait the T302 timer duration for the additional digits. At time-out of this timer, the call will be disconnected.	10~30 (seconds)	15
7	01-02 T303 (01 – 10) (01-10) : 04 (sec)	T303 establishes the time Interval for a response after sending a call setup message.	1~10 (seconds)	4

Table 3.3.5.9-1 ISDN CO LINE ATTRIBUTES (PGM 151)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
8	01-02 T305 (10 – 60) (10-60) : 30 (sec)	T305 establishes the Interval for a Released signal after receiving a Disconnect message.	10~60 (seconds)	30
9	01-02 T308 (01 – 10) (01-10) : 04 (sec)	T308 establishes the Interval for a Released ACK signal after sending a release message.	1~10 (seconds)	4
10	01-02 T309 (001 – 100) (001-100) : 090 (sec)	Optional state timer.	1~100 (seconds)	90
11	01-02 T310 (10 – 60) (10-60) : 40 (sec)	Timer used in accepting Received signal.	10~60 (seconds)	40
12	01-02 N200 (1 – 5) (1-5) : 3	The terminal shall provide one N200 counter for each logical link supported. The default value of this counter shall be 3.	1~5	3
13	01-02 N201 (250 – 300) (250~300) : 260 (byte)	The N201 counter sets the maximum number of Octets in the ISDN information field.	250~300 (bytes)	260
14	01-02 N202 (1 – 5) (1-5) : 3	If the terminal transmits a TEI Identify Request message (to request assignment of a TEI), the terminal shall provide one N202 counter for each logical link that it supports.	1~5	3
15	01-02 N204 (1 – 5) (1-5) : 1	The N204 counter establishes the maximum number of XID re-transmissions from the terminal.	1~5	1
16	01-02 K_VALUE (1-5) : 1	The terminal shall provide one K counter for each logical link supported.	1~5	1

3.3.5.10 T1 Line Timers – PGM 152

North American T1 standards require that the T1 terminating device, in this case the iPECS eMG, include various “adjustable” timers and counters as described below.

PROCEDURE	
COL T1 ATT ENTER CO RANGE	Press the [PGM] button and dial 152.
01-02 COL T1 ATT PRESS FLEX KEY (01-13)	Use the dial-pad to enter a CO Line range (Ex. 01-02). For a single CO Line, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.5.10-1.
	Use the dial-pad to enter desired data for the Attribute, refer to Table 3.3.5.10-1.
	Press the [Save] button to store the data entry.

Table 3.3.5.10-1 T1 LINE TIMERS (PGM 152)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 PAUSE (1-9) : 2 (sec)	A timed pause may be included in a Speed Dial number, in which case, the pause time is defined by this entry. Not currently implemented.	1~9 (seconds)	2
2	01-02 RLS GRD (01-60) : 20 (100ms)	The releaseguard timer defines the length of time the system will maintain a Line as busy after the call has been terminated to assure the PSTN has sufficient time to ‘clear down’ the circuit. Not currently implemented.	01~60 (100 ms)	20
3	01-02 DT DELAY (02-50) : 10 (100ms)	The DT (Dial tone) Delay timer defines the duration that dial tone must be received for DT recognition. Not currently implemented.	02~50 (100 ms)	10
4	01-02 INTER DGT (15-30) : 15 (20ms)	The Inter Digit timer defines the duration between digit transmissions. Not currently implemented.	15~30 (20 ms)	15
5	01-02 WINK (07-15) : 10 (20ms)	For TIE or DID Lines the Wink timer defines the length of time the ‘wink’ (T1 TIE line circuit reversal) will last.	7~15 (20 ms)	10
6	01-02 OP RATE (0- 3) 60-40 (10pps) (0)	For Pulse signaling, defines the duration and make/break ratio of each pulse. 0: 60-40(10pps), 1: 66-33(10pps) 2: 60-40(20pps), 3: 66-33(20pps)	Refer to description	60-40 (10pps)
7	01-02 SEZ DTC (000-127) : 003 (20ms)	This timer defines the length of a valid ‘line seizure’ signal.	0~127 (20 ms)	3

Table 3.3.5.10-1 T1 LINE TIMERS (PGM 152)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
8	01-02 RELEASE (000-127) : 007 (20ms)	For Ground Start Lines, defines the minimum length of time ground will not be applied to the TIP side from the PSTN.	0~127 (20 ms)	7
9	01-02 IASG TY (1:DTMF/0:PULSE) : DTMF	Incoming Address Signaling Type defines the type of signaling (DTMF or Pulse) expected.	0~1	DTMF
10	01-02 RING DTC (2-9) : 2 (100ms)	The Ring DTC (detect) timer defines the minimum acceptable length of the Ring-on time during a ring cycle.	2~9 (100 ms)	2
11	01-02 RING STOP (10-60) : 60 (100ms)	The Ring Stop timer defines the maximum Ring-off time during a ring cycle.	10~60 (100 ms)	60
12	01-02 COLLECT DGT (1-6) : 3	Collect DGT (digits) defines the number of digits expected on a DID line.	1~6	3
13	01-02 STORE TIME (01~15) : 15 (1sec)	For DID lines, this timer defines the maximum delay between incoming DID digits.	1~15 (second)	15

3.3.5.11 DCOB CO Attribute – PGM 153

The DCOB Attributes defines various characteristics of the E1/PRI module when employing R2 signaling.

PROCEDURE	
DCOB COLINE ATT ENTER CO RANGE	Press the [PGM] button and dial 153.
01-02 DCOB CO ATT PRESS FLEX KEY (1-6)	Use the dial-pad to enter a CO Line range (Ex. 01-02). For a single CO Line, enter the same number twice.
	Press the desired Flex button; refer to Table 3.3.5.11-1.
	Use the dial-pad to enter desired data for the Attribute, refer to Table 3.3.5.11-1.
	Press the [Save] button to store the data entry.

Table 3.3.5.11-1 DCOB CO ATTRIBUTE (PGM 153)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01-02 LINE STATUS (1-9) : 6	Send Line status information to PX when a call routed to subscriber before the called party is ringing.	1~9	6
2	01-02 DNIS SERVICE (1:ON/0:OFF) : OFF	In R2, determine whether system will send caller information to PX or not.	0: OFF 1: ON	OFF
3	01-02 NO OF CLI DGTS (01-15) : 10	In R2, board request CLI Digit to PX.	01~15	10
4	01-02 DCOB TYPE(0-2) DID (2)	According to this type, the line can be restricted to seize CO line for outgoing call.	0: DID/DOD 1:DOD 2:DID	2
5	01-02 CALL CATEGORY (1-9) : 1	In R2 signaling, the category signal used by the iPECS is defined here.	1~9	1
6	01-02 DID DGT NUM (00-32) : 00	Maximum number of DID digits if line is E1/R2 (if it is N/A then it will follow PGM 145 3rd.)	00~32	0

3.3.6 SYSTEM DATA –PGM 160 to 182

3.3.6.1 System Attributes I &II–PGM 160 to 161

There are two (2) System Attributes programs to define settings that affect system-wide features and functions. Generally, the entry will turn the feature ON (enable) or OFF (disable).

Refer to Table 3.3.6.1-1 and Table 3.3.6.1-2 for a description of the Attributes, LCD displays and the data entries required.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> SYSTEM ATTRIBUTES 1 PRESS FLEX KEY (01-24) </div>	Press the [PGM] button and dial: - 160 for System Attributes I - 161 for System Attributes II.
	Press the Flex button for the desired Attribute, refer to Table 3.3.6.1-1 & Table 3.3.6.1-2.
	Use the dial-pad to enter desired data for the Attribute, refer to Table 3.3.6.1-1 to Table 3.3.6.1-2.
	Press the [Save] button to store the data entry.

Table 3.3.6.1-1 SYSTEM ATTRIBUTES I (PGM 160)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ATD CALL QUE RB TONE (1:RBT/0:MOH): MOH	When calling a busy attendant, the system will provide either ringer-back tone or MOH. If MOH is selected, the source must be defined in PGM 171.	0: MOH 1: RB tone	MOH
2	CAMP-ON RBT/MOH (1:RBT/0:MOH) : MOH	When Camp-On is used, the calling station will receive either ringer-back tone or MOH. If MOH is selected, the source must be defined in PGM 171.	0: MOH 1: RB tone	MOH
3	CO DIAL TONE DETECT (1 : ON/ 0 : OFF) : OFF	The system can use dial-tone detection or a timed pause for Speed Dial numbers that contain a Pause.	0: OFF 1: ON	OFF
4	CO LINE CHOICE (0:RR/1:LAST/2:FIRST): 1	CO Lines are selected by the system from groups using either the LAST used, ROUND robin method or FIRST line in the group.	0: ROUND 1: LAST 2: FIRST	LAST
5	DISA RETRY COUNT (1 –9): 3	A DISA user is allowed to retry erroneous authentication code entries. This entry sets the number of retries before the system disconnects.	1–9	3
6	EXTERNAL NIGHT RING (1 : ON/ 0 : OFF) : OFF	CO/IP calls, which are assigned UNA, can activate the Loud Bell Contact. An incoming call, received while in Night, will activate the contact.	0: OFF 1: ON	OFF

Table 3.3.6.1-1 SYSTEM ATTRIBUTES I (PGM 160)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
7	HOLD PREFERENCE (1: SYS/ 0: EXC) : SYS	A single depression of the[HOLD] button during CO call places the call onthe preferred hold, System orExclusive.	0: Excl 1: System	System
8	PRINT LCR CONV DIGIT (1 : LCR/ 0 : USER) : LCR	SMDR will output the numberdialed by either the system'sLCR or the user.	0: User 1: LCR	LCR
9	ATD CALL QUE AVAILABLE (1:ON/0:OFF) : OFF	The system can be configured toqueue incoming calls to a busyAttendant.	0: OFF 1: ON	OFF
10	USE PGM_0 IN ALL ATTD (1 : ON/ 0 : OFF) : OFF	This field allows Main attendantsaccess to all Attendant functionsincluding System Attendantfeatures and programming. (Except PGM 06 – Recordsystem announcement)	0: OFF 1: ON	OFF
11	OFFNET PROMPT USAGE (1 : ON/ 0 : OFF) : OFF	When a call is routed to adestination external to theiPECS, the Off Net routingprompt can be played. Notavailable in US version.	0: OFF 1: ON	OFF
12	CO-TO-CO UC TMR EXTEND (1:ON/0:OFF) : OFF	When an UnsupervisedConference is established withDISA, Off-Net Fwd, etc., theUnsupervised Conference timer(PGM 182-button 5determines the allowed durationof the call. If enabled here, theuser may dial '#' to extend theallowed duration.	0: OFF 1: ON	OFF
13	ACD MANAGER PRINT (1:ON/0:OFF) : OFF	When the optional ACDMessage events are desired, thesystem must be enabled to sendACD event messages.	0: OFF 1: ON	OFF
14	CALL LOG LIST NUM (15-50) : 15	The Call Log that saves theOutgoing call, Received call, orLost call information can bedisplayed by pressing Call LogDisplay Button. The maximumsize of the Call Log per station isdefined here.	15~50	15
15	REPEAT DTMF TONE (1:ON/0:OFF) : OFF	When enabled, the system willprovide DTMF repeat tone to thecaller's station. It's nothing to do with PSTN.	0: OFF 1: ON	OFF

Table 3.3.6.1-1 SYSTEM ATTRIBUTES I (PGM 160)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
16	AUTH RETRY COUNT (1-9) : 3	If a CO's have "CO/IP groupAuthorization" set to ON in PGM141, 8th or the Stations have "Station Account" set to ON in PGM112, 19th then a valid authorization code must be entered to make an external CO call. When user fails to enter a valid Authorization code in the number of attempts assigned in this field, the station is disconnected or the Station COS is changed to COS 7. If the COS 7 WHEN AUTH FAIL, PGM 161, 17th is on then the station COS is changed to COS 7 otherwise the station is disconnected. When the station COS is changed COS 7, the user must employ COS Restore in Station User PGM 2 to return the station to the normal COS.	1 ~ 9	3
17	CONF ROOM CO TEL NUMBER CO TEL:	ISDN DID number an external party must dial to enter a Conference room. UCS Client must pre-establish the Conf Room.	8 digits	
18	MPB DIFFSERV TAG(00-63): 04	MPB Diff-Serv pre-tag value.	00-63	04
19	UPGRADE MODE (1:FTP/0:TFTP): FTP	Upgrade transfer mode from MPB to IP devices.	1: FTP 0: TFTP	FTP
20	TRANSFER TONE (1:RBT/0:MOH): RBT	When a CO call is transferred to a busy extension, Ring Back Tone or Music On Hold will be played to the CO Line.	0: MOH 1: RBT	RBT
21	CONF WARN TONE (1:ON/0:OFF) : ON	As new members join a conference room, the system provides warning tone to conference members.	0: OFF 1: ON	ON
22	TLS for WEB (1:ON/0:OFF) : OFF	Enables Transport Layer Security TLS for Web access.	0: OFF 1: ON	OFF
23	DUMMY DIAL TONE (1:ON/0:OFF) : OFF	When a CO/IP line does not provide dial tone, the system can provide dummy dial tone to the user.	0: OFF 1: ON	OFF
24	SYSTEM 2 ADDED ATTR PRESS FLEX KEY (01-23)	Select button 24 to access added attributes 1~23.	FLEX 1 ~ FLEX 23

3.3.6.2 System Password – PGM 162

Access to the system database and maintenance functions can be protected by passwords up to twelve (12) digits. Three passwords can be defined, Keyset Admin, Remote access, and CID.

The Maintenance password has full and unlimited access to the database and maintenance functions of the system.

The User and Admin password have access to database items defined in Web Admin. Note there are no default passwords.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px;"> SYSTEM PASSWORD PRESS FLEX KEY (1-3) </div>	Press the [PGM] button and dial 162.
<div style="border: 1px solid black; padding: 5px;"> KEYSSET ADMIN PASSWORD @@@@ @@@@ @@@@ </div>	Press the Flex button for the desired password: <ul style="list-style-type: none"> - For the Keyset Admin password press Flex button 1. - For the Remote access password press Flex button 2. - For the CID password press Flex button 3.
<div style="border: 1px solid black; padding: 5px;"> REMOTE ACCESS PASSWORD @@@@ @@@@ @@@@ </div>	Enter the desired password, up to 12 digits. To erase a password press the [SPEED] button.
<div style="border: 1px solid black; padding: 5px;"> CID PASSWORD @@@@ @@@@ @@@@ </div>	Enter the desired password, up to 12 digits. To erase a password press the [SPEED] button. Press the [Save] button to store the password entry.

Table 3.3.6.2-1 System Passwords

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 5px;"> KEYSSET ADMIN PASSWORD @@@@ @@@@ @@@@ </div>	Admin password, configurable database access in Keyset Admin.	12 digits	none
2	<div style="border: 1px solid black; padding: 5px;"> REMOTE ACCESS PASSWORD @@@@ @@@@ @@@@ </div>	Remote access password, full and unlimited access to database and maintenance functions.	12 digits	none
3	<div style="border: 1px solid black; padding: 5px;"> CID PASSWORD @@@@ @@@@ @@@@ </div>	CID password.	12 digits	none

3.3.6.3 Alarm Attributes – PGM 163

The system can monitor an external contact. This contact is most often employed as an Alarm indicator or Doorbell. The Alarm attributes define the operation of the external contact.

The Alarm Signal sent to assigned stations can be repeating or a single burst, the former is often desired. For the Doorbell, a single tone is sent each time the contact activates.

Refer to Table 3.3.6.3-1 for a description of the features, the data entries required and LCD displays for each attribute.

PROCEDURE	
SYSTEM ALARM ATT PRESS FLEX KEY (1-8)	Press the [PGM] button and dial 163.
	Press the desired Flex button; refer to Table 3.3.6.3-1.
	Use the dial-pad to enter desired data for the attribute, refer to Table 3.3.6.3-1.
	Press the [Save] button to store the data entry.

Table 3.3.6.3-1 ALARM ATTRIBUTES (PGM 163)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ALARM ENABLE (1:ON/0:OFF) : OFF	This parameter enables the external contact monitoring circuitry.	0: OFF 1: ON	OFF
2	ALARM CONTACT TYPE (1:CLOSE/0:OPEN) : CLOSE	This parameter establishes the contact state that will activate the Alarm, close or open.	0: Open 1: Close	CLOSE
3	ALARM/DOORBELL MODE (1:ALARM/0:BELL): ALARM	The contact can be treated to function as a doorbell instead of an alarm.	0: Bell 1: Alarm	ALARM
4	ALARM SIGNAL MODE (1:RPT/0:ONCE) : RPT	The assigned stations will receive a Repeating signal or single burst (ONCE) of alarm tone.	0: Once 1: Repeat	RPT
5	EMER CALL NOTIFY (1:ON/0:FF) : ON	This parameter enables/disables the emergency call notification.	0: OFF 1: ON	ON
6	DCOB FAULT NOTIFY (1:ON/0:FF) : ON	This parameter enables/disables the DCOB Fault notification.	0: OFF 1: ON	ON
7	SIP REG FAULT NOTIFY (1:ON/0:FF) : ON	This parameter enables/disables the SIP Registration Fault notification.	0: OFF 1: ON	ON
8	TEMP LICENSE NOTIFY (1:ON/0:OFF) : ON	This entry enables user to get the notification before expiring Temp license.	0: OFF 1: ON	ON

3.3.6.4 Attendant Assignment – PGM 164

eMG80/100 is consist of 1 System attendant and 3 Main attendant. eMG800 is consist of 1 System attendant and 4 Main attendant. The System Attendant has higher priority in call handling and system management functions with access to PGM 0. As a default, the System Attendant is assigned Station 100 for eMG80/100 and Station 1000 for eMG800. Main Attendants are not assigned by default.

PROCEDURE	
ATTENDANT ASSIGNMENT 100	Press the [PGM] button and dial 164.
ATTENDANT ASSIGNMENT 100	Select the desired button: - Button 1: System Attendant - Button 2: Main Attendants
	Use the dial-pad to enter desired station numbers for the System and Main Attendants. Use the [SPEED] button to erase an entry and the [VOL UP]/[VOL DOWN] button to scroll through the Main Attendants.
	Press the [Save] button to store the Attendant assignment entry.

3.3.6.5 Multi-cast RTP/RTCP Ports – PGM 165

Multi-cast is employed by the system to send BGM, MOH, paging and Push-To-Talk packets. Employing a single multi-cast packet reduces the overall LAN traffic. In some cases, specifically when multiple systems are connected to the same default router it may be advantageous to define different ports for each system.

PROCEDURE	
MULTICAST RTP/RTCP PRESS FLEX KEY (1-2)	Press the [PGM] button and dial 165.
MULTICAST RTP PRESS FLEX_KEY (01-24)	Press Flex button 1 for RTP ports or Flex button 2 for RTCP ports.
	Press the desired Flex button; refer to Table 3.3.6.5-1. The 24 Flex buttons are used to assign ports for the first 24 RTP/RTCP functions. To assign port numbers for additional RTP/RTCP functions, use the [VOL UP]/[VOL DOWN] buttons.
	Use the dial-pad to enter desired data for the port, refer to Table 3.3.6.5-1.

Table 3.3.6.5-1 MULTI-CAST RTP/RTCP PORTS — (PGM 165)

3.3.6.6 DISA COS – PGM 166

A DISA user is subject to the dialing restrictions assigned in the DISA Class-of-Service (COS). The restrictions applied are the same as with the corresponding Station COS levels 1~11 and interact with the CO COS in the same manner.

Assignments for DISA COS are made for the Day, Timed and Night mode of system operation. The default for all three DISA COS modes is 1, no restrictions.

PROCEDURE	
DISA COS (1 – 11) DAY: 07 NIGHT: 07 TIMED:07	Press the [PGM] button and dial 166.
	Select the desired button; - Button 1: Day mode COS - Button 2: Night mode COS - Button 3: Timed mode COS
	Use the dial-pad to enter desired DISA COS (1~11).
	Press the [Save] button to store the DISA COS data entry.

3.3.6.7 DID/DISA Destination – PGM 167

When a DID line or DISA user dials an invalid/vacant or busy station number the caller will be sent to the assigned destination that is selected according to the CO tenancy group of the DID/DISA line.

The destination is separately defined for invalid, busy, no answer and DND conditions and can be defined as the Attendant, busy tone, Station Group or VSF System Announcement.

Note that for calls on a DID line to a busy station, Call Wait can be assigned, refer to PGM 113, Station Attributes III, button 9.

Also, for DID calls only, announcements (prompts) can be sent from the VSF to the caller for various conditions, busy, error, DND, No Answer, reroute busy, reroute error, reroute no answer, or Attendant Transfer.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px;"> DID/DISA DESTINATION ENTER ICM GROUP (00-15) </div>	Press the [PGM] button and dial 167. Select ICM tenancy group (eMG80/100:0~15 / eMG800:0~32)
<div style="border: 1px solid black; padding: 5px;"> DID/DISA DESTINATION :0 PRESS FLEXKEY (1-9) </div>	Press the [PGM] button and dial 167 and press Flexible button (Ex.1).
<div style="border: 1px solid black; padding: 5px;"> BUSY DESTINATION TONE (F1-F4) </div>	Select the desired Flex button, - Button 1: Busy Destination (F1-F4) - Button 2: Error Destination (F1-F4) - Button 3: No Answer Destination (F1-F4) - Button 4: VSF Prompt Usage (F1-F5) - Button 5: Reroute Busy Destination (F1-F3) - Button 6: Reroute Error Destination (F1-F3) - Button 7: Reroute No answer Destination (F1-F3) - Button 8: DND destination (F1-F3) - Button 9: Reroute NET CO BUSY Destination (F1-F3)
	For Flex button 1~3 or 1~4, use the dial-pad to enter 1: ON or 0: OFF for the following VSF prompts. - 1: Tone - 2: Attendant - 3: Station Group number - 4: VSF Announcement For Flex button 4, select Flex button 1~5 for the desired VSF prompt and use the dial-pad to enter 1: ON or 0: OFF: - Button 1: Busy Prompt - Button 2: Error Prompt - Button 3: DND Prompt - Button 4: No Answer Prompt - Button 5: Attendant Transfer Prompt
	Press the [Save] button to store the destination data entry.

3.3.6.8 External Control Contacts – PGM 168

The MPBs include programmable contacts, which can be used to control external devices. Refer to Table 1.1-1 System Capacity Chart for number of available contacts. Each contact is assigned to activate under one of several conditions. As a Loud Bell Contact (LBC), the contact will activate when the assigned station or group receives an external call. Note for LBC, when the system is in the Night or Timed Ring mode, the contact will activate for incoming UNA calls and will ignore any station assignment. The contact may alternatively activate as a Door open contact, when External Page Zone 1 is accessed.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> EXT CONTROL CONTACT PRESS FLEXKEY (1-2) </div>	Press the [PGM] button and dial 168.
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> EXT CONTROL CONTACT NO 1 : ... (1-3) </div>	Select Flex button 1~2 for the desired External Control contact. Use the dial-pad to enter desired data. - 1: LBC + station number - 2: Door open - 3: External Page 1 access Press the [Save] button to store the External Contact data entry.

3.3.6.9 LCD Display Mode -PGM 169

The LCD display mode sets the time (12/24 hr.), date (day/month order), language and day-of-week display.

Refer to Table 3.3.6.9-1 and Table 3.3.6.9-2 for a description of the modes, the data entries required and LCD displays for each attribute.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> LCD DISPLAY MODE PRESS FLEX KEY (1-4) </div>	Press the [PGM] button and dial 169.
	Select the desired Flex button; refer to Table 3.3.6.9-1.
	Use the dial-pad to enter the desired mode and language, refer to Table 3.3.6.9-1 and Table 3.3.6.9-2.
	Press the [Save] button to store the LCD Display mode data entry.

Table 3.3.6.9-1 LCD DISPLAY MODE (PGM 169)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	LCD DATE MODE (1:MMDD/0:DDMM):MMDDYY	Sets the Date display as month/day or day/month. 0: DD-MM-YY, 1: MM-DD-YY	Refer to description	MMDDYY
2	LCD TIME MODE (1:12H/0:24H):12H	Sets the Time display mode as 12 hour or 24-hour (military) time. 0: 24 Hour Mode, 1: 12 Hour Mode	Refer to description	12 Hour
3	LCD LANGUAGE (00-18) ENGLISH (00)	Sets the Language used in the LCD. Refer to Table 3.3.6.9-2 below.	00~18	00 (English)
4	LCD WEEKDAY MODE (0-2) PGM 169 BTN 1 (0)	Sets the Day-of-Week (DoW) display mode: 0: no DoW, see PGM 169-BTN1 1: display MM/DD WDY, alpha month display, overrides button 1. 2: display MM DD WDY, numeric month display, overrides button 1.	Refer to description	Use button 1

3.3.6.10 Button LED Flash Rate – PGM 170

The LED flash rate for various functions and states can be assigned any one of the system's 15 signals. The various functions and states are shown in Table 3.3.6.10-1. The 15 flash signals available in the system are shown in Table 3.3.6.10-2.

PROCEDURE	
LED FLASHING RATE PRESS FLEX_KEY (1-24)	Press the [PGM] button and dial 170.
LED FLASHING RATE PRESS FLEX KEY (25-35)	There are 35 Flash rate entries represented by Flex buttons. To access entries 25 to 35, use the [VOL UP]/[VOL DOWN] buttons. Press the desired Flex button; refer to Table 3.3.6.10-1.
	Use the dial-pad to enter desired data for the flash rate, refer to Table 3.3.6.10-1 and Table 3.3.6.10-2.
	Press the [Save] button to store the Flash Rate data entry.

3.3.6.11 Music Sources – PGM 171

Music inputs are provided for use as the Background Music and/or Music-On-Hold source inputs. MPBs provide for two (2) music inputs.

The first input is the internal source and the second is external. In addition, a VMIU or VMIB announcement may be recorded and played as MOH to a holding caller. And SLIB port is used as MOH to a holding caller.

PROCEDURE	
MUSIC ASSIGN PRESS FLEX KEY (1-6)	Press the [PGM] button and dial 171.
	Select the desired Flex button; refer to Table 3.3.6.11-1.
	Use the dial-pad to select the desired Music Source, refer to Table 3.3.6.11-1.
	To save the Music Source, press the [Save] button.

Table 3.3.6.11-1 MUSIC SOURCES FOR MOH & BGM (PGM 171)

7~33	VSF MOH4~30 (01-70) VSF NO (..)	A system announcement could be used for VSF MOH 4~30	01-70	N/A

3.3.6.12 PABX Access Codes – PGM 172

When the system is used “behind” a PBX/CTX, the system needs to recognize the PBX/CTX Trunk access codes to implement dialing restriction, tone detection sequences and Flash timing.

A maximum of four (4) Trunk Access Codes of one (1) or two (2) digits can be entered.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> PABX ACCESS CODE PRESS FLEXKEY (1-4) </div>	Press the [PGM] button and dial 172.
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> PABX ACCESS CODE 1 .. </div>	Select the Flex button for the desired Access Code (button 1~4). Use the dial-pad to enter the PABX Trunk Access Code, two (2) digits 0~9, Use “*” as a wild card (any digit) entry. Press the [Save] button to store the access code data entry.

3.3.6.13 Ringing Line Preference Priority – PGM 173

When multiple calls are ringing at a station assigned Ringing Line Preference, the order of preference can be assigned based on the type of call; CO/IP Transfer (XFR), CO/IP Recall (REC), Incoming call (INC), or CO/IP Queue (QUE).

ICM calls are always assigned the lowest priority.

PROCEDURE									
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> <table style="width: 100%; text-align: center;"> <tr> <td>XFR</td> <td>REC</td> <td>INC</td> <td>QUE</td> </tr> <tr> <td>1</td> <td>2</td> <td>3</td> <td>4</td> </tr> </table> </div>	XFR	REC	INC	QUE	1	2	3	4	Press the [PGM] button and dial 173. Select the Flex button for the desired Call Type; refer to Table 3.3.6.13-1. Use the dial-pad to enter the priority 1~4. Press the [Save] button to store the RLP Priority data entry.
XFR	REC	INC	QUE						
1	2	3	4						

Table 3.3.6.13-1 RLP PRIORITY (PGM 173)

BTN	DESCRIPTION	RANGE	DEFAULT
1	CO/IP Transferred call	1~4	1
2	CO/IP Recall	1~4	2
3	CO/IP Incoming call	1~4	3
4	Queued CO/IP recall	1~4	4

3.3.6.14 RS-232 Port Settings – PGM 174

The system has an RS–232 serial port located on the MPB; refer to the **iPECS eMG Hardware Description and Installation Manual**. Certain characteristics of each port are programmable: baud rate, RS–232 control, and page settings. Refer to Table 3.3.6.14-1 for a description of the settings, the data entries required and LCD displays.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> RS232 PORT SETTING PRESS FLEX KEY (1-3) </div>	Press the [PGM] button and dial 174.
	Press Flex button 1 for Serial port 1 or Flex button 2 for USB COM1 port or Flex button 3 for USB COM2 port, then select a Flex button for the desired attribute (e.g. Flex button 1), refer to Table 3.3.6.14-1.
	Use the dial-pad to enter the desired Port data, refer to Table 3.3.6.14-1.
	Press the [Save] button to store the Port Data entry.

Table 3.3.6.14-1 RS–232 PORT SETTINGS (PGM 174)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 2px;"> SERIAL1 PORT SETTING PRESS (F1-F5) </div>	Select a Flex button for the desired attribute.	F1-F5	
1-1	<div style="border: 1px solid black; padding: 2px;"> SERIAL1 BAUD RATE BAUDRATE: 115200 </div>	This entry establishes the BAUD rate for the RS-232 serial port.	1: Unused 2: 9600 3: 19200 4: 38400 5: 57600 6: 115200	115200
1-2	<div style="border: 1px solid black; padding: 2px;"> SERIAL1 CTS/RTS (1:ON/0:OFF):OFF </div>	The system’s RS-232 port can support Clear-to-Send (CTS) and Ready-to-Send (RTS), control leads.	0: OFF 1: ON	OFF
1-3	<div style="border: 1px solid black; padding: 2px;"> SERIAL1 PAGE BREAK (1:ON/0:OFF):OFF </div>	The system can send a page break command over the serial port at the end of each page. See button 4 for page length set-up.	0: OFF 1: ON	OFF
1-4	<div style="border: 1px solid black; padding: 2px;"> SERIAL1 LINE PAGE (001-199) : 066 </div>	This entry is used to set the page length, the number of lines the system will send before sending the page break, see button 3 above.	001~199	66
1-5	<div style="border: 1px solid black; padding: 2px;"> SERIAL 1 XON/XOFF (1:ON /0:OFF):XOFF </div>	This entry enables XON/XOFF protocol. (It is not supported)	0: OFF 1: ON	XOFF

3.3.6.15 Serial Port Function Selections – PGM 175

The system has an RS-232 serial port located on the MPB; Also, the system can employ IP over three (3) TCP channels for the output of various system information.

Each output function is assigned a Serial port or TCP channel that is used to output the information. In addition, a TCP port must be assigned when a function is defined to use a TCP channel.

The Serial port is located on the MPB; refer to the **iPECS eMG Hardware Description and Installation Manual**. Note each function can be defined to use only one output. Refer to Table 3.3.6.15-1 and Table 3.3.6.15-2 for a description of the selections, the data entries required and LCD displays.

PROCEDURE	
PRINT PORT SELECTION PRESS FLEX_KEY (1-2)	Press the [PGM] button and dial 175.
SELECT TCP NO PRESS FLEX_KEY (1-9)	Press Flex button 1 to assign the output type for each function or Flex button 2 to assign the TCP port for the function when a TCP channel is selected for the function.
	Select the Flex button for the desired function, refer to Table 3.3.6.15-1 or Table 3.3.6.15-2.
	Use the dial pad to enter the output type (Flex button 1) or TCP port (Flex button 2). For Flex button 1 the entries available are: <ul style="list-style-type: none"> - 1: Serial port 1 - 2: Serial port 2 - 3: TCP channel 1 - 4: TCP channel 2 - 5: TCP channel 3 - 6: USB COM1 (6) - 7: USB COM2 (7)
	Press the [Save] button to store the data entry.

Table 3.3.6.15-1 FUNCTION OUTPUT TYPE (PGM 175)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	OFF LINE SMDR (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for Off-line SMDR/Statistics output.	1 ~ 7	SERIAL1
2	ADMIN DATA (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for the ADMIN Report output.	1 ~ 7	SERIAL1
3	TRAFFIC (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for the TRAFFIC report output.	1 ~ 7	SERIAL1
4	SMDI (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for the SMDI output.	1 ~ 7	SERIAL1

Table 3.3.6.15-1 FUNCTION OUTPUT TYPE (PGM 175)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
5	CALL INFO (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used to receive Call Information output.	1 ~ 7	SERIAL1
6	ON-LINE SMDR (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for the On-line SMDR.	1 ~ 7	SERIAL1
7	TRACE (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for the Trace output.	1 ~ 7	SERIAL1
8	DEBUG (1-7) SERIAL1 (1)	Defines the serial port or TCP channel used for the Debug output.	1 ~ 7	SERIAL1
9	ACD PACK (1-7) SERIAL 1 (1)	Defines the serial port or TCP channel used for the Unified Messages.	1 ~ 7	SERIAL1

Table 3.3.6.15-2 OUTPUT FUNCTION TCP PORT (PGM 175)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	OFF-LINE SMDR (1-9999) TCP PORT(NULL)	Defines the TCP port used for Off-line SMDR/ Statistics output.	1 ~ 9999	NULL
2	ADMIN DATA (1-9999) TCP PORT(NULL)	Defines the TCP port used for the ADMIN Report output.	1 ~ 9999	NULL
3	TRAFFIC (1-9999) TCP PORT(NULL)	Defines the TCP port used for the TRAFFIC report output.	1 ~ 9999	NULL
4	SMDI (1-9999) TCP PORT(NULL)	Defines the TCP port used for the SMDI output.	1 ~ 9999	NULL
5	CALL INFO (1-9999) TCP PORT(NULL)	Defines the TCP port used to receive Call Information output.	1 ~ 9999	NULL
6	ON-LINE SMDR (1-9999) TCP PORT(NULL)	Defines the TCP port used for the On-line SMDR.	1 ~ 9999	NULL
7	TRACE (1-9999) TCP PORT(NULL)	Defines the TCP port used for the Trace output.	1 ~ 9999	NULL

Table 3.3.6.15-2 OUTPUT FUNCTION TCP PORT (PGM 175)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
8	DEBUG (1-9999) TCP PORT(NULL)	Defines the TCP port used for the Debug output.	1 ~ 9999	NULL
9	ACD PACK (1-9999) TCP PORT(NULL)	Defines the TCP port used for Unified Messages.	1 ~ 9999	NULL
10	I-SMDR (1-9999) TCP PORT(NULL)	Defines the TCP port used for I-SMDR(Interactive-SMDR)	1 ~ 9999	NULL

3.3.6.16 Break/Make Ratio – PGM 176

For Pulse dial CO Lines, the system supports 10pps and the percent break/make ratios of 66/33 or 60/40.

PROCEDURE	
BREAK/MAKE RATIO (1:66/33 / 0: 60/40): 60/40	Press the [PGM] button and dial 176.
	Dial the digit (1 or 0) for the desired Break/Make ratio: - 1: 66/33 - 0: 60/40
	To save Break/Make ratio data, press the [Save] button.

3.3.6.17 SMDR Attributes – PGM 177

Station Message Detail Recording (SMDR) is an ASCII output of details on both incoming and outgoing calls. Various SMDR attributes can be assigned including; output records for all calls or LD only, call cost per pulse when using call metering, etc. Refer to Table 3.3.6.17-1 for a description of each Attribute, LCD displays and the data entries required.

PROCEDURE	
SMDR ATTRIBUTES PRESS FLEX KEY (01-24)	Press the [PGM] button and dial 177.
	Press the desired Flex button; refer to Table 3.3.6.17-1.
	Use the dial-pad to enter the desired data, refer to Table 3.3.6.17-1.
	To save SMDR Attribute data, press the [Save] button.

Table 3.3.6.17-1 SMDR ATTRIBUTES (PGM 177)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	SMDR SAVE (1:ON/0:OFF) : OFF	The system can store all outgoing calls (ON) or only calls that exceed the SMDR Timer (OFF). The later allows PSTN call set-up times to be removed from the recorded call time. For SMDR Timer settings refer to button 12 below.	0: OFF 1: ON	OFF

Table 3.3.6.17-1 SMDR ATTRIBUTES (PGM 177)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
2	SMDR PRINT (1 : ON/ 0: OFF) : ON	The system can output SMDR records automatically as they occur (real-time) or only when requested. When this attribute is ON, SMDR output is automatic at call completion.	0: OFF 1: ON	ON
3	RECORD TYPE (1 : LD/ 0: ALL) : LD	The system can record all outgoing calls or only long distance calls. Long distance calls are identified by the LD digit count and LD codes assigned in Flex button 4 and 19, respectively.	0: ALL calls 1: LD	LD
4	LD CALL DIGIT COUNT (07-15) : 07	Dialed numbers, which exceed the assigned LD digit count, are considered long distance calls for SMDR and COS purposes.	07-15	07
5	PRINT INCOMING CALL (1 : ON/ 0: OFF) : OFF	The system can output records for incoming calls as well as outgoing calls. If enabled, incoming calls are recorded as well as outgoing calls.	0: OFF 1: ON	OFF
6	PRINT LOST CALL (1 : ON/ 0: OFF) : ON	The system can provide lost call records, records for unanswered incoming (abandoned) calls.	0: OFF 1: ON	ON
7	RECORD IN DETAIL (1 : ON/ 0: OFF) : ON	The system can output detailed call records (ON) or summary information (total number of calls, cost and cost for each station).	0: OFF 1: ON	ON
8	HIDDEN DIALED DIGIT (0 - 9) : 0	For security purposes, digits dialed for an outgoing call can be hidden and replaced with "*". This field defines the number of digits to hide. Button 24 below defines whether leading or trailing digits are hidden. In addition, the station must be assigned for SMDR HIDE, PGM 113 button 5.	0-9	0
9	SMDR CURRENCY UNIT ...	The unit of currency used for call cost can be identified with 3 alpha characters for easy reference, refer to Table 2.1.2-1.		-
10	COST PER PULSE 000000	When metering is provided by the PSTN, the cost per metering pulse can be assigned.	6 digits	000000
11	SMDR DECIMAL LOCATION (0-5) : 0	This value determines the position of the decimal in the Cost per Pulse, button 10, starting from the right most digits.	0-5	0

Table 3.3.6.17-1 SMDR ATTRIBUTES (PGM 177)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
12	SMDR START TIMER (1sec) (000 – 250) : 000	To allow for call set-up times through the PSTN, a “Valid call timer” can be set. A call must be longer than the SMDR Start Timer for a call record to be generated if enabled under button 1 above.	000~250 seconds	000
13	SMTP IP ADDR (WEB) 0.0.0.0	SMTP Mail server IPv4 address to receive the SMDR e-mail reports.	12-digits	
14	USER MAIL ADDR(WEB)	User e-mail address to receive the SMDR e-mail reports, display only. To change data, use Web Admin.		
15	MAIL SEND WEEKLY SET N/A (0-7)	Sets day of week to send SMDR data weekly (0 for no weekly data, 1-7 for Monday through Sunday)	0-7	0
16	MAIL SEND DAILY SET 00(00-23)	Sets time-of-day for SMDR data to be sent on a daily basis (00 for no daily records, 01-23 for hour of the day).	00-23	00
17	AUTO SEND MODE (1 : ON/ 0: OFF) : OFF	If the SMDR buffer is full, the system can automatically send a notification by e-mail.	0: OFF 1: ON	OFF
18	AUTO DELETE MODE (1 : ON/ 0: OFF) : OFF	Delete SMDR records after sending e-mail.	0: OFF 1: ON	OFF
19	LONG DISTANCE CODE 0	For SMDR and COS purposes, five (5) Long Distance codes of up to two (2) digits each can be assigned. If dialed as the 1st digits, the call is considered an LD call.	Flex button 1~5 + digits 0~9 & '*' as a wild card	BTN 1: 0
20	SMDR RIN/CLI/CPN SVC_I (0:RIN/1:CLI/2:CPN):0	For incoming calls, the system will send the defined data item for “Field I”. The data item may be CLI, CPN or Ring Service Time. Note the User dialed number is always provided for an outgoing call.	0: RING 1: CLI 2: CPN	RING time
21	MSN PRINT ON SMDR (1:ON/0:OFF) : OFF	Print MSN number Information in SMDR Record.	0: OFF 1: ON	OFF
22	SMDR RIN/CLI/CPN SVC_II (0:RN/1:CL/2:CP/3:NO):2	For incoming calls, the system will send the defined data item for “Field II”. The data item may be CLI, CPN or Ring Service Time.	0: RING 1: CLI 2: CPN 3: None	CPN

Table 3.3.6.17-1 SMDR ATTRIBUTES (PGM 177)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
23	PRINT SERIAL NO (1 : ON/0:OFF) : OFF	Print record number as part of SMDR output, will reset to 1 when SMDR capacity is reached or SMDR records are deleted, see button 18.	0: OFF 1: ON	OFF
24	SMDR ATTRIBUTRS(2ND) PRESS FELX KEY (01-19)		01-19	
24-1	SMDR HIDE DGT 1:RIGHT/0:LEFT) : RIGHT	When "HIDDEN DIALED DIGIT" is enabled, button 8 above, this field determines if leading or trailing digits are hidden.	0: Left 1: Right	Right
24-2	SMDR INTERFACE SVC (0 : OFF/1:CO/2:CO&ICM): 0	When enabled, the system stores SMDR data to send to applications including NMS upon request.	0: OFF 1: CO 2:CO&ICM	OFF
24-3	SMDR ICM SAVE (1:ON/0:OFF) : OFF	When enabled, intercom call data is stored as part of the SMDR data.	0: OFF 1: ON	OFF
24-4	SMDR ICM PRINT (1:ON/0:OFF) : OFF	When enabled, intercom call data is printed as part of the On-line SMDR.	0: OFF 1: ON	OFF
24-5	SMDR DISC CAUSE (1:ON/0:OFF) : OFF	When enabled, the disconnect cause is stored in Off-line SMDR data and printed as part of the On-line SMDR.	0: OFF 1: ON	OFF
24-6	LONG TIME CALL (10min) (000-144) : 000	To monitor long time CO call, a "Long Time Call" can be set. 0 means no monitoring. If CO call duration exceeds this value, a notification will be sent to NMS server and alarm will be displayed.	000 ~ 144	000
24-7	PRT LIMIT TO NET CALL (1:ON/0:OFF) : OFF	When CO call is transferred to Net transit out CO, it's automatically deleted from SMDR.	0: OFF 1: ON	OFF
24-8	INTERNATIONAL CODE	It is used to distinguish international call for SMDR.	4 digit
24-9	MOBILE PHONE CODE	It is used to distinguish mobile call for SMDR.	4 digit
24-10	SMTP MAIL SERVER ID	This field defines the user's ID for SMTP Mail server. If user's ID and password is assigned, SMTP Mail server will check the validation of user ID and password.	Max 40 Chars	

Table 3.3.6.17-1 SMDR ATTRIBUTES (PGM 177)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
24-11	SMTP MAIL SERVER PWD	This field defines the user's password for SMTP Mail server. If user's ID and password is assigned, SMTP Mail server will check the validation of user ID and password.	Max 20 Chars	
24-12	TRANSFER CHARGE RATE (0-2): INDIVIDUAL	<p>0. INDIVIDUAL: When a call is transferred to another station, the transferred call is charged to two stations respectively.</p> <p>1. INTEGRATE XFERING: When a call is transferred to another station, the call is charged to the transferring station.</p> <p>2. INTEGRATE XFERED: When a call is transferred to another station, the call is charged to the transferred station.</p>	Refer to description	INDIVIDUAL
24-13	ATD XSFER CHARGE RATE (0-2):INDIVIDUAL	<p>0. INDIVIDUAL: When Attendant make outgoing call and transfer this call to another station, the transferred will follow the Transfer Charge Mode.</p> <p>1. ATD CHARGING: When Attendant makes outgoing call and transfers this call to another station, the call is charged to the Attendant.</p> <p>2. XFERED CHARGING: When Attendant makes outgoing call and transfers this call to another station, the call is charged to the transferred station.</p>	Refer to description	INDIVIDUAL
24-14	SMTP DNS ADDR (WEB)	SMTP Mail server Domain address to receive the SMDR e-mail reports.	Max 100 Chars	-
24-15	SMTP SENDER MAIL (WEB)	Program VSF mail Sender mail Address (It is moved to web admin PGM 160-161)	Max 40 Characters	-
24-16	SMTP SECURITY (0-2) : NO SECURITY	Choose SMTP Security (It is moved to web admin PGM 160-161) 0:Nosecurity, 1:SSL, 2:TLS	Refer to description	0
24-17	SMTP PORT (00001-65535) : 00025	Choose SMTP Port (It is moved to web admin PGM 160-161)	1-65535	25

Table 3.3.6.17-1 SMDR ATTRIBUTES (PGM 177)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
24-18	VSF VM DISPLAY (0:'I', 1:'V')	If the value is 'I', the call to "VSF voice mail" is displayed as 'I' in SMDR. But if the value is 'V', the call to "VSF voice mail" is displayed as 'V' in SMDR. 'I' means "incoming call". 'V' is new indication for "VSF voice mail".	0:'I' 1:'V'	0:'I'
24-19	DISPLAY N TYPE (1:ON/0:OFF) : OFF	Display 'N' in SMDR to distinguish and it is network call.	1:ON 2:OFF	OFF
24-20	OUTGOING CALL TYPE (0:ALL/1:ANSWER) : ALL	ALL : all of outgoing call ANSWER : Answered outgoing call	Refer to description	ALL
24-21	PRINT DIALED DIGIT (0:PSTN/1:USER) : PSTN	PSTN : Outgoing digits to PSTN USER : Dialed digits by user	0: PSTN 1: USER	PSTN
24-22	SMDR ICM Ring Info (1:ON/0:OFF) : OFF	When enabled, intercom call data has additional information about ringing duration. With this option disabled, cannot differentiate calls if they are answered or unanswered because TIME field is used for both of talking and ringing durations. With this option enabled, TIME is only for talking duration, and RING duration is presented separately as it is presented for CO call data.	0: OFF 1: ON	OFF
24-23	SMDR ICM CPN Info (1:ON/0:OFF) : OFF	When enabled, intercom call data has additional information about original dialed digits. With this option disabled, always only the last talking or ringing station is specified as called party. With this option enabled, the original dialed number is presented separately in CPN field.	0: OFF 1: ON	OFF

3.3.6.18 System Date, Time and Daylight Saving Time (DST) – PGM 178

The system Date, Time and DST feature are established by this entry.

The date and time are employed for several features and functions including; LCR, LCD displays, SMDR outputs, Auto Ring Mode Selection, Wake-Up Alarm, etc.

If DST is enabled the system time will be adjust one-hour forward and back at the DST start and end times, respectively.

PROCEDURE	
<div style="border: 2px solid black; padding: 5px; width: fit-content; margin: auto;"> SET TIME/DATE & DST PRESS FLEX_KEY (1 - 5) </div>	Press the [PGM] button and dial 178.
	Press the Flex button for the desired Attribute; refer to Table 3.3.6.18-1.
	- Button 1: Time - Button 2: Date - Button 3: DST enable mode - Button 4: DST start time - Button5 : DST end time
	Use the dial-pad to enter desired data for the Attribute Refer to Table 3.3.6.18-1.
	Press the [Save] button to store the data entry.

Table 3.3.6.18-1 SYSTEM TIME, DATE & DST (PGM 178)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	SET TIME TIME 00:22(HH:MM)	Sets the system time.	HH:MM	
2	SET DATE DATE : 07/24/13(MMDDYY)	Sets the system date.	MMDDYY	
3	DST ENABLE MODE (1:ON/0:OFF) : OFF	Enables DST feature for System Time.	0: OFF 1: ON	OFF
4	DST START TIME ONLY POSSIBLE BY WEBADM	The DST start time. This can be set only via WEB Admin. 2ndSunday of March at2:00 AM	See DST Table	Refer to description
5	DST END TIME ONLY POSSIBLE BY WEBADM	The DST end time. This can be set only via WEB Admin. 1stSunday inNov. at2:00 AM	See DST Table	Refer to description

3.3.6.19 Multi Language – PGM 179

The VMIU and VMIB support multiple languages; up to six languages may be supported simultaneously.

Once the prompts are downloaded to the VMIU/VMIB, the caller receives the Language selection announcement for DISA and CCR calls as well as proceeding a Hunt Group guaranteed announcement or DID error announcement.

The language selection announcement will only affect the language prompts enabled for use.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> SET SYSTEM MULTI LANG ENTER SEQ NO (001 -300) </div>	Press the [PGM] button and dial 179 (e.g. enter 015). eMG800 sequence number range is 0001-2890.
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> SET 015 SYS MULTI LANG PRESS FLEX KEY (1-6) </div>	Select Flex button, - Button 1: N. AMERICA Prompt Usage - Button 2: UNKNOWN Prompt Usage - Button 3: UNKNOWN Prompt Usage - Button 4: UNKNOWN Prompt Usage - Button 5: UNKNOWN Prompt Usage - Button 6: UNKNOWN Prompt Usage
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> N.AMERICA Prompt Usage (1:ON/0:OFF) : OFF </div>	Us the dial pad to enable or disable the desired language prompts. Press the [Save] button to store the data entry.

3.3.6.20 System Timers I to III - PGMs 180-182

A number of timers can be assigned to control and affect many features and functions of the system. Refer to Table 3.3.6.20-1 to Table 3.3.6.20-3 for a description of the timers and the input required.

PROCEDURE	
SYSTEM TIMER 1 PRESS FLEX KEY (01-22)	Press the [PGM] button and dial: <ul style="list-style-type: none"> - 180 for System Timers I - 181 for System Timers II - 182 for System Timers III
	Press the Flex button for the desired Timer; refer to Table 3.3.6.20-1 ~3.
	Use the dial pad to enable or disable the desired language prompts.
	Press the [Save] button to store the data entry.
	Use the dial-pad to enter the desired Timer data, refer to Table 3.3.6.20-1~3.
	Press the [Save] button to store the Timer data entry.

Table 3.3.6.20-1 SYSTEM TIMERS I (PGM 180)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ATD RECALL TMR(min) (00-60) : 01	Determines the amount of time the attendant receives recall after which the system will disconnect the call.	00~60 minutes	01
2	CALL PARK TMR(sec) (000-600) : 120	Determines the amount of time before a parked call will recall the station that parked the call.	000~600 seconds	120
3	CAMP-ON RECALL TMR(sec) (000-600) : 030	When a call transfer is camped-on, this timer determines the amount of time before the station receives recall.	000~600 seconds	030
4	EX-HOLD RECALL TMR(sec) (000-600) : 060	Determines the amount of time before a call placed on exclusive hold will recall the station.	000~600 seconds	060
5	I-HOLD RECALL TMR(sec) (000-600) : 030	Determines the amount of time before a call that is recalling the station will recall before also recalling the attendant.	000~600 seconds	030
6	S-HOLD RECALL TMR(sec) (000-600) : 030	Determines the amount of time before a call placed on system hold will recall the station.	000~600 seconds	030
7	TRANS RECALL TMR(sec) (000-600) : 030	Determines the amount of time a transferred call will ring at the receiving station before recalling the station that transferred the call.	000~600 seconds	030
8	ACNR DELAY TMR(sec) (000-300) : 030	If the ACNR Pause Timer expires and no CO Line is available for ACNR recall, the delay timer sets the delay before ACNR attempts to access a CO line. The retry counter is not decremented by this action.	000~300 seconds	030

Table 3.3.6.20-1 SYSTEM TIMERS I (PGM 180)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
9	ACNR PAUSE TMR(sec) (000-300) : 030	This timer establishes the time between ACNR recall attempts.	000~300 seconds	030
10	ACNR RETRY COUNT (01-13) : 03	This counter sets the number of recall attempts for ACNR before ACNR is abandoned. (For CIS : 1-9).	1~13	03
11	ACNR TONE DTC TMR(sec) (001-300) : 030	If call progress tones are not available for ACNR, the system will wait this duration after dialing before considering the called party as busy/no answer.	001~300 seconds	030
12	AUTO RELEASE TMR(sec) (000-300) : 030	If a user accesses a CO/IP path and does not take any action, the system will automatically release the CO/IP path when this timer expires.	000~300 seconds	030
13	CCR INT DGT TMR(100ms) (000-300) : 030	Inter-digit timer used with Customer Call Routing function.	000~300 100msec	030
14	CALL RESTRICT TMR(min) CHECK PGM 123-F2	Not used. Check PGM123-BTN2	00~99 minutes	00
15	CO DIAL DLY TMR(100ms) (00-99) : 05	Delay for through connection to prevent illegal dialing when CO/PBX has slow response.	00~99 100msec	05
16	RLS GUARD TMR(100ms) (010-150) : 020	When a CO Line is returned to idle, the system will deny access for this time to assure the PSTN returns the CO circuitry to idle.	010~150 100msec	020
17	CO RING OFF TMR(100ms) (010-150) : 060	This timer sets the maximum 'OFF' duration of the incoming ring cycle to determine when a call has been abandoned.	010~150 100msec	060
18	CO RING ON TMR(100ms) (1-9) : 2	This timer sets the 'ON' time of the incoming ring cycle for the Ring Detect circuitry of the system to recognize an incoming call.	1~9 100msec	2
19	ELAPSED CALL TMR(sec) (005-900) : 180	Users can receive a periodic tone indicating the length of an outgoing call. This timer sets the time before and between the tones. Note Call Time Tone must be enabled in PGM 112-button 1.	005~900 seconds	180

Table 3.3.6.20-1 SYSTEM TIMERS I (PGM 180)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
20	WEB PWD GUARD TMR(min) (001-999) : 005	If no data packets are received during a Web Admin connection for the Guard time, a password check will be initiated by the system.	001~999 minutes	5
21	ON HOOK IDLE TMR (sec) (00-99) : 00	Phone (IP/DKTU) goes to idle after this timer when the phone receives disconnect message or signal from CO line.	00~99 seconds	0
22	CALL REC REPEAT TMR(sec) (000-999) : 000	If record warning tone is set and this timer is set greater than 1, it works periodically when it's recorded.	000~999 seconds	0

Table 3.3.6.20-2 SYSTEM TIMERS II (PGM 181)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	FWD NO ANS TMR(sec) (000-600) : 015	When a user activates No-Answer Forward, calls will ring for this duration before the calls are forward. The Station No-Answer Forward timer PGM 123 will take precedence.	000~600 (seconds)	015
2	DID/DISA NO ANS(sec) (000-255) : 000	A DID/DISA call to a station will forward to the DID/DISA Destination assigned in PGM 167 should this timer expire before the call is answered.	000~255 (seconds)	000
3	VSF USR RECORD(sec) (000-999) : 060	This timer sets the maximum duration allowed for the User Greeting in the system's basic Voice Mail.	000~999 (seconds)	60
4	VSF VALID USER MSG(sec) (0-9) : 4	This timer sets the minimum duration allowed for a voice mail message in the system's basic VSF Voice Mail. Messages shorter than this period are not stored.	0~9 (seconds)	4
5	DOOR OPEN TMR(100ms) (00-99) : 20	This timer sets the minimum contact closure time required to activate the contact assigned as a door open contact.	00~99 (100msec.)	20
6	ICM DIAL TONE TMR(sec) (001-255) : 010	If a user goes off-hook on the Intercom and takes no action for this timer, the user will receive error tone.	001~255 (seconds)	10
7	INTER DIGIT TMR(sec) (01-20) : 05	This timer sets the maximum allowed time between user dialed digits. At expiration, the user will receive error-tone.	01~20 (seconds)	05

Table 3.3.6.20-2 SYSTEM TIMERS II (PGM 181)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
8	MSG REMINDER TONE(min) (00-60) : 00	An iPECS Phone user will receive periodic reminder tones of a message waiting at intervals based on this timer.	00~60 (minutes)	00
9	PAGE TIME OUT TMR(sec) (000-255) : 015	Determines the maximum duration of a page after which the caller and Page Zone are released.	000~255 (seconds)	15
10	PAUSE TMR(sec) (1-9) : 3	A Timed pause of this duration is used in Speed Dial and during other automatically dialed digits sent to the PSTN.	1~9 (seconds)	3
11	SOFT AUTO RLS TMR(sec) (01-30) : 10	When a Soft Key is used on the iPECS Phone, after expiration of this timer, the display will return to the previous display.	1~30 (seconds)	10
12	VM PAUSE TMR(100 msec) (01-90) : 30	When the system sends a "Pause" to Voice Mail using In-band signals, the Pause interval is defined by this timer. Not available in the USA.	1~90 (100msec.)	30
13	VSF CUT ERR TMR(1 SEC) (01-90) : 00	To cut error tone in VSF message that is leaved in a station.	1~90 (1 sec.)	00
14	UNUSED	Unused.		
15	EMERGENCY RETRY TMR (00-99) : 00 SEC	System try to make emergency call according to the CO access rule/Prefer CO/CO group if system could not seize predefined emergency Co line within this timer.	00~99 (1 sec.)	00
16	ERROR TONE TMR(1sec) (005-180) : 030	Error Tone Timer	005~180 (1 sec.)	30
17	HOWLING TONE TMR(1sec) (000-180) : 030	Howling Tone Timer	000~180 (1 sec.)	30
18	NOTIFY PLAY DELAY(1sec) (01-99) : 10	When VM notification call uses LCO, system will treat the call as the answered after this timer and play the new message prompt.	1~99 (1 sec.)	10
19	SHORT MODEM TMR(1sec) (01-60) : 10	If {Short modem} of a SLT is ON, the SLT maintains the modem mode for this time.	01~60 (1 sec.)	10

Table 3.3.6.20-2 SYSTEM TIMERS II (PGM 181)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
20	BUTTON IDLE TMR(1sec) (00,10-99) : 00	When a button is pressed, auto idle timer is added. A button is pressed in idle state, it goes to a menu list state.(not calling state) In menu list state, this auto idle timer is applied. The button that is applied this timer is as below. - 1. Transfer / PGM. - 2. Speed. - 3. Menu. - 4. Directory. - 5. Message. - 6. Call Log.	00,10~99 (1 sec.)	00

Table 3.3.6.20-3 SYSTEM TIMERS III (PGM 182)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	SLT HOOK BOUNCE(100ms) (01-25) : 01	This timer determines the duration the system considers an actual state change in the hook-switch and not a spurious contact bounce.	01~25 (100msec.)	01
2	SLT MAX H_FLASH(100ms) (01-25) : 07	This timer sets the maximum time an SLT user can depress the hook-switch for a Flash signal.	01~25 (100msec.)	07
3	SLT MIN H_FLASH(10ms) (000-250) : 010	This time sets the minimum time an SLT user must depress the hook-switch for a Flash signal.	000~250 (10 msec.)	010
4	STA AUTO RLS TMR(sec) (000-300) : 060	For an internal call, the system will return a station to idle if the call remains unanswered for this duration.	000~300 (seconds)	060
5	UNSUPER CONF TMR(min) (00-99) : 10	This timer determines the duration of an "Unsupervised conference" before the station is recalled or the conference is dropped.	00~99 (minutes)	10
6	PRIME LINE TMR(sec) (01-20) : 05	This timer sets the delay (no action duration) for delayed Prime Line operation.	01~20 (seconds)	05
7	WINK SIGNAL TMR(10ms) (010-200) : 010	This timer sets the duration of the "Seize Acknowledge Signal" (Wink) sent to the PSTN on a DID line.	010~200 (10 msec.)	010

Table 3.3.6.20-3 SYSTEM TIMERS III (PGM 182)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
8	EN-BLOC I_DGT TMR(sec) (01-20) : 05	When an ISDN Line is assigned to send digits En-block, PGM 143-button 3, the system will send a dialed digit if the user dials “#” or this timer is expired.	01~20 (seconds)	05
9	DTMF DURATION TMR(10ms) (04-99) : 10	This timer establishes the duration of the DTMF tone sent on an analog CO Line.	04~99 (10 msec.)	10
10	FLEX DID TMR(100ms) (01-99): 30	The system will receive DID digits for this timer. After the timer expires, the system will use the last 2 to 4 digits received as DID digits.	01~99 (100msec.)	30
11	WAKE UP FAIL TMR (sec) (00-99): 20	Provide wake up fail indication to attendant according to this timer.	00~99 (1 sec.)	20
12	PREPAID WARN TMR (sec) (00-99): 00	Prove warning tone when run out of prepaid money if this timer is not zero.	00~99 (1 sec.)	00
13	FAX DETECT TMR (sec) (01-20): 10	It is maximum fax tone detection time to deliver FAX call to fax destination.	1~20 (1 sec.)	10
14	AUTO PAUSE TMR (sec) (000-255): 000	IPCR Mute function will be released by this auto pause released timer.	0~255 (1 sec.)	0

3.3.6.21 In-Room Indication – PGM 183

The Supervisor Station can set the In-Room Indication to all members in the same Group up to 10 bins can be programmed, and each bin has (at most) 20 members excluding the Supervisor.

PROCEDURE	
IN ROOM INDICATION ENTER BIN NO (01-10)	Press the [PGM] button and dial 183.
IN ROOM INDICATION F1:SUPERVISOR F2:MEM	Use the dial-pad to enter the desired bin number.
	Press the desired Flex button; refer to Table 3.3.9.6-1.
	Press the [Save] button to store the data entry.

Table 3.3.6.21-1 In-Room Indication (PGM 183)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	IN ROOM INDICATION SURERVISOR : STA 100	Assigns Supervisor station.		
2	STA 100 MEM 101	This entry assigns stations as members.		

3.3.6.22 DCOB SYS Timers – PGM 186

A number of timers can be assigned to control and affect operation of E1 lines using R2 signaling. Refer to Table 3.3.6.22-1 for the timer descriptions and inputs required.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> DCOB SYS ATTRIBUTES PRESS FLEX KEY (1-6) </div>	Press the [PGM] button and dial 186.
	Press the Flex button for the desired Timer; refer to Table 3.3.6.22-1.
	Use the dial-pad to enter the desired Timer data, refer to Table 3.3.6.22-1.
	Press the [Save] button to store the Timer data entry.

Table 3.3.6.22-1 DCOB SYSTEM TIMERS (PGM 186)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	R2 OUT MANAG TMR(sec) (01-50) : 14	In R2 signaling, maximum time for waiting for forward signal from PBX.	01~50 (seconds)	14
2	R2 IN MANAG TMR(sec) (01-50) : 14	In R2 signaling, maximum time for waiting for forward signal from PBX.	01~50 (seconds)	14
3	R2 DISAPPEAR TMR(sec) (01-50) : 14	In R2 signaling, maximum time for waiting for the acknowledge of R2 signal.	01~50 (seconds)	14
4	R2 PULSE TMR(20msec) (01-30) : 07	In R2 signaling, time duration to send pulse typed R2 signal.	01~30 (20 msec)	07
5	R2 READY TMR (20msec) (000-500) : 007	Reserved for future usage for R2 timers.	000~500 (20 msec)	07
6	DIAL TONE DELAY (20msec) (01-30) : 20	Reserved for future usage for R2 timers.	01~30 (20 msec)	20

3.3.6.23 NTP Attributes – PGM 195

The system can employ the Network Time Protocol (NTP) or ISDN clock to synchronize the system time with the NTP time server or ISDN clock. The system requests the time from the NTP server at 10-minute intervals and then determines the time differential. If the system time is more 2 seconds off the NTP time, the system time is adjusted to synchronize with the NTP server time.

PROCEDURE	
NTP ATTRIBUTES PRESS FLEX KEY (1-1)	Press the [PGM] button and dial 195.
	Press the Flex button for the desired NTP Attribute; refer to Table 3.3.6.23-1.
	Use the dial-pad to enter the desired data, refer to Table 3.3.6.23-1.
	Press the [Save] button to store the data entry.

Table 3.3.6.23-1 NTP ATTRIBUTES

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	NETWORK TIME/DATE (0-2): DISABLE(0)	Sets time synchronization for the system as : <ul style="list-style-type: none"> • Disable • ISDN clock • NTP NTP Attributes are set only via the Web.	0: DISABLE 1: ISDN 2: NTP	DISABLE

3.3.6.24 CRR Attributes – PGM 252

System can reroute incoming call to CO. If called number matched with compare digits of Table 252, the call are routed to Rerouting number.

PROCEDURE	
CRR ATTRIBUTES PRESS FLEX KEY (1-3)	Press the [PGM] button and dial 252.
	Press the Flex button 1~3 for the desired setting, refer to Table 3.3.6.24-1.
	For Flex button 1 enable or disable CRR. For Flex button 2, press the [Save] button to reset the CRR table. For Flex button 3, dial the table bin number to input data.
	For Flex button 3, Enter the bin number, refer to Table 3.3.6.24-1.

Table 3.3.6.24-1 CRR ATTRIBUTES (PGM 252)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ENABLE CRR (1:ON/0:OFF) : OFF	This field is used to enable or disable CO Call Rerouting.	0: OFF 1: ON	OFF
2	INIT CRR PRESS [Save] KEY	This field is used to initialize the CRR table.		
3	CRR ATTRIBUTES ENTER BIN NO(000-169)		000-169	
3-1	CRR 001 COMPARE CO GRP GRP NO (01-20) : 01	Compared Co group should be matched with incoming CO group.	01-20	01
3-2	CRR 001 RECEIVE DGTS	Incoming digit numbers should be matched with these digits. An "*" may be entered as a wild-card to indicate insertion of the compared number.	Max 12 digits	
3-3	CRR 001 CO+TEL NUMBER	This field defines the CO line, CO group or CO access code plus telephone number.	Max 20 digits	
3-4	CRR 001 TYPE	If you chose '1' for NET type, you can use transit out code for CO to CO rerouting. If you chose '2' for DISA type, you can access the station number as DISA mode. Other case, you should not use this type.	N/A	

3.3.6.25 VM COS Attributes – PGM 253

Each Station is assigned one of the five Voice Mail Classes of Service. The VM COS attributes include user greeting length, E-Mail notifications, message retention and optional message marking.

PROCEDURE	
ENTER PGM NUMBER	Press the [PGM] button and dial 253.
VM COS ATTRIBUTE ENTER COS RANGE (1-5)	Enter COS range from 1 to 5.
1-2 VM COS ATT PRESS FLEX KEY (1-8)	Press flex button 1-8 for the desired setting, refer to Table 3.3.6.25-1. Use the dial-pad to enter the desired data, refer to Table 3.3.6.25-1. Press the [Save] button to store the data entry.

Table 3.3.6.25-1 VM COS ATTRIBUTES (PGM 253)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	GREETING LENGTH (00-99) : 60	This defines maximum user greeting length.	00-99	60
2	MESSAGE LENGTH (000-600) : 000	This defines maximum user message recording time.	000-600	000
3	NUMBER OF MESSAGE (000-250) : 000	This defines maximum number of voice mail message.	000-250	000
4	RETENTION TIME (00-99) : 00 (DAYS)	Voice mail messages will be automatically deleted after this amount of days.	00-99	00
5	E-MAIL NOTIFICATION (0-2) : NOTI. DELETE	E-mail notification can be enabled or disabled.	0: OFF 1: Notification 2: Notification & Delete	Notification & Delete
6	FUTURE DELEVERY MSG (1 :ON /0 :OFF) : OFF	Future Delivery message can be enabled or disabled.	0: OFF 1: ON	OFF
7	CONFIRM MSG RECEIPT (1 :ON/0 :OFF) : OFF	Confirm message receipt can be enabled or disabled.	0: OFF 1: ON	OFF
8	PRIVATE MSG MARK (1 :ON/0 :OFF) : OFF	Private message mark can be enabled or disabled.	0: OFF 1: ON	OFF

3.3.6.26 Personal Group – PGM 260

Several stations can share same station number. That means Personal Group is extended feature of Linked Pair. A Personal Group is composed with a master station and several member stations. A master station and all member stations share master station's number.

By using this shared number, almost features (Call To xxx / Call From xxx / SMDR / Message Wait...) can be activated. But, some features can be chosen by PGM 261 attribute about all station activating or individual station working. In PGM 260, Personal group master and member can be assigned. In PGM 261, Personal group attribute can be set.

PROCEDURE	
PERSONAL GRP ASSIGN ENTER GRP NUM (01-70)	Press the [PGM] button and dial 260. And Enter Group number (eMG80/100:1~7 /eMG800:1~600)
PERSONAL GRP 01 F1 : MASTER STA F2 : MEM	Press Flex button 1, register Master station. Press Flex button 2, register member stations. Use the dial-pad to enter the desired data. Press the [Save] button to store the data entry.

3.3.6.27 Personal Group Attribute – PGM 261

In PGM 261, Personal group attribute can be set.

PROCEDURE	
PERSONAL ATTRIBUTE ENTER GRP NUM (01-70)	Press the [PGM] button and dial 261. And Enter Group number.(eMG80/100:1~70 /eMG800:1~600)
PERSONAL GRP 01 PRESS FLEX KEY (1-3)	Press the Flex button 1~4 for the desired setting, refer to Table 3.3.6.27-1. Use the dial-pad to enter the desired data, refer to Table 3.3.6.27-1. Press the [Save] button to store the data entry.

Table 3.3.6.27-1 PERSONAL GROUP ATTRIBUTES (PGM 261)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01 USE MASTER WAKEUP (1:ON/0:OFF) : OFF	If this value is set to ON, all member wake-up follow by master wake up. If this value is set to OFF, individual wake-up is worked by each station.	0: OFF 1: ON	OFF
2	01 USE MASTER DND (1:ON/0:OFF) : OFF	If this value is set to ON, DND setting affect to Master and all member. If this value is set to OFF, individual DND is worked by each station.	0: OFF 1: ON	OFF
3	01 SET LINKED PAIR (1:ON/0:OFF) : OFF	If this value is set to ON, Master and Member Stations are linked and only one station can be activated.	0: OFF 1: ON	OFF

3.3.7 STATION GROUP DATA – PGM 190 & 192

Stations can be grouped so that incoming calls will search (hunt) for an idle station in the group. The system allows assignment of three hunt processes, Circular, Terminal and UCD. In addition, there are eight (8) functional groups available: ACD (Automatic Call Distribution) based on UCD hunt, Ring, Call Pick-Up, External Voice Mail (SLT connected), VSF-Voice Mail, iPECS Feature Server Voice Mail, Network Voice Mail and UCS Groups. Certain types of groups can incorporate announcements, which are given to the calling party. The system’s VMIU or VMIB can store up to seventy (70) announcements for use with Station Groups.

Note that a station can belong to multiple groups if the groups are all of the same type. Also note that when a station group is assigned to a group type (Station, ACD, VM, FS VM, VSF-VM, Net VM, UCS and Ring), the group attributes are initialized to the default values.

3.3.7.1 Station Group Assignment -PGM 190

Under Station Group Assignments the type, members and Pick-Up attribute are assigned to the Station Group. Note for the Net VM group, the network number must be assigned as the Net VM group member station. Refer to Table 3.3.7.1-1 for a description of the functions, the LCD displays and data entries required.

PROCEDURE	
STATION GRP ASSIGN ENTER GRP NO(401-440)	Press the [PGM] button and dial 190.
STATION GRP 401 F1:TYPE F2:PKUP F3:MEM	Use the dial pad to enter the desired Station Group number.
	Press the Flex button for the desired setting; refer to Table 3.3.7.1-1.
	Use the dial pad to enter the desired Station Group data. Note for group members, enter a station or station range. For an individual station press the desired Flex button for the position of the station in the group and dial the station number. For a range, enter the first and last station number in the range.
	Press the [Save] button to store the data entry.

Table 3.3.7.1-1 STATION GROUP ASSIGNMENT (PGM 190)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	STATION GRP 401 CIRCULAR GROUP (00-10)	This entry defines the type of station group. The range is below. 00: Not Assign, 01: Circular, 02: Terminal 03: UCD/ACD, 04: RING, 05: Ext VM 06: PICK-UP, 07: VSF-VM, 08: UMS 09: NET-VM, 10:UCS Server	Refer to description	Not Assign
2	GROUP 401 PICK-UP (1:ON/0:OFF) : OFF	Stations can pick-up group calls ringing at other stations in the group. This does not apply to VSF groups.	0: OFF 1: ON	OFF
3	CIRCULAR GROUP 401	This entry assigns stations as members of a station group, or for Net VM, the Network number.		

3.3.7.2 Station Group Attributes – PGM 191

Each type of group has a different set of available attributes relating to announcements, timers, overflow, etc.

Table 3.3.7.2-1 through Table 3.3.7.2-8 provides descriptions for the attributes, LCD displays and data entries required.

The attributes for the Circular and Terminal Hunt groups are given in Table 3.3.7.2-1 and the UCD attributes include the ACD functions Table 3.3.7.2-2. In addition, there are no attributes for a group assigned as a Net VM group in PGM 190.

PROCEDURE	
STATION GRP ATT ENTER GRP NO(401-440)	Press the [PGM] button and dial 191.
CIRC GRP 401 PRESS FLEX KEY (01-21)	Use the dial pad to enter the desired Station Group. The system will display the type of group from the Station Group Assignment PGM 190 data (Ex. 01 Circular).
	Press the Flex button for the desired attribute; refer to Table 3.3.7.2-1 to Table 3.3.7.2-8.
	Use the dial pad to enter the desired Group Attributes data, refer to Table 3.3.7.2-1 to Table 3.3.7.2-8.
	Press the [Save] button to store the data entry.

Table 3.3.7.2-1 STATION GROUP— CIRCULAR & TERMINAL GROUPS (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	CIRC 401 ANNC 1 TMR(1s) (000 - 999) : 015	If all stations in the group are busy when a call is offered, the call may continue to wait (queue) for an available station. If the queue period exceeds 1stAnnouncementTimer, the call may be sent to a VSFannouncement. If the timer is set to 000, the call will receive the first announcement, in full, prior to the hunt process (guaranteed announcement).	000~999 seconds	015
2	CIRC 401 ANNC 2 TMR(1s) (000 - 999) : 000	After the 1st announcement, the 2nd ANNC TMR is activated. At expiration, if the call remains queued to the group, the call is sent to the assigned 2nd VSF announcement.	000~999 seconds	000
3	CIRC 401 ANNC1 LOC VSF ANNC .. (01 – 70)	The Station Group can be assigned an announcement, which is played if the call remains queued beyond the ANNC 1 TMR duration. The announcement location is the VSF ANNC1 number. An entry of 00 indicates no announcement. Including '#' at the end of an entry instructs the system to disconnect after the announcement.	01~70	00: none

Table 3.3.7.2-1 STATION GROUP— CIRCULAR & TERMINAL GROUPS (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
4	CIRC 401 ANNC2 LOC VSF ANNC .. (01 – 70)	The Station Hunt Group can be assigned a 2nd announcement, which is played if the call remains queued beyond the ANNC 2 TMR duration. The announcement location is the VSF ANNC2 number. An entry of 00 indicates no announcement. Including '#' at the end of an entry instructs the system to disconnect after the announcement.	01~70	00: none
5	CIRC 401 ANNC2 RPT TMR (000 - 999) : 000.	The 2nd announcement can be repeated to calls that remain in queue at intervals of the Announcement 2 RepeatTimer. NOTE) Repeating must be "ON" under button 6 below.	000~999 seconds	000
6	CIRC 401 ANNC 2 RPT (1: ON / 0: OFF): OFF	After the 2nd announcement, if the call remains queued to the group, the 2nd VSF announcement can be repeated at the AnnouncementRepeatTimer interval.	0: OFF 1: ON	OFF
7	CIRC 401 OVERFLOW DEST S/H/V/SPD (Dial 1-4)	A call to the group will continue to route through the group until answered or all group members have been tried. The call will remain at the last station or will pass to the assigned OverflowDestination. 1:Station, 2:Station group, 3:VSF Announce, 4:System speed	Refer to description	
8	CIRC 401 OVERFLOW TMR (000 - 600) : 180	A call to a group will remain at the last station in the group or can be sent to the assigned OverflowDestination after expiration of the OVERFLOW Timer.	000~600 seconds	180
9	CIRC 401 WRAP-UP TMR (000 - 999) : 002	After terminating any call, a Group member will be maintained in a busy state for the duration of the WRAP-UP Timer.	000~999 seconds	002
10	CIRC 401 NO ANS TMR(1s) (00 – 99) : 15	Calls to a station in the group are directed to the station, if unavailable or unanswered in the NO AnswerTimer, the call can be routed based on the assigned hunt process.	00~99 seconds	15
11	CIRC 401 PILOT HUNT (1 : ON/ 0: OFF) : ON	A circular/terminal hunt group can be set so that only calls to the pilot number (Station Group number) will hunt.	0: OFF 1: ON	ON
12	CIRC 401 RPT NO MEMBER (1 : ON/ 0: OFF) : OFF	If a call is received and no members are on-duty, an ICM call will return re-order tone, while a CO/IP call will be routed to the overflow destination.	0: OFF 1: ON	OFF

Table 3.3.7.2-6 STATION GROUP ATTRIBUTES — VSF-VM GROUP (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	VSF-VM409RETENSION(1d) (00 – 99) : 00	When voice messages are stored in the VSF, the system will maintain (store) the message for the maximum number of days set in this program (1 to 99 days). (Not used currently)	00-99 (day)	00
2	VSF-VM 409DIAL TIME (1s) (00 – 99) : 15	This timer determines the inter-digit time employed during a VSF-VM session. If this timer expires while the VSF-VM is awaiting user input, the system will assume the remote party has disconnected and will return the channel to idle.	00-99 (seconds)	15
3	VSF-VM GROUP NAME	A VSF-VM group name can be designated.	20 character

Table 3.3.7.2-7 STATION GROUP ATTRIBUTES — UMS GROUP (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	UMS 410 ANNC 1 TMR(1s) (000 - 999) : 015	If all stations in the group are busy when a call is offered, the call may continue to wait (queue) for an available station. If the queue period exceeds this 1st AnnouncementTimer, the call may be sent to a VSF announcement. If the timer is set to 000, the call will receive the first announcement, in full, prior to the hunt process (guaranteed announcement).	000~999 seconds	015
2	UMS 410 ANNC 2 TMR(1s) (000 - 999) : 000	After the 1st announcement, the 2nd ANNC TMR is activated. At expiration, if the call remains queued to the group, the call is sent to the assigned 2nd VSF announcement.	000-999 seconds	000

Table 3.3.7.2-7 STATION GROUP ATTRIBUTES — UMS GROUP (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
3	UMS 410 ANNC1 LOC VSF ANNC .. (01 – 70)	The Station Group can be assigned an announcement, which is played if the call remains queued beyond the ANNC 1 TMR duration. The announcement location is the VSF ANNC1 number. An entry of 00 indicates no announcement. Including '#' at the end of an entry instructs the system to disconnect after the announcement.	01~70	00: none
4	UMS 410 ANNC2 LOC VSF ANNC .. (01 – 70)	The Station Hunt Group can be assigned a 2nd announcement, which is played if the call remains queued beyond the ANNC 2 TMR duration. The announcement location is the VSF ANNC2 number. An entry of 00 indicates no announcement. Including '#' at the end of an entry instructs the system to disconnect after the announcement.	01~70	00: none
5	UMS 410 ANNC2 RPT TMR (000 - 999) : 000.	The 2nd announcement can be repeated to calls that remain in queue at intervals of the Announcement 2 RepeatTimer. Note; repeating must be "ON" under button 6 below.	000~999 seconds	000
6	UMS 410 ANNC 2 RPT (1: ON / 0: OFF): OFF	After the 2nd announcement, if the call remains queued to the group, the 2nd VSF announcement can be repeated at the AnnouncementRepeatTimer interval.	0: OFF 1: ON	OFF
7	UMS 410 OVERFLOW DEST S/H/V/SPD (Dial 1-4)	A call to the group will continue to route through the group until answered or all group members have been tried. The call will remain at the last station or routes to the assigned OverflowDestination. 1:Station, 2:Station group 3:VSFAnnounce, 4:System speed	Refer to description	
8	UMS 410 OVERFLOW TMR (000 - 600) : 180	A call to a group will remain at the last station in the group or can be sent to the assigned OverflowDestination after expiration of the OVERFLOW Timer.	000~600 seconds	180
9	UMS 410 NANS TMR(1s) (00 – 99) : 15	Calls to a station in the group are directed to the station, if unavailable or unanswered in the NO AnswerTimer, the call can be routed based on the assigned hunt process.	00~99 seconds	15

Table 3.3.7.2-7 STATION GROUP ATTRIBUTES — UMS GROUP (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
10	UMS 410 PILOT HUNT (1 : ON/ 0: OFF) : ON	A FS VM group can be set so that only calls to the pilot number (station group number) will hunt.	0: OFF 1: ON	ON
11	UMS 410 ALTER DEST STA/HUNT	When a call comes into the group and there are no group members available, the call will be routed to the assigned AlternateDestination.	Station or Group Number
12	UMS 410 HUNT TYPE (1 : CIRC/ 0 : TERM): CIR	When a call is offered to the group, the Hunt process can be defined for Circular or Terminal hunt group.	0: TERM 1: CIR	CIR
13	UMS 410 WRAP-UP TMR (002 – 999) : 002	After terminating any call, the VM port will be maintained in a busy state for the duration of the WRAP-UP Timer.	002~999 seconds	002
14	FORCED FWD DEST USAGE (1:ON/0:OFF): OFF	Enables the system to redirect group calls to the Forced destination defined under button 15 below.	0: OFF 1: ON	OFF
15	UMS 410 FORCED DEST S/H/V/SPD (DIAL 1-4)	When a call is delivered to the group the system can redirect the call to the Forced destination if enabled under button 14 above. 1:Station, 2:Station group 3:VSFAnnounce, 4:System speed	Refer to description	-
16	GROUP NAME	A hunt group name can be designated.	20 character

Table 3.3.7.2-8 STATION GROUP ATTRIBUTES — UCS SERVER GROUP (PGM 191)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	UCS SVR [411] ASSIGNED UC Server 1 (01–16)	UCS Server number, this value must be set to 1.	01-16	1

3.3.7.3 Pick Up Group Assignment – PGM 192

Under Pick-Up Group Assignments members are assigned to the Station Pick Up Group.

PROCEDURE	
PICKUP GRP ASSIGN ENTER GRP NUM(00-49)	Press the [PGM] button and dial 192 and enter group number (Ex. 00). (eMG80/100:00~49/ eMG800:0~199)

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> PICKUP GRP 00 </div>	<p>Use the dial pad to enter the desired Pickup Group. The system will display the member of pickup group.</p>
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> PICKUP GRP 00 </div>	<p>Note for group members, enter a station or station range. For an individual station press the desired Flex button for the position of the station in the group and dial the station number. For a range, enter the first and last station number in the range.</p>
	<p>Press the [Save] button to store the data entry.</p>

3.3.8 ISDN LINE & ICLID ROUTING DATA – PGM 200-206

Each ISDN (Integrated Services Digital Network) Line provides digital services to the end-user. Basic Rate Lines have three (3) channels, 2 B channels and a D channel. The 2 B channels provide 64 Kbps each, a total of 128 Kbps for “Bearer” or voice channels.

The D channel provides a 16 Kbps signaling channel. Primary Rate Lines have 23/30 64 Kbps ‘B’ channels and 1/2 64 Kbps signaling channels.

For proper operation, entries are required for various attributes in PGM 200 ~ 202 to match the ISDN circuit and services from the PSTN.

3.3.8.1 ISDN Attributes – PGM 200

ISDN attributes define several characteristics of the ISDN interface. ISDN call cost services (Advice of Charge), CLI modification, voice encoding, and other characteristics of the interface are defined.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> SYSTEM ISDN ATT PRESS FLEX KEY (1-3) </div>	Press the [PGM] button and dial 200.
	Press the Flex button for the desired Attribute; refer to Table 3.3.8.1-1.
	Use the dial pad to enter the desired Attribute data.
	Press the [Save] button to store the Attribute data entry.

Table 3.3.8.1-1 ISDN LINE ATTRIBUTES (PGM 200)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	CO ATD CODE (2DGT) ..	When the system is set to send the station number with ISDN CLIP or COLP, either the station number or this ATD code will be sent based on PGM 114 button 11.	1~2 digits	
2	CLI PRINT TO SERIAL (1:ON/0:OFF) : OFF	The ISDN Calling Line Id may be included in call records output over the serial port assigned for “Call Information”, PGM 175 button 5.	0: OFF 1: ON	OFF
3	DISPLAY DID INFO (1:ON/0:OFF) : OFF	Display DID digit information on LCD and print it to serial port.	0: OFF 1: ON	OFF
4	Print Destination in CLI Print (1:ON/0:OFF) : OFF	If this set to ON, the following destination number is provided with ring Information. <ul style="list-style-type: none"> • Station Number, Station Group, CCR, Net station, Conference room 	0: OFF 1: ON	OFF

3.3.8.2 CLIP/COLP Table – PGM 201

Normally, the system will send the primary Directory Number of the ISDN Line in the ISDN call SETUP and CONNECT messages to identify the caller (CLIP) or the answering (COLP) party respectively.

Under certain circumstances, it may be desirable to provide a secondary or DID number for the ISDN Line. In these cases, the CLIP/COLP Table may be used to define the digits sent.

The number sent is selected based on the index assigned for the ISDN Line under CO/IP Attributes III (PGM 143).

For the CLIP/COLP Table entry, the CLI Station Number (PGM 114) is sent in place of the station number. For all other CLIP/COLP Table entries, the station number is sent as a suffix to the number in the Table.

Note that this number is sent only if CLIR and COLR are disabled under the CLIR Service and COLR Service assignments in the Station ISDN Attributes (PGM 114).

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> CLIP/COLP TABLE ENTRY ENTER BIN NO (00 –4 9) </div>	Press the [PGM] button and dial 201 and enter the bin number (Ex.00).
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> CLIP/COLP TABLE 00 </div>	Use the dial pad to enter the desired Bin number (00-49) Use the dial pad to enter the desired CLIP/COLP data, maximum 10 digits. Press the [Save] button to store the CLIP/COLP data entry.

3.3.8.3 MSN Table – PGM 202

When an ISDN Line assigned for DID operation, receives an incoming call, the call will be routed to a station based on the Flexible DID Table Index in the MSN Table.

PROCEDURE	
MSN TABLE ATT ENTER BIN NO (001 – 500)	Press the [PGM] button and dial 202 and enter the bin number (Ex.121). (eMG80/100:001~500/ eMG800:1~1500)
MSN TABLE 121 PRESS FLEX KEY (1 – 3)	Use the dial pad to enter a MSN Table index number.
	Press the Flex button for the desired MSN Table entry; refer to Table 3.3.8.3-1.
	Use the dial pad to enter the desired Table data.
	Press the [Save] button to store the Table data entry.

Table 3.3.8.3-1 MSN ATTRIBUTES (PGM 202)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	MSN TABLE 121 CO RANGE ... - ...	CO Line number associated with the MSN.		None
2	MSN TABLE 121 INDEX : NOT ASSIGNED	Index to the Flexible DID Table, PGM 231.	000~999	None
3	TABLE 121 TEL NUMBER	Telephone Number (called number)	23 Digits	None

3.3.8.4 ICLID Route Table – PGM 203

The system can employ ICLID (Incoming Calling Line Id) to determine the routing of incoming external calls. Each CO/IP Line and ACD group may be assigned to employ ICLID routing.

The system will compare the received ICLID to entries in the ICLID Route Table and, if a match is found, will route the call to the destination indicated by the index (bin) number of PGM 204.

PROCEDURE	
ICLID ROUTE TABLE ATT ENTER BIN NO (001-250)	Press the [PGM] button and dial 203 and enter the bin number (Ex.001).
ICLID ROUTE TABLE 001 PRESS FLEX KEY (1-4)	To program ICLID Route table, dial Bin No (001 – 250).
	Press the Flex button for the desired ICLID Table entry; refer to Table 3.3.8.4-1.
	Use the dial pad to enter the desired Table data
	Press the [Save] button to store the Table data entry.

Table 3.3.8.4-1 ICLID ROUTE INDEX (PGM 203)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ROUTE TABLE 001 INDEX : NOTASSIGNED	Index to the ICLID Ring Assignment Table PGM 204 that determines the call routing.	001~250	Not assigned
2	TABLE 001 ICLID NUMBER	ICLID (Incoming Caller Id) to match for the index. If the Caller Id matches the Table entry, the index is used to select the route from PGM 204.	24-digits 0 ~ 9 & '*' and '#' as a wild-card.	None
3	TABLE 001 ICLID NAME	ICLID name that is sent by the system to the destination for the ICLID routed call.	12.Character	None
4	TABLE 001 ICLID TONE ..	If the ICLID Number is matched with CID of caller, the Ring tone is followed this ICLID Tone.	2 digits.01~12	None

3.3.8.5 ICLID Ring Assignment – PGM 204

If the Incoming Caller ID matches an entry in the ICLID Route Table, the index from the Table is used to determine the call routing from the ICLID Ring Assignment Table.

Separate ring assignments are made for Day, Night, and Timed Ring mode for each index, 001 to 250, in this table. When assigned to ring to a VSF announcement, the call can be automatically dropped after the announcement by entering '#' after the announcement number.

When CO Lines are programmed to Ring an external AA/VM, VSF or Feature Server Group as an Automated Attendant, the Ring signal can be on an immediate or delayed basis allowing other stations/groups to be assigned Ring and answer prior to signaling the AA. The delay is defined in seconds from 00 to 30.

PROCEDURE	
<div style="border: 1px solid black; padding: 2px; width: fit-content;"> ICLID RING ASN TBL ATT ENTER BIN NO (001-250) </div>	Press the [PGM] button and dial 204 and enter the bin number (Ex.001).
<div style="border: 1px solid black; padding: 2px; width: fit-content;"> PRESS KEY DAY NIGHT TIMED-R </div>	Use the dial pad to enter the Index or Bin number (001 – 250).
	Press the desired Flex button: <ul style="list-style-type: none"> - Button 1: Day Ring - Button 2: Night Ring - Button 3: Timed Ring
	Use the dial pad to select the destination type: <ul style="list-style-type: none"> - Dial 1: Station - Dial 2: Hunt Group - Dial 3: VSF Announcement - Dial 4: AA Ring Time - Dial 5 : Net number
	Use the dial pad to enter a value for the selected destination type. Press the [Save] button to store the data entry.

3.3.8.6 PPP Attributes – PGM 205

In addition to remote access via an IP network connection, the system database may be accessed remotely via MODU.

The system will request a user id and password, which must match one of the User Ids and passwords assigned. After matching id and password are entered, the iPECS Home page is provided and Web Admin is available as explained in section 4.

PROCEDURE	
PPP ATTRIBUTES PRESS FLEX KEY (1-7)	Press the [PGM] button and dial 205.
	Press the desired Flex button; refer to Table 3.3.8.6-1.
	Used the dial pad to enter desired data, refer to Table 3.3.8.6-1 for appropriate entries.
	Press the [Save] button to store the data entry.

Table 3.3.8.6-1 PPP ATTRIBUTES (PGM 205)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	PPP DEST STA	If the incoming capability is 64 Kbps unrestricted digital and the called party number matches the PPP destination, the system will automatically answer the call and request PPP ID and password.	Station number	None
2	PPP USER ID 1 likppp01	System accepts this PPP ID 1.	12Character	likppp01
3	PPP PASSWORD 1 lpkts01	The password entered is used to authorize PPP ID 1.	12 Character	lpkts01
4	PPP USER ID 2 likppp02	System accepts this PPP ID 2.	12 Character	likppp02
5	PPP PASSWORD 2 lpkts02	The password entered is used to authorize PPP ID 2.	12 Character	lpkts02
6	PPP SERVER IP ADDR 10 .0 .0 .3	Operator can configure PPP Server IP Address with this option. To apply this option, system must be restarted.		10.0.0.3
7	PPP CLIENT IP ADDR 10 .0 .0 .2	Operator can configure PPP Client IP Address with this option. To apply this option, system must be restarted.		10.0.0.2

3.3.8.7 Prefix Dialing Table – PGM 206

With this table, three features can be supported.

- CO Call Charge with NPR metering.
- SIP direct dialing with no wait inter-digit timer.
- ISDN Prefix Call – ISDN en-block Dialing with Prefix Call Setup.

If first some digits (up to 8 digits) of outgoing dial number are matched with Prefix Code of each table, this table can start work. By each CO-line (PGM 142 – F20), Table ID (0-6) can be set. This table ID (PGM 142 – F20) is associated with PGM 206 – each table ID.

PROCEDURE	
PREFIX DIALING TABLES ENTER BIN NO (001-500)	Press the [PGM] button and dial 206 and enter the bin number (Ex.001).
PREFIX TABLE 001 PRESS FLEX KEY(01-10)	Use the dial-pad to enter the Table index number (bin).
Refer to Table 3.3.8.7-1 DISPLAY	Press the desired Flex button, refer to Table 3.3.8.7-1
	Use the dial pad to enter desired data, refer to Table 3.3.8.7-1...
	Press the [Save] button to store the data entry.

Table 3.3.8.7-1 Prefix Dialing Table (PGM 206)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	001 PREFIX CODE	Enter the Prefix code. (Max 8 digits)		
2	001 TABLE ID (0 – 6) : 0	Enter Table ID (0-6). 0 means NOT used.	0-6	0
3	001 MIN DIGIT (00 – 30) : 00	Select the minimum dial digits (00-30)	00-30	00
4	001 MAX DIGIT (00 – 30) : 00	Select the minimum dial digits (00-30)	00-30	00
5	001 NUM OF TYPE(0-6) UNKNOWN(0)	Select Number of Type (0~6). <ul style="list-style-type: none"> • 0:Unknown • 1:International • 2:National • 3:Network Spec • 4:Subscriber • 5:Abbreviated • 6:Reserved 	Refer to description	0

Table 3.3.8.7-1 Prefix Dialing Table (PGM 206)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
6	001 NUM PLAN(0-6) UNKNOWN(0)	Select Numbering Plan (0-6). <ul style="list-style-type: none"> • 0:Unknow • 1:ISDN/Telephony • 2:Data numbering • 3:Telex • 4:National standard • 5:Private • 6:Reserved 	Refer to description	0
7	001 SENDING COMPLETE (1:ON/0:OFF) : OFF	Select Sending Complete option. (On/Off)	0-1	OFF

9	001 CALL TIMER(sec) (000 – 999) : 000	Call Charge Timer can be assigned. By this timer value Call Metering can be established.	000-999	000
10	001 CALL COST 000000	Call Cost is calculated by CALL TIMER. (ex : timer is 1 min, cost is 000020, then after 3 minute call, total call cost is calculated to 000060)	000000-999999	000000
11	001 FLAT RATE (1:ON/0:OFF) : OFF	If Flat Rate is ON, Flat Rate is applied by CALL COST per a call	0-1	OFF
12	PREFIX TABLE INIT PRESS [HOLD] TO INIT	Initialize Prefix table.		

3.3.9 TABLES DATA – PGM 220 to 235

3.3.9.1 LCR Assignment Tables - PGM 220 to 223

The LCR Tables provide a mechanism to define the database, which will route outgoing calls, particularly long distance, using the most cost effective route. User dialed digits are compared to table entries and modified appropriately based on time of day, day of week, and assigned routes.

There are four LCR Tables, LCR Control Attributes, LCR Leading Digit Table, LCR Digit Modification Table, and LCR Initialization Table.

3.3.9.1.1 LCR Control Attributes - PGM 220

The LCR Control Attributes, among others items, allows access to the LCR Access Mode assignments. The LCR Access Modes define the user operations that will access the LCR feature.

The LCR Access Modes are:

MODE	DESCRIPTION
Mode 00:	LCR Disabled
Mode 01:	Loop (user dials '9' or CO/IP Group code (8xx) or presses a Loop button)
Mode 02:	Loop and Internal (user dials digits without a CO/IP Access Code prefix)
Mode 11:	Loop and Direct CO Line (user dialed CO Line Access Code, or presses {CO} button).
Mode 12:	Loop, Direct CO Line, and Internal
Mode 13:	Loop, Direct CO Line, Internal and Direct

In addition, days of the week are grouped into zones (Day Zones) and the time of day can be set into three groups (Time Zones). Table 3.3.9.1.1-1 provides general descriptive information and input ranges.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> LCR CONTROL ATTRIBUTES PRESS FLEX KEY (1-5) </div>	Press the [PGM] button and dial 220.
	Press Flex button 1~5, refer to Table 3.3.9.1.1-1.
	For LCR Access Mode and Time Zones, use the dial-pad to enter desired data and proceed to step 5). Refer to Table 3.3.9.1.1-1 for input ranges.
	For Day Zones press the Flex button 1~7 to select the day of week, Monday: Flex button 1 to Sunday: Flex button 7.
	For Day Zones, after selecting the desired day of week Flex button, use the dial pad to enter the desired zone, 1~3.
	Press the [Save] button to store the data entry.

Table 3.3.9.1.1-1 LCR CONTROL ATTRIBUTES (PGM 220)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 5px; width: fit-content;"> LCR ACCESS MODE (1-6) (M00) DISABLE LCR </div>	This entry defines the effective LCR modes, the modes by which the user can access LCR.	M00: 1 M01: 2 M02: 3 M11: 4 M12: 5 M13: 6	1

Table 3.3.9.1.1-1 LCR CONTROL ATTRIBUTES (PGM 220)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
2	<div style="border: 1px solid black; padding: 2px;"> DAY ZN 1:1234567 2: 3: M1 T2 W3 T4 F5 SA6 SU7 </div>	For each day of the week, a Day Zone (1 to 3) is assigned. The active Day Zone is the Zone assigned to the current day of the week (Flex button 1~7).	Flex 1~7 + 1~3	Zone 1: all days of the week
3	<div style="border: 1px solid black; padding: 2px;"> TIME ZONE 1 1:00-24 2: 3: </div>	This entry defines the hours of the day during which Time Zone 1 is active. Note hours not defined in Time Zone 2 and 3 are automatically part of Time Zone 1.	00~24	00~24
4	<div style="border: 1px solid black; padding: 2px;"> TIME ZONE 2 1:00-24 2: 3: </div>	This entry defines the hours of the day during which Time Zone 2 is active.	00~24	00~24
5	<div style="border: 1px solid black; padding: 2px;"> TIME ZONE 3 1:00-24 2: 3: </div>	This entry defines the hours of the day during which Time Zone 3 is active.	00~24	00~24

3.3.9.1.2 LCR Leading Digit Table — PGM 221

The Leading Digit Table is used to analyze the user-dialed digits to determine an appropriate Digit Modification Table Index. LDT Tables are provided for 32 LDT Table for iPECS-1200, 10 for the other systems.

The Table is divided into bins. The applicable LCR Access Modes (LCR Type) and the digits (up to the first 12) to be compared with the number dialed by the user are entered in the Leading Digit Table bin.

In addition, indices to the Digit Modification Table are defined for each Time Zone of each Day Zone; refer to LCR Control Attributes PGM 220.

Note the mode used to access LCR must match the LCR Type and must be within the effective LCR Access Mode assigned in PGM 220 to access the Digit Modification Table index. The allowed LCR Types are:

- **CO Line or Loop access:** User dials CO Line Access Code, CO/IP Group Access Code (8xx), Any CO Line Access Code '9', or presses a CO Line, CO/IP Group or Loop button.
- **Internal:** User dials outgoing call while receiving Intercom dial tone with no CO/IP access code.
- **Both:** Both COL and Internal.

In addition, each Leading Digit Table bin has the option to require an authorization code entry. When the user-dialed digits match an entry in the LCR Leading Digit Table, the system will check the Authorization option for the LDT Table bin. If the Authorization option is enabled, the user must enter a valid Authorization code to place the call.

PROCEDURE	
LDT TABLE ENTER LDT TBL NO (01-10)	Press the [PGM] button and dial 221 and enter LDT Table number (Ex.01).(eMG80/100:01~10/eMG800:1~32)
LDT 01 TABLE ENTER LDT BIN (000)	Enter the LDT Table number (Ex.000).
000 BOTH CD: DMT:	The system displays the first available bin (000~249) of the Leading Digits Table. To select a different bin, use the dial pad to enter the desired bin number.
	Press the desired Flex button (1~6), refer to Table 3.3.9.1.2-1.
	Use the dial pad to enter the desired Leading Digit Table data, refer to Table 3.3.9.1.2-1.
	Press the [Save] button to store the data entry. Note, as the data is stored, the system sorts the LDT bins in ascending order to allow rapid "look-up" of data. Thus, the bin number will be changed appropriately.

Table 3.3.9.1.2-1 LCR LEADING DIGITS (PGM 221)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	LDT 01/000 : LCR TYPE LCR MODE : BOTH (3)	This entry defines the LCR modes that will apply to this Leading Digit Table bin. To apply the DMT index, the LCR Type must be part of the LCR Mode defined in PGM 220.	1: Internal 2: CO Line 3: Both	Both

Table 3.3.9.1.2-1 LCR LEADING DIGITS (PGM 221)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
2	LDT 01/000 : LCR CODE	Up to 12 digits that, if matched by the user dialed digits, will access the DMT entry for the index assigned for the Day and Time zone below.	12 digits 0 ~ 9 and "*" as a wildcard	
3	LDT 01/000 : DAY 1 DMT INDEX(6DGT):	This entry defines the Digit Modification Table index (00~99) for each Time Zone for Day Zone 1. The appropriate index will be selected for the current Day and Time Zone. An entry of 6 digits (2 per Time Zone) must be entered.	00~99 3 DMT indices	
4	LDT 01/000: DAY 2 DMT INDEX(6DGT):	This entry defines the Digit Modification Table index (00~99) for each Time Zone for Day Zone 2. The appropriate index will be selected for the current Day and Time Zone. An entry of 6 digits (2 per Time Zone) must be entered.	00~99 3 DMT indices	
5	LDT 01/000: DAY 3 DMT INDEX(6DGT):	This entry defines the Digit Modification Table index (00~99) for each Time Zone for Day Zone 3. The appropriate index will be selected for the current Day and Time Zone. An entry of 6 digits (2 per Time Zone) must be entered.	00~99 3 DMT indices	
6	LDT 01/000: CHK PASSWORD (1:ON / 0:OFF) : OFF	If enabled (ON), when the dialed digits match the LDT table digits, the system will send second dial tone to request the user input a valid Authorization code.	0: OFF 1: ON	OFF
7	LDT 01/000: ZONE NO (001-100) : 001	If the LDT Zone Number of a station/co line is equal to this value, this LDT table is available to the station/co line.	001-100	001

3.3.9.1.3 LCR Digit Modification Table — PGM 222

Using the index determined from the analysis of the LCR Leading Digits Table PGM 221, the dialed number is modified in accordance with the Digit Modification Table and sent over the CO/IP group assigned for the index. Digits of the dialed number can be deleted based on the "Removal Position (RP)" and "Number of Remove digits (NR)" and a digit stream can be inserted in the resulting number.

Counting from the first dialed digit, the Removal Position defines the location of the digit where removal begins and, NR defines the number of digits to remove. The "Add Digit Stream" is then inserted in the resulting number at the digit position assigned by the Add Position entry. The resulting number is then dialed over the CO/IP path assigned. If the assigned path is not available, the "Alternate DMT index" is used to determine the number and CO/IP path to be used. Table 3.3.9.1.3-1 provides the displays, descriptions and entry ranges for the Digit Modification Table.

PROCEDURE	
DMT TABLE ENTER DMT BIN (00-99)	Press the [PGM] button and dial 222 and enter DMT bin number (Ex.55).
55 A: RP01 NR00 AP01 CG01 AD ..	Using the dial pad enter the desired Digit Modification Table index.
	Press the Flex button (1~6) for the desired Table entry, refer to Table 3.3.9.1.3-1.
	Use the dial pad to enter the desired Digit Modification Table data, refer to Table 3.3.9.1.3-1.
	Press the [Save] button to store the data entry.

Table 3.3.9.1.3-1 LCR DIGIT MODIFICATION (PGM 222)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	DMT 55 ADDED DGT	This entry defines the digit stream to insert in the number after digits are removed. Digits 0~9, '*', '#', and special characters: <ul style="list-style-type: none"> • [HOLD]: timed Pause • [DND]: Dial tone detect • [FLASH]: Billing station number 	25 digits	
2	DMT 55 REMOVAL POSITION (01-12) : 01	This entry defines the position of the digit where removal is to begin, starting with the 1st dialed digit (01).	01~12	01
3	DMT 55 NUM OF REMOVE DIGITS (00-12) : 00	This entry defines the number of digits to remove starting at the "Removal Position".	00~12	00
4	DMT 55 ADD POSITION (01-13) : 01	This entry defines the position in the number (after digits are removed) where the Add Digits are inserted.	01~13	01
5	DMT 55 CO/IP GROUP (01-21) : 01	This entry defines the CO/IP Group that the system will attempt to use for the call.	01~21	01
6	DMT 55 ALT INDEX (00-99) : ..	This entry defines an Alternate Digit Modification Table Index to use if no path is available in the assigned CO/IP Group.	00~99	
7	DMT 55 NET NUM PLAN BIN (000-251) : ...	This entry defines the Net Number Plan Table bin that the system will attempt to use for the transit out call.	000~251	
8	DMT 55 SMDR CODE	This only used for TNET with CM. This code will be send to CM when the TNET status is changed from Local survival mode to bypass mode.	4 digit	

3.3.9.1.4 LCR Table Initialize — PGM 223

The LCR Table Initialize allows global values to be assigned to the various Digit Modification Table entries. In addition, the LCR Leading Digits and LCR Digit Modification Tables can be initialized, no entries state.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> INITIALIZE LCR DB PRESS FLEX KEY (1-6) </div>	Press the [PGM] button and dial 223.
	Press the Flex button (1~6) for the desired Table entry, refer to Table 3.3.9.1.4-1.
	Use the dial pad to enter the desired LCR data, refer to Table 3.3.9.1.4-1.
	Press the [Save] button to store the data entry.

Table 3.3.9.1.4-1 LCR TABLE INITIALIZES (PGM 223)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> ENTER DMT INIT VAL(DAY1) </div>	This entry permits the global setting of the Digit Modification Table Time Zone 1 to 3 indices for Day Zone 1.	00~99 3 DMT indices	
2	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> ENTER DMT INIT VAL(DAY2) </div>	This entry permits the global setting of the Digit Modification Table Time Zone 1 to 3 indices for Day Zone 2.	00~99 3 DMT indices	
3	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> ENTER DMT INIT VAL(DAY3) </div>	This entry permits the global setting of the Digit Modification Table Time Zone 1 to 3 indices for Day Zone 3.	00~99 3 DMT indices	
4	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> ENTER CO GRP INIT VAL .. </div>	This entry permits the global setting of the CO/IP Group to be used for LCR calls.	01~21	
5	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> ENTER ALT INDEX INIT VA .. </div>	This entry permits the global setting of the Digit Modification Alternate Index.	00~99	
6	<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> INITIALIZE ALL LCR ? </div>	Pressing [Save] will return the LCR LDT and DMT tables to the default (no entries) setting.		

3.3.9.2 Toll Tables – PGM 224

There are five Toll restriction Tables and each has a pair of Table entries. Each pair consists of an Allow and a Deny entry. Allow and Deny entries for Table 'A' apply to Station and DISA Class of Service 2, 4 and 11.

Allow and Deny entries for Table 'B' apply to Station and DISA Class of Service 3, 4 and 11. Allow and Deny entries for Table 'C' apply to Station and DISA Class of Service 5 and 6.

Allow and Deny entries for Table 'D' apply to Station and DISA Class of Service 8, 10 and 11. Allow and Deny entries for Table 'E' apply to Station and DISA Class of Service 9, 10 and 11.

For each Table, there can be up to 50 separate Allow and Deny entries (total of 100) of up to 20 digits. Entries in the Tables can be any digit (0-9), “#” as a wild card (don't care) digit, or “*” as an end of entry digit.

Based on Table entries, stations or DISA users are allowed or denied dialing specified numbers. The following rules apply to establishing restrictions based on the Table entries:

- If the appropriate Allow/Deny Table pair has no entries and COS is 2 to 4, or 8 to 9, no restrictions are applied. If the COS is 5 or 6, no Long Distance dialing is allowed.
- If entries are only made in the Allow Table, only those numbers entered can be dialed, all other dialed numbers will be restricted.
- If entries are only made in the Deny Table, only those numbers entered will be restricted and all other numbers can be dialed.
- When there are entries in both the Allow and Deny Table pair, if the number is in the Deny Table, the number will be restricted otherwise the number can be dialed without restriction.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; background-color: #e0f0e0;"> TOLL EXCEPTION TABLES PRESS FLEXKEY (01-10) </div>	Press the [PGM] button and dial 224.
<div style="border: 1px solid black; padding: 5px; background-color: #e0f0e0;"> ALLOW TABLE A ENTER BIN NO (01-50) </div>	Press Flex button 1~10: - Button 1: Allow Table A - Button 2: Deny Table A - Button 3: Allow Table B - Button 4: Deny Table B - Button 5: Allow Table C - Button 6: Deny Table C - Button 7: Allow Table D - Button 8: Deny Table D - Button 9: Allow Table E - Button 10: Deny Table E Use the dial-pad to select a bin number (01~50). Use the dial-pad to enter the dialed number desired (up to 20 digits). Use “#” as a wild card to represent any digit and, at the end of an entry, dial “*” to end the entry. To delete a Toll Table entry, press the [SPEED] button. Press the [Save] button to store the data entry.

3.3.9.3 Emergency Code Table – PGM 226

The Emergency Code Table is used to identify emergency numbers which, when dialed, will override all COS dialing restrictions.

An Emergency Code number may be up to fifteen (15) digits in length.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px;"> EMERGENCY SVC CALL ENTER BIN NO (01 - 10) </div>	Press the [PGM] button and dial 226 and enter the bin number (Ex.01).
<div style="border: 1px solid black; padding: 5px;"> EMERGENCY SVC CALL BIN 01: 911 </div>	Use the dial-pad for the desired Emergency code entry, 01 ~ 10. Use the dial-pad to enter the Emergency code number. After entering the number dial "*", the number is displayed with an "E" indicating END of entry.
	Press the [Save] button to store the data entry.

3.3.9.4 Authorization Codes Table – PGM 227

Authorization codes are employed to control access to the system resources and facilities. Walking COS, CO/IP Group access, DISA callers, and certain Call Forward types may require input of a valid Authorization code. Codes up to 12 digits may be entered into the system database.

The station has an associated Station Authorization bin, which can be assigned by the user from the user's telephone. The System Authorization codes are stored in System bins and are entered or deleted only through Admin.

PROCEDURE	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> AUTHORIZATION CODE F1:STA_AUTH F2:SYS_AUTH </div>	Press the [PGM] button and dial 227.
	Press Flex button 1 or 2 to select the desired entry: - Flex button 1 - Station authorization code - Flex button 2 - System Authorization code
	For Flex button 1 enter a station range, enter the same station number twice for a single station entry. Then press Flex button 1 to set the password and Flex button 2 to set the COS (Day, Night and Timed).
	Use the dial-pad to enter the Authorization code or COS.
	Press the [Save] button to store the data entry.

Table 3.3.9.4-1 AUTHORIZATION CODES (PGM 227)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 2px;"> AUTHORIZATION CODE ENTER STA RANGE </div>	Authorization code for each station can be assigned up to 12 digits in length (enter STA range (Ex. 100110)).		
1-1	<div style="border: 1px solid black; padding: 2px;"> STATION AUTHORIZATION 100-110 : </div>	Authorization codes for system-wide use can be assigned up to 12 digits in length.	100-239	
2	<div style="border: 1px solid black; padding: 2px;"> AUTHORIZATION CODE ENTER BIN NO(001-360) </div>	Selects attribute, code or Class of Service. eMG80/100:001~360,eMG800:1~1200	Refer to description	
	<div style="border: 1px solid black; padding: 2px;"> SYSTEM AUTHORIZATION F1:SET_PWD F2:SET_COS </div>	Press Flex button 1 or 2 to select the desired entry: Flex button 1 –Set Password Flex button 2 –Set class of service	Flex button1-2	
2-1	<div style="border: 1px solid black; padding: 2px;"> SYSTEM AUTHORIZATION 001: </div>	A password of up to 12 digits is defined.		
2-2	<div style="border: 1px solid black; padding: 2px;"> SET COS : F1:DAY F2:NIGHT F3:TIME </div>	Establishes the COS associated with the System Authorization code during Day, Night and Timed Service modes.	Flex button1-3	

3.3.9.5 Customer Call Routing/VSF AA Table – PGM 228

The system incorporates IVR (Integrated Voice Response) capabilities called CCR (Customer Call Routing). After or during a VSF AA Announcement, a caller may dial a digit to select a destination or route for the call.

The CCR/VSF-AA Routing Audio Text Table defines the destination associated with digits dialed by the caller in response to the VSF AA Announcement (001-200).

Up to 200 single-level Audio Text menus may be assigned or, multi-level menu structures (maximum 200 levels) can be established using one menu as a destination for the previous level.

PROCEDURE	
<div style="border: 1px solid black; padding: 2px; width: fit-content;">CUSTOM CALL ROUTING SELECT CCR TABLE (01-70)</div>	Press the [PGM] button and dial 228 and select CCR table (Ex.01).
<div style="border: 1px solid black; padding: 2px; width: fit-content;">CCR TABLE 01 PRESS FLEX KEY (01-14)</div>	Use the dial-pad to select a CCR Table index, 001~200 The index number 001-200 is the VSF Announcement number
<div style="border: 1px solid black; padding: 2px; width: fit-content;">CCR TABLE 01 INPUT 1 : NOT ASSIGNED</div>	<p>Press a Flex button (1~13, 10=0) to assign a route for the associated CCR dialed digit. (11~13 is assigned to busy, no answer, error destinations)</p> <ul style="list-style-type: none"> - Flex button 01-10 are matched with input dial digit from outside user. The flex key number 10 is matched with dial digit 0. - Flex button 11-13 are related with CCR re-route Busy / Error / No Answer destination – The destination type is Tone / Attendant / Hunt Group / VSF Announcement. - Flex button 14 is CCR One Digit Only option. If this option is set to ON, user can dial only one digit. If this option is set to OFF, user can dial more than one digit. That means CCR or DISA service can be possible. - Flex Button 15 is Temporary Announcement Use option. - Flex Button 16 is Temporary Announcement No setting option. <p>In CCR announcement 3, if Temporary Announcement Use option is ON, Temporary Announcement No is set to 5, then the temporary announcement 5 is played.</p> <p>Temporary announcement can be used in holiday, or emergency case. When Temporary Announcement Usage is set to ON, programmed Temp Announcement is played instead of CCR table announcement. This Temporary Announcement can be set also by Remote Access - by using [Remote Access to Mobile Extension] feature.</p> <p>After access to Mobile Extension,</p> <p>To turn On Temp Announcement, 8 + CCR Announcement Number. To turn Off Temp Announcement, 9 + CCR Announcement Number.</p> <ul style="list-style-type: none"> - Flex Button 17 is [*] Button Used As. - Flex Button 18 is [#] Button Used As. <p>There are 3 options available - Repeat First Annc / Repeat Current Annc / Access Voice Mail Remotely</p>
<div style="border: 1px solid black; padding: 2px; width: fit-content;">CCR TABLE 01 INPUT 1 : ...</div>	Use the dial-pad to enter the Type and Value for Destination, refer to Table 3.3.9.5-1 for Type and value codes. Press the [Save] button to store the data entry.

Table 3.3.9.5-1 CCR DESTINATIONS (PGM 228)

TYPE	DESCRIPTION
01	Route to a Station
02	Route to a Hunt Group
03	Route with System Speed Dial
04	Route as PBX Transfer with System Speed Dial (Flash then dial speed dial digits)
05	Route to VSF Announcement

07	Route to Networked Station
08	Conference Room
09	Internal Page (eMG80/100:1~35 / eMG800:1~100)
10	External page
11	All Call Page
12	Route to voice mail (station group/station number)
13	Company Directory
14	Record VM Greeting
15	Room Type Conf Group Join (Value: system conference group number) (Value Range: eMG80/100(0 or 100~139), eMG800/UCP(0 or 100~259))
16	UCS system conference group (eMG80/100:100~139 / eMG800:100~259)

3.3.9.6 Executive/Secretary Table – PGM 229

Stations can be paired as Executive/Secretary pairs so that when the Executive enters DND, intercom and transferred calls are automatically routed to the Secretary. An Executive may have only one Secretary however, a Secretary can be assigned to multiple Executives. A Secretary of one pair may be the Executive of another however, assignments that form a loop-back are not allowed. In addition, when active, the Secretary can be assigned to receive the Executive's voice messages, refer to Station Attributes III PGM 113 button 10.

PROCEDURE	
EXEC/SEC PAIRS ENTER BIN NO (01-36)	Press the [PGM] button and dial 229 and enter the bin number (Ex.01).
EXEC/SEC PAIR 01 PRESS FLEX KEY(1-7)	Use the dial-pad to enter the desired Executive/Secretary pair bin. Press the desired Flex button; refer to Table 3.3.9.6-1. Press the [Save] button to store the data entry.

Table 3.3.9.6-1 EXECUTIVE/SECRETARY PAIRS (PGM 229)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	EXEC/SEC PAIR 01 PAIR 1 : . . . / . . .	Assigns Executive/Secretary pair stations.		
2	CO CALL TO SEC (1:ON/0:OFF) : OFF	If desired, all incoming CO calls to the Exec. The call is routed to the Secretary's station regardless of the Executive's status.	0: OFF 1: ON	OFF
3	CALL EXEC IF SEC DND (1:ON/0:OFF) : OFF	If the Secretary is in DND, Executive calls can be routed back to the Executive.	0: OFF 1: ON	OFF
4	EXEC GRADE (01-12): 12	Higher (or equal) grade Executives can override the Executive/Secretary Forward feature (5th: ICM call to SEC) to call a lower grade Executive. Highest grade: 01, Lowest grade: 12.	01~12	12
5	ICM CALL TO SEC (1:ON/0:OFF) : OFF	If this option is ON, all internal calls to the executive station (except for calls from higher or same grade executive) are routed to the Secretary's station regardless of the Executive's status.8801 Default value Korea, India, Israel, Turkey, Thailand : ON Otherwise : OFF	0: OFF 1: ON	OFF
6	SEC. AUTO ANS (1:ON/0:OFF) : OFF	When executive call to the secretary who is in 'T' mode.The call will be answered by hands free mode if it is ON.	0: OFF 1: ON	OFF
7	EXEC GROUP (00-50) : 00	If Group is greater than 1, it works that lower grade executive can call to higher grade executive directly when they are same group.	00-50	00

3.3.9.7 Flexible DID Conversion Table – PGM 231

When the received DID digits are converted as in PGM 230, the resulting 4 digit number may be used as an index to the Flexible DID Conversion Table. The Flexible DID Table index is used when DID Line is assigned a Conversion type 2; refer to PGM 145 Flex button 2. Based on the index from PGM 230 and the system mode (Day, Night or Timed) a destination for the DID call is determined. The destination can be a VSF AA Announcement with CCR assigned allowing further routing of the call or can route using the ICLID routing tables.

PROCEDURE:	
FLEX DID CONV TABLE F1:INPUT F2:INIT F3:DEL	Press the [PGM] button and dial 231.
FLEX DID CONV TBL INPUT ENTER BIN NO (0000-9999)	Select Flex button 1~3: - Flex button 1: Input new data, Flex button 2: Initialize Table, Flex button 3: Delete entry Enter the bin number (Ex.0001)
TABLE BIN 001 PRESS FLEX KEY (1-9)	Use the dial pad to enter a Table index (0000~9999).
	Press Flex button 1~9 to select the desired destination, refer to Table 3.3.9.7-1.
	Use the dial pad to enter the desired type and value for the destination, refer to Table 3.3.9.7-2.
	Press the [Save] button to store the data entry.

3.3.9.8 System Speed Zone Table – PGM 232

The System Speed Dial numbers can be grouped into zones. Only stations allowed can access numbers within a zone, allowing System Speed Dials to be partitioned. Each zone can be assigned to apply the appropriate Station and CO Line COS for the Speed Dial number prior to dialing.

PROCEDURE:	
SYSTEM SPEED ZONE PGM ENTER BIN NO (01-10)	Press the [PGM] button and dial 232 and enter the bin number (Ex.01).
	Using the dial-pad, enter the zone number, 01~10.
SYSTEM SPEED ZONE 1 F1:ZN F2:ST F3:TK F4:AK	Press Flex button 1~3 for the desired zone characteristic, refer to Table 3.3.9.8-1.
	Using the dial pad, enter the desired data as indicated in Table 3.3.9.8-1.
	Press the [Save] button to store the data entry.

Table 3.3.9.8-1 SPEED ZONE (PGM 232)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ENTER NEW ZONE RANGE ZONE 1 : 2200- 4999	Speed Dial Bin range for zone.	2200-4999	eMG80/100:2200~4999, eMG800:2200~9999
2	ENTER STA RANGE ZONE 1 : 100 – 239	Station range for zone.	100-239	eMG80/100:100~239, eMG800:1000~2199
3	SPEED ZONE 1 TOLL CHK (1:ON/0:OFF) : ON	Assignment to apply toll restriction.	0: OFF 1: ON	ON
4	SPEED ZONE 1 AUTH CHK (1:ON/0:OFF) : ON	Speed Dial Authorization Check for zone.	0: OFF 1: ON	ON

3.3.9.9 Auto Ring Mode – PGM 233

The system can automatically select the Ring and COS Mode based on time of day and day of week. Three Ring and COS modes are supported, Day, Night, and Timed modes.

The ring assignments are as defined in CO/IP Ring Assignment - PGMs 144. The COS assignments are defined in the DISA COS - PGM 166.

The start times for Day, Night and start and end times for timed modes are entered for each day of week. When the Timed mode ends, the system reverts to the appropriate mode based on the Day/Night settings and the time-of-day.

The Attendant can override the automatic selection and select the desired system Mode (Day, Night, and Timed). A separate Auto Ring Table can be established for each ICM Tenancy Group - PGM 125 (indices 1 ~ 15) and for the system (index 00).

PROCEDURE:	
WEEKLY TIME TABLE DIAL DIGIT (00-15)	Press the [PGM] button and dial 233 and enter Dial digit (Ex.00).(eMG80/100:00~15/eMG800:00~32)
WEEKLY TIME TBL 0 PRESS FLEX KEY (1-7)	Use the dial-pad to enter a tenant Table index or 00 for the system (00~15). Press the Flex button 1~7 for the desired day of week (Monday ~Sunday) followed by Flex button 1~3 for the desired ring mode (Day, Night, Timed), refer to Table 3.3.9.9-1. Use the dial-pad to enter a time (military time), 0000 to 2359. Press the [Save] button to store the data entry.

Table 3.3.9.9-1 AUTO RING MODE ASSIGNMENT (PGM 233)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	MON DAY-09:00 NITE-18:00 TDS-..... TDE-.....	Monday DAY/NIGHT/TIMED ring mode start times and TIMED mode end times.	0000~2359	DAY: 9:00 NITE: 18:00 TDS: TDE:

3.3.9.10 Voice Mail Dialing Table – PGM 234

When an external Voice Mail system is used that employs in-band signaling, a digit sequence must be defined for the system to signal various call characteristics to the Voice Mail system. The voice mail uses the sequences to determine appropriate announcements or further call routing. The Table permits the definition of digits as either a prefix or suffix to other digits (station number for mailbox identification). Sequences are defined for such call characteristics as Put Mail, Get Mail, No Answer call, etc.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> VOICE MAIL DIALING TBL DIAL DIGIT (1-9) </div>	Press the [PGM] button and dial 234.
	Use the dial-pad to enter a table entry (1~9), refer to Table 3.3.9.10-1.
	Use the dial-pad to select Prefix or Suffix and the digit sequence, use the [MSG/CALLBK] button to enter a Pause, refer to Table 3.3.9.10-1.
	Press the [Save] button to store the data entry.

Table 3.3.9.10-1 VOICE MAIL DIAL (PGM 234)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	VOICE MAIL 1 PREFIX OR SUFFIX (1-2)	Code sent when the voice mail is to receive call to record a message. Put Mail	1: Prefix 2: Suffix Any digits	P#
2	VOICE MAIL 2 PREFIX OR SUFFIX (1-2)	Code sent when the voice mail is to playback recorded messages. Get Mail	1: Prefix 2: Suffix Any digits	P##
3	VOICE MAIL 3 PREFIX OR SUFFIX (1-2)	Code sent when the voice mail is to receive a call while the user is busy. Busy Mail	1: Prefix 2: Suffix Any digits	P#*3P
4	VOICE MAIL 4 PREFIX OR SUFFIX (1-2)	Code sent when the voice mail is to receive a call while the user is in DND. DND Mail	1: Prefix 2: Suffix Any digits	P#*4P
5	VOICE MAIL 5 PREFIX OR SUFFIX (1-2)	Code sent when the voice mail is to receive a call when the user did not answer. No Answer Mail	1: Prefix 2: Suffix Any digits	P#*5P
6	VOICE MAIL 6 PREFIX OR SUFFIX (1-2)	Code sent when the voice mail is to receive a call when a dialing error exists. Error Mail	1: Prefix 2: Suffix Any digits	P#*6P
7	VOICE MAIL 7 PREFIX OR SUFFIX (1-2)	It is reserved.	1: Prefix 2: Suffix Any digits	
8	VOICE MAIL 8 PREFIX OR SUFFIX (1-2)	It is reserved.	1: Prefix 2: Suffix Any digits	
9	VOICE MAIL 9 DISCONNECT[DIALDGT_1]	Code sent when the voice mail is to disconnect a call. Disconnect Mail	1: Prefix 2: Suffix Any digits	*****

3.3.9.11 Registration & Fractional Module Table – PGM 235

When multiple iPECS eMG are located on the same LAN, it may be desirable to register add-on devices employing the Registration Table.

PROCEDURE:	
REGISTRATION TBL ENTER TBL NO(1-5)	Press the [PGM] button and dial 235 and enter Table number (Ex.1).
REG TBL 1: NO MAC INFO MAX PORT : 00, DEV ID:	Use the dial-pad to select a Table entry (1~5).
	Press the desired Flex button; refer to Table 3.3.9.11-1.
	Use the dial-pad to enter the desired data, refer to Table 3.3.9.11-1.
	Press the [Save] button to store the data entry.

Table 3.3.9.11-1 MAC REGISTRATION (PGM 235)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	TBL 1: SET MAC ADDR MAC 1:	Enter the MAC address of the device to register.		
2	TBL 1: SET MAX PORT NO OF PORT : 00	Enter maximum number of ports (channels) for the device. For a 00 entry the system will accept physical port number.	00-99	00
3	TBL 1: DEVICE ID DEVICE ID :	Enter device ID when it has multiple device ID in Board/Gateway.	0-255	0 (N/A)

3.3.9.12 Mobile Extension Table – PGM 236

A mobile phone can be used in conjunction with an iPECS Phone. The Mobile phone can access system resources available to the user’s wired phone and will receive ring for incoming iPECS calls. The user may be allowed to enable the Mobile extension and define the mobile number. The system can be defined to employ a specific CO/IP Line Group to place calls to the Mobile phone.

The Mobile Extension Table also defines Notification of new VSF messages. When a new message is received for a user in the VSF, the system will call the assigned ‘Tel Number’ notifying the user of the new message.

PROCEDURE:	
MOBILE EXTENSION TABLE ENTER STA NUMBER	Press the [PGM] button and dial 236 and enter STA number (Ex.100).
100 : MOBIL EXT ATTR PRESS FLEX KEY (01-14)	Use the dial-pad to enter the desired station number.
	Press the Flex button for the desired item; refer to Table 3.3.9.12-1.
	Use the dial-pad to enter the required data.
	Press the [Save] button to store the data entry.

Table 3.3.9.12-1 MOBILE EXTENSION (PGM 236)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	100 : PGM AUTHORITY (1:ON/0:OFF) : OFF	The user may be allowed to activate the mobile extension feature.	0: OFF 1: ON	OFF
2	100 : USAGE DISABLE (0-2)	Mobile extension feature can be enabled and Fail Over to Mobile extension can be included 0: DISABLE, 1: MOBILE EXT, 2: FAIL OVER	Refer to description	DISABLE
3	100 : ACCESS CO GRP CO GRP : 01	CO group used to call (ring) the mobile extension. eMG80/100:1-21, eMG800:1~201	Refer to description	01
4	100 : TEL NUMBER	Telephone number of the Mobile extension.		Not assigned
5	TABLE 001 CLI	When the mobile Telephone number and CLI do not match, the CLI entered here is used to authorize incoming calls from the mobile.		Not assigned
6	100 : HUNT CALL ENABLE (1:ON/0:OFF) : OFF	When the paired station is a member of a hunt group (ACD, Circular or Terminal), group calls can be sent to the active mobile extension.	0: OFF 1: ON	OFF
7	100 : VSF NOTIFY (1:ON/0:OFF) : OFF	Enables outbound notification by the system when the VSF has unheard messages.	0: OFF 1: ON	OFF

Table 3.3.9.12-1 MOBILE EXTENSION (PGM 236)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
8	100 : NOTIFY RETRY CNT (1~9) : 3	Defines the number of attempts the system will make to complete a notification when receiving busy/no-answer.	1~9	3
9	100 : NOTIFY RETRY INT (1~3) : 3	Defines the time between notification attempts. If a notification fails, the system will retry after the timer expires.	1~3 (Minutes)	3
10	100 : NOTIFY BY MY CLI (1:ON/0:OFF) : OFF	When the system sends CLI to the mobile extension, the CLI can be either the original caller's CLI or the CLI of station.	0: OFF 1: ON	OFF
11	100 : CALL BACK (1:ON/0:OFF) : OFF	If it is set to "ON", incoming mobile extension call will be released before answered and system places a call to mobile extension. After mobile extension answers, the dial tone is provided and mobile extension can make internal or external call.	0: OFF 1: ON	OFF
12	100 : DELAY TIMER (000-255) : 000	Mobile extension call will be placed after delay time.	000~255	0
13	100 : ANNOUNCE (00-200) : 00	It can be announced for remote control.	0~200	0
14	100 : SUFFIX DID TBL T (1:ON/0:OFF) : OFF	It provide flexible DID table index when DID type 2 is used.	0: OFF 1: ON	OFF

3.3.9.13 Hot Desk Attributes – PGM 250

A Hot Desk station allows a user to login for access to the system features and resources. Once logged in, the user is provided access to system features and resources employing the database for the user’s assigned station.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> HOTDESK ATTRIBUTE PRESS FLEX KEY (1-3) </div>	Press the [PGM] button and dial 250.
	Press the desired Flex button; refer to Table 3.3.9.13-1.
	Use the dial-pad to enter the appropriate data.
	Press the [Save] button to store the data entry.

Table 3.3.9.13-1 HOT DESK ATTRIBUTES (PGM 250)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 2px;"> NO OF AGENT (000-140) 000 </div>	Assign number of hot desk agents.	0-140	000
2	<div style="border: 1px solid black; padding: 2px;"> VIEW AGENT RANGE N/A </div>	View the assigned station number for agents.		
3	<div style="border: 1px solid black; padding: 2px;"> AUTO LOGOUT TMR (hour) (00-24) : 00 </div>	A Hot desk station will return to inactive if the logged in user takes no action for the Auto Logout timer.	0~24 Hrs.	00

3.3.9.14 CO Call Rerouting – PGM 252

System can reroute incoming call to CO. If called number matched with compare digits of Table 252, the call are routed to Rerouting number.

PROCEDURE:	
<div style="border: 2px solid black; padding: 5px; width: fit-content; margin: auto;"> CRR ATTRIBUTE PRESS FLEX KEY (1-3) </div>	Press the [PGM] button and dial 252.
	Press the desired Flex button; refer to Table 3.3.9.14-1.
	Use the dial-pad to enter the appropriate data.
	Press the [Save] button to store the data entry.

Table 3.3.9.14-1 CALL REROUTING ATTRIBUTES (PGM 252)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ENABLE CRR (1:ON/0:OFF) : OFF	Enable CRR	0: OFF 1: ON	OFF
2	INIT CRR PRESS [Save] KEY	Initialize all data		
3	CRR ATTRIBUTES ENTER BIN NO (000-169)	If PGM 252-BTN1 is set 'ON', BTN3 is available.(Ex. enter the bin number 000)	000-169	
4	CRR TABLE 000 PRESS FLEX KEY (1-4)	Press the desired Flex button, refer to Table 3.3.9.14-2	Flex button 1-4	

Table 3.3.9.14-2 CRR TABLE ATTRIBUTES (PGM 252)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	CRR 000 COMPARE CO GRP GRP NO (01-20) : 01	Enter group number for compare digits in incoming.	01-20	01
2	CRR 000 RECEIVE DGTS	Enter receive digits.		..
3	CRR 000 CO+TEL NUMBER	Enter co group (or individual co, access co) plus telephone number.		..
4	CRR 000 TYPE ...	N/A : press digit '0' NET TYPE : '1' for transit out DISA TYPE : '2' for using DISA	0-2	N/A

3.3.9.15 Digit Conversion Tables – PGM 270

The Digit Conversion Table index is assigned to the Station and CO line. And the digit conversion can be applied according to the Apply Time Type (Unconditional, Day/Night/Timed or LCR Day/Time) differently. Each Table includes 200 entries of up to 16 digits; entries in the Tables can be any digit (01–15), or “*”, “#”. Each Index can be applied by Apply Option. (All/Station/CO line/Disable)

PROCEDURE:	
DIGIT CONVERSION TABLE ENTER TABLE NO (01–15)	Press the [PGM] button and dial 270 and enter the table number (Ex. 01).(eMG80/100 :1-15 / eMG800:1-32)
01 DIGIT CONVERSION ENTER BIN NO (001–200)	Dial Digit Conversion Table Number (01–15) and enter the bin number (Ex.001).
01/001 DIGIT CONV. PRESS FLEX KEY (01–18)	Dial conversion Bin No (001–200). - Flex 1: Apply Time Type, Flex 2: Dialed Digit - Flex 3: Unconditional Changed Digit - Flex 4–6: Day/Night Timed Changed Digit - Flex 7–15: LCR Time (Day/Time Zone Changed Digit) - Flex 16 : Ring mode table - Flex 17 : Apply Option - Flex 18: ARS CO Access CO
	Use the dial-pad to enter the dialed number.
	Press the [Save] button to store the data entry.

Table 3.3.9.15-1 DIGIT CONVERSION TABLE ATTRIBUTES (PGM 270)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	01/001 APPLY T-TYPE (0–2): UNCONDITIONAL	The Apply time type to be applied when the dialed digit is dialed. 0: Unconditional , 1: Follow DNT, 2: Follow LCR	Refer to description	Unconditional
2	01/001 DIALED DIGIT	The dialed digits	Max. 24 digits	
3	01/001 UNCOND CHANGED	The dialed digits are converted to this digit stream unconditionally.	Max. 24 digits	
4	01/001 DAY CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW DNT' and current ring mode is DAY.	Max. 24 digits	
5	01/001 NIGHT CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW DNT' and current ring mode is NIGHT.	Max. 24 digits	
6	01/001 TIMED CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW DNT' and current ring mode is TIMED.	Max. 24 digits	

Table 3.3.9.15-1 DIGIT CONVERSION TABLE ATTRIBUTES (PGM 270)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
7	01/001 D1/T1 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 1 and time zone is 1.	Max. 24 digits	
8	01/001 D1/T2 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 1 and time zone is 2.	Max. 24 digits	
9	01/001 D1/T3 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 1 and time zone is 3.	Max. 24 digits	
10	01/001 D2/T1 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 2 and time zone is 1.	Max. 24 digits	
11	01/001 D2/T2 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 2 and time zone is 2.	Max. 24 digits	
12	01/001 D2/T3 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 2 and time zone is 3.	Max. 24 digits	
13	01/001 D3/T1 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 3 and time zone is 1.	Max. 24 digits	
14	01/001 D3/T2 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 3 and time zone is 2.	Max. 24 digits	
15	01/001 D3/T3 CHANGED	The dialed digits are converted to this digit stream when Apply Time type is 'FOLLOW LCR' and day zone is 3 and time zone is 3.	Max. 24 digits	
16	01/001 RING MODE TBL (00-15): 0	The dialed digits are converted according to the auto ring mode time.	00-15	0
17	01/001 APPLY OPTION (0-3): ALL	The Apply Option can be applied according to the caller. 0. All, 1. Reserved, 2. CO Line, 3. Disable	Refer to description	All
18	01/001 ARS CO ACCESS	If a selected path is not available for some reason (All Busy, Line Fault etc.) after digit conversion, Alternative Route Selection (ARS) will connect calls using predefined designated ARS digit in digit conversion table.	Max. 8 Digits	

3.3.10 NETWORKING DATA –PGM 320 to 324

3.3.10.1 Network Basic Attribute – PGM 320

PROCEDURE:	
<div style="border: 2px solid black; padding: 5px; display: inline-block;"> NET BASIC ATTRIBUTE PRESS FLEX KEY (1-8) </div>	Press the [PGM] button and dial 320.
	Press the Flex button 1–8 for the desired setting, refer to Table 3.3.10.1-1.
	Use the dial-pad to enter the required data.
	Press the [Save] button to store the new data.

Table 3.3.10.1-1 NETWORK BASIC ATTRIBUTE (PGM 320)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	NET ENABLE (1:ON/:OFF) :OFF	Enable Networking function	0: OFF 1: ON	OFF

8	001 DIGIT REPEAT (0:NO/1:YES): NO	When the number plan code (Flex 2) is for PSTN call or transit-call, this number code can be enveloped in SETUP message or not whether if this field is set or not.	0: NO 1: YES	NO

Table 3.3.10.4-1 NETWORK NUMBERING PLAN (PGM 324)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
9	001 NET PSTN ENBLOCK (0:NO/1:YES) : NO	Choose "Transit-out Public Line" to En-block or Over-lap.	0: NO 1: YES	NO
10	001 CO ATD CODE CLI (1:ON/0:OFF) : OFF	Determine whether if Centralized ATD CLI is sent or not when slave system makes transit call.	0: OFF 1: ON	OFF
11	001 FIREWALL ROUTING (1:ON/0:OFF) : ON	Select IP address (Firewall IP address or Non-firewall IP address).If the destination system (VOIB) is in same VPN then Non-firewall IP address should be sent. Otherwise the firewall IP address should be sent. <ul style="list-style-type: none"> • ON : Send firewall IP address • OFF : Send Non-firewall (Internal) IP address 	0: OFF 1: ON	ON
12	001 AUTHO CODE COS USE (0:NO/1:YES): NO	When there's a transit out call request from user of slave system by seizing CO line, apply COS according to the authorization code.	0: NO 1: YES	NO
13	001 SMDR DIAL HIDDEN (0:NO/1:YES): NO	Determine to display dialed digit of transit out call or not at the slave system; it can contain authorization code.	0: NO 1: YES	NO
14	001 NET PSTN CLI (0:NET/1:PSTN): NET	NET: Send network station number for CLI PSTN: Send full CLI (e.g., 02-450-1000)	0: NET 1: PSTN	NET
15	001 SITE NAME	It is comment field to set name of network site.	Max. 12 characters	
16	001 EMERGENCY RERTETMR (00-10) : 00	When timer is '0': The reroute emergency call is not work. When timer is set '1'~'10': The reroute emergency call is activated after this timer. This is only work when PGM 112-18th is transit-out CO group.	00-10	00

3.3.10.5 Network Feature Code Table – PGM 325

PROCEDURE:	
NET FEATURE CODE TBL ENTER BIN NO (01-20)	Press the [PGM] button and dial 325 and enter the bin number (Ex.01).
01 NET FEATURE CODE TBL PRESS FLEX KEY (1-2)	Use the dial-pad to enter the bin no.
	Press the Flex button 1~2 for the desired setting, refer to Table 3.3.10.5-1.
	Use the dial-pad to enter the required data, refer to Table 3.3.10.5-1.
	Press the [Save] button to store the new data.

Table 3.3.10.5-1 NETWORK FEATURE CODE TABLE (PGM 325)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE
1	01 NET FEATURE CODE	Networking Feature Code programming for Networking paging call.	16 digits
2	01 NET DEST NONE (1-6)	Select network feature type (1-6) and dial associated number. 1: INT PAGE ZONE : (eMG80/100:01-35/eMG800:1-100) 2: EXT PAGE ZONE : (1-1) 3: ALL CALL PAGE ZONE : 1(INT), 2(EXT), 3(ALL) 4: DOOR OPEN : 1~2 5: Conference Room : (1-9) 6: Call park : (eMG80/100:01-19/eMG800:1-200)	Refer to description

3.3.11 TNET (Centralized Networking) – PGM 330 ~ 336

In a Centralized Control TNET (Transparent Networking), remote devices may be registered to a Central MPB/MPB (CM) and to a Local MPB/MPB (LM).

In this way, the CM maintains control of the remote device. Should the WAN connection between an LM and CM fail (2 second polling error), the LM will initiate operational control of the locally registered devices.

Calls between the systems (CM & LM) can automatically shift to PSTN Modules registered with the LM for Fail-over operation. The configuration and characteristics of LMs and CM are configurable as is Fail-over operation.

3.3.11.1 TNET Basic Attributes – PGM 330

Each MPB in a Central Control network environment must be enabled for TNET operation in order to function as part of the network.

PROCEDURE:	
TNET BASIC ATTRIBUTES PRESS FLEX KEY (1 – 1)	Press the [PGM] button and dial 330.
TNET ENABLE (1:ON/0:OFF) : OFF	Press Flex button 1. Use the dial-pad to enable or disable TNET, Central Control networking. Press the [Save] button to store the new data.

3.3.11.2 TNET CM Attributes – PGM 331

Each LM (Local MPB), which is part of a Central Control Network, must be defined with the IP Address of the CM (Central MPB) as well as the LM configuration data that will be sent to the CM at the time the LM registers with the CM.

The port counts define the ports, which are allocated in the CM database for use by devices registered to the LM. The number of ports defined in the database of each LM must be equal or less than the ports defined in the CM for the LM, see PGM 332, in order to register properly.

PROCEDURE:	
TNET CM ATTRIBUTES PRESS FLEX KEY (1 – 10)	Press the [PGM] button and dial 331. Press the Flex button, 1~6 for the desired setting, refer to Table 3.3.11.2-1. Use the dial-pad to enter the required data, refer to Table 3.3.11.2-1. Press the [Save] button to store the new data.

Table 3.3.11.2-1 TNET CM ATTRIBUTES (PGM 331)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	CM REGISTER REQ (1:ON/0:OFF) : ON	This field informs the LM to attempt registration with the CM. This field must be set to ON for proper registration.	0: OFF 1: ON	OFF

Table 3.3.11.2-1 TNET CM ATTRIBUTES (PGM 331)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
2	CM SERVER TYPE 0:LIK / 1:CM : LIK(0)	This field defines Central Call Manager type. The LIK is eMG/UCP even though the display is LIK.	0:LIK 1: CM	LIK
3	CM1 IP ADDRESS 0 .0 .0 .0	This field defines the IP address of the CM1 that will be used by the LM.	IPv4 address	
4	CM2 IP ADDRESS 0 .0 .0 .0	This field defines the IP address of the CM2 that will be used by the LM.	IPv4 address	
5	CM1 MAC ADDRESS 000000000000	This field defines the MAC address of the CM1 that will be used by the LM.		
6	CM2 MAC ADDRESS 000000000000	This field defines the MAC address of the CM2 that will be used by the LM.		
7	CM IPKTS PORT (0001 - 9999) :5588	In the TNET environment, the IP KTS protocol signaling UDP port is defined. At present this field is not used, do not change this port number.	0000- 9999	5588
8	CM TOTAL PORT (000 – 999) : 011	This field defines the total number of ports the LM will request be allocated by the CM for devices attached to the LM. This value must be equal to or less than the port count in the CM for the LM devices.	000-999	000
9	POLLING COUNT (00 – 99) : 05	This field defines the maximum polling failures an LM considers a WAN fault.	00-99	05
10	POLLING INTERVAL (00 – 99) : 02	This field defines the interval time between LM to CM polling attempts.	00-99	02

3.3.11.3 TNET LM ATTRIBUTES – PGM 332

The CM (Central MPB/MPB) must be programmed with the MAC and IP address of each LM (Local MPB) in the Centralized Control network as well as the maximum configuration of each LM.

The port counts define the ports, which are allocated in the CM database for use by devices registered to the LM.

The number of ports defined in the database of each LM, sees PGM 331, must be equal to or less than the ports defined in the CM for the LM, in order to register properly.

VoIP channels are needed to support RTP Packet relay or codec translation between other devices. The CO port count must include any VoIP channels required.

PROCEDURE:	
TNET LM ATTRIBUTES ENTER BIN NO(01-15)	Press the [PGM] button and dial 332.
TNET LM(01) ATTRIBUTES PRESS FLEX KEY (1- 4)	Use the dial pad to enter the bin number associated with the LM.
	Press the Flex button, 1~4 for the desired setting, refer to Table 3.3.11.3-1.
	Use the dial-pad to enter the required data, refer to Table 3.3.11.3-1.
	Press the [Save] button to store the new data.

Table 3.3.11.3-1 TNET LM ATTRIBUTES (PGM 332)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	LM(01) MAC ADDRESS 00000000000000	This field defines the MAC address of the LM that will be part of the TNET environment and is used by the CM for authorization.	MAC address	
2	LM(01) IP ADDRESS 0 .0 .0 .0	This field displays the IP address of the LM.	IPv4 address	
3	LM(01) IPKTS PORT (0001 - 9999) :5588	In the TNET environment, the IP KTS protocol signaling UDP port is defined. At present this field is not used, do not change this port number.	0000-9999	5588
4	LM (01) TOTAL PORT (000 – 999) : 000	This field defines the total number of ports the LM will request be allocated by the CM for devices attached to the LM. This value must be equal to or more than the available port count in the LM.	000-999	000
5	LM (01) MULTICAST IP 239.20.19.1	This field defines the multicast IP address that could be used in TNET branch site.	IPv4 address	

3.3.11.4 FoPSTN Attributes – PGM 333

The Fail-over function allows the systems in a Centralized Control network (TNET) environment to complete calls from system to system over a PSTN (analog or digital) line should the WAN connection to the CM fail.

A CO Gateway/Board must be registered to the LM for local control and access CO services. Users may call others in the normal manner and the call is routed over CO facilities to the remote CM.

When calls are directed to a DID line at the receiving system, the system will select a line from the assigned CO Group and dial the Tel Number with the station number dialed as the trailing digits.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> FoPSTN ATTRIBUTES PRESS FLEX KEY (1-3) </div>	Press the [PGM] button and dial 333.
	Press the Flex button 1~3 for the desired setting, refer to Table 3.3.11.4-1.
	For Flex button 1 enable or disable FO. For Flex button 2, press the [Save] button to reset the FO table. For Flex button 3, dial the table bin number to input data.
	For Flex button 3, use the dial-pad to enter the required data, refer to Table 3.3.11.4-1.
	Press the [Save] button to store the new data.

Table 3.3.11.4-1 FAIL-OVER ATTRIBUTES (PGM 333)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ENABLE FoPSTN (1:ON/0:OFF) : ON	This field is used to enable or disable Fail-over operation from the CM or LM.	0: OFF 1: ON	OFF
2	INIT FoPSTN TABLE PRESS [Save] KEY	This field is used to initialize the FO table.		
3	FoPSTN ATTRIBUTES ENTER BIN NO(000-199)			
3-1	FoPSTN 001 NUM PLAN xxxxxxxx	Station numbers associated with the remote system. A range can be indicated by using "*" to indicate the range.	Max 8 digits	
3-2	FoPSTN 001 CO GROUP GRP NO (00-21) : 01	This field defines the CO Group of the local system that will be used to place calls to the stations entered in the FO Numbering Plan, should WAN failure occur. eMG80/100:1~20, eMG800:1~200	Refer to description	
3-3	FoPSTN 001 TEL NUMBER xxxxxxxxxxxxxxxxxxxx	This field defines the telephone number the system should dial to place a call to the stations entered in the FO Numbering Plan, should Wan failure occur. An "*" may be entered as a wild-card to indicate insertion of the dialed station number.		

3.3.11.5 TNET LM External Contact Attributes – PGM 334

Each LM incorporates relay contacts, which can be employed as a Door Lock Release. The contact activates a 3rd party Door Lock Release mechanism activated by dialing the Door Unlock code at a local station. Note assigning other functions to the contact may cause unexpected operation.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> TNET LM EXT CONTACT ENTER BIN NO (01-15) </div>	Press the [PGM] button and dial 334. The range is : eMG80/100 : 1-15 / eMG800: 1-32
<div style="border: 1px solid black; padding: 5px; background-color: #e0ffe0;"> LM(01) EXT CONTACT PRESS FLEX_KEY (1-4) </div>	Select LM number Select Flex button 1~4 for the desired External Control contact. Use the dial-pad to enter desired data. <ul style="list-style-type: none"> - 1. LBC + station number, (ex. 150) - 2. Door Lock Release - 3. External Page 1 access - 4. External Page 2 access Press the [Save] button to store the External Contact data entry.

3.3.11.6 TNET LM Music Attributes – PGM 335

The CM does not provide BGM/MOH to an LM. The LM employs local BGM and MOH facilities, which reduces traffic load on the WAN and IP channel processors. The LM uses IP Multicast for local BGM and MOH transport.

PROCEDURE:	
TNET LM MUSIC ATTR ENTER BIN NO (01-15)	Press the [PGM] button and dial 335
MUSIC ASSIGN PRESS FLEX_KEY (1-3)	Select LM number
Refer to Table 3.3.11.6-1 DISPLAY	Select the desired Flex button; refer to Table 3.3.11.6-1.
	Use the dial-pad to select the desired Music Source, refer to Table 3.3.11.6-1.
	To save the Music Source, press the [Save] button.

Table 3.3.11.6-1 MUSIC SOURCES FOR MOH & BGM (PGM 335)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	BGM TYPE (0-37) MUSIC 1 (1)	Assigns the source for BGM. <ul style="list-style-type: none"> • 00: Ring-back • 01: Int music • 02: Ext music • 03: VSF MOH • 04~08: SLTMOH1~5 • 09~37: VSFMOH2~30 	Refer to description	Music 1
2	MOH TYPE (0-37) MUSIC 1 (1)	Assign the source for MOH. <ul style="list-style-type: none"> • 00: Ring-back • 01: Int music • 02: Ext music • 03: VSF MOH • 04~08: SLTMOH1~5 • 09~37: VSFMOH2~30 	Refer to description	Music 1
3	INT/EXT1 MUSIC (0:INT/1:EXT1): INT	Assigns the input for source 1 <ul style="list-style-type: none"> • 0: Internal • 1: Ext. Music 1 	Refer to description	Internal

3.3.11.7 TNET LM Alarm Attributes – PGM 336

The LM incorporates circuitry to monitor an external contact. This contact is most often employed as an Alarm indicator or Doorbell. The Alarm attributes define the operation of the monitoring circuitry. For the Alarm, the signal to the LM stations can be repeating or a single burst, the former is often desired. For the Doorbell, a single tone is sent each time the contact activates.

PROCEDURE:	
TNET LM ALARM ATTR ENTER BIN NO (01-15)	Press the [PGM] button and dial 336.
LM(01) ALARM ATTR PRESS FLEX KEY (1-4)	Select LM number
	Press the desired Flex button; refer to Table 3.3.11.7-1.
	Use the dial-pad to enter desired data for the attribute, refer to Table 3.3.11.7-1.
	Press the [Save] button to store the data entry.

Table 3.3.11.7-1 ALARM ATTRIBUTES (PGM 336)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ALARM ENABLE (1:ON/0:OFF) : OFF	This parameter enables the external contact monitoring circuitry.	0: OFF 1: ON	OFF
2	ALARM CONTACT TYPE (1:CLOSE/0:OPEN) : CLOSE	This parameter establishes the contact state that will activate the Alarm, close or open.	0: Open 1: Close	CLOSE
3	ALARM/DOORBELL MODE (1:ALARM/0:BELL): ALARM	The contact can be treated to function as a doorbell instead of an alarm.	0: Bell 1: Alarm	ALARM
4	ALARM SIGNAL MODE (1:RPT/0:ONCE) : RPT	The assigned stations will receive a Repeating signal or single burst (ONCE) of alarm tone.	0: Once 1: Repeat	RPT

3.3.12 Zone Data – PGM 436 - 441, 444

Zone data is a tool employed to easily manage the characteristics of groups of devices under the control of an MPB. Often, devices are installed in groups with common characteristics. Such devices can be grouped to a Zone to define common characteristics including Country Code, DSCP, RTP packet handling, etc. Common attributes are defined at the device, Zone and Inter-zone level. Device settings have priority over Zone settings, while Zone settings have priority over system settings.

Generally, transport of RTP packets should be a peer-to-peer communication over either a LAN or VPN. If iPECS devices are separated by a NAPT server or direct peer-to-peer communications is not available, packet relay must be employed to assure communication. In packet relay, RTP packets are received by a local VoIP channel (MPB or VOIB), which is under control of the MPB, and the IP address is translated from a public to the device's private address.

The VoIP channels implement a secure channel using IPSec protocol. Devices can be assigned as part of an "RTP Relay group" to use the same VoIP channels to implement relay of RTP packets. Packet relay groups also provide for conversion of multi-cast packets from the MPB to uni-cast and back again at the group level to multi-cast. Note packet relay requires an MPB or VoIP channel be available locally for each simultaneous call that requires packet relay. Programs 436 to 441 define device zone assignments and zone configurations. These programs are available only in Web admin. Holiday and Vacation assignments for each zone are defined in Program 444.

3.3.12.1 Zone Holiday Assignment – PGM 444

Holidays and vacation day intervals for each zone can be established to define a specified Service mode (Day, Night, and Timed) Up to 40 holidays and 5 vacation intervals can be defined.

PROCEDURE:	
ZONE HOLIDAY ASSIGNMENT ENTER BIN (01-32)	Press the [PGM] button and dial 444 and enter the bin number (Ex.01).
ZONE(01) HOLIDAY ATTR PRESS FLEX KEY (1-3)	Use the dial-pad to enter the bin (Zone) number (01~32).
	Press the Flex button, 1 ~ 3, for the desired setting, refer to 3.3.12.1-1.
	Use the dial pad to enter the required data, refer to Table 3.3.12.1-1.
	Press the [Save] button to save any changes.

Table 3.3.12.1-1 ZONE HOLIDAY ASSIGNMENT (PGM 444)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	ZONE(01) RING MODE(0-3) TIMED-R	Enter the desired Service mode for the Holiday or Vacation. 0: DAY, 1: NIGHT, 2: TIMED, 3: N/A	Refer to description	TIMED
2	ZONE(01) VACATION ENTER BIN NO(1-5)	Assign a date range for the vacation entering the start and end dates as yymmdd - yymmdd.	12 digits	None
3	ZONE(01) HOLIDAY ENTER BIN NO(01-40)	Assign a date for the holiday for the Zone as MMDD.		None

3.3.13 GREEN MODE

The system can disable the power of a Digital Phone or SLT (Single Line Telephone) installed in the system at night or during holiday mode. The power On/Off can be controlled by Web Admin manually or automatically according to the assigned power On/Off time.

3.3.13.1 Green mode activation – PGM 500

It is applied for SLIB, DSIB and HYIB. Regarding the exact board related to terminal, refer to iPECS eMG Hardware Description and Installation Manual.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> GREEN MODE ACTIVATION PRESS FLEX KEY (1-4) </div>	Press the [PGM] button and dial 500.
	Press the Flex button, 1 ~ 4, for the desired setting, refer to Table 3.3.13.1-1.
	Use the dial pad to enter the required data, refer to Table 3.3.13.1-1.
	Press the [Save] button to save any changes.

Table 3.3.13.1-1 GREEN MODE ACTIVATION (PGM 500)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	POWER SAVE USAGE (1:EN/0:DIS) : DISABLE	Enable or Disable power usage.	0: Disable 1: Enable	DISABLE
2	POWER ON/OFF (1:ON/0:OFF) : ON	Power ON/OFF manually all of stations in Power Save used board.	0: OFF 1: ON	ON
3	POWER SAVE MODE PRESS SLOT BTN (F1-F6)	Enables or Disables Power Save Usage Mode of each board.	Flex button 1-6	
4	POWER CURRENT STATE CHECK SLOT BTN (F1-F6)	Displays the current status of board power ON/OFF.	Flex button 1-6	

3.3.13.2 Green mode time setting – PGM 501

It is applied for SLIB, DSIB and HYIB. Regarding the exact board related to terminal, refer to iPECS eMG Hardware Description and Installation Manual.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> GREEN MODE TIME ENTER WEEK DAY NO (1-7) </div>	Press the [PGM] button and dial 501 and enter the day from 1 to 7 by dial pad (Ex.1).
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> (MON) GREEN MODE TIME F1:ON TIME F2:OFF TIME </div>	Press the desired Flex button 1 or 2.
	Press the Flex button, 1 ~ 2, for the desired setting, refer to 3.3.13.2-1.
	Use the dial pad to enter the required data, refer to Table 3.3.13.2-1.
	Press the [Save] button to save any changes.

Table 3.3.13.2-1 GREEN MODE TIME (PGM 501)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	POWER ON TIME (HH:MM) NOT ASSIGNED	Enable power on time		Not assigned
2	POWER OFFIME (HH:MM) NOT ASSIGNED	Enable power off time		Not assigned

3.3.14 INITIALIZATION — PGM 450

The system has been pre-programmed with certain features, which are based on the default database. The defaults are loaded into memory when the system is initialized. The system should always be initialized when installed or the database is suspected of being corrupt. The system can be initialized manually during installation, refer to the **iPECS eMG Hardware Description & Installation Manual**.

This program allows all or any of several distinct portions or the database to be initialized, returned to default.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content;"> INITIALIZATION PRESS FLEX KEY (01-17) </div>	Press the [PGM] button and dial 450. Select a Flex button to initialize the desired data, refer to Table 3.3.14-1. Press the [Save] button, the selected data is initialized and confirmation tone is received.

Table 3.3.14-1 INITIALIZATION DATA (PGM 450)

BTN	DISPLAY	REMARK
1	INITIALIZATION FLEX NUM PLAN	It will initialize numbering plan.
2	INIT STATION DATA STATION DATA(ENT STA RNG)	It will initialize station attributes for selected stations.
3	INIT COL DATA COL DATA(ENT COL RNG)	It will initialize CO line attributes for selected CO lines.
4	INIT COL DATA SYSTEM DATA	It will initialize system attributes.
5	INITIALIZATION STATION GROUP	It will initialize hunt attributes.
6	INITIALIZATION ISDN TABLES	It will initialize ISDN related attributes. (MSN/Flexible DID, COLP, DID conversion)
7	INITIALIZATION SYSTEM TIMER	It will initialize system timer attributes.
8	INITIALIZATION TOLL TABLES	It will initialize toll tables.
9	INITIALIZATION LCR DATA	It will initialize LCR attributes.

Table 3.3.14-1 INITIALIZATION DATA (PGM 450)

BTN	DISPLAY	REMARK
10	INITIALIZATION OTHER TABLES	It will initialize miscellaneous tables. (Exec/Sec, CCR, Prefix, Authorization code, Auto ring mode, VM prefix, System SPD Zone, Multicast table, Mobile Extension)
11	INITIALIZATION FLEX BUTTON	It will initialize flexible button and DSS/LSS.
12	INITIALIZATION NET DATA	It will initialize networking attributes.
13	INITIALIZATION ALL DATA	It will initialize all programs.
14	SYSTEM RESTART RESTART NOW	It will restart the MPB.
15	UNUSED	
16	INITIALIZATION PERSONAL GROUP	It will initialize Personal Group.
17	INITIALIZATION Default password *	It will initialize(remove) password if it is *
18	INITIALIZATION HOTEL DATA	

3.3.15 PRINT-OUT DATABASE — PGM 451

The system can output all or portions of the system database in order to provide a 'hard-copy'. The data is output over the appropriate Serial port (Serial 1 or Serial 2).

PROCEDURE:	
DATABASE PRINT OUT PRESS FLEX KEY (01-22)	Press the [PGM] button and dial 451.
	Select Flex button 1~22 to output the desired data, refer to Table 3.3.15-1.
	For Station, Station Flex buttons, and CO/IP line data, use the dial pad to enter the desired range for stations or CO/IP lines, or for all skip this step.
	Press the [Save] button, after output, confirmation tone is heard.

Table 3.3.15-1 DATABASE PRINT OUT (PGM 451)

BTN	DISPLAY	REMARK
1	DATABASE PRINT OUT FLEX NUM PLAN	
2	DATABASE PRINT OUT IP SETTING PLAN	
3	DATABASE PRINT OUT STA DATA(ENT STA RNG)	A station range must be entered to output the Station data.
4	DATABASE PRINT OUT COL DATA(ENT COL RNG)	A CO/IP line range (01~21) must be entered to output CO/IP data.
5	DATABASE PRINT OUT SYSTEM DATA	
6	DATABASE PRINT OUT STATION GROUP	
7	DATABASE PRINT OUT ISDN TABLES	
8	DATABASE PRINT OUT SYSTEM TIMER	
9	DATABASE PRINT OUT TOLL TABLES	
10	DATABASE PRINT OUT LCR DATA	

Table 3.3.15-1 DATABASE PRINT OUT (PGM 451)

BTN	DISPLAY	REMARK
11	DATABASE PRINT OUT OTHER TABLES	
12	DATABASE PRINT OUT NATION SPECIFIC	
13	DATABASE PRINT OUT FLX BTN(ENT STA RNG)	A station range must be entered to output the Station Flex button data. Data may be output in 20 or 10 character format, see Flex button 17 below.
14	DATABASE PRINT OUT ALL DATA	
15	DATABASE PRINT OUT LCD PRINT(0-2):NORMAL 24	
16	DATABASE PRINT OUT TO QUIT PRESS [Save]	
17	STRING LENGTH (1:20/0:10): 20(CHAR)	The Station Flex button print out can be provide in a 20 or 10 character format, default is 20 characters.
18	DATABASE PRINT OUT BOARD ATTRIBUTES	
19	DATABASE PRINT OUT NETWORKING TABLE	
20	DATABASE PRINT OUT HOTEL DATA	
21	FLEX BTN LCD PRINT STR LEN(0-1): 20	Print out strings those are used in flexible button to display the content.
22	WORKING LCD PRINT	Print out strings those are used to activate some features.

3.3.16 VIRTUAL TRACE DIP-SWITCH — PGM 452

The Virtual Trace Dip-switch is used to enable and disable traces for various functions as defined in Table 3.3.16-1.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> VIRTUAL TRACE DIP SW PRESS FLEX KEY (01-22) </div>	Press the [PGM] button and dial 452.
	To enable trace, press the desired trace button 1-9. The Flex button LEDs indicate trace setting, On/Off, press the desired Flex button to toggle Trace Enable, - LED on: trace enable - LED off: trace disabled.
	To enable selected trace settings, press the [Save] button.

Table 3.3.16-1 VIRTUAL TRACE DIP-SWITCH (PGM 452)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	VIRTUAL TRACE DIP SW CALL TRACE : (OFF)	'Call Trace' is enabled for output.	0: OFF 1: ON	OFF
2	VIRTUAL TRACE DIP SW VOIP TRACE : (OFF)	VoIP Trace is enabled for output.	0: OFF 1: ON	OFF
3	VIRTUAL TRACE DIP SW HTTP TRACE : (OFF)	HTTP Trace is enabled for output.	0: OFF 1: ON	OFF
4	VIRTUAL TRACE DIP SW MULTICAST TRACE : (OFF)	Multicast Data (normally registration data between MPB and local mode device) Trace is enabled for output.	0: OFF 1: ON	OFF
5	VIRTUAL TRACE DIP SW CTI TRACE : (OFF)	CTI Device Trace is enabled for output.	0: OFF 1: ON	OFF
6	VIRTUAL TRACE DIP SW RAW DATA TRACE : (OFF)	Detailed Data Trace is enabled.	0: OFF 1: ON	OFF
7	VIRTUAL TRACE DIP SW MPMP TRACE: (OFF)	MPB to MPB Data Trace is enabled for output.	0: OFF 1: ON	OFF
8	VIRTUAL TRACE DIP SW CPU RE TRACE: (OFF)	CPU Redundancy Data Trace is enabled for output.It is not used.	0: OFF 1: ON	OFF
9	VIRTUAL TRACE DIP SW MISU/VMIU TRACE:(OFF)	MISU/VMIU Trace is enabled for output.	0: OFF 1: ON	OFF

Table 3.3.16-1 VIRTUAL TRACE DIP-SWITCH (PGM 452)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
10	VIRTUAL TRACE DIP SW DSP TRACE (OFF)	DSP Trace is enabled for output.	0: OFF 1: ON	OFF
11	VIRTUAL TRACE DIP SW SIP TRACE (OFF)	SIP Trace is enabled for output.	0: OFF 1: ON	OFF
12	VIRTUAL TRACE DIP SW ISDMR TRACE (OFF)	ISDMR Trace is enabled for output.	0: OFF 1: ON	OFF
13	VIRTUAL TRACE DIP SW SIP MSG TRACE (OFF)	SIP MSG Trace is enabled for output.	0: OFF 1: ON	OFF

3.3.17 VIRTUAL DIP-SWITCH — PGM 453

The Virtual Dip Switch is employed to change from in-band to SMDI for External Voice Mail communications and manually poll each IP KTS device.

PROCEDURE:	
<div style="border: 1px solid black; padding: 5px; width: fit-content; margin: auto;"> VIRTUAL DIP SWITCH PRESS FLEX KEY (1-6) </div>	Press the [PGM] button and dial 453.
	To enable trace, press desired Flex button 1~6. The Flex button LEDs indicates Dip switch setting, On/Off. Press the desired Flex button to toggle setting, - LED On: enabled - LED Off: disabled
	To enable call trace, press the [Save] button.

Table 3.3.17-1 VIRTUAL DIP-SWITCH (PGM 453)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	<div style="border: 1px solid black; padding: 2px;"> VIRTUAL DIP SWITCH DEVICE POLLING: (ON) </div>	'Device polling'. If enabled (On), the system will check each registered device, Gateway/Board and iPECS Phone to determine if the device is alive or not.	0: OFF 1: ON	ON
2	<div style="border: 1px solid black; padding: 2px;"> VIRTUAL DIP SWITCH SMDI SETTING: (OFF) </div>	SMDI setting is enabled for output.	0: OFF 1: ON	OFF
3	<div style="border: 1px solid black; padding: 2px;"> VIRTUAL DIP SWITCH MULTICAST LED: (OFF) </div>	If this value is set, the LED commands from MPB will be sent to Gateway/boards and terminals in the multi-cast mode.	0: OFF 1: ON	OFF
4	<div style="border: 1px solid black; padding: 2px;"> VIRTUAL DIP SWITCH AUTO NEGO: (MANUAL) </div>	This field enables negotiation of speed between the LAN switch port and the system.	0: AUTO 1: MANUAL	MANUAL
5	<div style="border: 1px solid black; padding: 2px;"> VIRTUAL DIP SWITCH FULL-HALF: (FULL) </div>	The duplex mode of LAN connections can be set according to this field.	0: FULL 1: HALF	FULL
6	<div style="border: 1px solid black; padding: 2px;"> VIRTUAL DIP SWITCH 10-100 TX: (100) </div>	The speed of the Ethernet interface is established based on this field, 10 Base T or 10/ 100 Base T.	0: 100 1: 10	100

3.3.18 DECT ATTRIBUTES — PGM 4913

DECT Attributes define functions associated with the DECT equipment and operation. Generally, the entry will turn the feature ON (enable) or OFF (disable).

PROCEDURE:	
DECT ATTRIBUTES PRESS FLEX KEY (1-4)	Press the [PGM] button and dial 491.
	Press the Flex button for the desired Attribute; refer to Table 3.3.18-1.
	Use the dial pad to enter the required data.
	Press the [Save] button to store the data entry.

Table 3.3.18-1 DECT ATTRIBUTES (PGM 491)

BTN	ATTRIBUTE/DISPLAY	DESCRIPTION	RANGE	DEFAULT
1	AUTO CALL RLS (1:ON/0:OFF) : OFF	If enabled, when the other party of an active internal call disconnects, GDC-450H/480H/500H returns to idle.	0: OFF 1: ON	OFF
2	BASE FAULT ALARM (1:EN/0:DIS) : DISABLE	If enabled, DECT Base station (GDC-600BE) alarms are sent to the Attendant.	0: Disable 1: Enable	Disable
3	CHAIN FAULT ALARM (1:EN/0:DIS) : DISABLE	Not used.	0: Disable 1: Enable	Disable

4 WEB Service

4.1 General

The iPECS system incorporates a Web Server, which is employed by the system's Web Service. Using a Web browser the system's Web Server can be accessed and the database managed in a user-friendly environment.

In addition to modifying the system database, Web Admin provides for Maintenance such as system file upload, remote upgrade, database download and maintenance functions.

We provide On-line web user guide to a user. You can get the information about the frequent use of features by clicking [User's guide] in the login page.

The default database includes assignment of a private IP address to the system. This address (10.10.10.2) may be used to access the system from the LAN. However, a routable IP address must be assigned for access from a remote location.

To access the iPECS Web Server requires:

- Operating iPECS series system
- IP address assigned in the system and is known
- TCP port assigned for the KSU LAN port and is known
- iPECS system connected to an accessible LAN
- iPECS system password (Keyset Admin, Remote access, and CID) if any, is known

4.1.1 PC/Browser

- MS Explore 10.0, Chrome 24.0, Firefox 18.0 or higher version is recommended (HTML5 support required)
- Windows PC, at least 32MB RAM (64MB or more RAM is recommended)
- NIC (Network Interface Card)

4.1.2 Environment for LAN connection

- IEEE 802.3, 10/100 Base T
- Static/DHCP addressing
- Firewall, requires Network Administrator to allow access.
- Remote access requires a routable IP address for the iPECS system Web Server. This must be assigned to the system prior to access.

4.2 iPECS systemWeb Access & Login

In the browser 'ADDRESS' field, enter the MPB or UCP IP address (default is 10.10.10.2) and TCP port. Select GO; the Web server returns iPECS system Web Services Login page, Figure 4.2.1-1. The Web services include the Admin and Maintenance functions and the Station Program User Portal.

To access the Admin and Maintenance function, User ID and Password should be matched with the assignments in the User Management.

The default Maintenance User ID is 'admin' and the password is '1234'. The system will return the Admin & Maintenance Main page, section 4.3.

To access the Station program, the user must enter their Station number and full Authorization code (station number and Auth code) in Tables Data – Station Authorization Code (PGM 227). The system will return the Station Program Main page as shown in section 4.6.

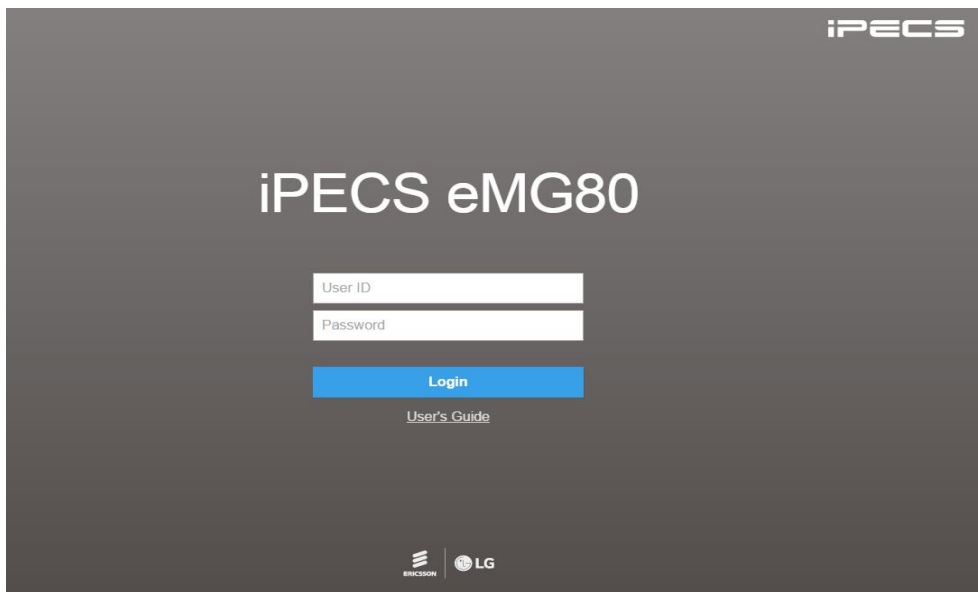

Figure 4.2-1 iPECS eMG80 Home page

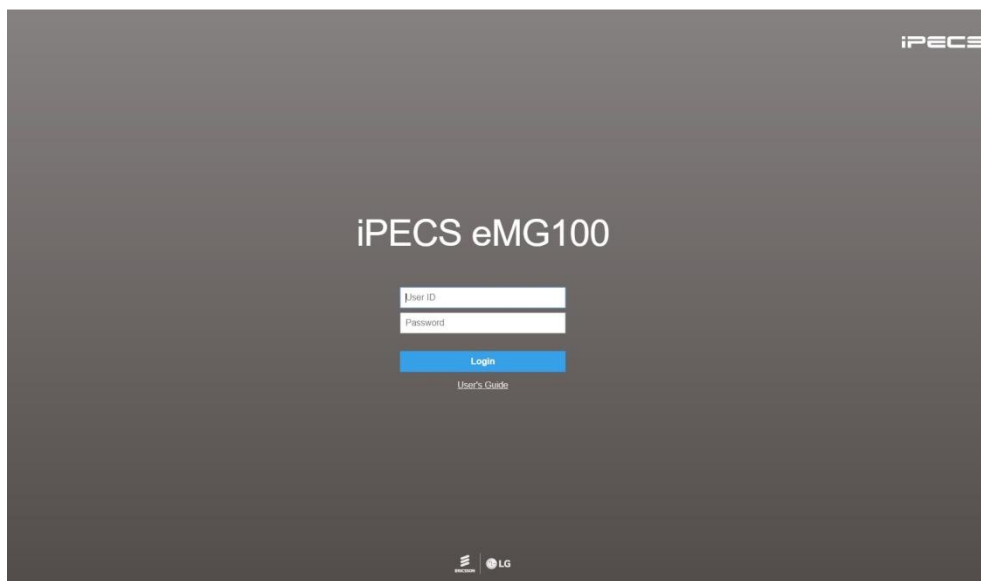

Figure 4.2-2 iPECS eMG100Home page

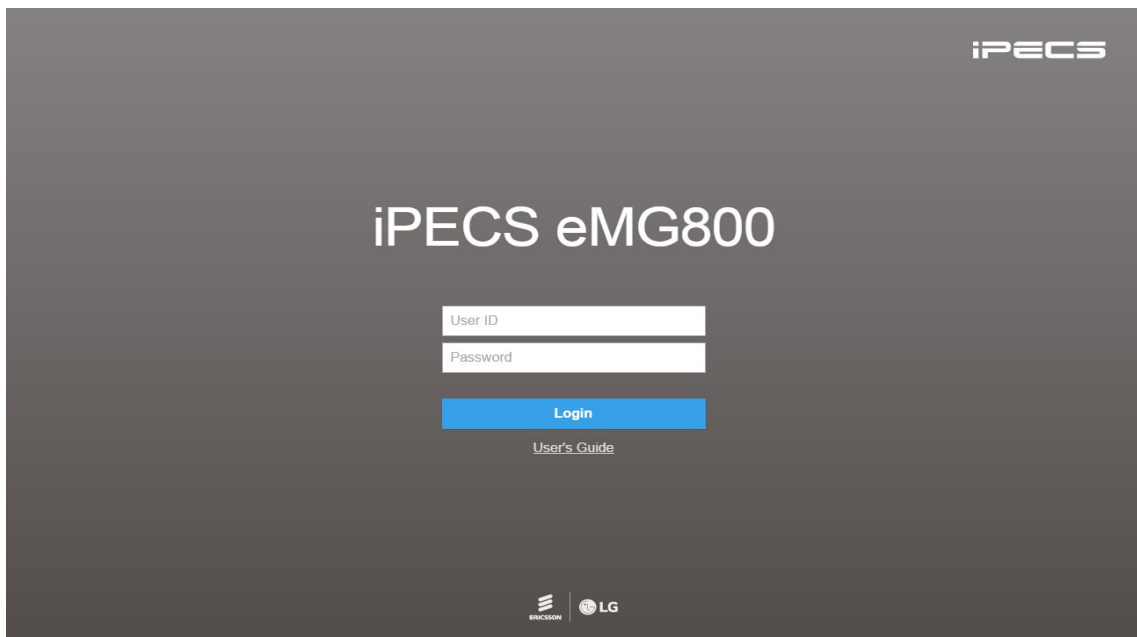

Figure 4.2-3 iPECS eMG800Home page

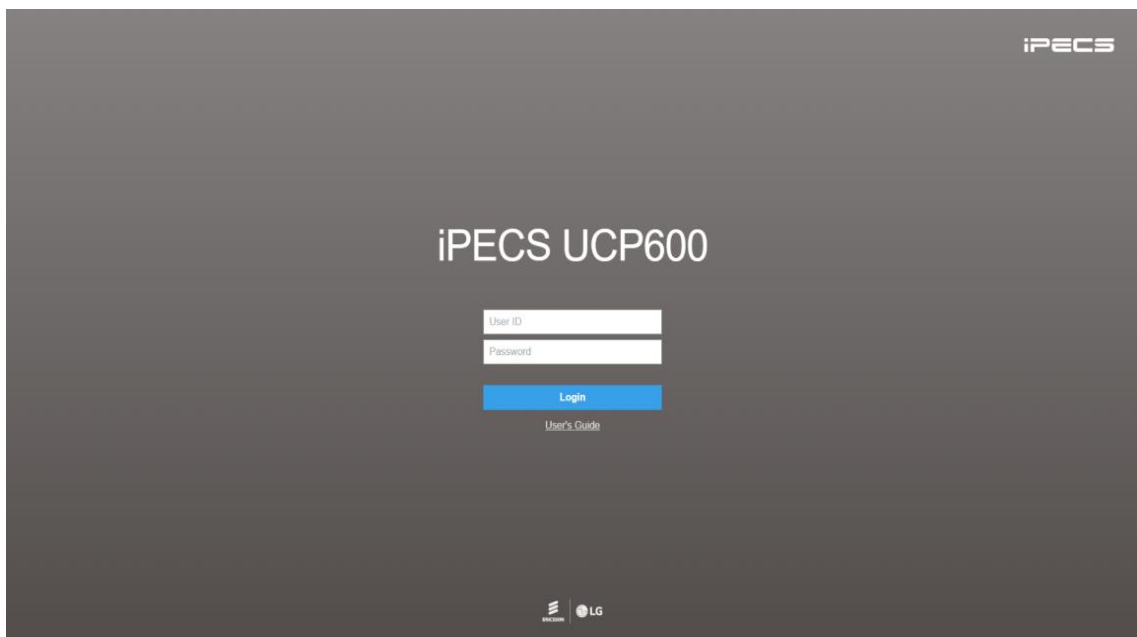

Figure 4.2-4 iPECS UCP600Home page

For reference, we explain Admin and Maintenance based on UCP600. The home page is displayed according to eMG80/100, eMG800 & UCP type (UCP100, UCP600, UCP2400).

To access User portal, the user must enter **Station number and full Authorization code** (station number and Auth code) as defined in Tables Data – Station Authorization Codes (PGM 227). The system will go to the user portal Main page as below. For detail information, refer to “User Portal User Guide” provided.

The screenshot displays the user portal interface for station STA 1001. At the top, there is a navigation bar with the station ID 'STA 1001' and a menu icon. Below the navigation bar, there are tabs for 'My Attributes', 'My Profile', 'Voice Mail', 'Button Setting', and 'Directory'. A 'Save' button is located in the top right corner. The main content area is divided into four sections, each with a title and a radio button for 'ON' or 'OFF' status:

- Call Forward:** Status is 'ON'. Fields include 'Call Forward Condition' (dropdown: Select Condition), 'Destination Type' (dropdown: Select Destination Type), and 'Destination Number' (text input).
- Mobile Extension:** Status is 'OFF'. Field includes 'Destination Number' (text input).
- Pre-Selected Message:** Fields include 'Show Text Message to an internal caller' (dropdown: Select a message) and 'Voice message play to an outside caller' (dropdown: OFF).
- Agent Duty:** Status is 'OFF'. Fields include 'Station Group Number' (text input) and 'Off-Duty Reason' (dropdown: 0).

A hamburger menu icon is located in the bottom right corner of the page.

Figure 4.2-2 iPECS User Portal main page

4.3 Web Admin & Maintenance Main Page Overview

In the Web Admin Login screen (see section 4.2), enter the User ID and Password then click the **[Login]** button to access the iPECS Admin & Maintenance Main Page as shown in Figure 4.3-1.

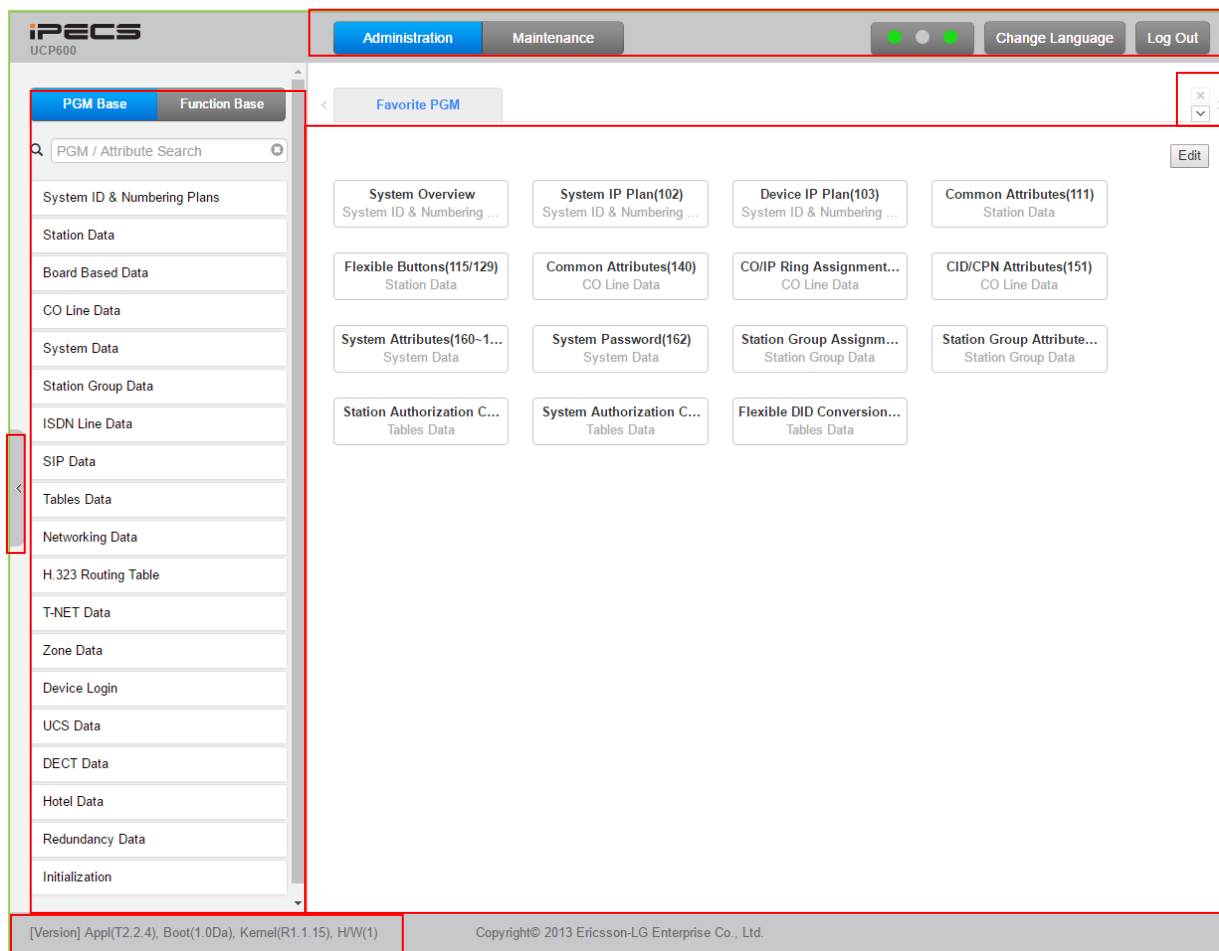

Figure 4.3-1 iPECS UCP Admin & Maintenance Main Page

The Admin & Maintenance Main Page has three sections,

- Menu bar – Upper frame
 - Administration** – accesses the system database.
 - Maintenance** – SW upgrade, Database, Multi Language, SMDR, VSF, Voice Mail, Trace, etc.
 - Change Language**– change the desired language.
 - Log out** – log out the web server
- Search box, PGM Base, Function Base– Left frame
- Favorite Programs and Entry section – Central frame

What is the meaning about Buttons and Text on page?

- 1) Search Box: When user clicks PGM search menu for the first time, it takes 4 seconds to build index. Whenever user types a keyword or PGM number, PGMs that have the keyword will be shown at the left menu. Searched text will be highlighted in green when the PGM window shows. User can search for the related feature easily in Administration and Maintenance.
- 2) Hide menu by clicking the left arrow in the middle of window on left side.

- 3) X button at the top of the page on the right side functions whether the current tab or all tabs are closed or not.
- 4) button will display all PGM by click and check which PGM is using.
- 5) The Application, Boot, and Kernel version can find at the left side of bottom.
- 6) User can check the status indicator at the bottom on the right side of page by displaying the text such Disconnected or Read Only User.
 - Disconnected: disconnected to Web Admin Server without working for a long time. User can connect to Web Admin Server by clicking Refresh button.
 - Read Only User: User who access to Web Admin Sever has no authority to set the function as the maintenance user and just is only for read.

License State Display

If “Installation Period” or the color of SW Maint. is GREEN, system software can be upgraded.

Major version upgrade is possible in “Installation” or “Maintenance” Period but Minor version upgrade is possible in “Warranty” Period. In other states, both upgrade and downgrade are not allowed.

- First LED : SW maintenance
- Second LED: Temporary License
- Third LED: T-Net (eMG & UCP) /Redundancy (UCP only)

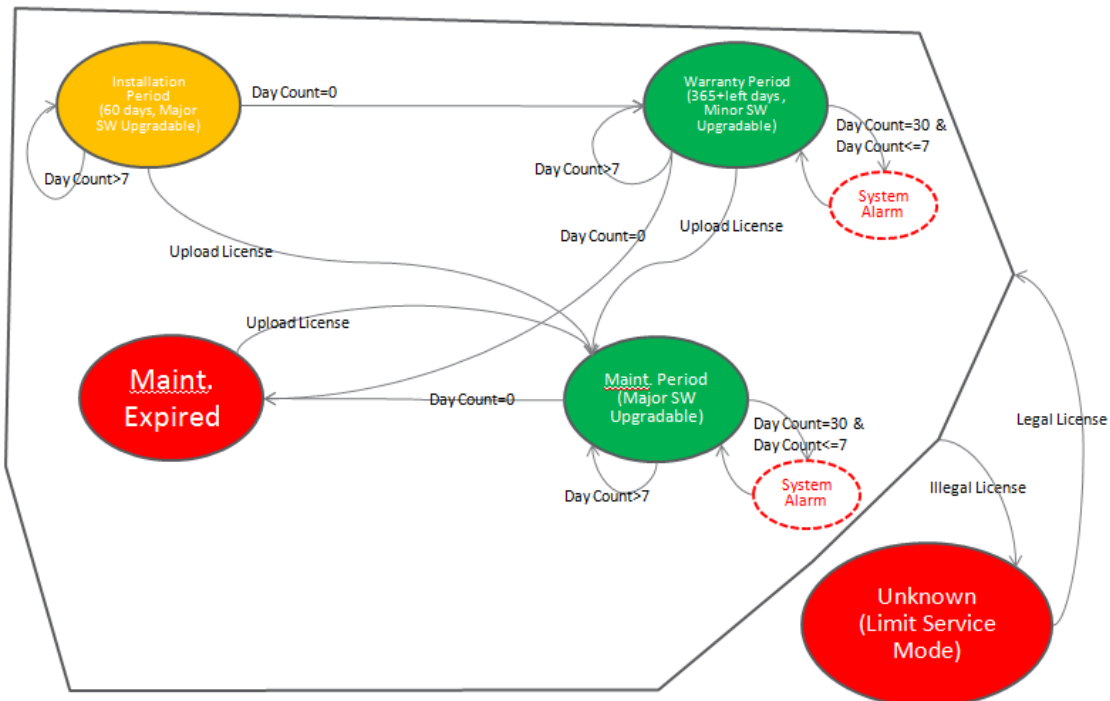

Note)

- To turn off the alarm, Administrator can set ‘Alarm Enable’ to OFF in System Data > Alarm Attributes (163) > Alarm enable: OFF. For more information, refer to Alarm Attributes.
- To turn off the alarm on Phone, press ‘Alarm reset’ PGM code *565 to stop. It’s a one-time thing. Please check the exact alarm reset code in Flexible Numbering Plan (106~109) because the code is different according to the numbering plan.

SW Maintenance State

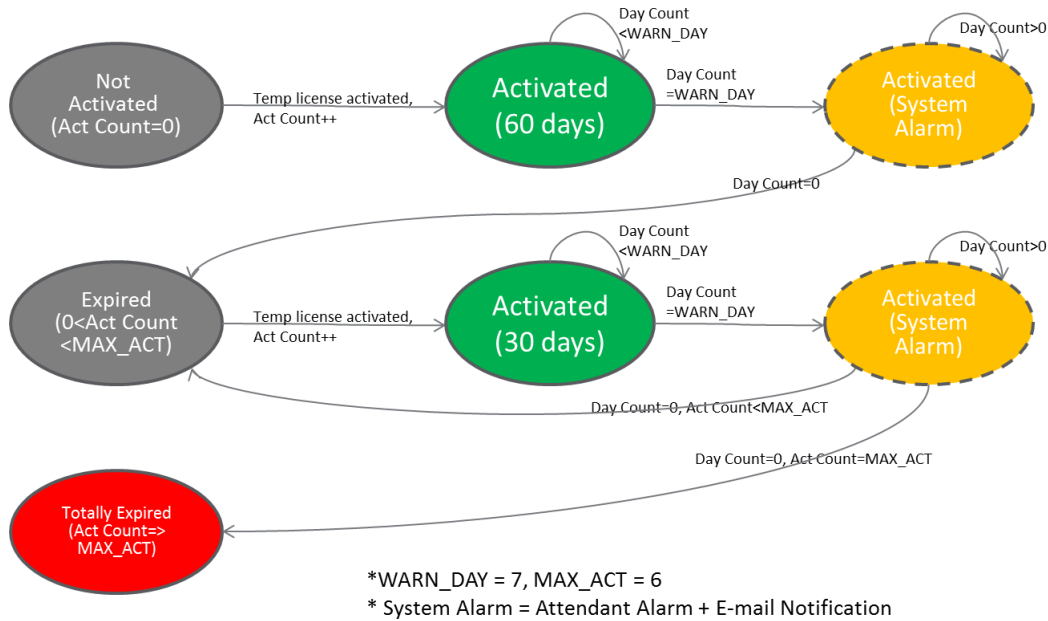

The following figure is SW Maintenance state for SMB. System Alarm (Attenant alarm & E-mail notification) occurs once 30 days before expiration and daily during 7 days before expiration.

If the system goes to the limited service mode, the station COS is changed to 7.

Temp License State

Temp License can be activated totally 6 times. It is valid for 60 days at first activation and is valid 30 days from second activation to the last. System Alarm occurs daily during 7 days before expiration.

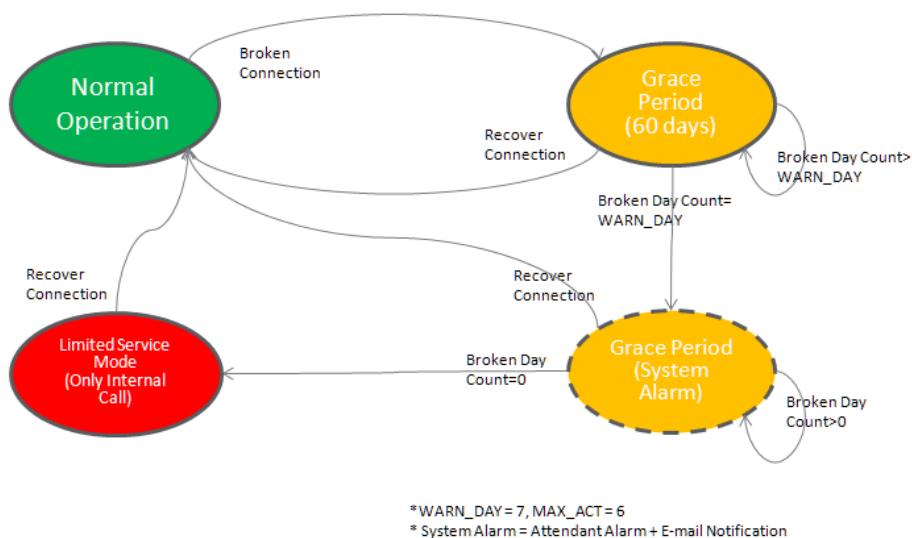

T-Net or Redundancy State

T-Net LCM license is valid for 60 days if the connection is broken. And Redundancy for UCP system is valid for 60 days if System is slave, active state, and the connection is broken.

But the limitation is not applied in Master system. System Alarm occurs daily whenever the broken day counter is smaller than 7 and the alarm will be stopped if the connection is restored.

- Below cases are always “Normal”.
- 1. TNLS license
- 2. Master system when redundancy

4.3.1 Favorite Program Groups

To ease access to frequently used program, the iPECS Admin Main Page displays a Favorite PGM list. The Favorite PGM list buttons, when selected, return the associated Web page. Up to 20 favorites are configured using the Edit button in the upper right of the page.

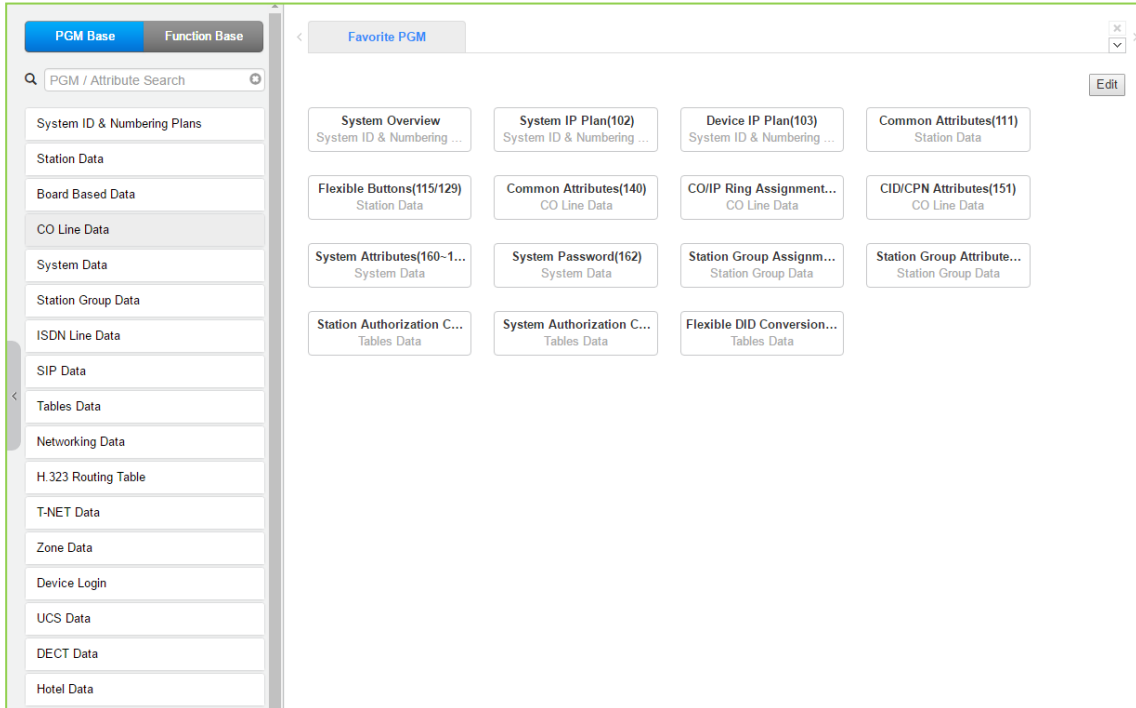

Figure 4.3.1-1 Favorite Program

To register a Favorite program: Click Edit button. The following page will be displayed.

- Clear button: Clears the check box for all programs.
- Save button: Saves the Web page, PGMs with checked boxes are stored as Favorites, up to 20.
- Back button: Returns to the previous page.

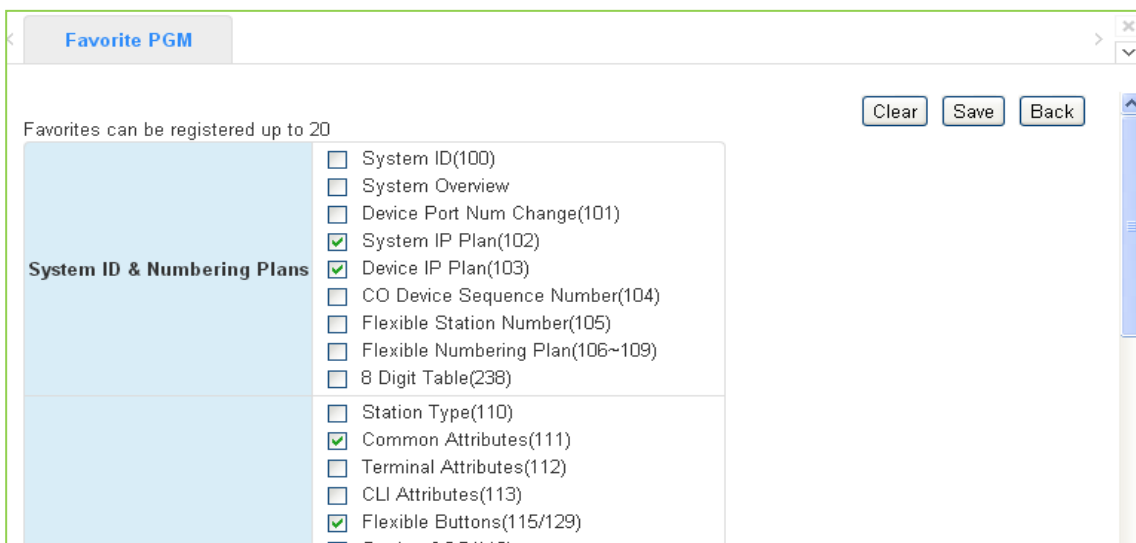

Figure 4.3.1-2 Favorite Program Groups for edit

4.3.2 Using Function Base

Function Base is designed to customize the feature or PGM by configuring the Function base so that customer can be easy to use the desired and frequent feature.

There are two buttons: Common Function List and User Function List. The feature or PGM can register up to 20 as Favorite function.

Common Function List

Generally, iPECS system supports the basic function list as default. The available function is 5 (DID Setting Scenario, Network Scenario, SIP Extension Registration, SIP Trunk Configuration, Station Group Scenario). The 5 functions can't be deleted or editable.

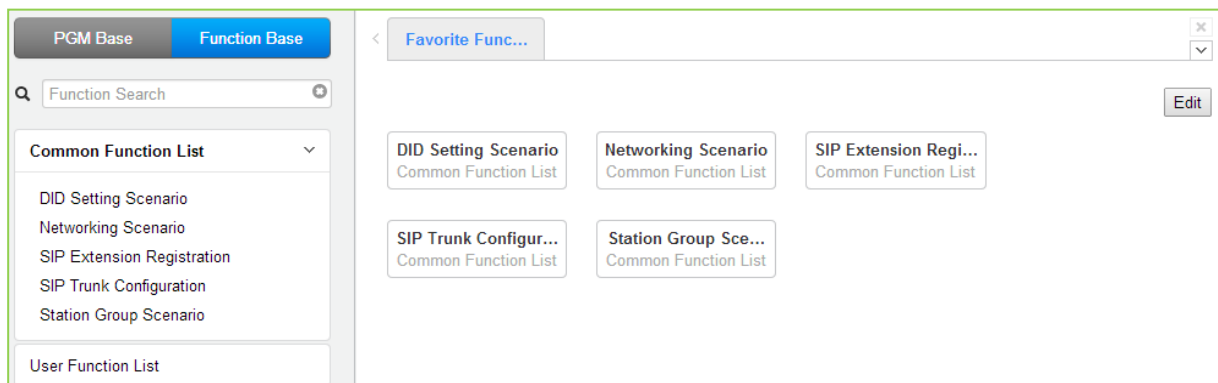

Figure 4.3.2-1 Common Function List

User Function List

To configure the user function list, click Maintenance button and then you can see the Function Program in the left frame and click the sub menu 'User Function Management' as the following figure. On this web page, you can add or delete the function.

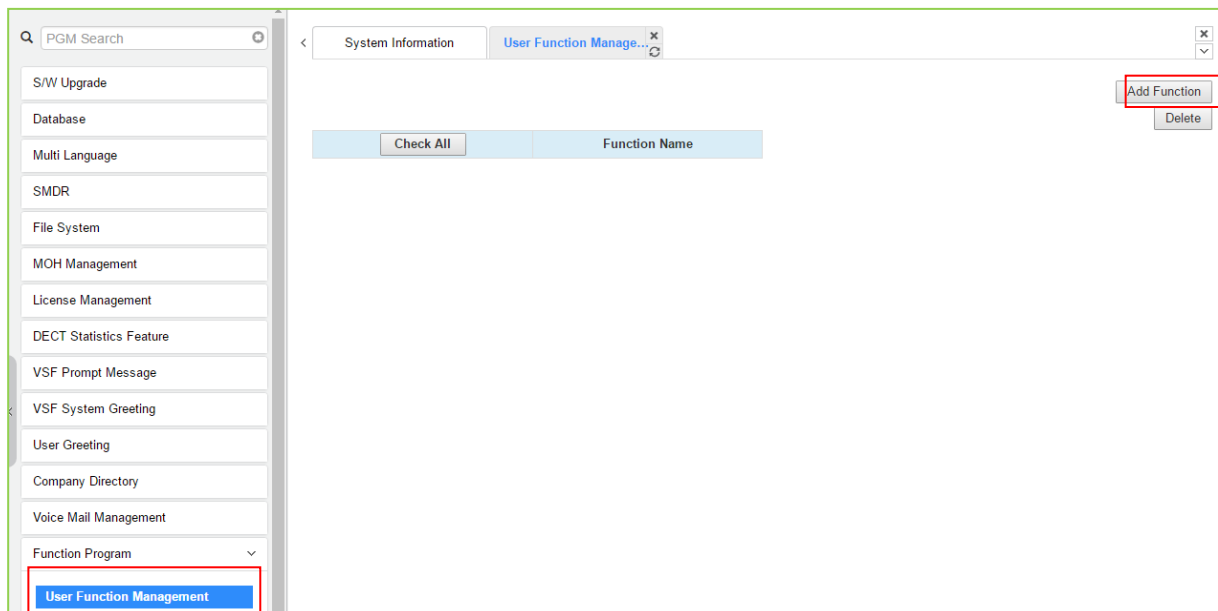

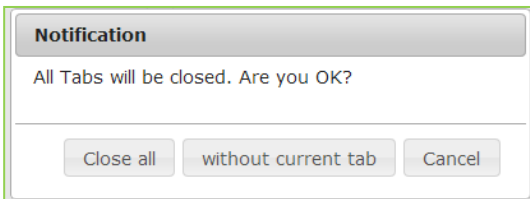

Figure 4.3.2-2User Function Management

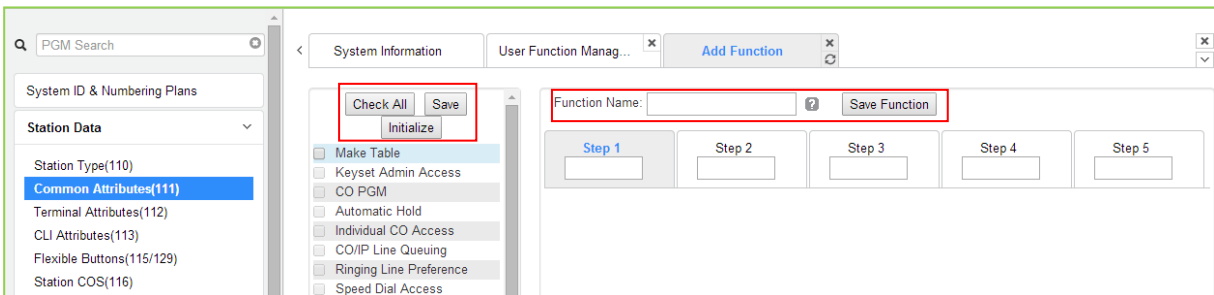

Adding Function

This step is divided into 5 steps and you can make the desired function each step. The following is the guide to make Name and add the function on each step:

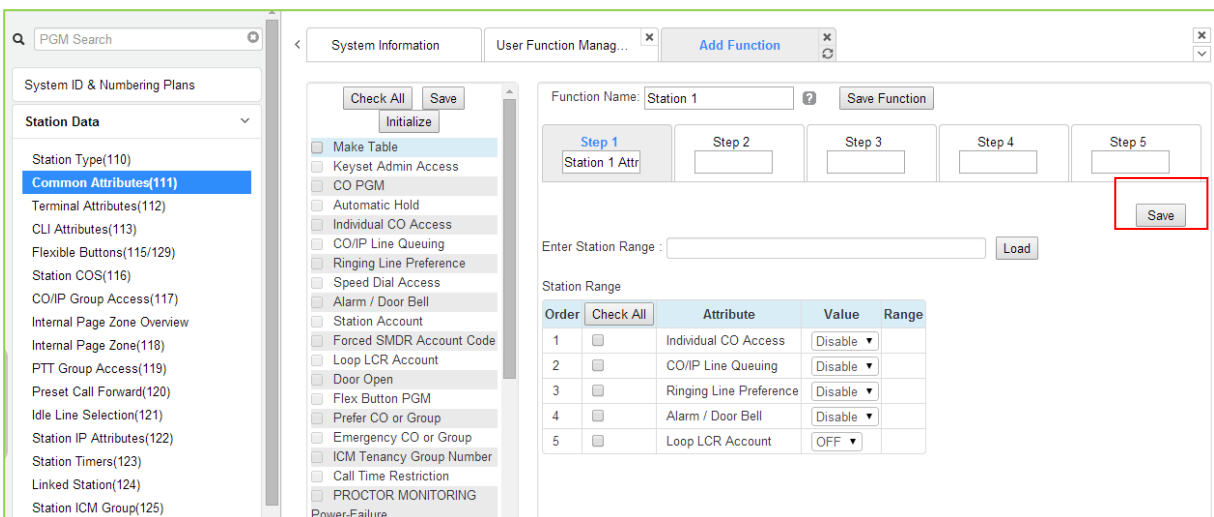

- To enter the function name, English, Numbering, Underscore (_) and Parentheses are available. Function name has to be filled out.
- To enter the step name, English, Numbering, and Special letters except Double quotation marks are available.
- The step name doesn't need to be filled out, but the function has to be configured each step.
- To cancel or close this tab, click the close button (X) and pop up the blow;

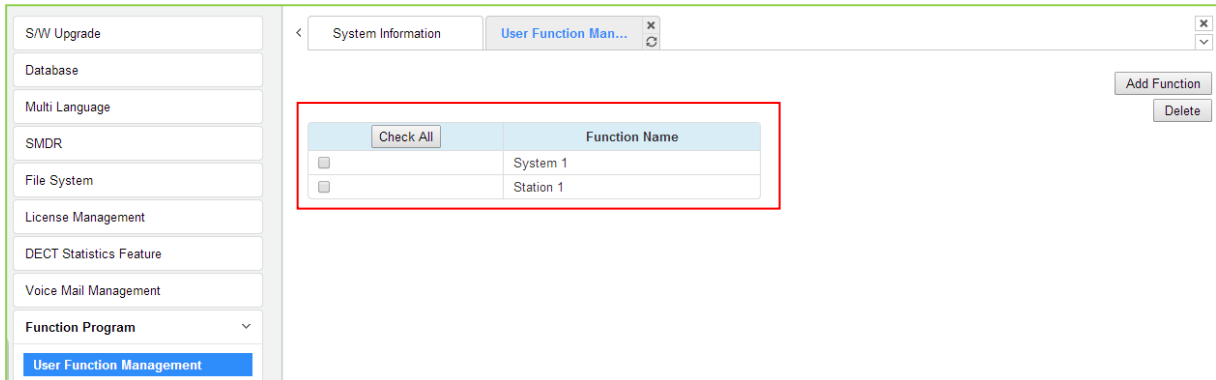

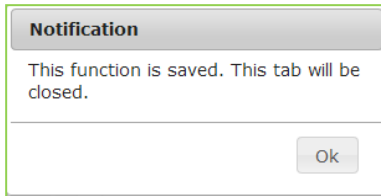

- 1) Click the Add Function button.
- 2) On the below window, click the desired PGM in the left frame. First fill out the function name and step name. To configure the step 1, click the Make table to check the desired function and then click **[Save]** button.
 - Check All: check all functions
 - Save: Save the checked functions
 - Initialize: Initialize the checked functions

- 3) The selected functions are displayed and click **[Save]** button after checking each functions. The rest steps are the same as the step 1.

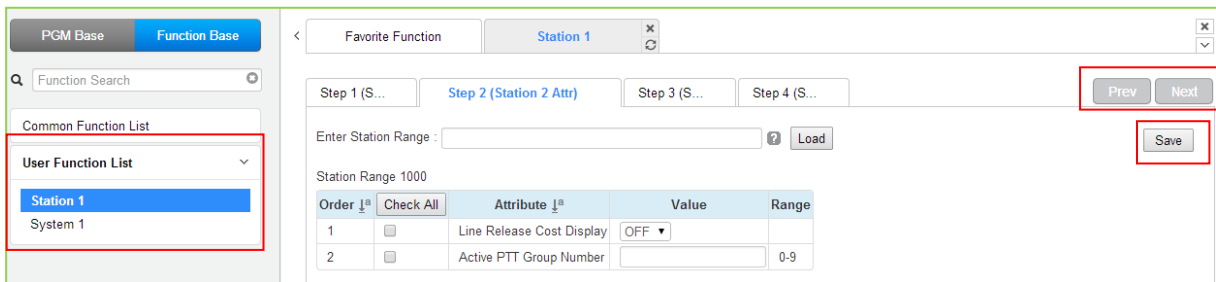

- 4) Finally, click **[Save]** Function to save and then click **[OK]** button.

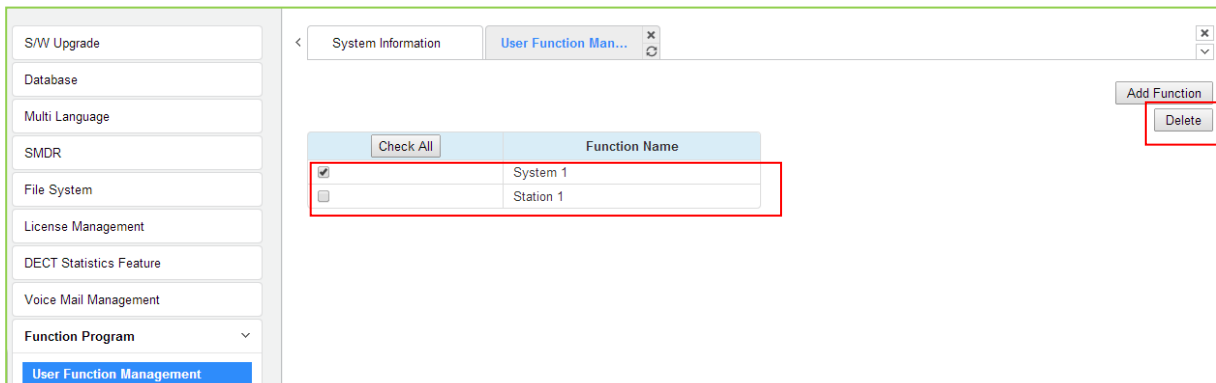

- 5) To check the function, click Function Base button in the left frame and User Function List and you will see the following figure.

You can enable or disable the function by checking each function and then click the save after setting Value. Also move to each step by clicking **[Next]** button or **[Previous]** button.

Deleting Function

To delete the user function, click Maintenance at the top of window and then click the Function Program -> User Function Management. Check the desired function to delete and click **[Delete]** button.

4.3.3 iPECS Web Page Navigation

The Navigation frame appears in the left after login; refer to Figure 4.3-1. Selecting a Program group from either the Navigation pane or the Favorites list will display the selected Web entry page. Each of the system's data entry Web pages includes a frame for data display and modification. To modify data, click in the data field, either a drop-down menu will appear for entry selection or a cursor will appear in the field and the user may type in the data required. Once all new data for a Web page has been entered, the **[Save]** button must be clicked to send the new page to the system and save the modified data. In some cases, where mentioned, it may be necessary to reset the system. The system can be reset manually as described in the **iPECS Hardware Description and Installation Manual** by selecting the Reset System button on the Initialization Web page or using the reset button.

4.3.4 General Web Page Features

4.3.4.1 Web Page Range Entries

On many of the Web pages for Station, CO Line and Tables Data a range of station, lines or table indices must be entered to display the appropriate data entry page. In this case, a range of devices or indices can be selected by entering the lowest and highest device number separated by a dash. In addition, a comma can be used to enter non-sequential numbers. Note no space characters should be entered before or after the dash or comma. Note the data entry page displays the data for the lowest device or table index entered.

4.3.4.2 Table Check Boxes

Data entry pages that require a range entry, only display the data for the lowest device number or Table index entered in the range. To assure that only the appropriate data is changed for all entries in the range, a check box is located in front of each attribute. When the page is saved, only data for attributes with the box checked are saved for the range while data for unchecked attributes are not modified.

4.3.4.3 Sorting Displayed Data

Charts in the data pages typically allow the data to be sorted based on a given column in either ascending or descending order. In the column header, the sorting symbol displays to indicate the sorting function is available for the column.

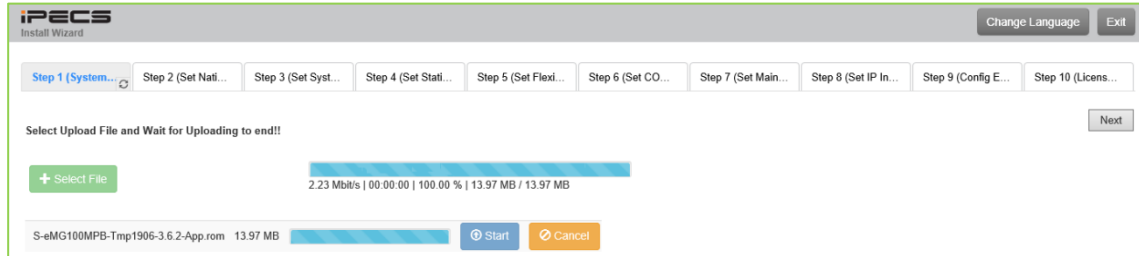

4.3.5 Install wizard

After the system is initialized, the first time Web Admin is accessed, the Install Wizard is displayed. The Wizard presents 10 pages in sequence with parameters that should be verified or commonly need modification prior to operation of the system including:

- System Upgrade
- Nation Code
- System Time&Date
- Station Number
- Flexible Numbering Plan
- CO Ring Assignment
- Maintenance ID &Password
- IP Information
- Config Encryption
- License Upload

4.3.5.1 System Upgrade

Click the Select files button and then open the pop-up folder. Select the desired file to upload to the system's memory and click the **[Start]** button. The file is sent to the system's memory, saved and automatically loaded upon a system reset or restart.

4.3.5.2 Nation Code

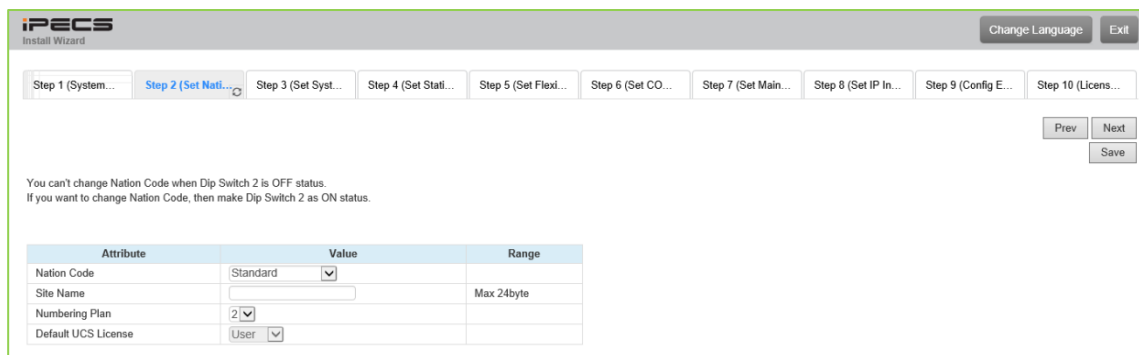

During initialization, the system employs the Nation Code to establish the default gains and tones for the various interfaces (analog CO Lines, ISDN lines, etc.), as well as the numbering plans for the specific country. The gains, in particular must be set to comply with the local regulatory requirements. Normally, the Nation Code will be set at the factory, however, assure the Nation code matches the system location.

Changing Nation Code

- 1) Dip Switch pole 4 of UCP100 (or UCP600, UCP2400) moves to ON. Dip Switch pole 2 of KSU (eMG) moves to ON.
- 2) Change Nation Code by clicking in the combo box.
- 3) Click **[Save]** button and then the system start resetting to apply.

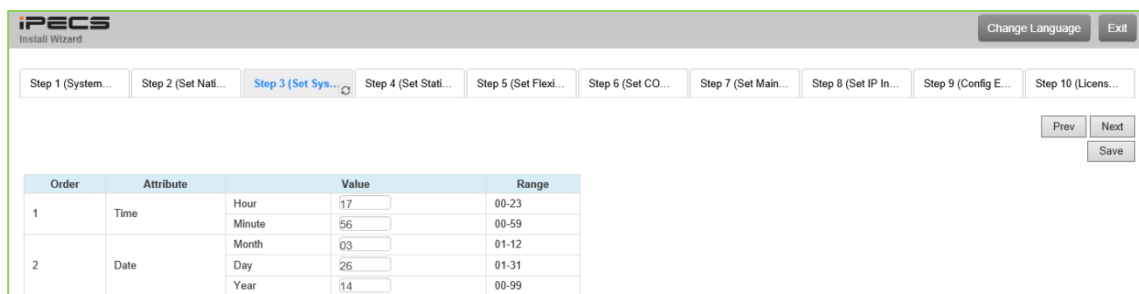

In addition, all other data will be initialized, so the Nation Code should be properly set prior to other programming. You can change the numbering plan for your situation. Default UCS License is added.

UCP systems provide built-in UCS licenses. You can select the type of that except for vUCP.

4.3.5.3 Set SystemTime and Date

You can set System time and date in this page.

4.3.5.4 Set Station Number

You want to change the current station number to New station number. In this page, you can change the station number.

Index	Station Number	Type	IP Address	MAC Address	New Station Number
<input type="checkbox"/>	1000	DSIB12 #1	10.10.10.2	b40edc281cc2	1000
<input type="checkbox"/>	1001	DSIB12 #2	10.10.10.2	b40edc281cc2	1001
<input type="checkbox"/>	1002	DSIB12 #3	10.10.10.2	b40edc281cc2	1002

4.3.5.5 Set Flexible Numbering Plan

The Flexible Numbering Plan defines the various digit strings (codes) users may dial to access system resources (outside lines, page zones, etc.) and features. In the wizard, codes for features that commonly may require modification are displayed.

Order #	Attribute #	Value
1	Access CO In First CO Group	9
2	Attendant Call	0
3	Group Call Pick-Up	**
4	Station Group Pilot Number	*401 - *600

4.3.5.6 Set CO Ring Assignment

CO Ring Assignment establishes how the system will route incoming calls. The wizard assignments cover all CO/IP Lines in the system and the Ring assignments for Day, Night and Timed Ring modes can be established.

Check All	Attribute	Value	Range	Station Delay Value [Station:Delay]	
<input type="checkbox"/>	Day	<input checked="" type="radio"/> Station Range	Range: <input type="text"/> - <input type="text"/> Delay: <input type="text"/>	0-9	[1000:0]
		<input type="radio"/> Station Group	<input type="text"/>		
		<input type="radio"/> VSF	Announcement: <input type="text"/> Auto Drop: <input type="checkbox"/>	0 - 200 (0 : Unused)	
		<input type="radio"/> AA Ring Time	<input type="text"/>	0-30	
		<input type="radio"/> Net Station	<input type="text"/>		
<input type="checkbox"/>	Night	<input checked="" type="radio"/> Station Range	Range: <input type="text"/> - <input type="text"/> Delay: <input type="text"/>	0-9	[1000:0]
		<input type="radio"/> Station Group	<input type="text"/>		
		<input type="radio"/> VSF	Announcement: <input type="text"/> Auto Drop: <input type="checkbox"/>	0 - 200 (0 : Unused)	
		<input type="radio"/> AA Ring Time	<input type="text"/>	0-30	
		<input type="radio"/> Net Station	<input type="text"/>		
<input type="checkbox"/>	Timed Ring	<input checked="" type="radio"/> Station Range	Range: <input type="text"/> - <input type="text"/> Delay: <input type="text"/>	0-9	[1000:0]
		<input type="radio"/> Station Group	<input type="text"/>		
		<input type="radio"/> VSF	Announcement: <input type="text"/> Auto Drop: <input type="checkbox"/>	0 - 200 (0 : Unused)	
		<input type="radio"/> AA Ring Time	<input type="text"/>	0-30	
		<input type="radio"/> Net Station	<input type="text"/>		

4.3.5.7 Set Maintenance ID & Password

The Wizard includes a password entry page. It is strongly recommended that a unique User ID and strong password be entered to minimize the risk of admin and maintenance access by unauthorized personnel. In order to finish the final step, you should register at least a maintenance ID. If not so, the Wizard can't go on to the next. Also, Keypad admin password can be registered in this page.

NOTE)

The new information will be in effect immediately upon saving the information. When a new Admin User ID and Password are saved, the Web login screen appears. A new Admin session will be required using the new login credentials. The number of Tenancy group for each system is as below:

UCP100/600/2400	100 groups
eMG800	32 groups
eMG80/100	15 groups

4.3.5.8 Set IP Information

The IP Information page establishes the IP address scheme. DHCP can be enabled or static addressing can be configured. When the system is behind a firewall, the Firewall address must be entered allowing proper operation with remote users, devise and SIP trunks. A DNS (Directory Name Server) for Domain Name resolution should also be entered on this page.

Note that changing any IP address in the system requires a system reset; the reset does not initialize data.

4.3.5.9 Config Encryption

Passphrase is used for DB encryption. If the value is set, the private data in your system will be encrypted. Therefore even if the files which include private data are leaked, they cannot be read. When you don't want to this encryption feature, you have to set the passphrase to blank.

Note that, before the encryption, it is better backup your DB for emergency case and remember the passphrase. Otherwise, you cannot decrypt the system DB.

If the passphrase is assigned, the system DB which includes private data will be encrypted. If the passphrase is lost, you cannot change it or decrypted system DBs,

The screenshot shows the 'Step 9 (Config...)' of the iPECS Install Wizard. It features a progress bar at the top with steps from 'Step 1 (System...)' to 'Step 10 (Licens...)'. Below the progress bar are 'Prev', 'Next', and 'Save' buttons. The main content area contains a table with columns 'Attribute', 'Value', and 'Remark'. The 'Voice Mail Encrypt' attribute is set to 'Disable' with a dropdown arrow, and its remark is 'can set when VM channels are all Idle'. Below this is a section titled 'Passphrase for DB Encryption (Save : [X])' with three input fields: 'Enter Current Passphrase', 'Enter New Passphrase (MAX 32 characters)', and 'Confirm New Passphrase'. The 'No passphrase' remark is visible next to the second field.

Attribute	Value	Remark
Voice Mail Encrypt	Disable	can set when VM channels are all Idle
Passphrase for DB Encryption (Save : [X])		
Enter Current Passphrase	<input type="text"/>	
Enter New Passphrase (MAX 32 characters)	<input type="text"/>	No passphrase
Confirm New Passphrase	<input type="text"/>	

4.3.5.10 Set License Upload

Before License upload, make sure that the date of system is set correctly. Click **[Select files]** button and then open the pop-up folder. Select a valid license file to upload to the system and click the **[Start]** button.

If the file which is sent to the system is "System License File", it will be saved and automatically applied without restart. The enabled features by uploading license file can be shown in "System Overview" page.

The screenshot shows the 'Step 10 (Licens...)' of the iPECS Install Wizard. It features a progress bar at the top with steps from 'Step 1 (System...)' to 'Step 10 (Licens...)'. Below the progress bar are 'Prev' and 'Finish' buttons. The main content area contains a red warning message: 'Before uploading, check the system date. Some boards may be restarted after uploading license file.' Below this is the instruction 'Select a License File and Wait for Uploading to end!!' and the 'Serial No. : 000EE3C414000024'. A green '+ Select File' button is located at the bottom left.

4.4 Web Admin Programming

4.4.1 System ID & Numbering Plans

Selecting the System ID & Numbering Plans expands the Navigation frame to display the available Program groups as shown in the below figure.

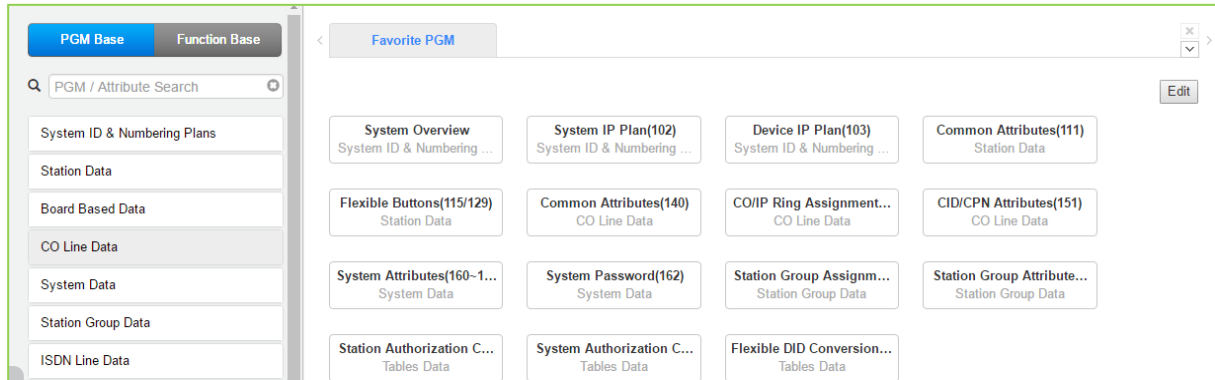

Figure 4.4.1-1 System ID & Numbering Plans sub-menu

4.4.1.1 System ID – PGM 100

Selecting System ID will display the following Input Entry page. Click **[Reset System]** to restart the system after changing Nation code, Site name, Site detail, My area code, Multi area code, Numbering Plan, etc.

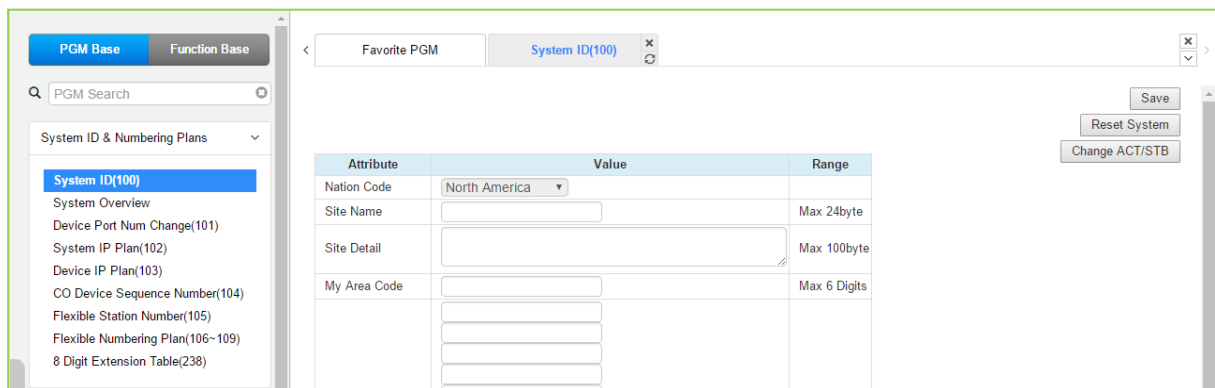

Figure 4.4.1.1-1 System ID

Under System ID, the country is identified using the international dial codes (Nation Code). A twenty-four (24) character Site Name, Site detail and the local My Area Code maybe defined. This information is used to set gain, frequencies and other system characteristics specific to the country and regional regulatory requirements. The Site Name is primarily useful for the installer/programmer as a reference to customer.

Note)

- In case of eMG, to change Nation code, Dip-switch 1 pole # 2 is ON; you cannot change the Nation code while the switch is OFF.
- In case of UCP, to change the Nation Code, the UCP Module “Mode” dipswitch pole 4 must be ON; you cannot change the Nation code while the switch is OFF.
- The rest attributes are additional options for Customer’s convenience.
- In case of UCP, the built-in VoIP DSP channels (VOIU) can be disabled allowing use of the DSPs for the Multi-party Conference function.
- In case of UCP100, SLIU channels cab be disabled or enabled.

Numbering Plan

The system employs one of the nine (9) basic Flexible Number Plans as detailed in Appendix B. Individual items from the selected Numbering Plan can be changed under Flexible Numbering Plan in section 4.4.1.7.

Note) The numbering plan on this manual is based on Numbering plan 2. The value (or feature code) may be different according to Numbering plan.

eMG80

Flexible VMIU/VOIU(MPB) channel	VMIU 8 / VOIU 0 ▾	
Flexible VMIB/VOIB(VVMU) channel	VMIB 4 / VOIB 8 ▾	

Flexible VMIU/VOIU(MPB) channel&Flexible VMIB/VOIB(VVMU) channel

You can select one of the following types according to the current configuration using Voice mail and VoIP channel

Flexible VMIU/VOIU(MPB) channel	Flexible VMIB/VOIB(VVMU) channel
VMIU8 / VOIU0	VMIB8 / VOIB4
VMIU8 / VOIU2	VMIB6 / VOIB6
VMIU8 / VOIU4	VMIB4 / VOIB8
VMIU6 / VOIU6	
VMIU4 / VOIU8	

- 1) Administrator can select the channel capacity of VoIP and Voice Mail in this filed.
In case of VMIU8/VOIU0, the default 2 channel of VoIP can't be used.
- 2) VVMU channel field can't be available if VVMU is not installed.
- 3) Select VoIP and Voice mail channel for Built-in (MPB) and VVMU by referring the below chart.

Item		Specification
VOIU(MPB)	Built-in VoIP	Max. 8 Channels
		- 2 Channels (by default)
		- 6 Channels (1 Channel increment by license)
VMIU(MPB)	Built-in Voice Mail	Max. 8 Channels
		- 2 Channels (by default)
		- 6 Channels (1 Channel increment by license)
VOIB(VVMU)	VoIP	Max. 8 Channels
		- 8 Channels (1 Channel increment by license)
VMIB(VVMU)	Voice Mail	Max. 8 Channels
		- 8 Channels (1 Channel increment by license)

eMG100

Flexible VMIU/VOIU(MPB) channel

You can select one of the following types according to the current configuration using Voice mail and VoIP channel

Flexible VMIU/VOIU(MPB) channel	
VMIU8 / VOIU0	VMIU4 / VOIU12
VMIU8 / VOIU2	VMIU2 / VOIU14
VMIU8 / VOIU4	VMIU0 / VOIU16
VMIU6 / VOIU6	VMIU10 / VOIU6
VMIU4 / VOIU8	VMIU12 / VOIU4
VMIU6 / VOIU8	VMIU14 / VOIU2
VMIU8 / VOIU8	VMIU16 / VOIU0
VMIU6 / VOIU10	

- 1) Administrator can select the channel capacity of VoIP and Voice Mail in this filed.
In case of VMIU8/VOIU0 and VMIU16 / VOIU0 default 2 channel of VoIP can't be used.
- 2) Select VoIP and Voice mail channel for Built-in (MPB) by referring the below chart.

Item		Specification
VOIU(MPB)	Built-in VoIP	Max. 16 Channels
		- 2 Channels (by default)
		- 14 Channels (1 Channel increment by license)
VMIU(MPB)	Built-in Voice Mail	Max. 16channels
		- 2 Channels (by default)
		- 14channels (1 Channel increment by license)

eMG800

Flexible VMIU/VOIU channel	VMIU 4 / VOIU 8 ▼	
----------------------------	-------------------	--

Flexible VMIU/VOIU channel

You can select one of the following types according to the current configuration using Voice mail and VoIP channel.

Flexible VMIU/VOIU channel
VMIU8 / VOIU0
VMIU8 / VOIU2
VMIU8 / VOIU4
VMIU4 / VOIU8

UCP

You can set VOIU in this page.

The MCIU (Audio Conference) channel is flexible according to VoIU 'Enable or Disable' and installing the related module as below:

Channel / System		UCP100			UCP600
		4CO/2BRI	4BRI	No TDM	No TDM
CO/BRI		4	8	0	0
MISC		2	2	2	4
SLT		2	2	2	0
Built-in MCIU (Audio Conference)	VoIU: Enable	6	6	6	6
	VoIU: Disable	14	10	18	18
Built-in VoIP channel when VoIU is enabled		4	2	6	6
Built-in VoIP (Switching) by license (8 Ch)		8/16			8/16/24

*VoIU: Built-in VoIP (DSP).

*VoIU set the default value 'Enable or Disable' in Install wizard or PGM100.

*The number of channel for MCIU is flexible according to using VoIU and Option boards as the above.

Speed Numbering'

You can easily memory the system speed dial code and station dial code by selecting the desired type depending on the situation among the following types:

eMG80/100

- 1) Type (0): System speed (2000~4999), Station speed (000~099)
- 2) Type (1): System speed (200~999), Station speed (000~099)
- 3) Type (2): System speed (200~999), Station speed (00~19)
- 4) Type (3): System speed (20~99), Station speed (00~19)
- 5) Type (4): System speed (1000~3999), Station speed (000~099)
- 6) Type (5): System speed (100~999), Station speed (000~099)
- 7) Type (6): System speed (100~999), Station speed (00~09)
- 8) Type (7): System speed (10~99), Station speed (00~09)
- 9) Type (8): System speed (1~9), Station speed (0~0)

eMG800

- 1) Type (0): System speed (2000~9999), Station speed (000~099)
- 2) Type (1): System speed (200~999), Station speed (000~099)
- 3) Type (2): System speed (200~999), Station speed (00~19)
- 4) Type (3): System speed (20~99), Station speed (00~19)
- 5) Type (4): System speed (1000~8999), Station speed (000~099)
- 6) Type (5): System speed (100~999), Station speed (000~099)
- 7) Type (6): System speed (100~999), Station speed (00~09)

Figure 4.4.1.2-2eMG800 System Overview

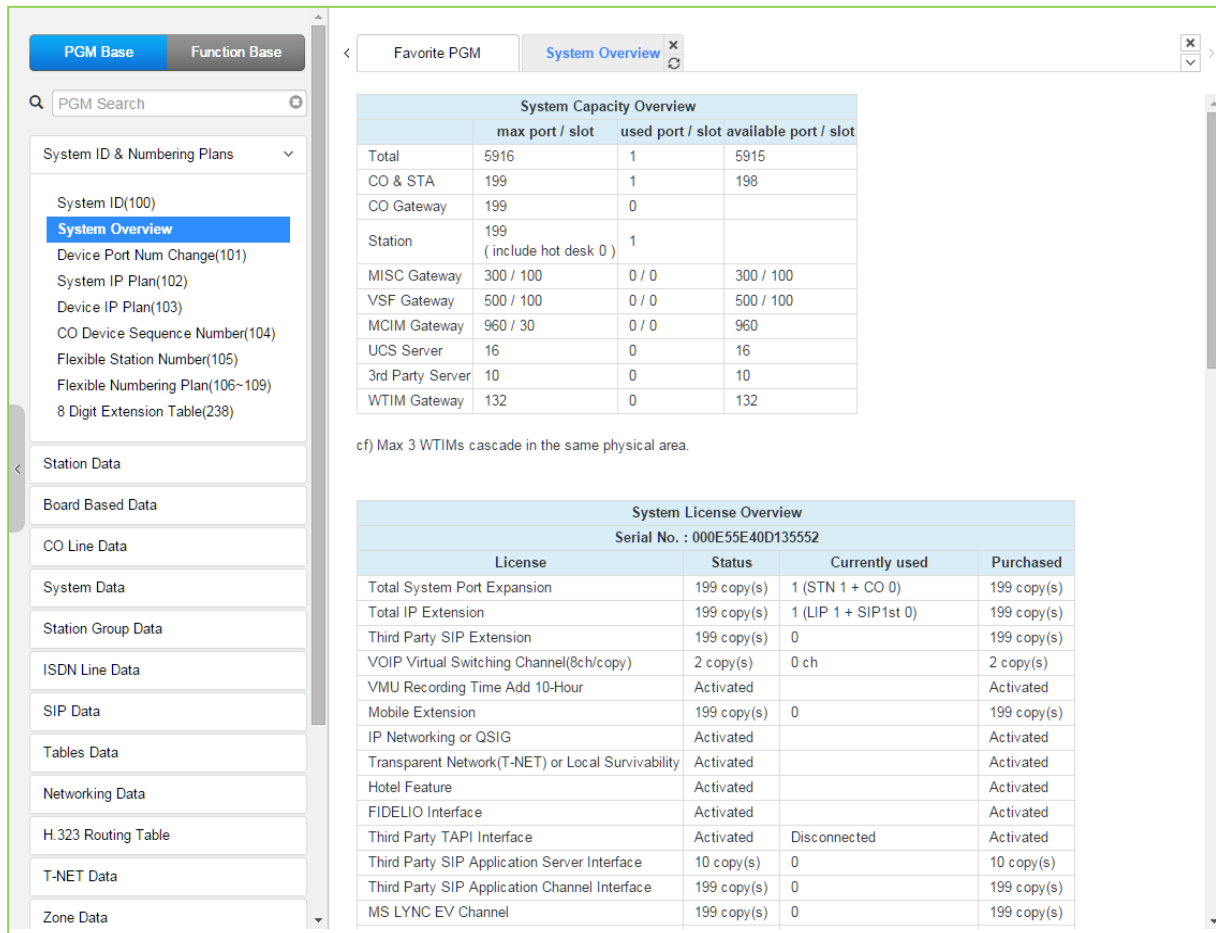

Figure 4.4.1.2-3UCP System Overview

The above information may be different according to installing the related board and license.

Especially UCP is different according to UCP type (UCP100, UCP600, UCP2400).

Note) System overview may show different figure between the below and yours according to installing Module, Device, etc.

4.4.1.3 Device Port Number Change– PGM 101

Selecting Device Port Num Change (101) will display the input entry page.

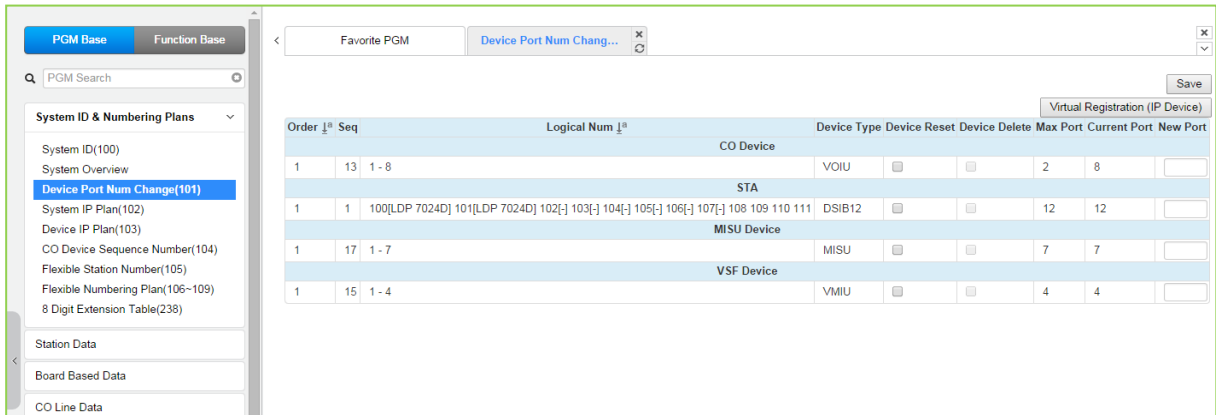

Figure 4.4.1.3-1 eMG80/100Device Port Num Change

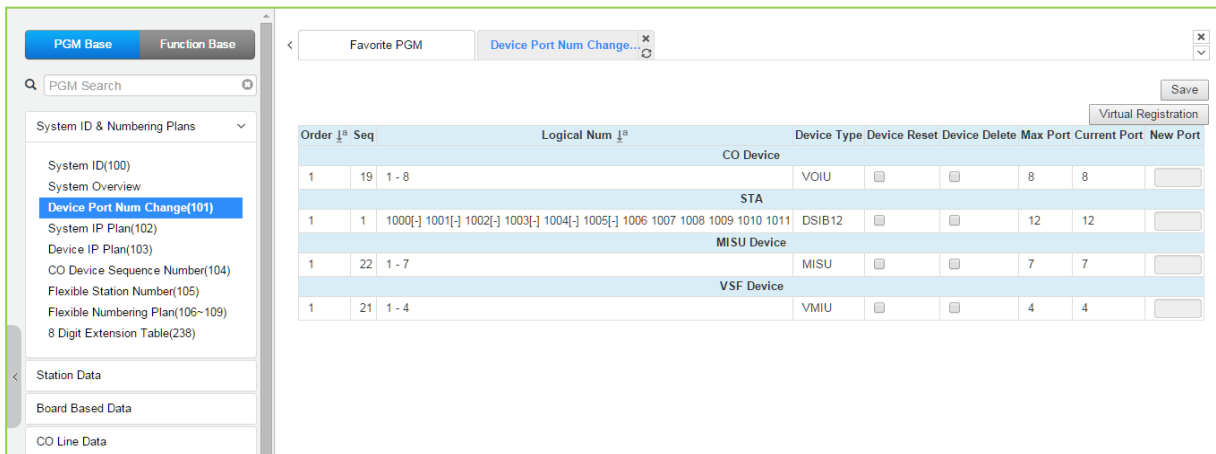

Figure 4.4.1.3-2eMG800 Device Port Num Change

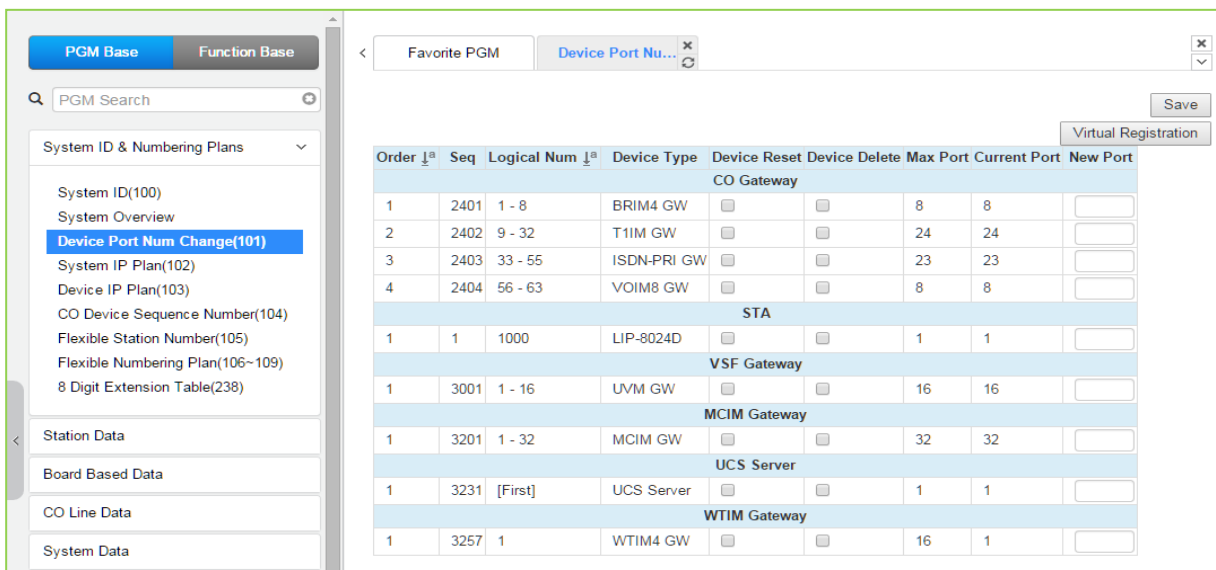

Figure 4.4.1.3-3UCP Device Port Num Change

The system supports changing port count of a device or deleting devices. In this window, the Device ID, Mac address, IP address and port count of the device can be modified.

Also checking the **[Device Delete]** check box will delete the device.

Devices may be registered through the Virtual Registration page by accessing to “Device Port Number Change” page.

Devices can be registered with or without a MAC address and the number of ports associated with the device may be limited.

This may be useful for example to implement a “partial T1” gateway where only some of the T1 channels are available. Note to virtually register a SIP trunk, use the Device Type of CO and device as VOIM, enter the desired number of channels.

If you want to use virtual MAC address when you register Device, please check the check box in front of MAC address input field. Click **[Register]** button after finishing the desired value.

Administrator can register 25 devices at one time and can copy/paste/drag like excel.

If you want to use virtual MAC address when you register device, please select 'Yes' in Virtual MAC column.

<input type="checkbox"/>	DNS IP Address	0.0.0.0

Figure 4.4.1.4-2UCP System IP Plan

The System IP Plan sets several IP addresses including MPB (UCP) IP address that is required for external VoIP calls, the IP address for the router, and the system's internal private IP address Plan.

Note that the LAN and Router addresses must be routable IP addresses for access to an external VoIP network, remote access by an iPECS Phone or remote Web access.

When used, the LAN port of the VVMU(eMG80), VOIB(eMG100/800) or VOIM (Voice over IP device unit) must also have a routable IP address for access to/from an external VoIP network and a remote iPECS device.

When "Automatic IP Assign" is enabled, the system will assign IP addresses to each iPECS IP terminal and gateway Modules including any VOIM using the System IP address range defined. These addresses are used for communications between the system and other VOIMs and terminals.

When "Automatic IP Assign" is enabled, the system will assign IP addresses to each iPECS IP terminal and Board (Gateway Modules) including any VVMU, VOIB or VOIM using the System IP address range defined. These addresses are used for communications between the system and other VVMU (VOIB, VOIM) and terminals.

The system may be connected to a LAN that is segmented by two separate private IP address schemes. This segmenting technique is often used to separate voice and data devices.

However, with this segmenting technique, the system will normally treat the segmented devices such as IP softphones, as remote devices, using valuable WAN bandwidth. Assigning the "Second Sys IP address" with a valid IP address from the second segment permits the system to communicate directly with the devices over the LAN.

iPECS can be installed behind a NAT server, if the NAT server provides fixed address translation and port forwarding to the system. In this case, the system will employ the "Firewall IP address" as the fixed IP address for communication with remote devices. This address must be assigned as the "MPB (UCP)" address in the remote device.

Table 4.4.1.4-1 SYSTEM IP ADDRESS PLAN

ATTRIBUTE	DESCRIPTION	DEFAULT
MPB (UCP) DHCP	Controls the DHCP client function for MPB in the KSU or UCP.	OFF
MPB (UCP) IP Address	Public IP Address of the KSU (UCP) LAN port that required for remote user and external VoIP network access. IPv4 format.	10.10.10.2
MPB (UCP) SubnetMask	Defines the system subnet for MPB (UCP) IP addresses.	255.255.255.0
Router IP Address	IP Address of router for external network (WAN) access. Required for shared voice and data LAN, external VoIP and remote Web access.	10.10.10.1
System IP Range	Range for private IP addresses of Modules/Terminals.	
System SubnetMask	Define the system subnet for private IP addresses.	255.255.255.0
Automatic IPAssign	The system automatically assigns IP addresses to modules and terminals (ON) or, when OFF, IP addresses are assigned manually in Device IP Address Table or from the DHCP address assigned to the device.	ON
Second SystemIP Address	When devices have different address schemes on the same LAN, enter an IP address from the second LAN for use by the system.	0.0.0.0

Table 4.4.1.4-1 SYSTEM IP ADDRESS PLAN

ATTRIBUTE	DESCRIPTION	DEFAULT
Second SystemNet Mask	Net mask of the second private IP addresses	255.255.255.0
Firewall IP Address	When the system is installed behind a NAPT server, the fixed IP Address provided by the NAPT server must be assigned here. Also, use this IP address to identify the MPB (UCP) in remote devices.	0.0.0.0
DDNS Usage of Firewall	If the firewall of system has a dynamic IP address, you can use Dynamic DNS by setting 'DDNS Usage of Firewall' and 'Domain Name of Firewall'. Note that after IP address of firewall is changed, VOIP (UCP) / VOIU (eMG)board will be restarted.	ON/OFF, 1-127 (Min.)
Domain Name of Firewall		
First MAC Range	MAC Address Range to register a device if device MAC address is included in range.	000000000000~ 000000000000
Second MAC Range	MAC Address Range to register a device if device MAC address is included in range.	000000000000~ 000000000000
DNS IP Address	IP Address of Domain Name Server, which iPECS system will use to resolve a URL to an IP address. The DNS provides the resolution after receiving the name from iPECS.	0.0.0.0
System IPV6 Usage	Usage of IPV6 Address in SIP signaling	No
System IPV6 Address	IPV6 address used for System - User can set Unicast IP or set based on SLAAC Info.	
System IPV6 Router	IPV6 Router used for System - User can set Router IP or set based on SLAAC Info.	
System IPV6 Net Prefix	IPV6 Prefix used for System - User can set Prefix or set based on SLAAC Info.	64

4.4.1.5 Device IP Plan - PGM 103

Selecting Device IP Plan will display the input entry page.

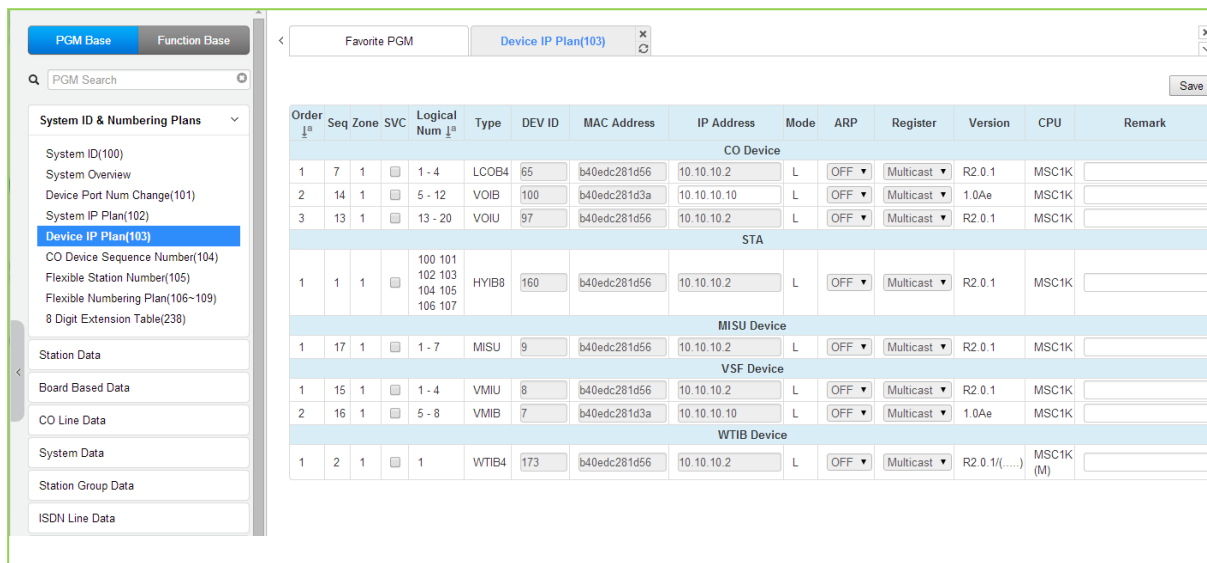

Figure 4.4.1.5-1 eMG Device IP Plan

TDM board is registered with own slot number. It is registered automatically without any configuration.

If the station is assigned to Master or Slave by linked station, the bracket '[M] or [S]' will be displayed by the station number in PGM 101, 103, 105, 124 of Web page.

To register IP device:

As Gateway/board and terminals are registered to the iPECS, a slot number is assigned, which indicates the order of registration.

Also, based on the type of device (CO Gateway/board, Terminal or Station board) the system assigns a logical Sequence Number.

Thus, Sequence Numbers for CO Gateway/board, Terminals are independently assigned based on the type of Gateway/board.

These Sequence Numbers are employed to provide a relationship between the physical MAC address and the logical port numbers of the device.

The system may assign a default private IP address to each Sequence Number. If desired, this program may be used to modify the assigned IP address for each Gateway/board and iPECS Phone.

Each Gateway/board and terminal can be assigned for "Direct Send". With Direct Send enabled, the system will employ the Ethernet MAC address of the device to send iPECS protocol messages to the device. This reduces the overall LAN traffic by eliminating the need for IP address headers in the messages.

The system normally employs IP multi-cast protocol to respond to a registration request from a Gateway/board or terminal.

When the device is separated from the system by a router, the system must use the IP uni-cast protocol. This is established by the "Local Device" assignment. When disabled (Off), the system will send an IP uni-cast message to the device in response to a registration request.

Figure 4.4.1.5-2UCP Device IP Plan

This page displays all of the devices registered to the iPECS UCP by grouping into the type of device (CO, STA, etc.).

If the station is assigned to Master or Slave by linked station, the bracket '[M] or [S]' will be displayed by the station number in PGM 101, 103, 105, 124 of Web page.

Selecting the SVC button for a device will toggle the service mode between in and out-of-service. The device type can be modified as well as the MAC and IP address.

Using the SVC check box to place a device out of service, an errant device can be replaced without affecting the database. After placing the device out-of-service, it can be removed, replaced and the MAC address of the new device entered.

The SVC check box is used to bring the new device into service employing the database from the replaced device.

The system may assign a default private IP address to each device. If desired, this program may be used to modify the assigned IP address for each Gateway/board and iPECS Phone.

The device mode, connected to a local or remote LAN, is displayed. Each Gateway/board and terminal can be assigned for "ARP". With ARP disabled, the system will employ the Ethernet MAC address of the device to send iPECS protocol messages to the device.

This reduces the overall LAN traffic by eliminating ARP messages and the need for IP address headers in the messages.

The system normally employs IP multi-cast protocol to respond to a registration request from a Gateway/board or terminal.

When the device is separated from the system by a router, the system must use the IP uni-cast protocol. This is established by the "Local Device" assignment.

When disabled (OFF), the system will send an IP uni-cast message to the device in response to a registration request.

4.4.1.6 CO Device Sequence Number - PGM 104

Selecting CO Gateway/board Sequence Number will display the input entry page. Selecting the blue colored text in the Table header will sort the table based on the selected column. Click **[Save]** button after changing Value to apply.

Ordering Num	Type	Sequence Number	CO Line Num	IP Address	Order
1	LCOB4	7	1	10.10.10.2	1
2	VOIB	14	5	10.10.10.10	2
3	VOIU	13	13	10.10.10.2	3

Figure 4.4.1.6-1 eMG CO Device Sequence Number

Ordering Num	Type	Sequence Number	CO Line Num	IP Address	Order
1	VOIU	2401	1	10.10.10.2	1
2	ISDN-PRI GW	2402	7	10.10.10.10	2
3	LGCM LOOP 8 GW	2403	37	10.10.10.12	3

Figure 4.4.1.6-1 UCP CO Device Sequence Number

The system configures the CO/IP Line numbers as discussed in section 2.3. In case of eMG, each slot is assigned the starting CO/IP Line number based on the Order Numbering.

With UCP, each Module is assigned the starting CO/IP Line number based on the registration order.

In place of the default Order Numbering, the “Order” number assigned in this PGM can be used to reorder the CO/IP numbering.

4.4.1.7 Flexible Station Numbering Plan - PGM 105

Selecting Flexible Station Number will return the data entry page. For convenience, the copy, paste, and drag is available to enter or modify data.

This page permits changes in the Station Numbering Plan using one of three methods:

- **Enter Station Index Range:**eMG80/100: 1-140 / eMG800: 1-1200 / UCP: 1-2400
- **Station Index Range:** use to change the station numbers associated with a range of “Order Numbers” (the indexes). The “Start Station Number” is assigned to the station with the first index then the station number is incremented by one and assigned to the next station in the range. The process is repeated until the station number with the last index is changed.
- **Station Number:**enter the station number to search. The station number is displayed and then you can change the new station number as you wish.
- **Multiple Station Number to change:**there are two ways to search the station number for change; Enter Index Range or Enter Station Range.

You can change station numbers over a range of stations using the “Start Station Number” as the first station number for the range. The station number is incremented by one for each successive station in the range.

The screenshot displays the 'Flexible Station Number' configuration page. On the left is a sidebar with a search bar and a list of system ID & numbering plans, with 'Flexible Station Number(105)' selected. The main area contains a 'Favorite PGM' dropdown set to 'Flexible Station N...', an 'Enter Station Index Range (1 - 2400)' field with a 'Default: 1-100' value, and 'Load' and 'Save' buttons. Below this is a 'Station Index Range 1-100' section with a 'Station Number' input field and a 'Search' button. A 'CID Password' field with a 'Go to Setting' button is also present. The 'Multiple Station Number to change' section has two radio buttons: 'Enter Index Range' and 'Enter Station Range', each with associated input fields and a 'Start Station Number' field. A 'Range Save' button is at the bottom of this section. The main part of the page is a table with 12 rows, each with a checkbox, an index, a station number, a type, an IP address, a MAC address, and a new station number.

Index	Station Number	Type	IP Address	MAC Address	New Station Number
<input type="checkbox"/>	1	LIP-8012E	10.10.10.10	00405a2e5176	1000
<input type="checkbox"/>	2	SLTM8 GW #1	10.10.10.11	b40edcb0a3ca	1001
<input type="checkbox"/>	3	SLTM8 GW #2	10.10.10.11	b40edcb0a3ca	1002
<input type="checkbox"/>	4	SLTM8 GW #3	10.10.10.11	b40edcb0a3ca	1003
<input type="checkbox"/>	5	SLTM8 GW #4	10.10.10.11	b40edcb0a3ca	1004
<input type="checkbox"/>	6	SLTM8 GW #5	10.10.10.11	b40edcb0a3ca	1005
<input type="checkbox"/>	7	SLTM8 GW #6	10.10.10.11	b40edcb0a3ca	1006
<input type="checkbox"/>	8	SLTM8 GW #7	10.10.10.11	b40edcb0a3ca	1007
<input type="checkbox"/>	9	SLTM8 GW #8	10.10.10.11	b40edcb0a3ca	1008
<input type="checkbox"/>	10	DTIM8 GW #1	10.10.10.12	b061c702d7ec	1009
<input type="checkbox"/>	11	DTIM8 GW #2	10.10.10.12	b061c702d7ec	1010
<input type="checkbox"/>	12	DTIM8 GW #3	10.10.10.12	b061c702d7ec	1011

Figure 4.4.1.7-1 Flexible Station Number

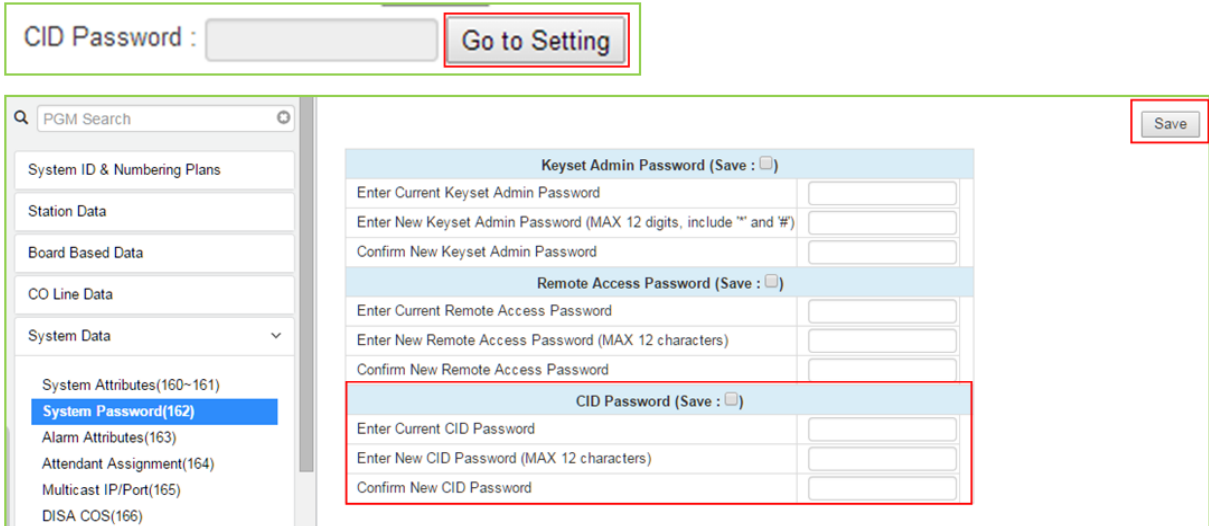

Each iPECS IP and LDP Phone and SLT is assigned a logical order number, shown as the “Index” number on the Web page, during the registration process. The station Index number is incremented from 1 as each terminal device is registered.

At registration, station numbers increment sequentially with the index and are assigned starting at Station 100 for eMG80/100 and at Station 1000 for eMG800/UCP.

The Station Numbering Plan allows the station numbers to be two (2) to eight (8) digits in length as long as the number of digits in the Station numbers is the same.

Setting CID Password directly

You can set the CID password to click “Go to Setting” button. After clicking it, you will move to the following PGM 162 and set the CID password, and then save CID password to mark tick on the save box and click the [Save] button.

4.4.1.8 Flexible Numbering Plan - PGM 106 ~ 109

Selecting Flexible Numbering Plan will display the input entry page. Selecting the blue colored text in the Table header will sort the table based on the selected column. Click [Save] button after changing Value to apply.

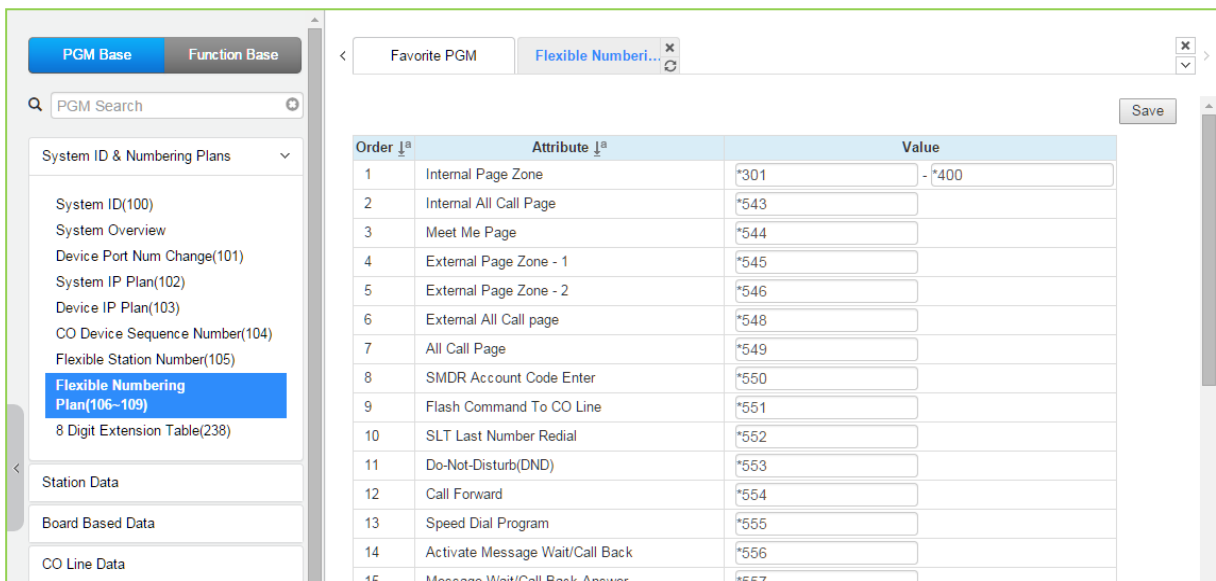

Figure 4.4.1.8-1 Flexible Number Plan

Feature dial codes for the system can be assigned using the system’s Flexible Number Plan. Feature codes should be one (1) to four (4) digit in length and must not conflict. For example, Feature codes 53 and 536 represent a conflict. The system will not update the database until correct data is entered. Table 4.4.1.8-1 provides a brief description for each feature and the default codes as they appear in Numbering Plan 2. The default values for other numbering plans, which may be selected on the title “System ID (100)” and other numbering plan is described in Appendix B.

Table 4.4.1.8-1 FLEXIBLE NUMBERING PLAN CODES

Order	ATTRIBUTE	DESCRIPTION	DEFAULT
1	Internal Page Zone	Internal Page Zone access codes. eMG80/100:301~335, eMG800:*301~*400, UCP:*301~*400	Refer to description
2	Internal All CallPage	Internal All Call Page access code.	*543
3	Meet Me Page	Meet-Me-Page answer code.	*544
4	External PageZone – 1	External Page Zone 1 access code.	*545
5	External Page Zone – 2	External Page Zone 1 access code only for UCP/eMG100.	*546
6	External All CallPage	External All Call Page access code.	*548
7	All Call Page	All Call Page access code.	*549
8	SMDR AccountCode Enter	Dial code to signify the start of an SMDR Account Code.	*550
9	Flash CommandTo CO Line	Dial code to generate a Flash on the active CO Line.	*551
10	SLT Last NumberRedial	SLT Last number redial feature access code.	*552
11	Do-Not-Disturb(DND)	Dial code to activateDo-Not-Disturb.	*553
12	Call Forward	Code to activate Call Forward.	*554
13	Speed DialProgram	SLT Speed Dial programming access code.	*555
14	Activate MessageWait/Call Back	Code to activate Message Wait/Call Back.	*556
15	Message Wait/Call-Back Answer	Code to return Message Wait/Call Back.	*557
16	SLT Speed DialAccess	SLT Speed Dial access code.	*558
17	DND/FWD Cancel	Code to cancel DND/FWD/MSG Wait.	*559
18	SLT CO SystemHold	Code to place a CO Line call on System Hold.	*560
19	SLT ProgramMode Access	SLT user program access code.	*561
20	AttendantUnavailable	Code to make attendant “unavailable”.	*562
21	AME Feature	Dial code to assign an Answering Machine Emulation Flex button.	*564
22	Alarm Reset	Code to terminate an Alarm signal.	*565
23	Group CallPick-Up	Group CallPick-up code.	*566
24	Universal NightAnswer	Universal NightAnswer code.	*567
25	Account CodeWith Bin	Dial code forentering anAccount Code.	*568
26	Walking COS	Dial code toactivate WalkingClass-of-Service.	*569
27	ACD Agent ON/OFF Duty	Code to toggleACD SupervisorON and OFF duty.	*571
28	ACD SupervisorLogin	Supervisor log-incode.	*572
29	ACD SupervisorLogout	Supervisor log-outcode.	*573
30	ACD Help Code	Agent &Supervisor code forSupervisor help.	*574
31	ACD Call InQueue Display	Dial code todisplay calls inqueue.	*575
32	ACD SupervisorStatus	Dial code todisplay groupstatus.	*576
33	ACD SupervisorMonitor	Dial code toactivateSupervisormonitor.	*577
34	ACD RerouteQueued CallAnswer	Code to reroutecall after answer.	*578

Table 4.4.1.8-1 FLEXIBLE NUMBERING PLAN CODES

Order	ATTRIBUTE	DESCRIPTION	DEFAULT
35	ACD RerouteQueued Call NoAnswer	Code to reroutecall prior toanswer.	*579
36	Camp-On Answer	Dial code toanswer a CampedOn call.	*621
37	Call ParkLocations	Dial code toplace/retrieve acall in a systemPark Orbit. eMG80/100:#601~#619, eMG800:#601~#800, UCP:#601~#800	Refer to description
38	Station GroupPilot Number	Station group pilotnumber. eMG80/100: *401~*440, eMG800: *401~*500, UCP: *401~*500	Refer to description
39	Station User VSFFeatures Access	VSF featureaccess code.	66
40	Call CoverageRing	Code for CallCoverage button.	*76
41	Direct CallPick-Up	Dial code toactivate DirectedCall Pick-up.	*77
42	Access CO Group	Dial code toaccess a CO Linefrom a group.	89
43	Access IndividualCO/IP	Dial code toaccess a specificCO/IPLine.	88
44	Access Held CO/IP	Dial code toaccess the last CO/IPLine from Hold.	8*
45	Access HeldIndividual CO/IP	Dial code toaccess a specificCO/IPLine from Hold.	8#
46	Access CO InFirst CO Group	Dial code to access the 1st available CO/IP Line in any accessible group.	9
47	Attendant Call	Dial code to callMain Attendant.	0
48	VM MSG WaitEnable	Dial code forexternal Voicemail to activateMessage Waitindication.	*8
49	VM MSG WaitCancel	Dial code forexternal VoiceMail to deactivateMessage Waitindication.	*9
50	Door Open	Dial code toactivate Door 1contact.	#*1
51	Door Open	Dial code toactivate Door 2contact.	#*2
52	Door Open	Dial code to activate Door 3 contact only for UCP/eMG100.	#*3
53	Door Open	Dial code to activate Door 4 contact only for UCP/eMG100.	#*4
54	MCID Request	Dial code toactivate MaliciousCaller Id (ExceptUSA version).	*0
55	UnsupervisedConf TimerExtend Code	Dial code toextendunsupervisedconference time.	##
56	PTT GroupLogon/Logoff	Push-To-Talkgroup login andlogout dial code. The station musthave a PTTbutton for properoperation.	#0
57	ACD AgentPrimary Login	ACD AgentPrimary Logincode.	*581
58	ACD AgentPrimary Logout	ACD AgentPrimary Logoutcode.	*582
59	ACD AgentSecondary Login	ACD AgentSecondary LoginCode.	*583
60	ACD AgentSecondary Logout	ACD AgentSecondary LogoutCode.	*584
61	Wrap-up End	ACD AgentWrap-up endcode.	*585
62	T-NET CM LOGIN/OUT	T-NET CM Login/out code	*586

Table 4.4.1.8-1 FLEXIBLE NUMBERING PLAN CODES

Order	ATTRIBUTE	DESCRIPTION	DEFAULT
63	ENTER INTOCONF ROOM	Code for a station to enter a conference room.	*59
64	ENTER INTOCONF-GROUP	Code for a station to initiate a conference group.	*68
65	STATION ICR	Code for a station to activate ICR forward.	*587
66	PICK UP GROU PPICK-UP	Pick Up Group Call Pick-up dialing code.	*588
67	EMERGENCY PAGE	Code for emergency page.	*589
68	REMOTE MEX CONTROL	Code to control the mobile extension settings remotely.	*580
69	Agent ON/OFF Duty In ALL GRP	Code to change the state of the Agent ON/Off duty in all Station groups.	*58*
70	SLT ACNR	Dial code for an SLT to activate ACNR	*58#
71	ACD Supervisor Ring Mode	Code to check and change ACD group Ring mode by ACD group supervisor.	*570
72	Company Directory Name	Code to check and record a user's Name greeting for the Company Directory feature.	*563
73	ISDN Supplementary HOLD	ISDN Supplementary HOLD Numbering Plan Code.	*57*
74	ISDN Supplementary Conference	ISDN Supplementary Conference Numbering Plan Code (Not supported).	*57#
75	Forced Channel Seize	Code to disconnect an existing call and seize the CO/IP Line or connect to the station.	*56*
76	Override DND/Forward	Dial code to override DND or Call Forward activated by a station.	*56#
77	Cancel call back	Code to cancel a Callback request.	
78	Transfer to VSF Number	While on a CO/IP Line call, this code may be used to transfer a call to a valid system announcement, [Transfer] + [*55*] + valid system announcement (01-200). The outside party receives the system announcement and DISA service activates.	*55*
79	CCR	It is used in digit conversion.	#2
80	Room Type Conf Group Join	After a UCS client activates a UCS Conference Group, other users may dial this code and the group number to enter the Conference.	5*0
81	Phone Lock/Unlock	Protect a phone from normal call features and allow only making of emergent call features.	47*
82	Flexible Page Prefix	Prefix code to access extended Page Codes.	*7*

4.4.1.9 8Digit Extension Table - PGM 238

Selecting 8 Digit Extension Table will display the input entry page. Click [Save] button after changing Value to apply.

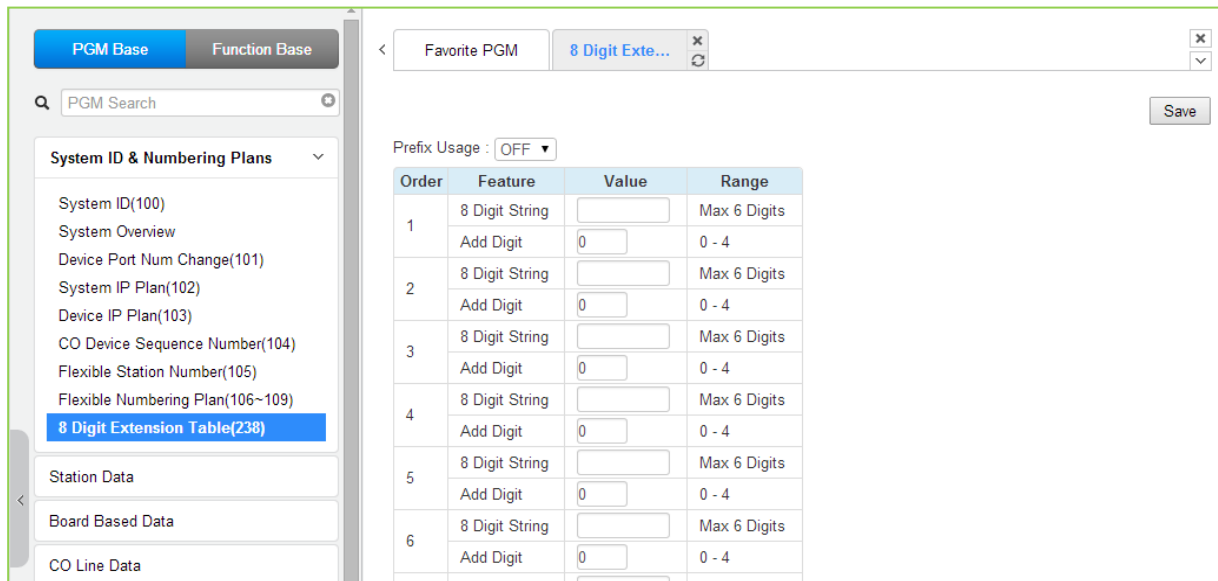

Figure 4.4.1.9-1 8 Digit Table

The iPECS system supports a Station Numbering Plan of up to eight digits. By combining a prefix digit string (8 Digit String) of up to six (6) digits with the Add Digit count (digit count from the Station Numbering assigned in PGM 105), Station Numbering can support up to eight digits. Note that multiple prefixes (8 Digit Strings) with varying ADD Digit counts can be assigned. In addition, in case of a conflict, the Prefix digit string will have priority over the Flexible Numbering Plan thus disabling the feature associated with the digit string but allowing the station to receive calls.

4.4.2 Station Data

Selecting the Station Data group will display the Station Data sub-menu displayed in the left frame as the below figure.

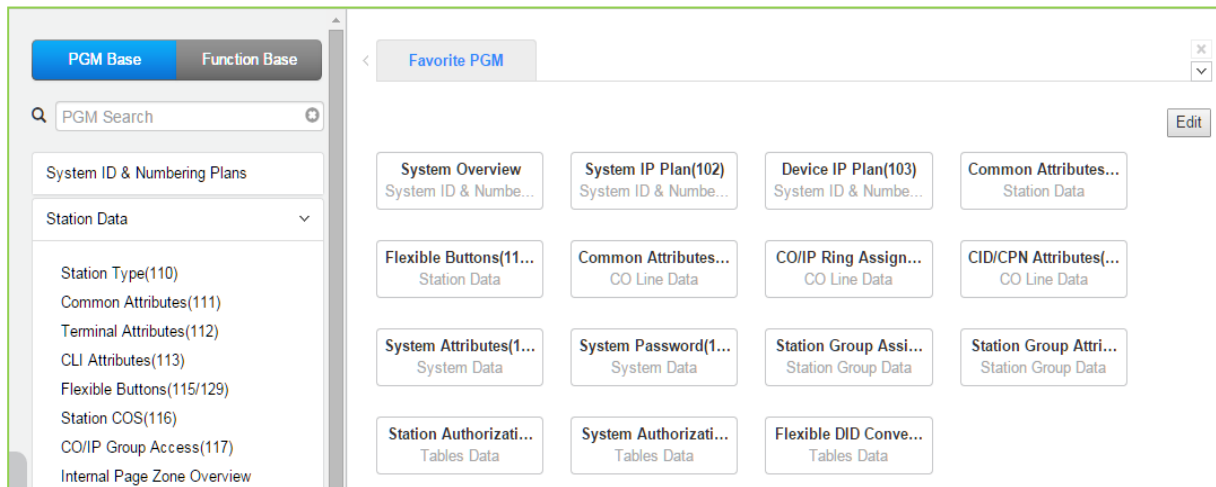

Figure 4.4.2-1 Station Data Main Page

4.4.2.1 Station Type - PGM 110

Selecting Station Type will display the Station Type data input entry page. Enter a valid station range and click **[Load]** to modify the Station Type data. Click **[Save]** button after changing Value to apply.

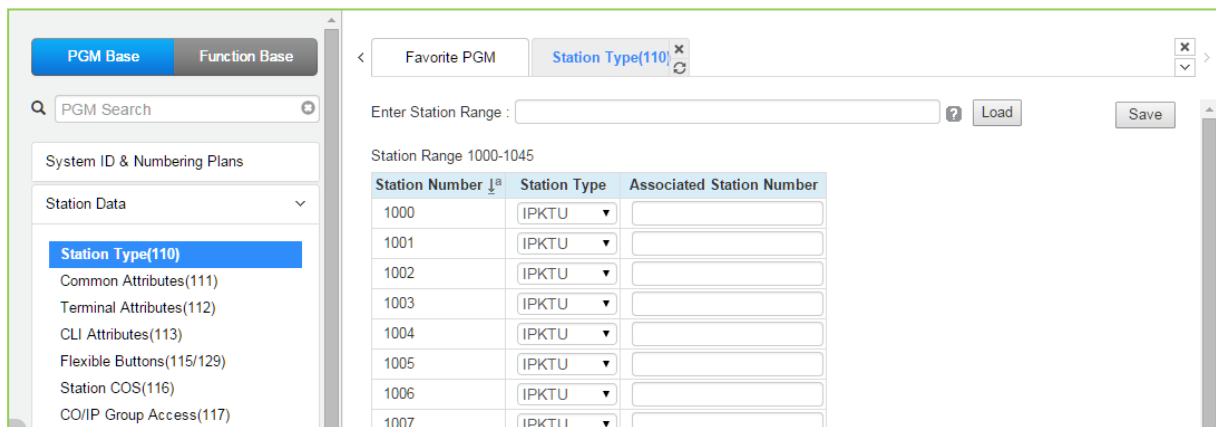

Figure 4.4.2.1-1 Station Type

Each station is assigned a type selected from the “Station Type” drop-down menu. The type is used by the system to recognize the station’s capability and set default Flex button configurations. In addition, for standard iPECS DSS/BLF consoles, the ‘AssociatedStation Number’ is required so the system will recognize the station that is used with the console. Note this is not used with the Serial DSS/BLF Consoles. In case of selecting SLT type, there are 6 types as below:

- SLT (DTMF)
- SLT (Pulse)
- SLT (DTMF VOL-MW)
- SLT (Pulse-MW)
- SLT (DTMF FSK-MW)
- SLT (DTMF POL-MW)

4.4.2.2 Common Attributes - PGM 111

Selecting Common Attributes will display the commonattributes data input page. Enter a valid station range and click the **[Load]** button to enter Common Attributes data.

Use the check boxes to indicate which attributes to define; data for checked attributes is stored for the entire range of stations by clicking **[Save]** button after changing Value.

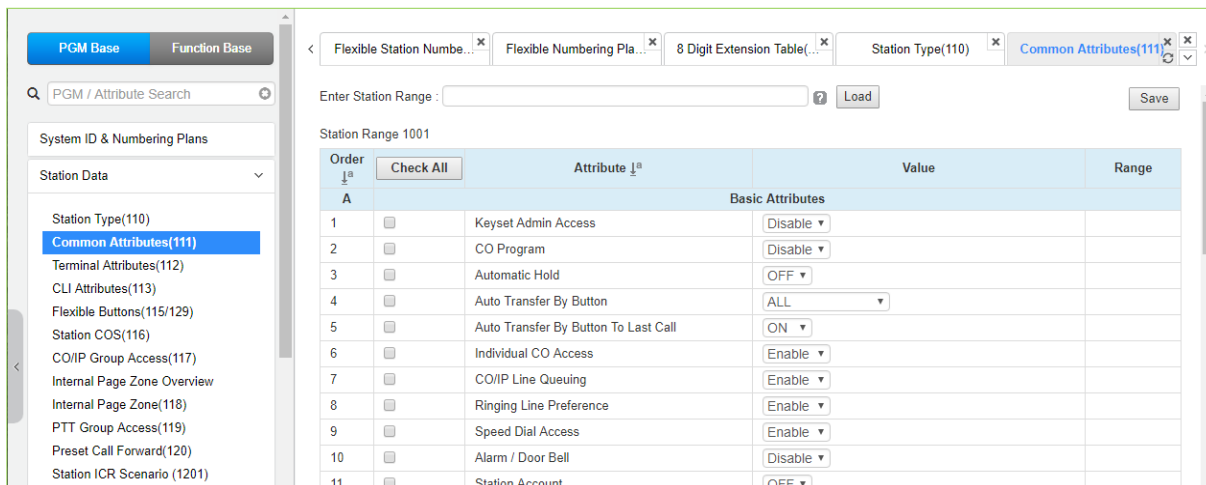

Figure 4.4.2.2-1 Common Attributes

Common Attributes define features and functions available to the station. Generally, the entry will turn the feature ON (enable) or OFF (disable). Refer to the following table for a description of the features and the input required.

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Keypad Admin Access	When enabled, the station can access the system Database.	Disable Enable	Enable
CO PGM	A station can be permitted to change the CO/IP Linenumbers (ports) associated with a Flexible button.	Disable Enable	Disable
Automatic Hold	Enables Auto Hold for the station. With Auto Hold enabled, the system will place an active external call on hold if the user presses a CO/IP Line or DSS button.	OFF ON	ATD: ON Others:OFF
Auto Transfer By Button	Transfer a talking call to a new making call by pressing Station(DSS)/CO(Loop)/U-Loop flexible button. OFF, ALL Except CO to CO	Refer to description	ALL
Auto Transfer By Button To Last Call	Transfer a talking call to only last new making call when use Auto Transfer By Button. Ex) Talking -> press Button A -> press Button B -> On Hook : Talking is transferred to Button B	OFF ON	ON
Individual CO Access	Permits stations to use dial codes to access individual CO/IP Lines.	Disable Enable	Enable
CO/IP Line Queuing	Permits the station to queue for the next available Line when an All Lines Busy signal is received.	Disable Enable	Enable
Ringing Line Preference	Enables Ringing Line Preference for the station. Calls that ring the telephone can be answered by going off-hook without selecting the CO/IP Line button.	Disable Enable	Enable

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Speed Dial Access	Allows the station to access System Speed Dial bins.	Disable Enable	Enable
Alarm/Door Bell	Assigns a station to receive Alarm/Door Bell signal.	Disable Enable	Disable
Station Account	When ON, the station user must enter an authorization code to access CO/IP Lines.	OFF ON	OFF
Forced SMDR Account Code	When On, the user must enter an Account code to place an outgoing call.	OFF ON	OFF
Loop LCR Account	The Station may be required to enter a StationAuthorization code to accessLOOP LCR operation.	OFF ON	OFF
Door Open	Enables use of Door open feature by station.	Disable Enable	Enable
Flex Button PGM	The ability to assign Flexible buttons of the iPECS IP and LDP Phones can be controlled. When allowed here, the user may assign features to Flexible buttons but requires special assignments to configure CO/IP Line buttons.	OFF ON	ON
Prefer CO or Group	The System will seize this CO/IP Line or a Line from the CO/IP group numberwhen the station dials "9" (First available Co accesscode) CO, IP Line, CO Groupnumber	Refer to description	Access code
Emergency CO or Group	This field defines the CO/IP Line or Group employed by the system to place Emergency Assistance calls. CO #, CO Group #	Refer to description	Any CO
ICM Tenancy Group	Assigns stations to an ICM Tenancy Group. eMG80/100:1~15, eMG800:0~32, UCP:0~100	Refer to description	1
Call Time Restriction	All outgoing calls will disconnect at expiration of theCall Restrict Timer. The Cut-Off Timers can be set the time for Station and CO Line. For cut off timer of Station, refer to the title "Station Timers (123)". For CO line, refer to the title "CO Line data: Common Attributes (144)".	OFF ON	OFF
Proctor MonitoringPower-Fail	Enables use of PABX ANI Link device for E-911support, Only an SLT port can be used for this feature.	OFF ON	OFF
Line Release CostDisplay	When a CO/IP line is released, the disconnect cause or call-cost isdisplayed in the LCD of iPECS IP or LDP Phone.	OFF ON	OFF
Active PTT GroupNumber	A station can be assigned to a PTT (Push-to-Talk) group and thegroup enabled so the station can place and receivePTT announcements for the group.	0~9	
Hot Desk Station	A station (only IP Phone) can be assigned as a Hot Desk phone. Users and agents can login and use resources of the system through the Hot Desk phone.	OFF ON	OFF
SMDR Hidden DialedDigits	If this feature enables, the dialed digit can be hided on SMDR output.	Disable Enable	Disable

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Left Message to Executive	When a call forwards to the Secretary of an Executive/Secretary pair, messages can be left for the Executive (ON) or Secretary (OFF).	OFF ON	ON
Station Web Level	Based on this level, the user will be able to view the specified programs within the Station User Web portal. Level 1 can view all programs, Levels 2 and 3 are configured in the title "System data: Station Web Authorization". This is a Web only PGM.	LEVEL 1 ~ LEVEL 3	LEVEL 2
Headset page mode	When a page announcement is received, it is normally played over the Speaker of the iPECS IP or LDP Phone. For headset users, the page can be played to the headset or both the headset and speaker. SPKR, HEADSET, BOTH	Refer to description	Speaker
Progress Indication	When employing a non-ISDN terminal, specifically a modem or analog FAX, the ISDN call SETUP message must include this message and "Progress Indication" should be set to "ON".	OFF ON	OFF
3.1 KHz Audio	When an analog device (SLT or FAX) uses an ISDN Line in the system, the Information Element of the ISDN SETUP message must indicate the device only has 3.1 KHz audio capabilities. If an SLT or analog FAX will be allowed access to the ISDN Lines, this parameter must be "ON"	OFF ON	OFF
Pickup by flexible button	When a station receives a call, the DSS/BLF button at other stations will flash and, if allowed, other stations may use the button to answer (pick-up) the call. ON: User can pick up by DSS button. OFF: User can't pickup by DSS button.	OFF ON	ON
Prepaid Call	It is a useful feature for user to pay the money within the budget (Prepaid) for outgoing calls. For more information, refer to the below feature "Prepaid money".	OFF ON	OFF
Prepaid Money (0 - 999999) & Used Prepaid Money	An amount can be associated with the station as prepayment for outgoing calls. The assigned "Pre-paid Money" is reduced by the calculated call cost (Call Metering or cost/minute). This parameter displays the remaining funds for outgoing calls. Prepaid Money is often used in small hospitality businesses. The "Used Pre-paid Money" displays the money that has been used.	000000 – 999999 000000 - 999999	0 0
SIP USER TABLE INDEX	These fields reference the index to the SIP User ID Attributes Table. The referenced SIP User ID may be employed for several of the SIP headers for outgoing calls and may be employed for incoming call routing as configured in the SIP CO Attributes PGM 133, "ID Assigned Station".	Refer to description	0
SIP USER TABLE INDEX2			0
SIP USER TABLE INDEX3			0
Up to three SIP User Id indices can be assigned to each station to permit the use of up to three SIP Trunk service providers. eMG80/100:0~140, eMG800:0~1200, UCP:0~2400			

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Station Web Language	User can select the desired language for Station Web. English, Local language	Refer to description	English
Lift Handset for page	If an iPECS IP or LDP Phone user attempts to page using the speakerphone, pre-selection will be activated and the display shows "Lift Handset for Page when Lift Handset forPage is ON". If Lift Handset for Page is OFF, then User can make page on speakerphone without lift handset.	OFF ON	ON
Privacy	If Privacy is ON, then any person could not barge-in to the station and also Attendant can't intrude to Station. Also, if Privacy is ON, any person can't forcefully disconnect the station.	OFF ON	OFF
Collect call block	This option enables each station to block a collect call by setting OFF.	OFF ON	OFF
DSS LED service	This option indicates whether to use the other station by showing LED of DSS button if the other station is assigned to DSS button. If this option is ON, the DSS LED light appears red. If this option is OFF, the LED DSS light is not available even though the station number is assigned to DSS button.	OFF ON	ON
DSS LED service on other station	This option indicates whether DSS LED is updated or not on other station If it is ON then DSS button LED of other station is updated. If it is OFF then DSS button LED of other station is not updated	OFF ON	ON
Stop Emergency page announcement	If this is set to "After announcement", then system will keep playing the announcement regardless of calling party's status. By calling party, After announcement	Refer to description	By calling party
Send LM IP to UC client	If it is set to the available number, then system sends LM IP to UC premium client even though it is connected to CM. It is used for local survival. UCP:1-100, eMG800:1-32,eMG80/100: 1-15	Refer to description	
Media Option	Only audio path is connected when make internal call/answer. Both Audio and Video path is connected when make internal call/answer between LIP-9070/9071. Audio only, Audio & Video	Refer to description	Audio only
Hot Desk Emergency Call Identity	When a Hotdesk station makes an emergency call, the specification of co line seized and caller number(CLI) is used with a stations according to this option. <ul style="list-style-type: none"> • Follow Logged-in Agent: Use Emergency CO Group and CLI of hotdesk logical user station. • Follow Hot Desk Phone: Use Emergency CO Group and CLI of hotdesk physical phone the user logged-in. 	Refer to description	Follow Logged-in Agent
Hot Desk Page Identity	Page identity and page group and zone. <ul style="list-style-type: none"> • Follow logged-in agent • Hot desk phone 	Refer to description	Follow Logged-in Agent

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
DTMF across the Page - DTMF Receive & ACK Allow	For Paged end point - Allow or do not allow the DTMF Receiving and sending of DTMF ACK digit string.	OFF ON	OFF
Call Coverage Attributes			
Call Coverage Mode	The Call Coverage feature permits an iPECS IP or LDP Phoneuser to receive ring and answer calls for other stations.	OFF ON	OFF
Call Coverage Delay Ring	When a covered station rings, the {CALL COVERAGE} button LED will flash at the coveringstation and the station will receive ring (immediate or delayed by 0 to 15 ring cycles).	0~15	0
Call Coverage On Busy	OFF: Call Coverage is implemented when a covered station is in the idle state. ON: Call Coverage is implemented when a covered station is on idle or busy state.	OFF ON	ON
Call Coverage Through Mobile Extension	OFF: Call Coverage Ring is not delivered to Mobile Extension ON: Call Coverage Ring is not delivered to Mobile Extension	OFF ON	ON
Call Coverage On Busy Range	External Call Only: Call Coverage only for external calls when the covered station is busy External and Internal Call: Call Coverage both for external & internal calls when the covered station is busy	Refer to description	External Call Only
Call Coverage Delay Ring Method	by Originator: Call Coverage Delay is implemented by the covered station's "Call Cover Delay Ring" delay count' by Member: Call Coverage Delay is implemented by covering station's "Call Cover Delay Ring" delay count'	Refer to description	by Originator
Call Coverage For Wakeup Ring	OFF: Wakeup Ring to covered station is not covered ON: Wakeup Ring to covered station is covered	OFF ON	OFF
Call Coverage Ring Type on Member	Silence: No audible ring is presented and the user must press the flashing Call Coverage button to answer the call. Normal Ring: Audible ring is presented and the call can be answered by simply lifting the handset or pressing the Speaker button. Mute ring is only supported in LIP-8000E series. Silence, Normal Ring, Muted(Continuous)-80XXE only, Muted(One Burst)-80XXE only	Refer to description	Normal Ring
Tone/Ring Attributes			
Call Time Tone	A tone can be sent periodically with indicating the elapsedtime of an outgoing CO/IP call. The Elapsed CallTimerdetermines the period between tones.For more information about Elapsed Call timer, refer to the title "System data: System timer (180~182, 186)".	OFF ON	OFF

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Camp-on Tone	When the Camp-on feature is enabled for the station, if the station is busy and receives a Camp-on request, the LCD indicates the camped on call. In addition, if Camp-on tone is enabled, the Camp-On tone is sent to the station as an audible signal for the camp-on.	OFF ON	ON
ICM Dial Tone Source	One of four dial tone sources can be selected for each station. Dial Tone / Internal music / External music / VSF MOH / SLT MOH1~5 / VSF MOH2~30	Refer to description	Dial Tone
ICM Ring Back ToneSource	One of four ring back tones can be selected for each station. Ring BackTone / Internal music/External music/VSF MOH/SLT MOH1~5/VSF MOH2~30	Refer to description	Ring Back Tone
Off hook ring type	While the station is Off hook ring, the type of ring can be adjusted as a single burst, muted normal ring, system ring or no audible ring signal. BURST, MUTE, Refer to System Attributes, SILENCE	Refer to description	Refer to System attributes
SIP color ring	With a SIP based AA/VM that supports color ring, color ring may be provided to SIP phones. The group number associated with the external AA/VM should be entered as the SIP Color Ring source.		Station number
Gain table index	Selects one of three Tables employ to set the gain from a device to other device types. PGM 410 to 417 under the Maintenance tab set the individual gains.	1-3	1
Tone table index	Selects one of five Tables to determine the tones sent to the Station. The individual tones are configured in PGM 410 to 417 under the Maintenance.	1-5	1
Digit conversion table	One of the Digit Conversion Tables can be configured for use for this CO/IP Line. eMG80/100:1-15, eMG800:1-32, UCP: 1-32	Refer to description	
DTMF tone for Flexible button	If this is enabled, then, system provides DTMF tone when a user presses the flexible button to send DTMF tone to called party.	OFF ON	OFF
Routing Attributes			
Call Forward	When allowed, Call Forward can be activated by the station.	OFF ON	OFF
DND	Enables DND to be activated by the station. The station can be limited to activate DND for outside calls (CO/IP Only) or for internal calls (ICM only), if desired. OFF, ALL, ICM call only, CO call only	Refer to description	OFF
Off-net Forward	A station must be allowed Off-Net Fwd to forward external incoming calls outside the system or otherwise establish a CO-to-CO connection(Unsupervised Conference). (Except USA version)	Disable Enable	Enable
ACD Group Service	When unavailable, DID/DISA calls to the station can route to the ACD Group to which the station is a member.	OFF ON	OFF
Ring Group Service	When unavailable, DID/DISA calls to the station can route to the Ring Group to which the station is a member.	OFF ON	OFF

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ACD Login Priority	ACD Group members may be assigned a priority, 0-9. Members with the highest priority are sent calls ahead of lower priority members. This field is the same as PGM 191-button 19.	0 ~ 9	0
Prime Line	This feature enables Delayed Prime Line (Idle Line) activation; see the title "Idle Line Selection (121)" and "System data: System timer: Prime LineDelay timer (180~182 & 186)".	HOT WARM	WARM
Auto ACD DND	If an Agent does not answer an ACD call in the ACD No Answer timer, the Agent enters an Unavailable state with the Reason code entered here. The reason code is sent in ACD Event messages.	None #, *, 1~9	NONE
Forward if OOS	If a station is Out-of-Service and has previously forwarded calls, the system will forward the calls to the previous destination if enabled here.	OFF ON	OFF
LDT Table Index	LCR operation for the station will employ the LDT Table index defined by this entry. eMG80/100: 1-10, eMG800:1-32, UCP:1-32	Refer to description	1
LDT Zone number	If the LDT Zone Number of a LDT table (LCR LDT(221)) is equal to this value, the LDT table is available to this station.	1-100	1
Mobile (Web) Client Service	When enabled, the station can activate call back from the Station Web portal.	Disable, Enable	Disable
Click to call service	To use click call application, it should be enabled.	Disable, Enable	Disable
MS Lync RCC service	To use MS Lync RCC, it should be enabled.	Disable, Enable	Disable
MSN Wait	When a call that is corresponding to a MSN Telephone Number comes in to system, the call is basically routed to idle stations that have free MSN button that is assigned for the corresponding Telephone Number. And also the call can be routed to busy stations in the following condition. OFF: if a keyset is in a busy status, cannot receive incoming MSN Telephone Number corresponding call even though it has a free(idle) corresponding MSN LOOP Button ON: if a keyset is in a busy status, can receive incoming MSN Telephone Number corresponding call if it has a free(idle) corresponding MSN LOOP Button.	OFF ON	OFF
DID Restriction	A call routed using DID normally routes to the appropriate station. If desired, a Station can be restricted from receiving DID calls.	OFF ON	OFF
DISA Restriction	A call routed using DISA normally routes to the appropriate station. If desired, a Station can be restricted from receiving DISA calls.	OFF ON	OFF

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Pre-Selected Msg DND	When the user activates Pre-Selected or Custom Messages, the system can automatically activate DND for the station so that the station will not receive ring and the call is routed based on the DND treatment.	OFF ON	OFF
Private Mode for External Mobile or External Forwarded	This is about presentation of number in display of internal caller's or callee's station in following cases. 1) extension 'A' calls extension 'B' that is forwarded to external number of 'B' <ul style="list-style-type: none"> ON : extension number or extension name of 'B' is presented in display of extension 'A' OFF : external number of 'B' or SPEED name of the external number 'B' is presented in display of extension 'A' 2) external number that is registered as extension 'B' calls extension 'A' <ul style="list-style-type: none"> ON : extension number or extension name of 'B' is presented in display of extension 'A' OFF : external number of 'B' or SPEED name of the external number 'B' is presented in display of extension 'A' 	OFF ON	ON
Voice Attributes			
Page Access	Stations must be allowed Page access to send a page over the system's Paging facilities.	OFF ON	OFF
Forced hands Free Mode	When placing an intercom call, a user can change the ICM signaling mode, Tone Ring to Hands free answer mode or HF Answer to Tone Ring.	OFF ON	OFF
Group Listening	Enables Group Listen feature, audio is sent to both the handset and speaker with the handset microphone active and speakerphone microphone OFF.	Disable Enable	Enable
Override Privilege	Enables intrusion to gain access to an active CO/IP call.	Disable Enable	Disable
Voice Over	Enables use of Voice Over by the station.	Disable Enable	Enable
Barge In Mode	Barge-in permits an authorized Station to intrude into other existing outside/internal calls or to force disconnection existing of an existing call. Disable, Only Monitor, Monitor & Join & Disconnect	Refer to description	Disable
Camp on enable	Station can receive a Camp-on while busy. If 'Camp On Tone' is enabled, the stations receive Camp-on tone, otherwise only the LCD will indicate the camp on call. If the station is not allowed to receive a Camp-On, the calling user receives error tone.	OFF ON	ON

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Video Show on Calling (ex. IP Video Door Phone)	When VoIP video door phone rings to a video-enabled IPKTS handset, the video streaming commences immediately while the IPKTS handset is in the ringing and the video stream continues when answered. OFF : normal implementation (video starts after answer) ON : video stream from this Video Door Phone to the ringing video-enabled LIP Phone even though this is alerting stage. Condition : A VOIU/VOIB channel for RTP-Packet-Relay purpose is required to serve ring-back-tone generation via a DSP channel. That is because system does pre-answer to the Video Door Phone even though the receiving station is on alerting state.	OFF ON	OFF
Silent intercom busy service	It is used to mute automatically when make intercom busy service (intrusion/voice over) and also it override "Ring Group Service"/"ACD Group Service".	OFF ON	OFF
Transfer for uncomplete call	When an user transfers a call to a busy extension, it defines to allow the transfer call. it is not working on SIP phone <ul style="list-style-type: none"> • Transfer : the call is transferred to busy extension • Recall : the call is recalled to transferring extension 	Refer to description	Transfer
Block Transferred Call	When an user transfers a call to a extension, it defines to allow the transfer call. <ul style="list-style-type: none"> • Allow CO & ICM transfer : Allow CO and ICM call transfer • Block CO & ICM transfer: Block CO and ICM call transfer • Block CO transfer: Block CO call transfer • Block ICM transfer: Block ICM call transfer 	Refer to description	Allow CO & ICM transfer
MOH Attributes			
Default MOH for External Call	Default MOH type that holding party serves for an external call. <ul style="list-style-type: none"> • Refer To Zone or Sys MOH, • Internal Music1, • External Music2, • VSF MOH, • SLT MOH1~5, • VSF MOH2~30 	Refer to description	Refer To Zone or Sys MOH
Default MOH for Internal Call	Default MOH type that holding party serves for an internal call. <ul style="list-style-type: none"> • Refer To Zone or Sys MOH, • Internal Music1, • External Music2, • VSF MOH, • SLT MOH1~5, • VSF MOH2~30 	Refer to description	Refer To Zone or Sys MOH
Override MOH Of External CPN(231)	Default MOH type of holding party can override the MOH of CPN that is programmed in Flexible DID Conversion Table(231).	OFF ON	OFF

Table 4.4.2.2-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Override MOH Of CO Line(140)	Default MOH type of holding party can override the MOH of CO Line that is programmed in CO Line MOH(140).	OFF ON	OFF
Zone MOH – Follow Holding party Zone	If MOH of device specific (CO or Station) is set to “Refer To Zone or Sys MOH” and Zone MOH type is set to a specific MOH that is not following “Refer To Sys MOH”, MOH is type is decided by Zone MOH(P439).	OFF ON	OFF
Sys MOH – Follow Holding party Sys(TNET)	If MOH of device specific (CO or Station) is set to “Follow Zone or Sys MOH” and Zone MOH is set to “Refer To Sys MOH”, MOH type decided by System(P171) or TNET(P335) Music Source setting.	OFF ON	OFF

4.4.2.3 Terminal Attributes - PGM 112

Selecting Terminal Attributes will display the Terminal Attributes data input page. Enter a valid station range and click **[Load]** to enter Terminal Attributes data. Use the check boxes to indicate which attributes to define; data for checked attributes is stored for the entire range of stations by clicking **[Save]** Button after changing Value.

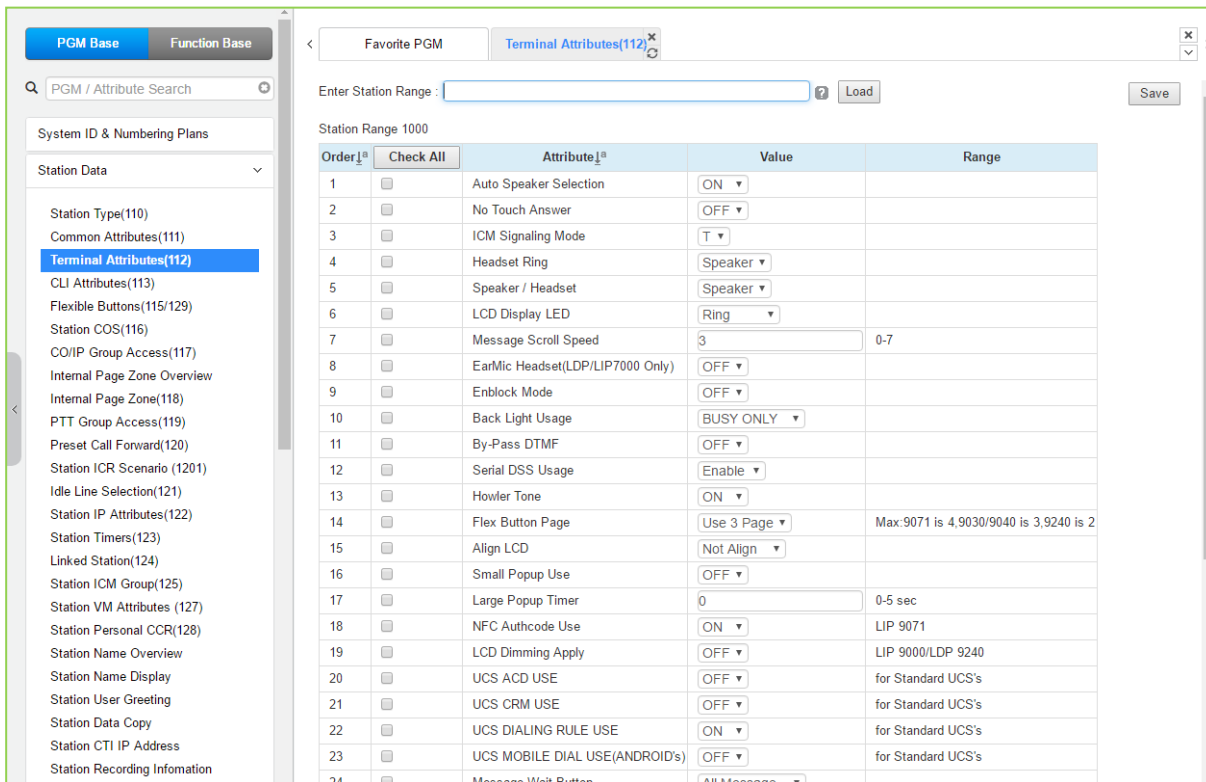

Figure 4.4.2.3-1 Terminal Attributes (PGM 112)

Terminal Attributes define features and functions available to the terminal itself. Generally, the entry will turn the feature ON (enable) or OFF (disable). Refer to the following table for a description of the features and the input required.

Table 4.4.2.3-1 Terminal Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Auto Speak Selection	Enables [SPEAKER] activation when a CO/IP Line, DSS or other feature button is pressed;there is no need to lifthandset.	OFF ON	ON
No-Touch Answer	Enables No-touch answer, which automatically connects transferred calls to the station's speakerphone after a short tone.	OFF ON	OFF
ICM signaling Mode	The user may select Hands-free (H), Privacy (P) or Tone Ring (T) for the ICM Signaling mode.	H, T, P	T
Headset Ring	The user can select how to receive Incoming ring signals among Speaker, Headset or Both.	Speaker/ Headset/ Both	Speaker
Speaker/Headset	The user can select between Speaker and Headset for Call.	Speaker/ Headset/	Speaker

Table 4.4.2.3-1 Terminal Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LCD Display LED	The LCD LED, upper left of LCD, may be used for Intercom Call ring Indication or both Message Wait and ring Indication.	MWI/Ring, Ring	MWI/Ring
Message Scroll Speed	The user can adjust the scroll speed on message from 0 to 7.	0 ~7	3
Ear& Mic Headset	The user can use Ear Microphone Headset for Internal or external calls if the phone has the Ear. Microphone headset port.	OFF ON	OFF
Enblock mode	When On, the user-dialed digits are stored at the iPECS IP or LDP Phone until explicitly sent by the user. When sent, all dialed digits are sent to the system in a block. Enblock mode is only available to iPECS IP or LDP Phones with 3-Soft keys.	OFF ON	OFF
Back Light Usage	The backlight of iPECS IP and LDP Phones is assigned to stay off, light only when the station is busy, or light constantly. Please check the phone if the feature is available before setting this option. Always Off, Busy Only, Always On	Refer to description	Busy Only
By Pass DTMF	When detected, DTMF from an SLT may be regenerated by CO/IP Line interface circuitry, the SLT port can by-pass detection so DTMF is not detected.	OFF ON	OFF
Serial DSS Usage	Enables an LIP-8000/LIP-9000/1000i station to have a Serial DSS/BLF Console attached.	Disable Enable	Enable
Howler Tone	Howler tone can be sent to a phone when left off-hook.	OFF ON	ON
Flex Button Page	LDP-9240D, LIP-9030/9040(C), LIP-9071, 1020i, 1030i, 1040i, 1050i, 1080i has flexible button page in LCD. (Max: LIP-9071, 1080i: 4, LIP-9030/9040(C)/1020i/1030i/1040i/1050i : 3, LDP-9240: 2) The Navigation Up/Down button is used to scroll through the Flex buttons pages assigned. Use 1 Page, Use 2 Page, Use 3 Page, Use 4 Page	Refer to description	Use 3 Page
Default flexible button page	The flexible button page automatically go to predefined page when phone go to idle. Use 1 Page, Use 2 Page, Use 3 Page, Use 4 Page	Refer to description	Use 1 Page
Align LCD	For the iPECS LIP-9010/20/30/40, character alignment for messages to the phone can be right or left aligned by the system, or alignment controlled by the phone ("Not Align"). For the other phone, please check if the feature is available before using this option.	Not Align Align Left Align Right	Not Align
Small Popup Use	If this option is set to ON, small popup is displayed on the LCD of LIP-9030/9040/1010i/1020i/1030i/1040i/1050i. If it is set to OFF, top bar is displayed instead of small popup.	OFF ON	OFF
Large Popup Timer	When Large popup timer is set to any value from 1 to 5 except 0, the display of large popup is disappeared after the timer expired and then the large popup information is displayed at top bar.	0~5 (Sec.)	0

Table 4.4.2.3-1 Terminal Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
NFC Authorization code Use	If this option is ON, User enters Authorization code to use NFC function for LIP-9071.	OFF ON	ON
LCD Dimming Apply	If this option is ON, LCD dimming is available only for LIP-9000 Series and LDP-9240D. LCD is dark when the phone is paused so some light is needed. So we provide the dimmable lights.	OFF ON	OFF
UCS ACD Use	If the ACD (Automatic Call Distribution) option is set to ON, the ACD menu is displayed on Tools of UCS. UCS can use ACD login/logout and ACD On/Off Duty.	OFF ON	OFF
UCS CRM Use	If the CRM (Customer Relationship Management) option is set to ON, the CRM menu is displayed and CRM installation tray icon is displayed on Tools of UCS. UCS can use CRM function after installation CRM integration.	OFF ON	OFF
UCS DIALING RULE USE	UCS client user can use 'Dialing Rule' of UCS client such as CO Access, PBX code, Country Code, Area code, International Call, Long distance call, Add zero setting, etc. by setting ON. But, if this option is OFF, UCS Client user follows 'System Dialing Rule' such as Digit Conversion and LCR.	OFF ON	OFF
UCS MOBILE DIAL USE (ANDROID'S)	This option is only for Android UCS Client. If this option is ON, UCS client user can place a call by using UCS client application. But, if this option is OFF, UCS client user places a call by Mobile Network (Communication network where the last link is wireless).	OFF ON	OFF
UCS PUSH POLLING Use	It is only used for iOS client that is not ringing or long delay to ring when receive PUSH message. If it is ON then system send PUSH polling message, so UCS application will wakeup periodically. so it could consume more batter ON: System send PUSH polling message OFF: System does not send PUSH polling message	OFF ON	OFF
Message Wait Button	User can program MWI (Message Wait Indication) LED according to the following type: <ul style="list-style-type: none"> • All Messages: LED is blinking about all calls and Message. • Voice Mail: blinking in case of getting Voice mail. • Missed Call: blinking in case of being Missed call. • SMS: blinking in case of getting Short message • ICM Call Back: blinking in case of Incoming call 	Refer to description	All Message
PGM button	If this option is set to Enable, you can access Programming by pressing PGM button.	Disable Enable	Enable
MENU button	If this option is set to Enable, you can access MENU by pressing Menu button. Some phones have no MENU button so that you check if the phone has Menu button or not in advance.	Disable Enable	Enable
Headset button	If this option is set to Enable, you can change Headset mode by pressing Headset button.	Disable Enable	Enable
Key Pad Tone	It is only work with LIP90xx 2.0Aa or later version. Tone off, Dual tone, Single tone	Refer to description	Dual tone

Table 4.4.2.3-1 Terminal Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
***PHONE Lock Status(Force to Set)	Force to lock or unlock by admin	Unlock / Lock	Unlock
PHONE Auto Lock Usage	To lock a phone automatically after some minutes of idle state or after some minutes since unlocked Do Not Apply, After Duration of Idle, After Duration fromUnlock	Refer to description	Do Not Apply
PHONE Auto Lock Timer	After this duration a Phone goes to locked state	0 - 1430 (minutes)	0 (minute)
PHONE Lock Action for Hot-Desk	Phone Lock/Unlock for Hot-Desk <Hot-Desk Login - Using Unlock> <ul style="list-style-type: none"> • Step1) from a Locked (Dummy) Station • Step2) Phone Lock/Unlock Code(or Button) • Step3) Authorization (Station Number & Password of a Hot-Desk) • Step4) Login To a Hot-Desk <Hot-Desk Logout - Using Lock> <ul style="list-style-type: none"> • Step1) from a Hot-Desk Station • Step2) Phone Lock/Unlock Code(or Button) • Step3) Authorization (Station Password of the Hot-Desk Station) • Step4) Locked Hot-Desk (remain in the Hot-Desk Station) in condition <ul style="list-style-type: none"> - Option 1 (Station Data > Terminal Attributes (P.112) > PHONE Lock Action for Hot-Desk = "Just Lock Phone") Or, Logout To Locked Dummy Station (Logout from the Hot-Desk Station) in condition - Option 2(Station Data > Terminal Attributes (P.112) > PHONE Lock Action for Hot-Desk = "Logout from Hot-Desk") Just Lock Phone, Logout from Hot-Desk	Refer to description	Just Lock Phone

Table 4.4.2.3-1 Terminal Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Allow to Stop - Flexible Paging	<p>Permission to stop on-going announce or silent message paging</p> <p><To Stop/Cancel Page initiated by Me></p> <ul style="list-style-type: none"> In condition, Allow to Stop Flexible Paging = “Allow to Stop Initiated by Me Only” or “Allow to Stop Initiated by Any One” Dial the Stop/Cancel Code or press One-Touch flex button that has the code : Flexible Page Prefix Code + 00 (ex. *7400) <p>< To Stop/Cancel Page initiated by All (including Me)></p> <ul style="list-style-type: none"> In condition, Allow to Stop Flexible Paging = “Allow to Stop Initiated by Any One” Dial the Stop/Cancel Code or press One-Touch flex button that has the code : Flexible Page Prefix Code + ** (ex. *7***) <p>Not Allow to Stop, Allow to Stop Initiated by Me Only, Allow to Stop Initiated by Any One</p>	Refer to description	Not Allow to Stop
Separated Flex Button in Call Control	<p>It is used only IP Attendant No Voice mode log in.</p> <p>If this option is OFF, IP ATD flex button is synchronized with hard phone's flex button.</p> <p>If this option is ON, IP ATD flex button is worked individually.</p>	OFF ON	OFF
SLT Attributes			
Data Security	Disables override and camp-on tones to the station. This feature is commonly used for an analog modem or FAX to assure tones do not affect received information.	OFF ON	OFF
ECM Faxes in T.38	ECM stands for Error Correction Mode. If you failed to send something via Faxes, you can send it again until it is successful.	Allow, Prevent	Allow
MODEM Enable	When an SLT port is connected to a Modem, the port can be enabled for Modem operation. This will activate Echo Cancellation and disregard any Camp-on/Call Wait to improve modem performance.	OFF ON	OFF
SLT CID TYPE	Caller ID can be sent to an SLT as FSK or DTMF signals.	FSK DTMF	FSK
Send SLT CLI Info	When allowed, the system sends CLI (Calling Line Identification) information to SLT.	OFF ON	ON
SLT Flash Mode	<p>When an SLT activates a Hook-flash the system will perform one of the following operations:</p> <ul style="list-style-type: none"> Flash Transfer: the active call placed on hold and the dialtone is returned. Flash-Drop: the active call is dropped. Flash-Ignore: the Hook-flash is ignored, no action is taken. Hold Release:the active call is placed on hold and if the SLT returns to idle the call is dropped. 	Refer to description	FlashTransfer
SLT configuration mode	For the South African region, the SLT gain is adjusted based on the SLT Configuration Mode. Default, Short, Long, Far	Refer to description	Default
Block Back Call	When an SLT attempts to transfer a CO/IP call to another CO/IP Line, the transfer can be blocked and the call released.	OFF ON	OFF

Table 4.4.2.3-1 Terminal Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SLT Open Loop Time	Send open loop signal to SLT port when counter party user hangs up SLT.	0~9 (100ms)	0
Short Modem	If this value of a SLT is ON, the SLT is the modem mode in seizing a CO line. When the CO line is CO board, the {short modem timer} is starting when the SLT seizes the co line. And if the {short modem timer} is expired, the SLT go to the original mode. When the CO line is ISDN, the {short modem timer} is starting after receiving the ISDN connect message. And if the {short modem timer} is expired, the SLT go to the original mode.	OFF ON	OFF
Line Echo	When LKA-200 SLT is used, the echo may be hearing. If this option is set to ON, the echo won't be happen.	OFF ON	OFF

4.4.2.4 CLI Attributes - PGM 113

Selecting CLI Attributes will display the CLI Attributes data input page. Enter a valid station range and click **[Load]** to enter CLI Attributes data.

Use the check boxes to indicate which attributes to define; data for checked attributes is stored for the entire range of stations by clicking **[Save]** Button after changing Value.

Order	Check All	Attribute	Value	Range
1	<input type="checkbox"/>	Call Wait	OFF	
2	<input type="checkbox"/>	Call Wait Signal Continuous	OFF	
3	<input type="checkbox"/>	Call Wait Signal Duration(*3sec.) Of A Call	2	0-20(*3sec)
4	<input type="checkbox"/>	CLIP Display	ON	
5	<input type="checkbox"/>	COLP Display	OFF	
6	<input type="checkbox"/>	CLIR Service	OFF	
7	<input type="checkbox"/>	COLR Service	OFF	
8	<input type="checkbox"/>	CLI Name Display	OFF	
9	<input type="checkbox"/>	CLI/IP Message Wait	OFF	
10	<input type="checkbox"/>	FAST CLI For Transfer Call	OFF	
11	<input type="checkbox"/>	E.164 Call Log CLI (for SIP Extension)	OFF	
		CID Password	<input type="text"/>	<input type="button" value="Go to Setting"/>
12	<input type="checkbox"/>	Station CLI 1	1000	Max 12 Digits
13	<input type="checkbox"/>	Station CLI 2	<input type="text"/>	Max 16 Characters

23	<input type="checkbox"/>	Add 1st CO group access code in call log	OFF	
24	<input type="checkbox"/>	Company Name 1	<input type="text"/>	0-100, 0: station name

Figure 4.4.2.4-1 CLI Attributes (PGM 113)

CLI Attributes define features and functions available to the station. Generally, the entry will turn the feature ON (enable) or OFF (disable) or enter is made in the text box. Refer to the following table for a description of the features and the input required.

Setting CID Password directly

You can set the CID password to click **[Go to Setting]** button. After clicking it, you will move to the following PGM 162 and set the CID password, and then save CID password to mark tick on the save box and click **[Save]** button.

Table 4.4.2.4-1 CLI Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Call Wait	When a busy station receives a call, the call may queue to the station instead of receiving busy treatment. With Call Wait, the caller will hear Ring-back tone and the CO/IP Line LED flashes. Also, the CLI for the new incoming call displays. OFF, For External/Internal, For External, For Internal	Refer to description	For External /Internal

Table 4.4.2.4-1 CLI Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Call wait signal continuous	When this filed set On, you will get the indication of Call wait signal continuously without returning to the current conversation. In case of Off, you will return to the current conversation after 1 cycle of Call wait signal indication.	ON, OFF	OFF
Call wait signal duration (*3sec.) of a call	You can set the call wait signal duration of a waiting call: the default is 2 (2*3sec.) and the range is from 0 to 20.	0-20 (*3sec)	2
CLIP Display	CLIP (Calling Line Identification Presentation), a carrier service, sends the number of the calling party to the system in the call SETUP message. If enabled here, the number will be shown in the iPECS Phone LCD.	OFF ON	ON
COLP Display	COLP (Connected Line Id Presentation), a carrier service, sends the number of the answering party to the system in the call CONNECT message. If enabled here, the number will be shown in the iPECS Phone LCD.	OFF ON	ON
CLIR Service	CLIR (Calling Line Identification Restriction), a carrier service, removes calling party ID sent from the ISDN to the called party with a RESTRICT instruction in the SETUP message. If enabled here, the system will send the RESTRICT instruction to the PSTN when an outgoing ISDN call is placed.	OFF ON	OFF
COLR Service	COLR (Connected Line Id Restriction), a carrier service, removes connected party ID sent from the ISDN to the calling party with a RESTRICT instruction in the CONNECT message. If enabled here, the system will send the restrict instruction to the PSTN when the station answers an ISDN call.	OFF ON	OFF
CLI Name Display	When the Incoming CLI data from the carrier matches a number in Speed Dial, or Outgoing dial data from a user matches a number in Speed Dial, the system can display the name associated with the Speed Dial bin, if set to ON.	OFF ON	ON
CLI/IP Message Wait	A log of missed calls with caller identification can be maintained for the user, permitting the user to call back the identified party. Up to 1000 entries are maintained in the log, system-wide.	OFF ON	OFF
FASTCLI For Transfer Call	If this option is set to ON, when a transferred call is routed to an SLT or DECT phone, the CLI for the CO/IP call is sent to the SLT or DECT phone instead of transferring station number.	OFF ON	OFF
E.164 Call Log CLI (for SIP Extension)	When enabled, the E.164 format CLI is sent to SIP Extensions for an incoming CO/IP call.	OFF ON	OFF

Table 4.4.2.4-1 CLI Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Station CLI 1	To use this option, 'CLIR Service' or 'COLR Service' is set to OFF. The CLI number is entered up to 12 digits. The entered CLI number as suffix is added to the number set in CLIP/COLP Table (201). Also check 'COLP Table Index', 'CLIP Table Index', and 'Station CLI Type' in CID/CPN Attributes (151). The entered CLI number sends the called party via ISDN call setup or connected message. Default: eMG80/100:100, eMG800:1000, UCP:1000	Max. 12 digits	Refer to description
Station CLI 2	To use this option, 'CLIR Service' or 'COLR Service' is set to OFF. The CLI number is entered up to 16 digits. The entered CLI number as suffix is added to the number set in CLIP/COLP Table (201). Also check 'COLP Table Index', 'CLIP Table Index', and 'Station CLI Type(2~5)' in CID/CPN Attributes (151).The entered CLI number sends the called party via ISDN call setup or connected message.	Max. 16 characters	Related with PGM 143 – Station CLI Type
Station CLI 3			
Station CLI 4			
Station CLI 5			
CLI / Redirect Display	When an incoming call is Redirected in the carrier's network, the call SETUP message will contain an original and redirected CLI. This selection determines if the iPECS IP and LDP Phone will display the original or redirected number.	OriginalCLI / RedirectCLI	Original CLI
Station or Attendant	When the system sends a station number with CLIP or COLP, the number can be either the Attendant number or the number of the station.	Station Attendant	Station
CPN Type	NOT SEND: CPN is not sent to S0 interface. STATION NUMBER: Station number is sent as CPN to S0 interface. BYPASS FROM NET: Incoming CPN is sent as CPN to S0 interface.	Refer to description	Not send
CLI Name Preference	NET: If CLI name is provided from network, then it is displayed. If CLI name is not provided from network, the matched Speed name is displayed. SPD: If CLI is matched with Speed bin and it has name, then the matched Speed name is displayed. If CLI is not matched or matched Speed name is not configured, CLI name from network is displayed.	NET, SPD	NET
Display Restricted Caller Number	When {Display Restricted Caller Number} in CLI Attributes(113) of a station is ON, although the caller number is restricted in ISDN message, the ringing station displays the caller number.	OFF ON	OFF

Table 4.4.2.4-1 CLI Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Display Full CLI	The system provides CLI information by displaying on LCD. If this option is ON, the full CLI information is displayed on the second line of LCD. If this option is OFF, the CLI information is displayed from the left to the center on the second line partially. It means the CLI information is limited so that the full CLI can't be displayed.	OFF ON	ON
Add 1st CO group access code in call log	To use this option, 'Digit Conv. Table (PGM 111)' must be checked in advance and then set whether to add 1st CO Group access code in call log for Call back by setting ON or OFF.	OFF ON	OFF
Emergency CLI 1	If Dialed number is matched with Emergency Code Table(PGM226), Emergency CLI is used for CLI.	Max 16 Characters	
Emergency CLI 2			
Emergency CLI 3			
Emergency CLI 4			
Emergency CLI 5			
Company Name 1	It is used to send name to ISDN(PRI/BRI) eMG80/100: 1~16, eMG800: 1~100,UCP: 1~1000, (0: Station name)	Refer to description	
Company Name 2			0
Company Name 3			0
Company Name 4			0
Company Name 5			0
Call Log Attributes			
Call Log usage	Most Phones show the call log. But the way to display the call log is different between System Serve and Phone self. This option is to select which way to display the call log. The available phone type is LIP-8012D/8024D/8040L and LIP-9008/9010/9020/9030/9040/1010i/1020i/1030i/1040i/1050i. Condition <ul style="list-style-type: none"> For color graphic phones (8050V/9070/9071,1080i), UCS client, and DECT phone: only 'Phone self' automatically regardless of this option. For other phone type except the above LIP and LDP phones: only 'System serve' automatically regardless of this option. System serve, Phone self	Refer to description	System serve
Call Log menu	This option selects the call log menu for a call log type. The call log types have 4: Lost call, All call, Received call, and Dialed call. <ul style="list-style-type: none"> ALL: display all calls. Type:display the call log 4 types and then select the desired type. 	All, Type	All

Table 4.4.2.4-1 CLI Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Answered By Group Member	<p>One of the members can answer the call to the same ring group such as call coverage, linked pair, etc. At that time, the call log can set whether to leave the received call list or not by selecting Answered or Do-Not-Log. But the call log is left in the received call list on the phone even though setting Do-Not-Log.</p> <ul style="list-style-type: none"> • Answered: the call log is left in the received call list on the same ring group phone. • Do-Not-Log: the call log is left in the received call list only on the phone except other member phones. 	Refer to description	Answered
Coverage Call Log	<p>This is option about log of coverage call of a slave station. When gets a coverage ring for a master station, slave station leaves or do not leave log according to conditions in option.</p> <p>All, Except Answered By Other, Only Answered By Me, None</p>	Refer to description	All
Internal Call Log	<p>This option enables the call log to display 'Both (Incoming and Outgoing)' or 'Incoming only' or 'None'.</p> <ul style="list-style-type: none"> • Both: Incoming and outgoing call. • Incoming only: Show Incoming call only. • None: Don't leave the internal call as call log. 	Refer to description	Both
Clear Missed Call Log	<p>When missed call is left in a station, the LOG soft button is indicated as LOG(M), and missed call icon is displayed. When this option is ON and missed call is left, if a user enter call log list by pressing LOG button and go out from call log list, then missed call indication(LOG(M) & missed call icon) is deleted.</p> <p>When this option is OFF and missed call is left, if a user enter call log list by pressing LOG button and go out from call log list, then missed call indication(LOG(M) & missed call icon) is not deleted. In this case, missed call log indication is deleted after checking all missed call.</p>	OFF ON	OFF
Page Call Log	<p>This is option about log for a receiving page call.</p> <ul style="list-style-type: none"> • None:do not leave log for receiving page • All:leave log for all kinds of receiving page • Emergency(Including Urgency Level 0) Only: leave log only for receiving an emergency page 	Refer to description	None
Busy/DND/VM Log	<p>If it is On then system call log is left when call is delivered to busy/DND/unconditional forward to VM destination.</p>	OFF ON	OFF

4.4.2.5 Flexible Buttons - PGM 115/129

Selecting Flex Buttons will display the Flex buttons data input page. Enter a valid Station range and click **[Load]** to enter Flex button data. For convenience, the copy, paste, and drag is available to enter or modify data. Please click **[Save]** button after entering or modifying data to apply.

You can set the initial system default value if there is no assignment in Flexible Button Default Table (239) and Preset Flexible Button Default (240) by clicking **[Default Value]**. Otherwise, you can set the flexible button value according to Flexible Button Default Table (239) and Preset Flexible Button Default (240) by clicking **[Default Value]**.

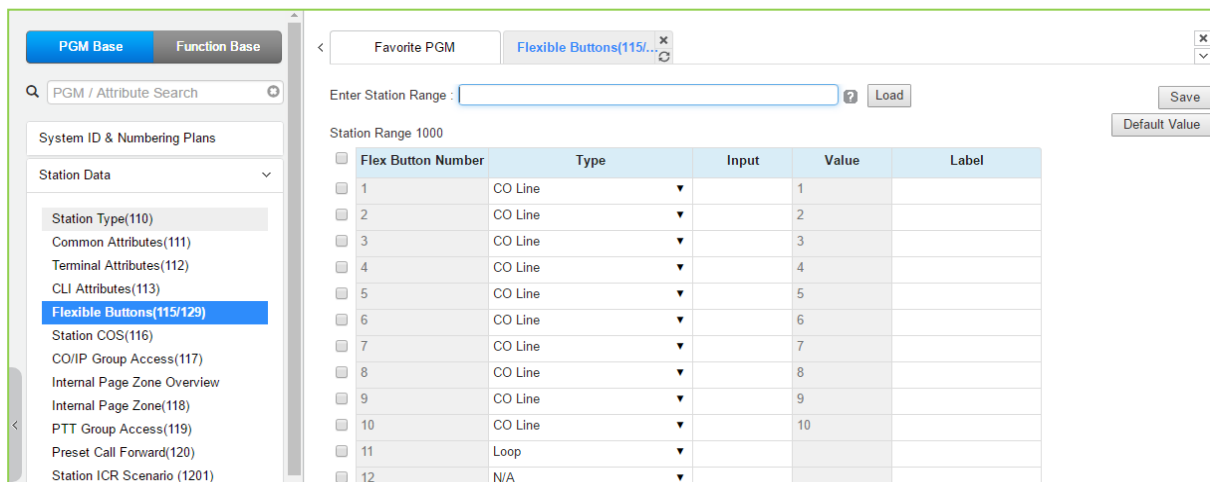

Figure 4.4.2.5-1 Flex Buttons Assignment

Each Flex button for each iPECS IP and LDP Phone and DSS Console can be assigned a function (TYPE) as below. After selecting the Type for a button Range, enter the value, if required. The types available from the drop-down menu are shown in Table below. In addition, for the LIP Phone models 8040, 8050, 9070, 9071 and the LSS Console models, a label can be assigned that is used as the designation for the button in the LCD of the phone.

Table 4.4.2.5-1 FLEX BUTTON TYPE & VALUE

TYPE	REMARK
N/A	Empty (unassigned), may be defined by the user.
CO Line	Assigns button to access a defined CO/IP line.
CO Group	Assigns button to access a free line in the CO/IP Group.
Loop	Assigns button to access a loop line.
Station Number	Assigns button as DSS/BLF for the assigned station number.
Programming (Numbering Plan)	Assigns button to dial a code from the Flexible Numbering Plan, see Appendix section.
Programming (PGM)	Assigns button to perform a User Program function from the Fixed Numbering Plan, Appendix section.
Station Speed	Station Speed Dial bin.
System Speed	System Speed Dial bin.
Net Station	Refer to Network Numbering Plan Table - PGM 324.
U-Loop	U-Loop button for call wait of internal & external call
Dial Digit	The user can assign the desired number on Flexible button by selecting 'Dial Digit' in the field of Type. The user can make a call by pressing the assigned flexible button.

4.4.2.6 Station COS - PGM 116

Selecting Station COS will display the Station COS data input page. Enter a valid station range and click **[Load]** to enter the Station COS data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

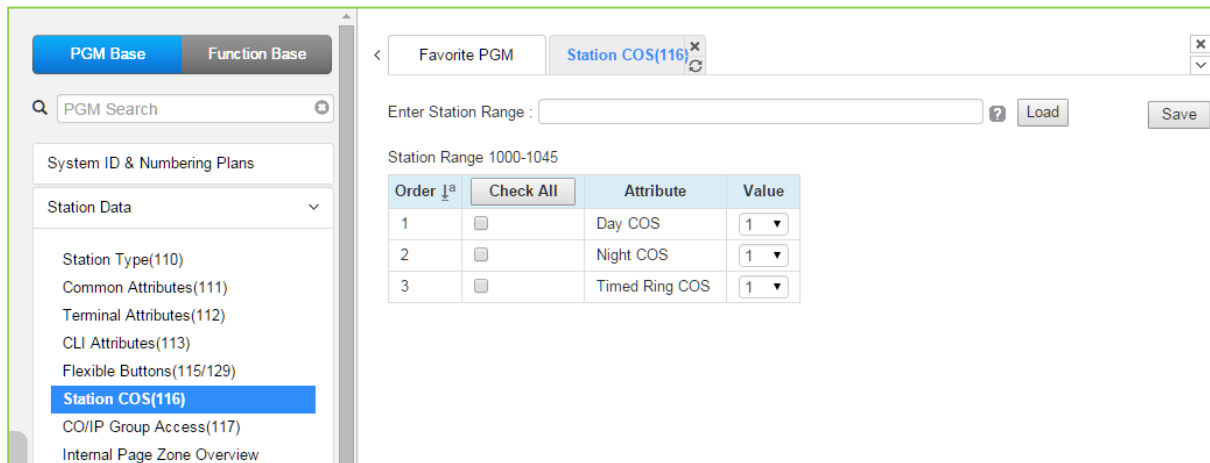

Figure 4.4.2.6-1 Station COS

In case of PGM 116 is in condition of limited service mode due to License issue, the default value is 7 for all COS type. All stations are assigned a Class-of-Service (COS), which determines the ability of the user to dial certain types of calls, refer to Table 4.4.2.6-1. Separate COS assignments are made for Day, Timed and Night Mode operation. As a default all stations are assigned with a Station COS of 1 for all modes, no restrictions.

The station COS interacts with the CO Line COS to establish overall dialing or Toll restrictions. This interaction and the resulting restrictions are given in Table 'Station/CO COS'. Long distance calls are determined by the first dialed digit ("0" or "1") and the number of digits dialed. If the first digit dialed is a LD code, default "0" or "1", or, if the number of digits dialed exceeds the assigned LD digit counter in 'System Data SMDR Attributes section', the call is considered a Long Distance call and appropriate restrictions applied.

Table 4.4.2.6-1 STATION COS

STATION	RESTRICTIONS
1	No restrictions are placed on dialing from the station.
2	The assignments in Exception Table A are monitored for allow and deny numbers.
3	The assignments in Exception Table B are monitored for allow and deny numbers.
4	The assignments in both Exception Tables A & B are monitored for allow and deny numbers.
5	The leading digit dialed cannot be a Long Distance code, default "0" or "1", and further denied/allowed based on Exception Table C.
6	The leading digits dialed cannot be a Long Distance code & digit count cannot exceed the LD digit counter, default 7 digits, and further denied/allowed based on Exception Table C.
7	Intercom and paging calls are allowed. No outgoing dialing except for emergency calls is allowed on CO Lines.
8	The assignments in the Exception Table D are monitored for allow and deny numbers.
9	The assignments in the Exception Table E are monitored for allow and deny Numbers
10	The assignments in the Exception Table D & E are monitored for allow and deny numbers.
11	The assignments in the Exception Table A & B and D & E are monitored for allow and deny numbers.

4.4.2.7 CO/IP Group Access - PGM 117

Selecting CO/IP Group Access will display the CO/IP Group Access data input page. Enter a valid station range and click **[Load]** to enter CO/IP Group Access data. Check the appropriate boxes to allow or delete access to each CO/IP Group. Click **[Save]** button after changing Value to apply.

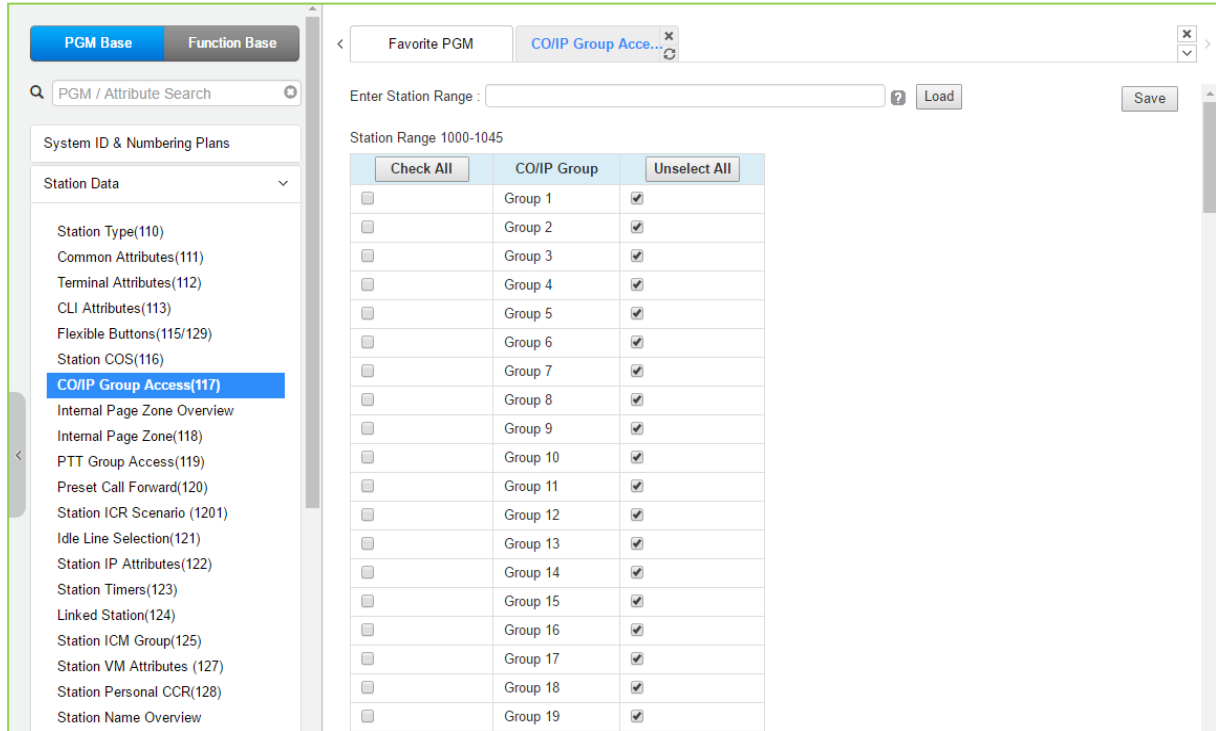

Figure 4.4.2.7-1 CO/IP Group Access

Stations can be allowed or denied access to CO Lines and IP Channels by group (eMG80/100: 20 & eMG800/UCP: 200). As a default, all stations are allowed access to all groups except Private Lines (group 00) and unused CO Lines. The CO Line is assigned as a Private Line by default.

4.4.2.8 Internal Page Zone Access - PGM 118

Selecting Internal Page Zone will display the Internal Page Zone data input page. Enter a valid station range and click **[Load]** to enter the Internal Page Zone Access data. Check the appropriate boxes to allow or delete access to each Internal Page Zone. Click **[Save]** button after changing Value to apply.

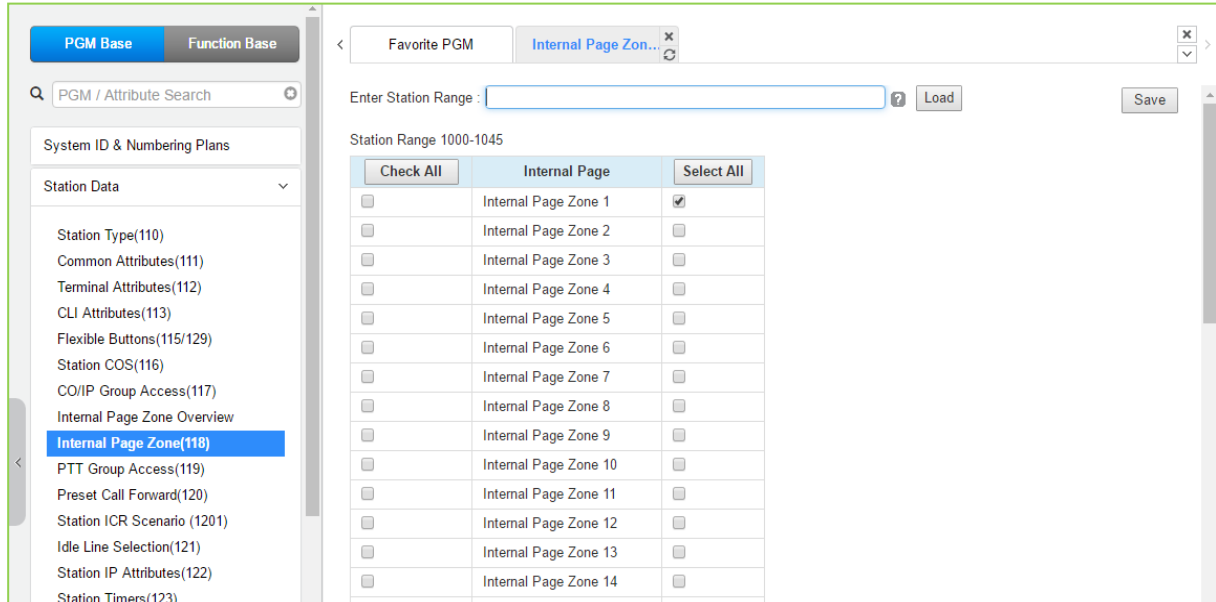

Figure 4.4.2.8-1 Internal Page Zone

Each iPECS IP and LDP Phone is assigned to receive announcements from each Internal Page Zone. A station can be assigned to any, all or no zones. Note a remote station or a station not assigned to any Internal Zone will not receive any page announcements including Internal All Call. As a default, all stations except remote stations are assigned to zone 1.

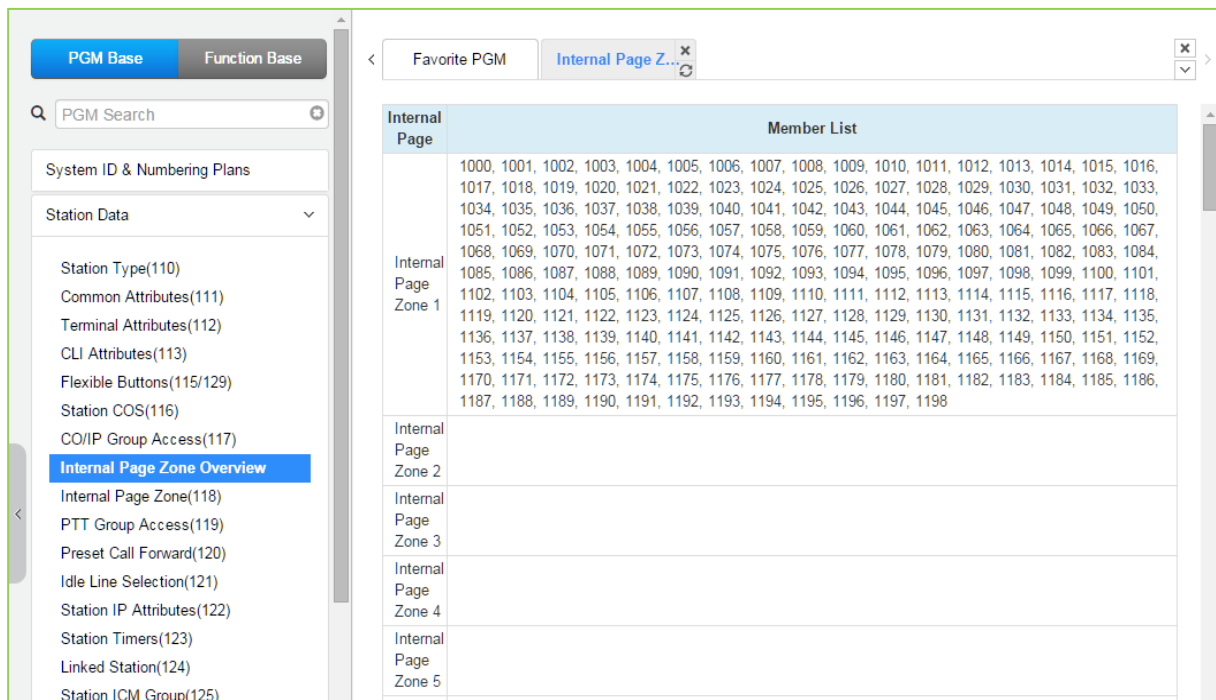

Figure 4.4.2.8-2 Internal Page Zone overview

4.4.2.9 PTT Group Access - PGM 119

Selecting PTT Group Access will display the PTT Group Access data input page. Enter a valid Station range and click **[Load]** to enter the PTT Group Access data. Check the appropriate boxes to allow or delete access to each PTT Group. Click **[Save]** button after changing Value to apply.

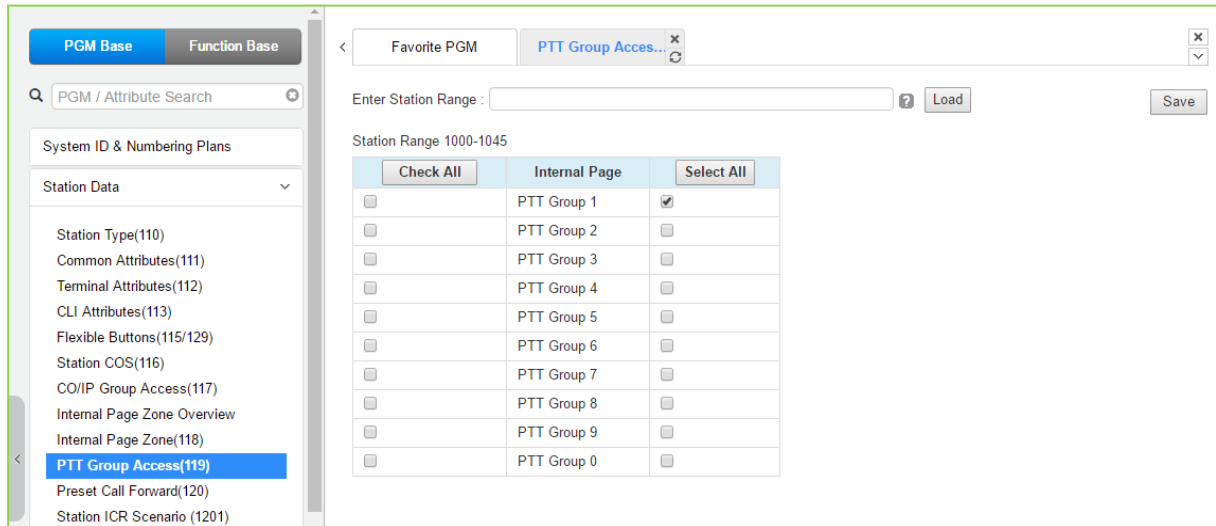

Figure 4.4.2.9-1 PTT Group Access

Each iPECS IP or LDP Phone is assigned to receive PTT announcements from any combination of the ten (10) PTT groups. Note a station not assigned to any group will not receive PTT page announcements including Internal All PTT group page. As a default, all stations except remote stations are assigned to group 1.

4.4.2.10 Preset Call Forward - PGM 120

Selecting Preset Call Forward will display the Preset Call Forward data input page. Enter a valid station range and click **[Load]** to enter the Station Preset Call Forward data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Favorite PGM: Preset Call Forward(...)

Enter Station Range : Load Save

Station Range 1000-1025

Order	Check All	Call Forward Type	Destination
1	<input type="checkbox"/>	Internal Unconditional	N/A
2	<input type="checkbox"/>	Internal Busy	N/A
3	<input type="checkbox"/>	Internal No Answer	N/A
4	<input type="checkbox"/>	Internal DND	N/A
5	<input type="checkbox"/>	Internal OOS	N/A
6	<input type="checkbox"/>	External Unconditional	N/A
7	<input type="checkbox"/>	External Busy	N/A
8	<input type="checkbox"/>	External No Answer	N/A
9	<input type="checkbox"/>	External DND	N/A
10	<input type="checkbox"/>	External OOS	N/A
11	<input type="checkbox"/>	Transfer to Mail Box	N/A

Figure 4.4.2.10-1 Preset Call Forward

Stations can be programmed so that incoming CO/IP and Intercom calls forward to a preset station or station group. This allows an external or internal call to initially ring at a station and forward to a pre-determined destination.

Preset Forward can be separately assigned Internal Unconditional, Internal Busy, Internal No Answer, Internal DND, Internal OOS, External Unconditional, External Busy, External No Answer, External DND, External OOS preset forwarding to any station, Station group, system speed dial bin (off-net) or Station ICR.

As a default, no Preset Call Forward is assigned. For “Transfer Mail-Box” enter the Station Group number of the Voice Mail group (external VM, VSF or Feature Server Voice Mail group). This will permit other users to transfer calls directly to the desired user’s Voice Mailbox.

4.4.2.11 Station ICR Scenario - PGM 1201

Selecting Station ICR Scenario displays the input entry page.

Index	Attribute	Value	Range	Del
	Call Profile Table Usage	0	0~3 (0:Deactive CP)	
	Caller ID	N/A	Max 23 Digits

2	Destination	N/A : CO Value [] Dial Digit []	Max 23 Digits	

Figure 4.4.2.11-1 Station ICR Scenario

Station ICR is an extension of call forward where the user enters scenarios to define the call forward feature. Each station has ten (10) routing scenarios that define conditions for routing a user's incoming calls.

Each scenario may define time of day, day of week, date, caller ID and destination for incoming calls. In addition, the scenarios may be prioritized; calls are routed to the destination with the highest priority-matching scenario.

Call Profile Table Usage

This option selects Call profile table usage from 0 to 3. 0 means that Station User doesn't use Call profile usage. Station user can set the ICR Scenario up to 10 (0 to 9) according to the environment by setting many options including 'Call Profile Table Idx (0-3)', 'Call Profile Timer', and 'Call Profile Apply option'.

Anytime Station User can change the call profile table usage by changing the value so that Station user can apply the related station ICR scenario index.

Call Profile Timer

Station user can set the time for applying the call profile. If the station user can set 0 as timer, ICR operate immediately.

Call Profile Apply Option

This option selects the call type for applying ICR. If this option is All Call, ICR apply to all calls. If this option is Direct call (Except CCR, DISA), ICR apply only to DID call.

4.4.2.12 Idle Line Selection - PGM 121

Selecting Idle Line Selection will display the Idle Line Selection data input page. Enter a valid Station range and click **[Load]** to enter the Idle Line Selection data. Check the appropriate radial button and enter the value for the Idle Line Selection. Click **[Save]** button after changing Value to apply.

Figure 4.4.2.12-1 Idle Line Selection

When a station goes to an off-hook condition (lifts handset or presses **[SPEAKER]** button), the system normally provides intercom dial tone.

In place of dial tone, the station can be programmed to access a CO Line, CO/IP Group or call a Station or Station Group as described in Table 4.4.2.12-1 when the station goes off-hook.

The Idle Line Selection (Prime Line) can be either immediate or delayed after going off-hook. The immediate/delay selection is based on the Hot/Warm assignment in 'Common Attributes - Prime Line'.

Table 4.4.2.12-1 IDLE LINE SELECTION TYPE & VALUE

TYPE	DESCRIPTION
No Selection	Returns Intercom dial tone.
Flex Button	Flex button, activates Flex button as if pressed.
CO Line	CO/IP path seizes CO line.
CO/IPGroup	CO/IP Group, seizes CO line from theCO/IP Group.
Station/Net	Station, calls the assigned station.
Station group	Station group, calls the assigned station group.
Station speed	Station speed, calls the assigned station speed.
System speed	System speed, calls the assigned system speed.

4.4.2.13 Station IP Attributes - PGM 122

Selecting Station IP Attributes will display the Station IP Attributes data input page.

Enter a valid Station range and click **[Load]** to enter the Station IP Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

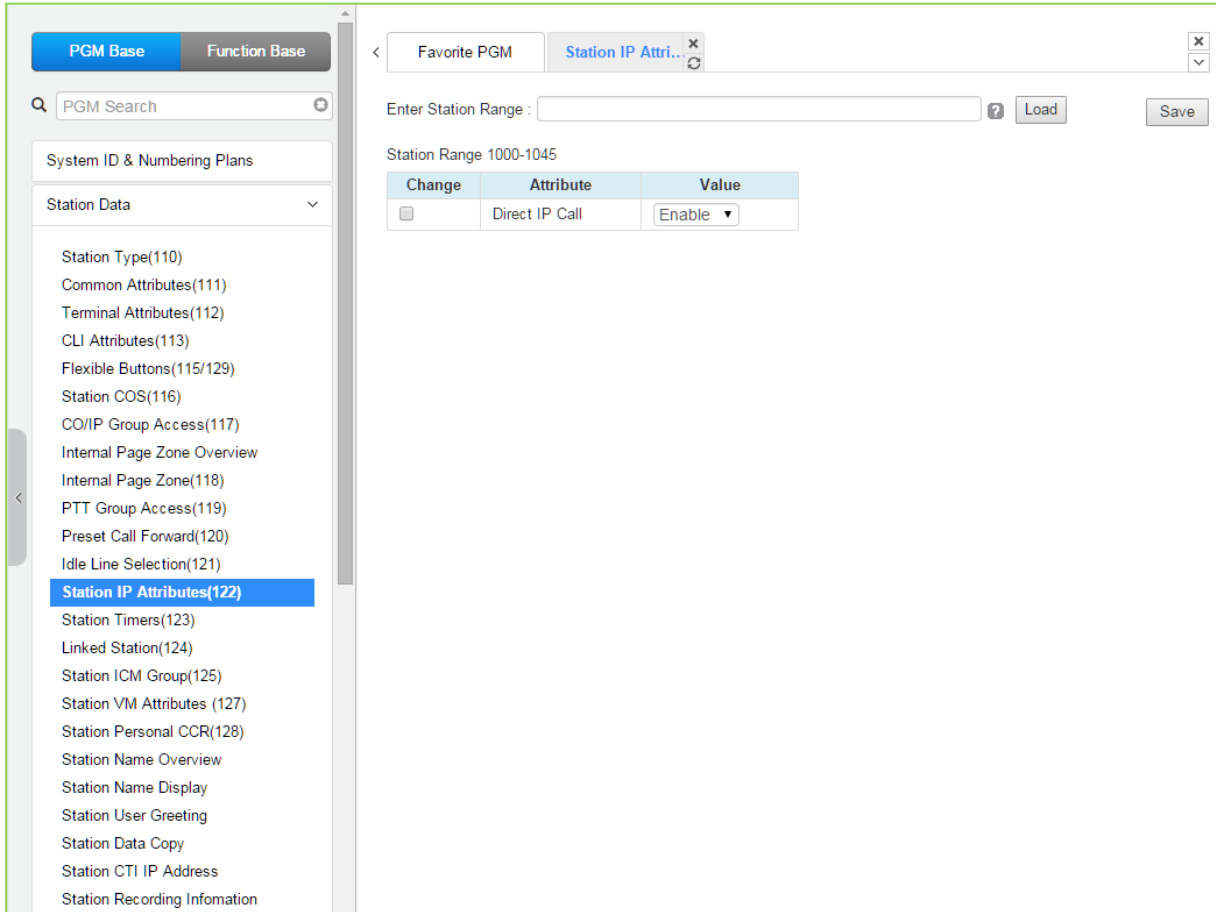

Figure 4.4.2.13-1 Station IP Attributes

Stations are allowed access to the systems VoIP resources based on the Station IP Attributes.

4.4.2.14 Station Timers - PGM 123

Selecting Station Timers will display the Station Timers input page.

Enter a valid Station range and click **[Load]** to enter the Station Timers data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

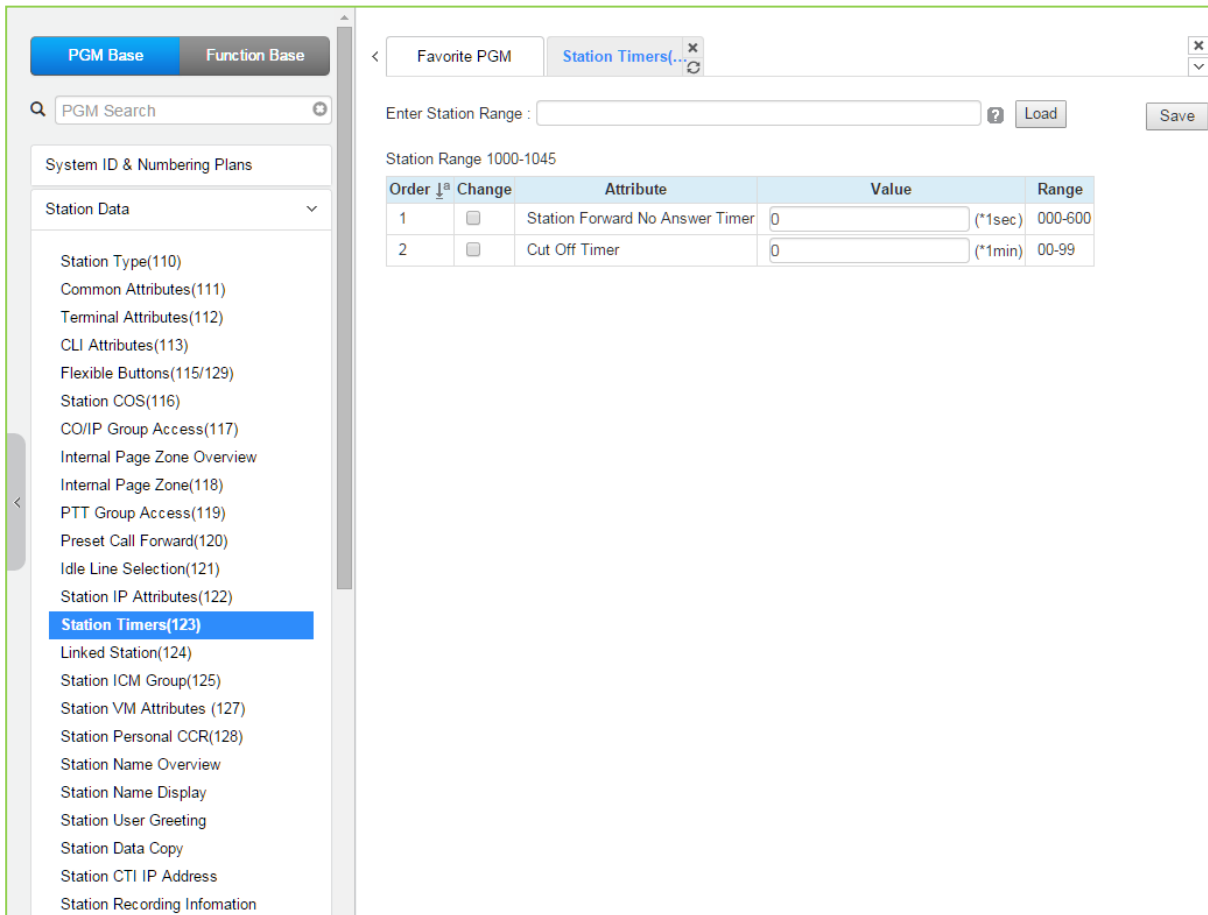

Figure 4.4.2.14-1 Station Timers

Certain timers can be assigned on a station basis. Available timers, description and valid inputs are given in the below table.

Table 4.4.2.14-1 STATION TIMERS (PGM 123)

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Station Forward No Answer Timer	This timer set the duration that the station will ring prior to Ring-No-Answer Forward. This setting affects both manual and 'Preset Call Forward' and overrides 'Call forward No Answer timer in System timer of System data'.	000-600 (seconds)	000
Cut Off Timer	Allowed length of CO/IP calls when station is assigned 'Call Time restriction in Common Attributes of Station data'.	00-99 (minutes)	00

4.4.2.15 Linked Station - PGM 124

Selecting Linked Station will display the Linked Station input page. Enter a valid Station range and click [Load] to enter the Linked Station data. Click [Save] button after changing Value to apply.

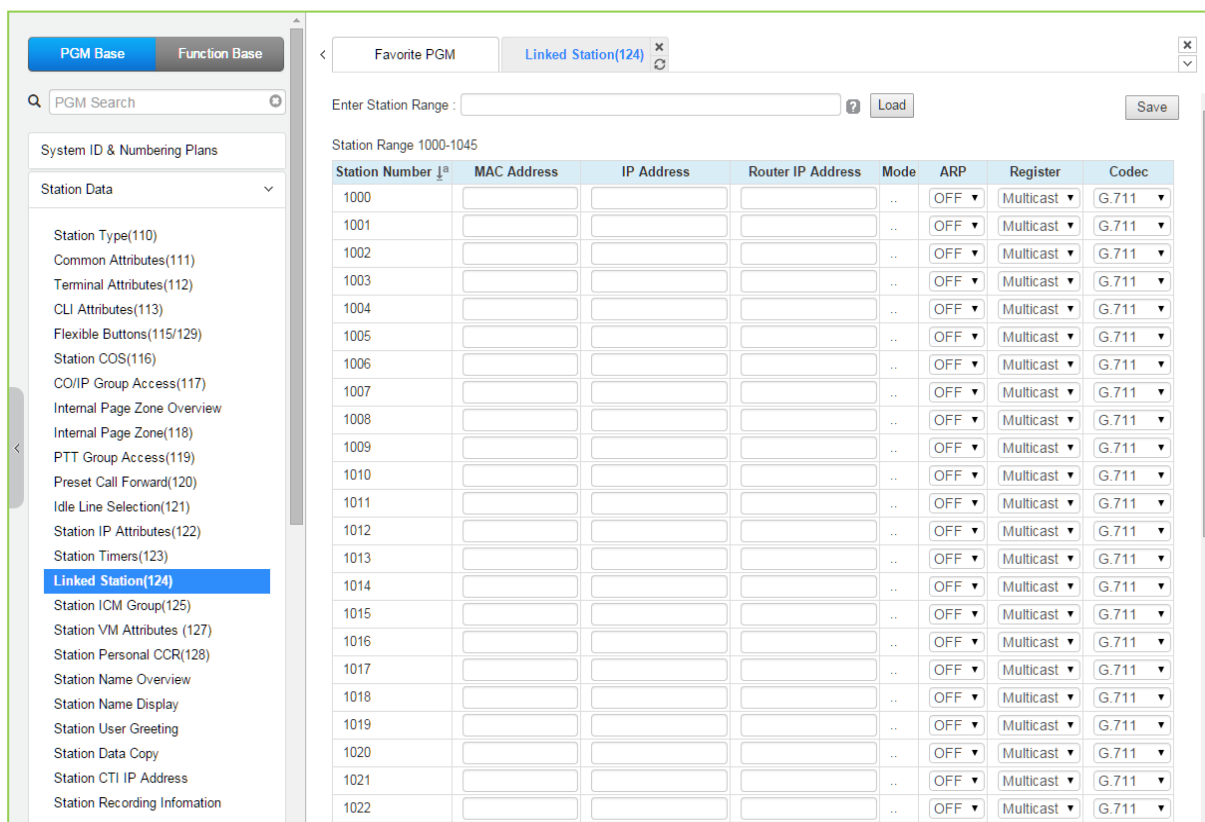

Figure 4.4.2.15-1 Linked Station Pair

For UCS Client, it is recommended that PGM 443 be employed for an unregistered (MAC Linked pair) station. When unregistered station linking is used, the linked station does not reduce the system's capacity.

However, in this case, the linked station must be an iPECS IP Phone. Unregistered linking is allowed only to an iPECS IP Phone. Once UCS Client is linked, it will display in this Web page as well as in PGM 103 and 443.

If the station is assigned to Master or Slave by linked station, the bracket '[M]' or '[S]' will be displayed by the station number in PGM 101, 103, 105, 124 of Web page.

To link registered stations, the Personal Group feature is used and configured in PGM 260 and 261.

Table 4.4.2.15-1 LINKED STATION TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
MAC Address	Set MAC address of linked un-registered station, required data. Note the secondary station must not be registered in the system prior to linking. If needed, delete the device from the system prior to linking.		
IP Address	The IP Address of the linked station.	IPv4 address	
Router IP Address	Set the Router IP address for a linked station.	IPv4 address	

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Mode	<p>Display operating mode of the station, remote or local and NAT or NAPT.</p> <ul style="list-style-type: none"> • Remote:R/NAPT, R/NAT, R/NAP, R • Local remote:LO/NAPT, LO/NAT, LO/NAP, LOLocal, L/NAPT, L/NAT, L/NAP, L 	Refer to description	L (Local)
ARP	<p>If set OFF, the system will employ layer 2 switching over the LAN to communicate with the linked station. If set ON, the system will employ ARP (Address Resolution Protocol) to determine the IP address of the device, if required, and communicate using IP.</p>	OFF ON	OFF
Register	<p>Normally, iPECS IP devices register using multi-cast packets. When separated from the system, that is when the device is remote, unicast is used.</p>	Multicast Unicast	Multicast
Codec Type	<p>A specific Codec type can be configured for the station. System, use the codec defined for the system</p>	G.711 G.723.1 G.729	G.711

4.4.2.16 Station ICM Group - PGM 125

Selecting Station ICM Tenancy Group displays the Station ICM Tenancy Group input page. Select ICM Tenancy Group and click **[Load]**, the system will display the ICM Tenancy Group Characteristics. Enter the Station number of the group Attendant and check the appropriate box to allow calling to the group. Click **[Save]** button after changing Value to apply.

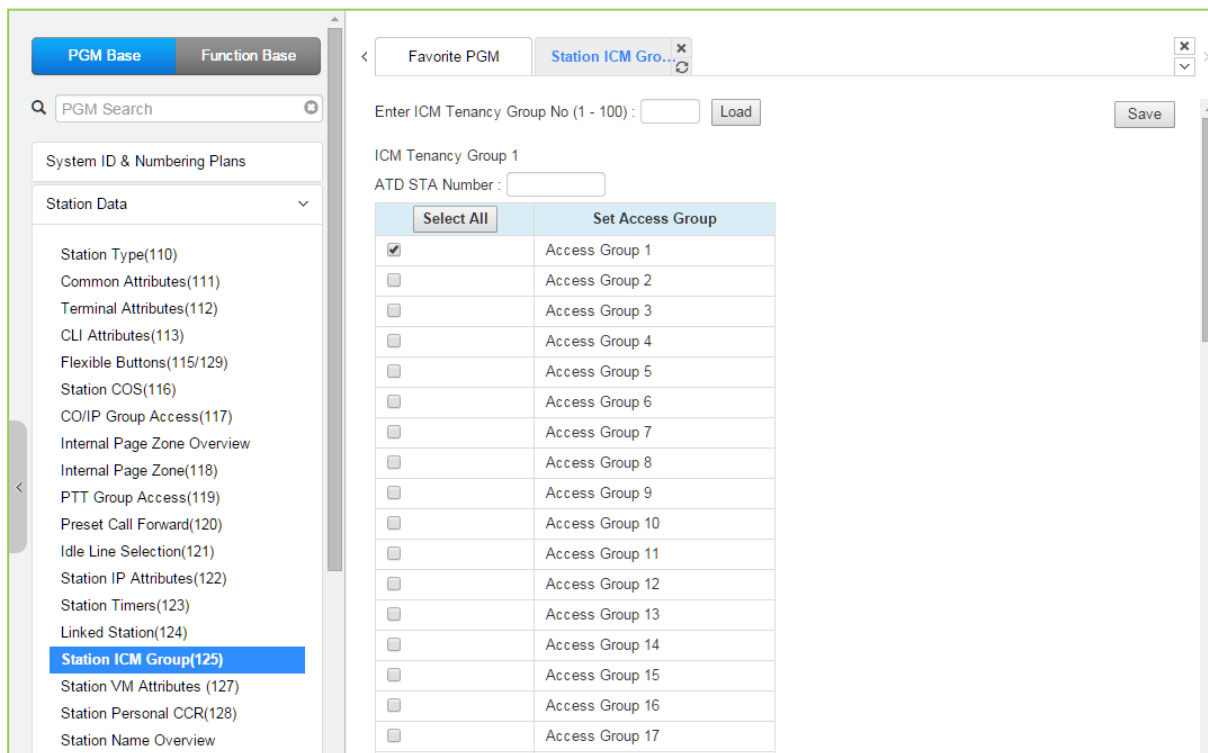

Figure 4.4.2.16-1 Station ICM Group

Stations can be assigned to an ICM group under 'Common Attributes section'. Up to 15 Tenant groups for eMG80/100(up to 32 for eMG800 and up to 100 for UCP)can be defined. Each group is configured to allow or deny placing intercom calls, including transfers, to stations in other groups and an Attendant station can be defined for each group. The Attendant will receive “dial 0” calls and controls Day/Night mode for the group.

Table 4.4.2.16-1 STATION ICM GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Tenancy ATD	Attendant station for the ICM Tenant group. ATD receives dial '0' calls and controls Day/Night Service.	Station No.	
Group Access	ICM tenancy groups allowed access by stations of the selected group.	eMG80/100:1~15 eMG800:1~32 UCP:1~100	1

4.4.2.17 Station Voice Mail Attributes – PGM 127

Selecting VM Attributes displays the Station Voice Mail Attributes input page. Enter a valid Station range and click **[Load]** to enter the Station Voice Mail Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

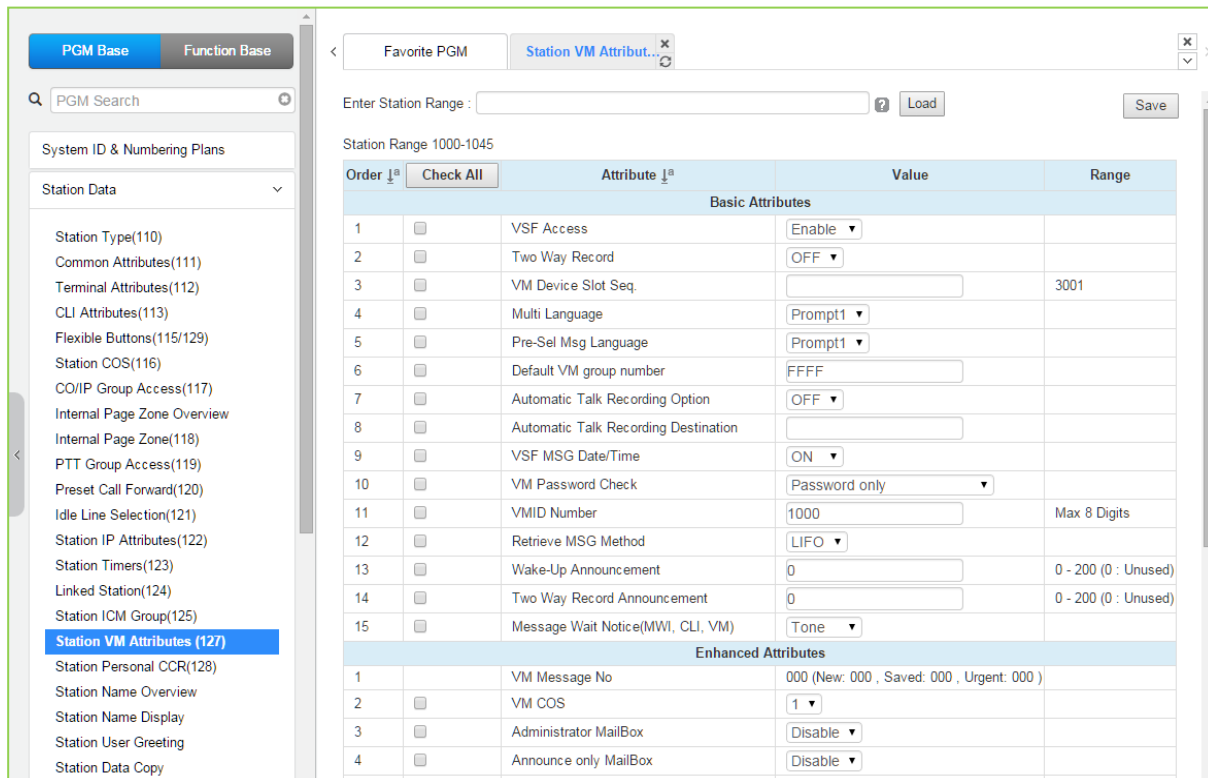

Figure 4.4.2.17-1 Station VM Attributes

The Station VM Attributes are divided into three sub-sections. The Basic Attributes assign general characteristics of the Station's Voice Mail and announcements. Enhanced Attributes assign characteristics including VM COS, notification, cascading and Company Directory Names. The E-Mail Notification section defines various SMTP server data such as the Station and System E-mail account data.

Table 4.4.2.17-1 STATION VM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Basic Attributes			
VSF Access	The station must be permitted VSF access to access the built-in Voice Mailbox.	Disable Enable	Enable
Two way Record	When allowed, the station can activate the Two-way record feature to record a conversation.	OFF ON	OFF
VM Device Slot Seq.	The sequence number defines the VMIU or VMIB where messages for the station are stored	Seq. No.	
Multi Language	The selected language is employed for prompts played to the user when accessing the VSF.	Prompt1~6	Prompt 2
Pre-selected Message Language	The selected language is employed for prompts played to an external CO caller if the called station has activated Pre-selected Message.	Prompt1~6	Prompt 2

Table 4.4.2.17-1 STATION VM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Default VM group number	When the user has no Voice messages and selects the [Call Back/Msg] button, the “Default VM group number” is called.		
Auto Talk Recording Option	This field enables unconditional recording of all calls placed/received by the station. Recordings, in .wav format, are stored at the UCS Client defined as the Call Recording Station below.	OFF, ALL, CO	OFF
Auto Talk Recording Destination	When Auto Call Recording is defined for a station, the destination for the recording is defined here. The UCS Client Station number, or an IPCR or 3rd party SIP recording server.	Station or Group	
VSF MSG Date/Time	When ON, the data/time the message was received is played to the user prior to the message.	OFF ON	ON
VM Password check	When ON, the user must enter their valid Authorization code to access their VSF Voice Mailbox. The password can be defined as none, the Authorization code only or the normal Station Number and Authorization code. No password, Password only, Station number and password	Refer to description	Password only
VMID Number	When using an adjunct VM, the system can translate the Mailbox number from the user’s station number to the assigned VMID. The system sends the station number or VMID, if assigned, to the VM (in-band or SMDI) in order to identify the appropriate Voice Mailbox. Default: eMG80/100:100, eMG800:1000, UCP:1000	Max. 8 digit	Refer to description
Retrieve MSG Method	Messages stored in the VSF may be retrieved in either a FIFO (first-in-first-out) or LIFO (last-in-first-out) order based on this entry.	FIFO/ LIFO	LIFO
Wake-Up Announcement	A VSF system announcement can be recorded to play to the station as a Wakeup Announcement.	0-200	0
Two way record announcement	The two way record announcement can be recorded to play to the station as Announcement.	0-200	0
Message Wait Notice(MWI, CLI, VM)	When a user has voice mail, system can provide this as voice prompt instead of dial tone according to option based on station. <ul style="list-style-type: none"> • Disable: System provides normal dial tone when a user goes to off hook status. • Tone: System provides warning tone instead of dial tone to give indication when a user goes to off hook status. • Prompt: System provides message indication as voice prompt when a user goes to off hook status. DECT phone do not support this feature.	Disable, Tone, Prompt	Tone

Table 4.4.2.17-1 STATION VM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Password Retry Attempts	Password retry count for voice mail box access	Disable 1~5	Disable
Enhanced Attributes			
VM Message No	Number of Voice Messages in the user's Mailbox.		000
VM COS	Each Voice Mailbox is assigned one of five VM Classes of Service (COS) that determines basic characteristics of the Mailbox such as message retention. The Voice Mail COS attributes are set in PGM 253.	1-5	1
Administrator Mailbox	A Mailbox can be assigned as an Administrator Mailbox permitting broadcast messaging and control of other user mailboxes.	Disable Enable	Disable
Announce Only Mailbox	A mailbox can be configured so that the connected party will hear the greeting but cannot leave a message, Announce Only. After the greeting, the call is routed based on the Announce Only Option.	Disable Enable	Disable
Announce Only Option	This option determines if the caller will be disconnected or returned to the previous menu after hearing the Announce Only Mailbox greeting.	Previous Menu/ Hang Up	Previous menu
Company Directory – First Name	This field is first name of a station for Company Directory feature.	Max. 12 characters	N/A
Company Directory – Last Name	This field is last name of a station for Company Directory feature.	Max. 12 characters	N/A
Message Rewind/Fast-Forward Time	While listening to a message the user may rewind or Fast forward. The Rewind and Fast Forward time are determined by this field.	03 - 99	04
VM Notify retry count	If the notification to the user's mobile repeatedly fails, after the retry count, the system will send the call to the Attendant to complete the notification.	00 - 99	03
VM Notify dial time	When the mobile notification call is placed, the system will terminate the call, considering the call a failed attempt, if no digits are received from the mobile phone user before the timer expires.	00 - 99	15 sec
VM Forward Option	When a left message is forwarded, this option is applied.	Move / Copy	Move
Cascade Mailbox 1	A left message is copied or moved to 1'st mailbox destination station.	Station No	N/A
Cascade Mailbox 2	A left message is copied or moved to 2'nd mailbox destination station.	Station No	N/A
Cascade Mailbox 3	A left message is copied or moved to 3'rd mailbox destination station.	Station No	N/A
Cascade Mailbox 4	A left message is copied or moved to 4'th mailbox destination station.	Station No	N/A

Table 4.4.2.17-1 STATION VM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Cascade Mailbox 5	A left message is copied or moved to 5'th mailbox destination station.	Station No	N/A
Cascade Method	Cascade method is determined. Disable, Copy, Move	Refer to description	Disable
Cascade Message Type	Cascade Message Type is determined. Normal Only, Urgent Only, All	Refer to description	Normal only
Cascade Apply Timer	Cascade Apply Timer is set.	001 ~250 (min)	0
Cascade For Read Message	If this value is set to Enable, the left message can be cascaded to next destination regardless the message is read or not. If this value is set to Disable, cascading action is stopped when the left message is read.	0 : Disable 1 : Enable	Enable
E-Mail notification			
[Send Mail] button : click [Send mail] button to send mail for notification			
E-Mail Notification Enable	If this option is set ON, the system sends Email as soon as getting Voice mail.	OFF ON	OFF
SMTP Server Address (IP or Domain Name)	This field defines the address or URL of the SMTP mail server for the notification. IP v4 addressor Mail server name	Refer to description	Max. 64 characters
SMTP Port	This field defines the TCP/IP port the system will employ when communicating with the SMTP E-mail server.	1 - 65535	25
SMTP Security Connection	The system can support basic security policies when communicating with the SMTP E-mail server. Note the server must also be configured for the selected security protocol. No Security, SSL, TLS	Refer to description	No Security
E-Mail Account ID	This field defines the account Identification for the system configured in the SMTP server.		
E-Mail Account Password	This field defines the password for the system's E-mail account in the SMTP server.	Max. 64 characters	
Sender E-Mail Address (From)	This field defines the E-mail address used to send the new Voice Message notification via E-mail.	E-mail address	
Receiver E-Mail Address (To)	This field defines the E-mail address to notify when a new VSF message is received for the station.	E-mail address	
Attach Message Option	When E-mail notification is enabled in the VM COS (PGM 253), the E-mail may include the voice mail as a wav file attachment. The proper information must be assigned for the receiver mail and system mail account information.	OFF ON	ON
Delete Message Option	After sending an E-mail notification the system will automatically delete the Voice message from the user's Voice Mailbox if this parameter is ON.	OFF ON	OFF

4.4.2.18 Station Personal CCR Table – PGM 128

Selecting Station Personal CCR displays the Station Personal CCR Table input page. Enter a valid Station range and click **[Load]** to enter the Station Personal CCR Table data. Click **[Save]** button after changing the type or value.

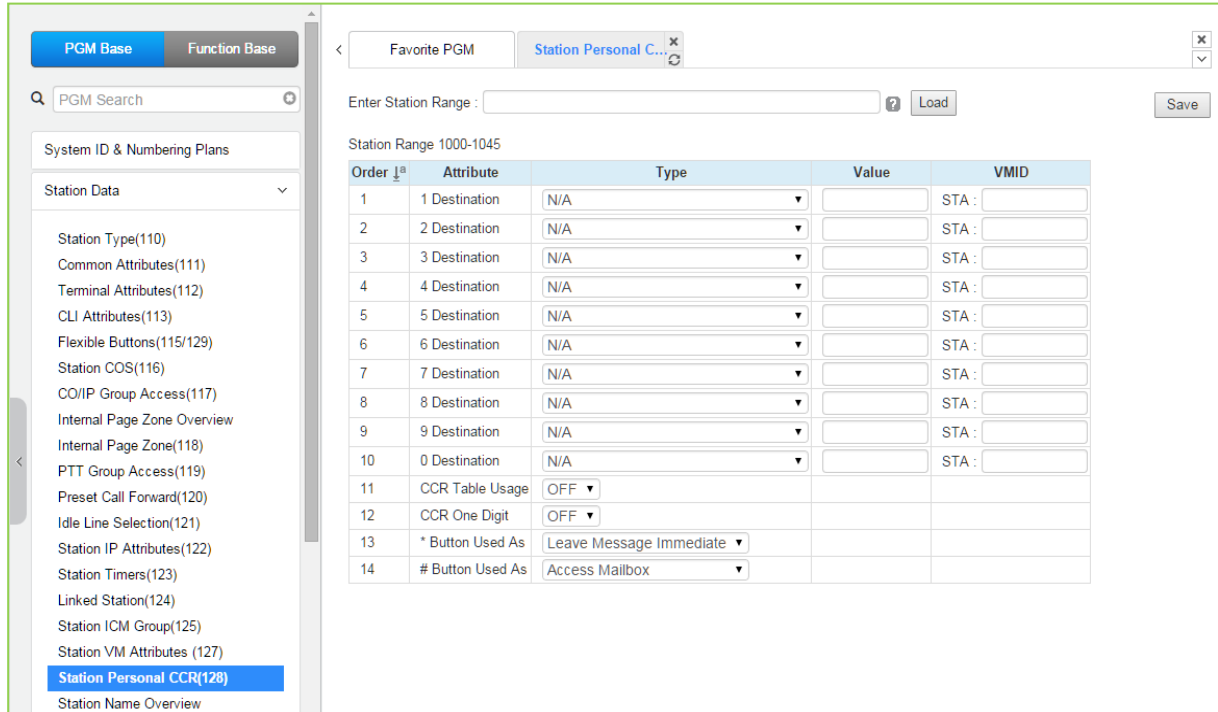

Figure 4.4.2.18-1 Station Personal CCR Table

Table 4.4.2.18-1 STATION CCR Table

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
1-9, 0 Destination	Digit dialed by outside caller. A destination type and value can be programmed by dialed digit.15 kinds destination is available.	...	NA
CCR One Digit	When ON, the system will analyze the first digit received only, additional digits dialed by the caller are ignored.	OFF ON	OFF
CCR Table Usage	If this option is ON, CCR table can be activated. If this option is OFF, CCR table is not available, instead of that, dialing digits by outside caller can be recognized as DISA dialing.	ON OFF	OFF
*Button Used As	It can be used as the following: <ul style="list-style-type: none"> System Numbering Plan Replay Greeting Access Mailbox Leave Message Immediate 	Refer to Description	System Numbering Plan

4.4.2.19 Station Name Overview & Display

Selecting Station Name Overview shows the current station name.

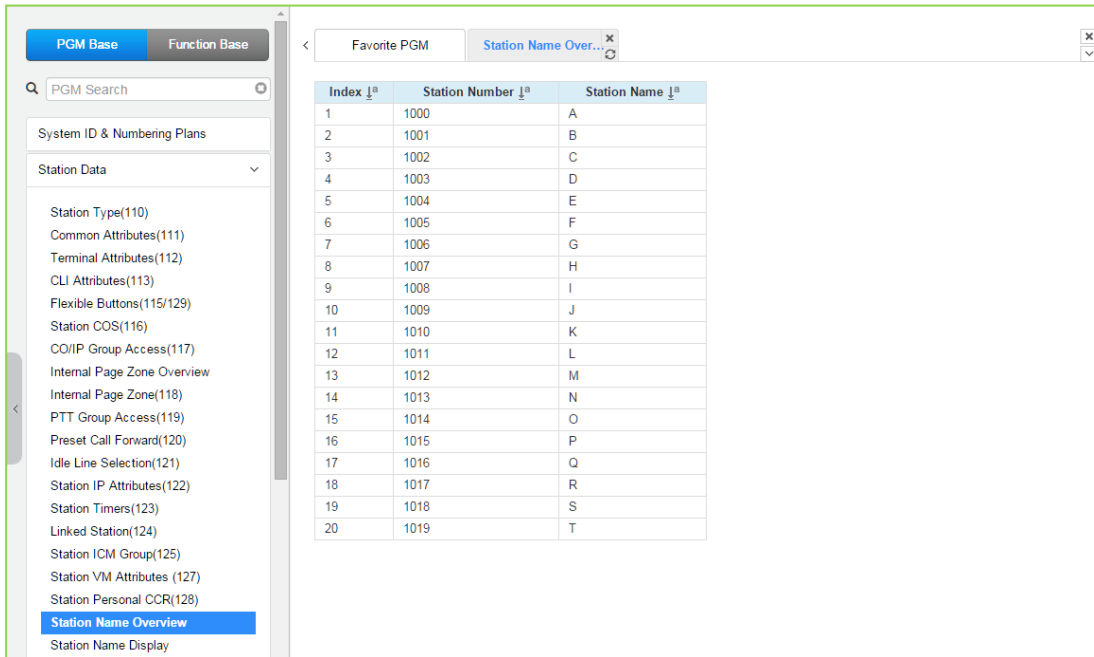

Figure 4.4.2.19-1 Station Name Overview

Each station name will be displayed if the each station has the name. Selecting Station Name Display will display the Station Name input page. Enter a valid Station range and click **[Load]** to enter the Station Name data. For convenience, the copy, paste, and drag is available to enter or modify data. Click **[Save]** button after changing the type or value.

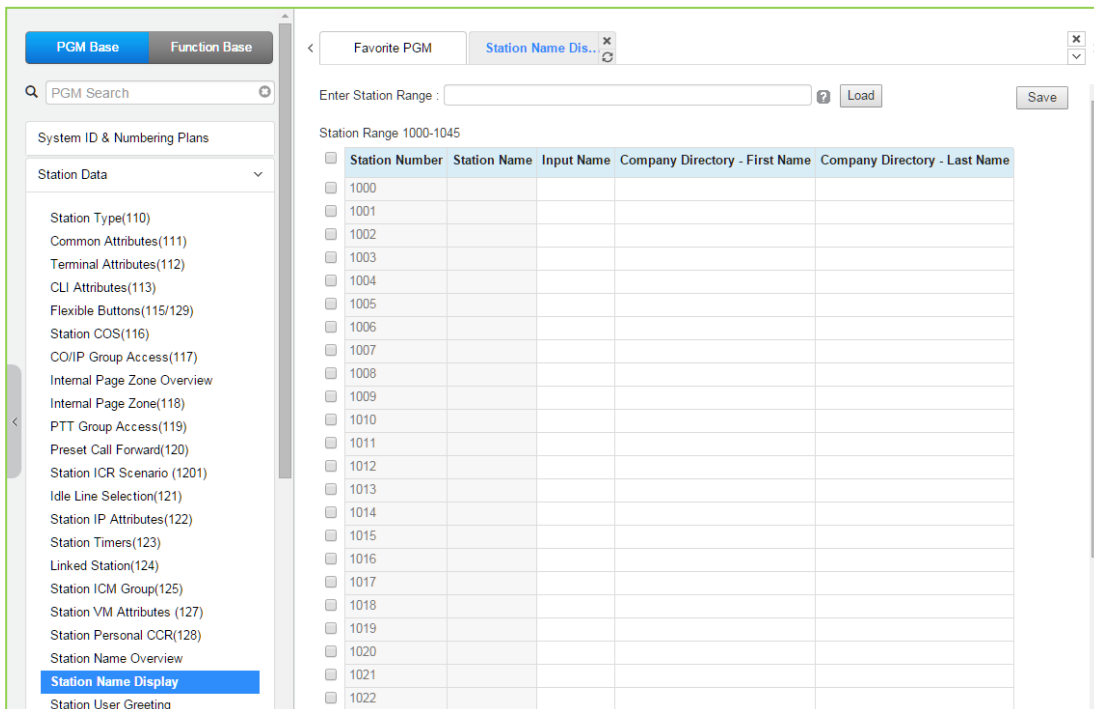

Figure 4.4.2.19-2 Station Name Display

You can fill out the Station name, Input name (up to 20 digits), company directory-First name & Last name for customer's convenience.

4.4.2.20 Station User Greeting

Selecting Station User Greeting will display the Station User Greeting data input page.

Enter a valid Station range and click **[Load]** to enter the Station Voice Mail Attributes data.

Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

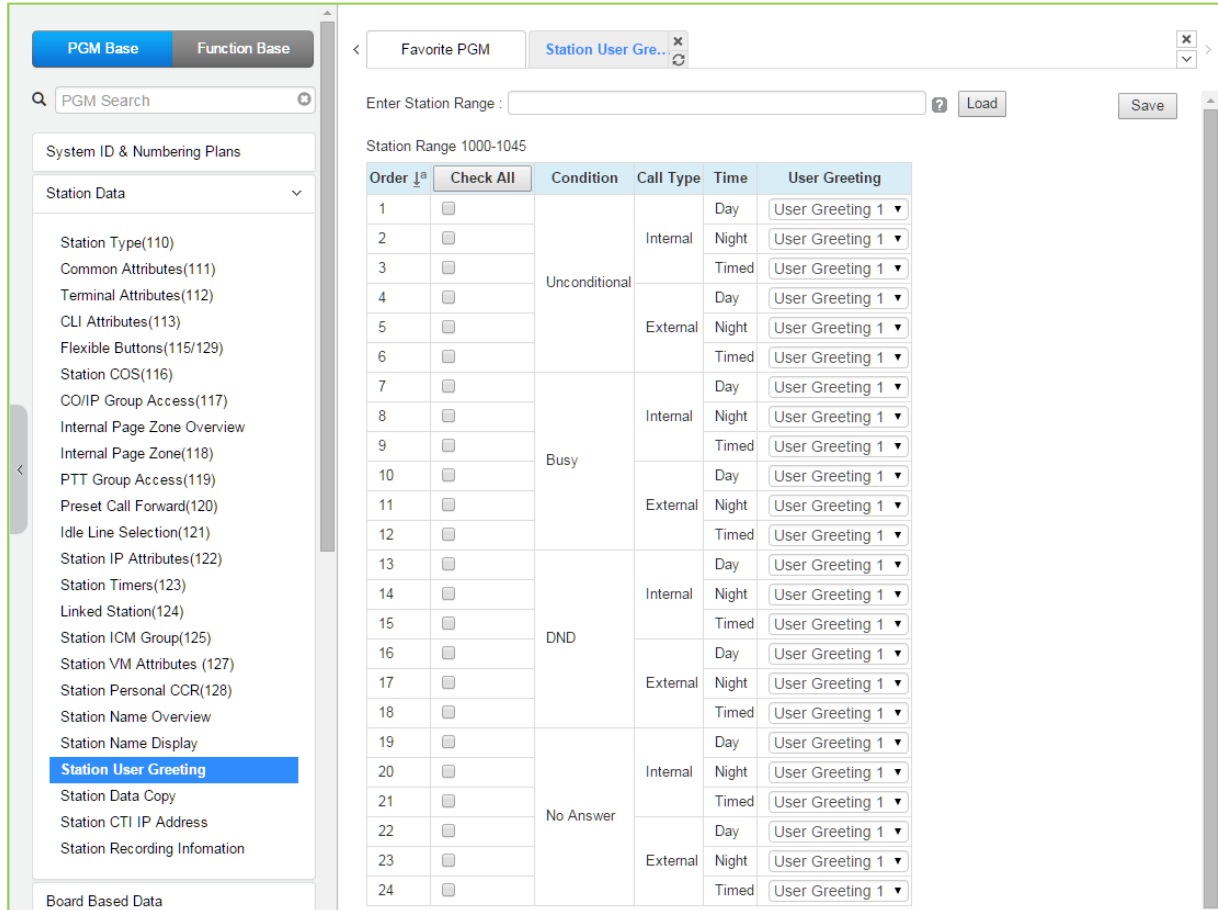

Figure 4.4.2.20-1 Station User Greeting

There are 4 User greeting for each station.

User can select multi user greeting depending on the condition, call type, and time.

- Condition: unconditional, busy, DND, No answer
- Call Type: Internal, External
- Call Time: Day, Night, Timed

4.4.2.21 Station Data Copy

Selecting Station Data Copy will display the Station Data Copy data input page. Enter a valid Source Station, Destination Station Range and click **[Copy]** to copy the station data. Note that this function is not available for an Attendant station.

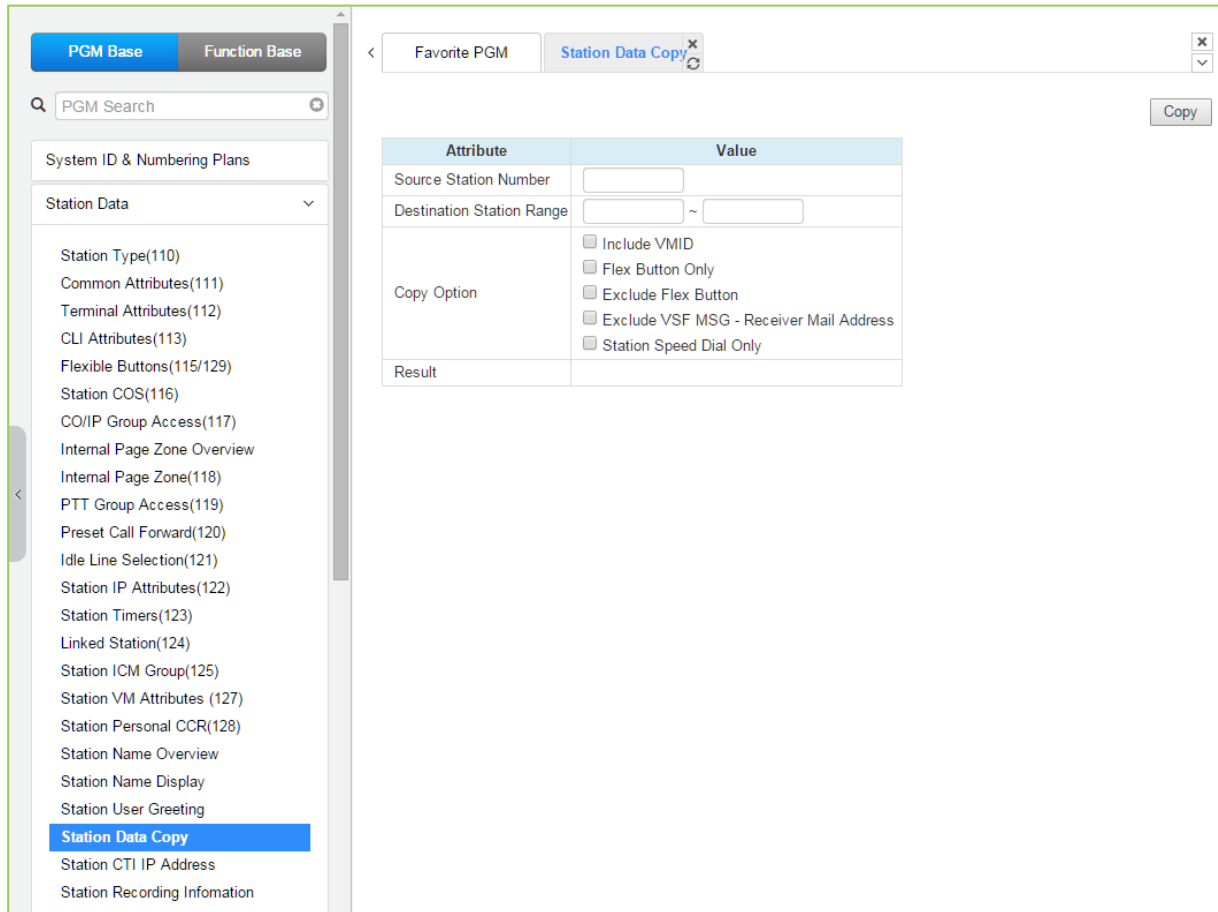

Figure 4.4.2.21-1 Station Data Copy

4.4.2.22 Station CTI IP Address (1st Party TAPI)

Selecting Station CTI IP Address displays the page shown in the following figure. Enter a Station Range and click **[Load]** to display and modify the CTI IP address. Click **[Save]** button after changing the type or value.

The screenshot shows a web interface for configuring Station CTI IP addresses. On the left is a navigation pane with a search bar and a list of menu items. The 'Station CTI IP Address' item is highlighted in blue. The main content area has a breadcrumb trail 'Favorite PGM > Station CTI IP ...'. Below this is a form with 'Enter Station Range :', a 'Load' button, and a 'Save' button. The 'Station Range' is set to '1000-1045'. A table displays the following data:

Index	Station Number	IP Address	State
1	1000	0.0.0.0	Deactivated
2	1001	0.0.0.0	Deactivated
3	1002	0.0.0.0	Deactivated
4	1003	0.0.0.0	Deactivated
5	1004	0.0.0.0	Deactivated
6	1005	0.0.0.0	Deactivated
7	1006	0.0.0.0	Deactivated
8	1007	0.0.0.0	Deactivated
9	1008	0.0.0.0	Deactivated
10	1009	0.0.0.0	Deactivated
11	1010	0.0.0.0	Deactivated
12	1011	0.0.0.0	Deactivated
13	1012	0.0.0.0	Deactivated
14	1013	0.0.0.0	Deactivated
15	1014	0.0.0.0	Deactivated
16	1015	0.0.0.0	Deactivated
17	1016	0.0.0.0	Deactivated
18	1017	0.0.0.0	Deactivated
19	1018	0.0.0.0	Deactivated
20	1019	0.0.0.0	Deactivated
21	1020	0.0.0.0	Deactivated
22	1021	0.0.0.0	Deactivated
23	1022	0.0.0.0	Deactivated
24	1023	0.0.0.0	Deactivated
25	1024	0.0.0.0	Deactivated
26	1025	0.0.0.0	Deactivated
27	1026	0.0.0.0	Deactivated
28	1027	0.0.0.0	Deactivated
29	1028	0.0.0.0	Deactivated
30	1029	0.0.0.0	Deactivated

Figure 4.4.2.22-1 Station CTI IP Address

The system supports 1st party TAPI (Telephony Application Programming Interface) for CTI (Computer Telephony Integration). The system will send specific TAPI information to the IP address for activity by the associated Station.

4.4.2.23 Station Recording Information

Selecting Station recording information displays the page shown in the following figure.

Enter a Station Range and click **[Load]** to display and check the current recording information on each station.

The screenshot shows a web interface for station recording information. On the left is a navigation menu with 'Station Recording Information' highlighted. The main content area has a search bar for 'PGM / Attribute Search' and a 'Station Range' input field containing '1000-1045'. Below the input field is a table with the following data:

Index	Station Number	Greeting	Company Directory Name
1	1000	X	X
2	1001	X	X
3	1002	X	X
4	1003	X	X
5	1004	X	X
6	1005	X	X
7	1006	X	X
8	1007	X	X
9	1008	X	X
10	1009	X	X
11	1010	X	X
12	1011	X	X
13	1012	X	X
14	1013	X	X
15	1014	X	X
16	1015	X	X
17	1016	X	X
18	1017	X	X
19	1018	X	X
20	1019	X	X
21	1020	X	X
22	1021	X	X
23	1022	X	X
24	1023	X	X
25	1024	X	X
26	1025	X	X
27	1026	X	X
28	1027	X	X
29	1028	X	X
30	1029	X	X

Figure 4.4.2.23-1 Station Recording Information

The {Station Recording information} displays the recording state of voice mail greeting and company directory name with O and X. (O: recorded, X: not recorded)

4.4.2.24 Station CLI Program

Selecting Station CLI Program displays the page shown in the following figure.

Enter a Station Range and click **[Load]** to display and enter the desired Station CLI from 1 to 5. Click **[Save]** button after finishing the value with checking the checkbox.

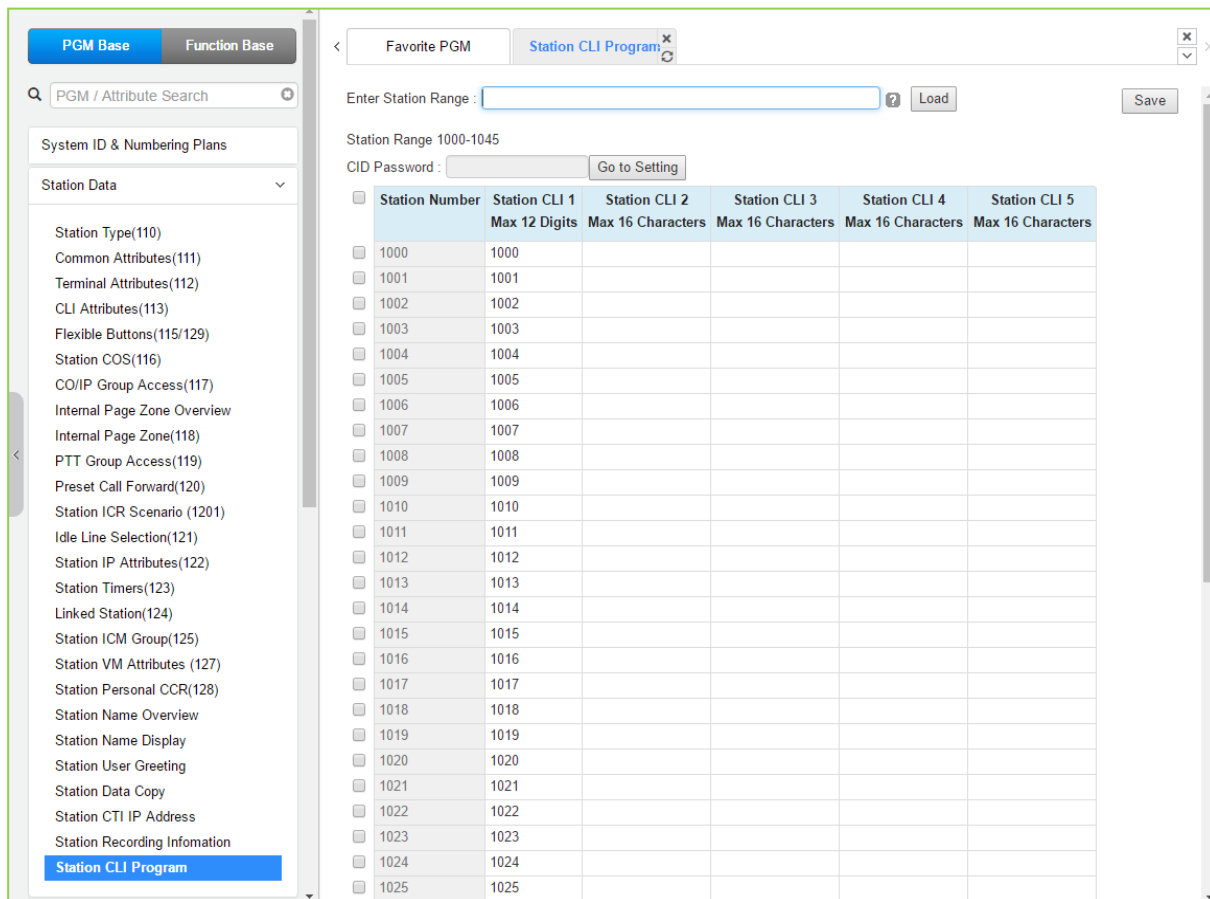

Figure 4.4.2.24-1 Station CLI Program

Station user can set the station CLI up to 5. Station user can send only the CLI number (1~5) or the desired CLI number by applying CLIP/COLP Table (291) to the called party.

Station CLI 1

To use this option, 'CLIR Service' or 'COLR Service' is set to OFF. The CLI number is entered up to 12 digits.

The entered CLI number as suffix is added to the number set in CLIP/COLP Table (201). Also check 'COLP Table Index', 'CLIP Table Index', and 'Station CLI Type' in CID/CPN Attributes (151).

The entered CLI number sends the called party via ISDN call setup or connected message.

Station CLI 2~5

To use this option, 'CLIR Service' or 'COLR Service' is set to OFF. The CLI number is entered up to 16 digits.

The entered CLI number as suffix is added to the number set in CLIP/COLP Table (201). Also check 'COLP Table Index', 'CLIP Table Index', and 'Station CLI Type(2~5)' in CID/CPN Attributes (151).

The entered CLI number sends the called party via ISDN call setup or connected message.

4.4.3 Board Based Data

Selecting the Board Based Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

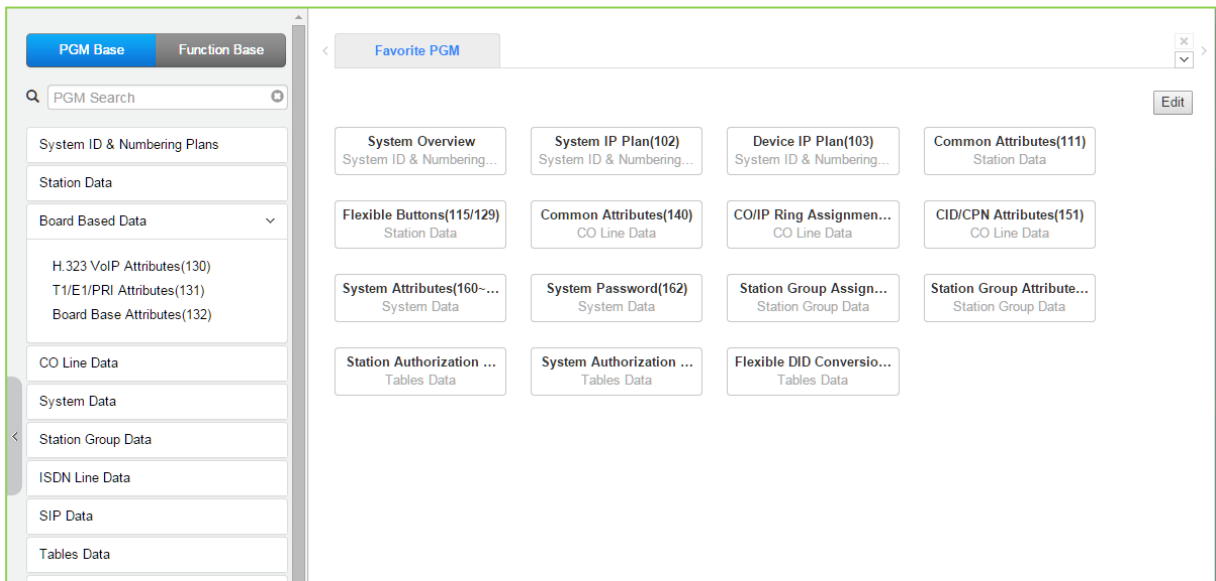

Figure 4.4.3-1 Board Based Data Main Page

4.4.3.1 H.323 VoIP Attributes - PGM 130

Selecting H.323 VoIP Attributes returns the H.323 VoIP Attributes data input page. Enter the VoIP gateway Sequence number (refer to 'Device IP Plan' if you want to find the sequence number) and click **[Load]** to enter VoIP data. Click **[Save]** button after changing Value.

Enter Device/GW slot sequence number: eMG80/100: 1-300 / eMG800: 1-2890 / UCP:1-3688

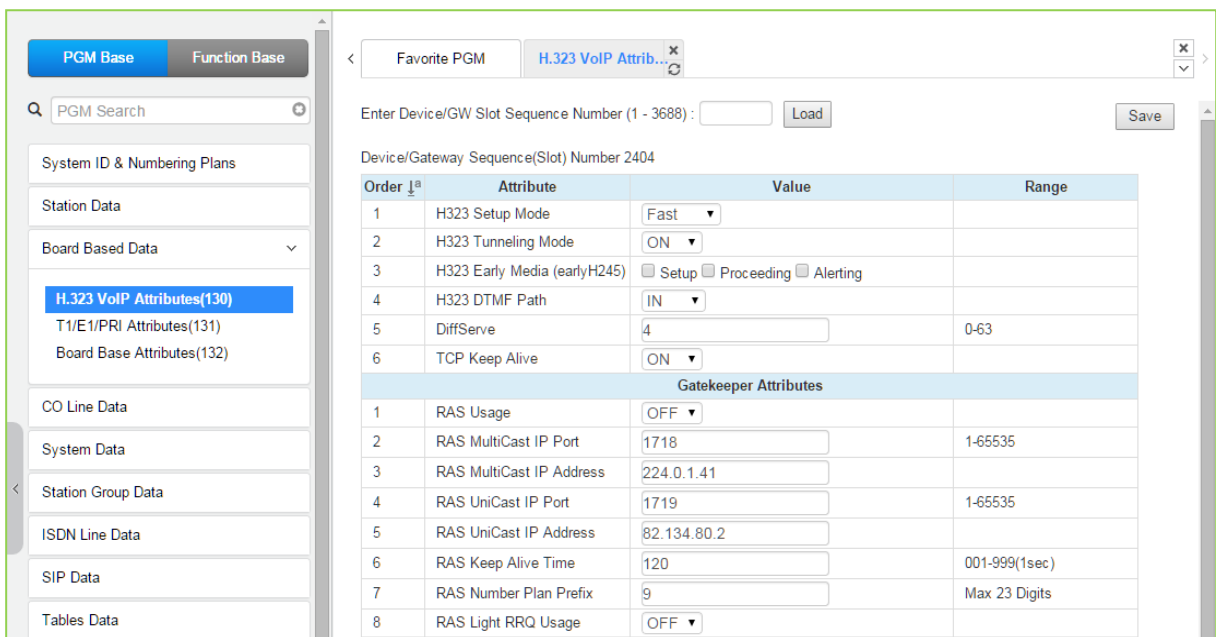

Figure 4.4.3.1-1 H.323 VoIP Attributes

The VOIP channels may be used for Distributed Networking, access to SIP or H.323 networks and for remote iPECS devices. When the standard H.323 VoIP protocol is employed for an external VoIP call, several attributes of these channels can be assigned. The H.323 call set-up mode and tunneling (H.245 Encapsulation) can be established.

Also for H.323 support, a RAS (Registration, Admissions and Status) channel can be defined. The RAS channel IP addresses (uni-cast and multi-cast) as well as the IP port Numbering Plan and other H.323 set-up characteristics are defined.

This page also allows setting the IP TOS bit for Diffserv, a commonly recognized packet prioritization protocol. Higher priority packets are given priority in the Default gateway or Layer 3 Switch queue. However, they are the first to be discarded in the event of long queue delays, which may cause excess packet loss and poor voice quality.

Refer to the following table for a description of the features and the input required.

Table 4.4.3.1-1 H.323 VOIP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
H323 Setup Mode	IP calls can be set-up using the H.323 normal or Fast Start mode.	Normal/ Fast	Fast
H323 Tunneling Mode	IP calls can be set-up using the H.245 encapsulation (Tunneling).	OFF ON	ON
H323 Early Media (early H245)	This feature is the ability of two user endpoints to communicate before call is actually established in normal call mode. This feature is not used when 'H323 Setup Mode' is 'Fast'. <ul style="list-style-type: none"> • Setup: Caller party tries to open early media on receiving the Setup message. • Proceeding: Calling party tries to open early media on receiving the Proceeding message. • Alerting: Calling party tries to open early media on receiving the Alerting message. 	Refer to description	
H323 DTMF Path	During a call, DTMF can be sent in-band or out-of-band (H.245) Out-band, In-band, 2833	Refer to description	In-band
DIFFSERV	This parameter sets DiffServ pre-tagging for Voice packet. Note high values may cause high packet discard levels.	0~63	4
TCP Keep-Alive	The system will send a polling message every 75 seconds to assure the status of the TCP connection.	OFF ON	ON
Gatekeeper Attributes			
RAS Usage	When this feature is ON, the VoIP channel is used as the Gatekeeper.	OFF ON	OFF
RAS Multicast IP Port	This field defines the Multicast TCP/IP Port for RAS Information of Gatekeeper.	TCP/IP Port	1718
RAS Multi-cast IP Address	This field defines the Multicast IP address for RAS Information of Gatekeeper.	IP Address	224.0.1.41
RAS Uni-cast IP Port	This parameter defines the Unicast IP Port for RAS Information of Gatekeeper.	TCP/IP Port	1719

Table 4.4.3.1-1 H.323 VOIP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
RAS Uni-cast IP Address	This parameter defines the Unicast IP address for RAS Information of Gatekeeper.	IP Address	82.134.80.2
RAS Keep Alive Time	To maintain a connection, the system and GateKeeper must exchange RAS Information prior to expiration of this timer.	001-999 (seconds)	120
RAS Number Plan Prefix	The numbering plan for Calling Number in RAS Setup.	Max. 23 digit	9
RAS Light RRQ Usage	The system can be assigned to use the simple RRQ (Registration Request) message (ON) or the full RRQ message (OFF).	OFF ON	OFF
RAS Gateway ID	The Gatekeeper ID.	128 characters	
Fail Over Usage	If an H.323 call fails to set-up in the 'Call Setup No Response time' below, the system will attempt to place the call on the Failover CO/IP group also defined below.	OFF ON	OFF
Call Setup No Response Time	When Failover is enabled, the system places the fail-over call if this timer expires before the system receives a response to setup messages.	0, 3-15 Sec.	5
Failover CO Group Number	The system will place the Fail-over call employing a CO/IP line from the assigned CO/IP Line Group. eMG80/100:1-21, eMG800:1~201, UCP:1~201	Refer to description	
VOIP(VOIU) GW Port Usage			
Q.931 Port Range	IP-Binding H.323 signaling option: Q.931 TCP Port Range.	TCP port	2048-2559
H.245 Port	Range IP-Binding H.323 signaling option: H.245 TCP Port Range.	TCP port	2560-3071
RAS Port Range	IP-Binding H.323 signaling option: RAS UDP Port Range.	UDP port	2048-3071
Media Port Range	IP-Binding media option: Media UDP Port Range. Default: eMG80/100:6000-7036, eMG800:6000-14400, UCP:6000-19972	UDP port	Refer to description
Data Sharing Port Range	IP-Binding option: Data Sharing TCP Port Range.	TCP port	8500-8548
External CODEC Priority Configuration			
External CODEC Priority Configuration	The system supports five Codecs and, for negotiating purposes, the priority of each can be defined. Codecs not assigned a consecutive priority are not available during negotiations with the host.	None/ g.711-u/ g.711-a/ g.723.1/ g.729/ g.729a	None

4.4.3.2 T1/E1/PRI Attributes - PGM 131

Selecting T1/E1/PRI Attributes returns the T1/E1/PRI Attributes data input page.

Enter the Device Sequence number (refer to 'Device IP Plan' if you want to find the sequence number) and click **[Load]** to enter T1/E1/PRI data. Click **[Save]** button after changing Value.

Enter Device/GW slot sequence number:eMG80/100: 1-300 / eMG800: 1-2890 / UCP:1-3688

Figure 4.4.3.2-1 T1/E1/PRI Attributes

Each T1/E1/PRI module can be assigned for various attributes of the interface.

The T1 interface framing and line coding can be selected and, for the PRI, TE or NT operation can be selected. Refer to the following table for a description of the features and the input required.

Table 4.4.3.2-1 T1/E1/PRI ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
T1 Setup Mode	Select T1 Setup mode D4 frame: Using In-Band Control Protocol. ESF : Using Data link Message.	ESF/ D4	D4
T1 Line Mode	Select T1 line coding (AMI/B8ZS).	AMI/ B8ZS	B8ZS
PRI Line Mode	Select TE/NT Mode.	TE/NT	TE
PRI /E1 CRC Check	Enable CRC (Cyclical Redundancy Check).	OFF ON	OFF
E1 R2DSP check	Used for R2-E1 Device or E1 Device.	OFF/ ON	OFF
DCO PX Type	Reserved for future usage for R2 E1 Device. S1240, TDX1B, STANDARD, CONGES_DIS	Refer to description	STANDARD
Caller Name Type	(USA only) If the caller has a name, the Caller Name is sent to the network according to the option Facility message, Display message, OFF	Refer to description	OFF

4.4.3.3 Board Base Attributes - PGM 132

Selecting Board Base Attributes will display the Board Base Attributes data input pag.

Enter the Sequence number (refer to 'Device IP Plan' if you want to find the sequence number) and click **[Load]** to enter attribute values.

Use the check boxes to indicate which attributes to modify; data for checked attributes is stored for the entire range of devices when saved. Click **[Save]** button after changing Value.

Enter Device/GW slot sequence number: eMG80/100: 1-300 / eMG800: 1-2890 / UCP:1-3688

Order	Check All	Attribute	Value	Range
1	<input type="checkbox"/>	Router IP Address		IP Address
2	<input type="checkbox"/>	Device Codec Type	System Codec	
3	<input type="checkbox"/>	Firewall IP Address		IP Address
4	<input type="checkbox"/>	RTP Packet Relay Firewall IP Address		IP Address
5	<input type="checkbox"/>	RTP Security	ON	
6	<input type="checkbox"/>	T-NET Enable	OFF	
7	<input type="checkbox"/>	T38 Enable	OFF	
8	<input type="checkbox"/>	USE Board IP for SIP	OFF	
9	<input type="checkbox"/>	T38 Port Usage	DIFF WITH VOICE	
10	<input type="checkbox"/>	RFC2833 Payload	101	0-127
11	<input type="checkbox"/>	RFC2833 Volume	10	0-36(-dB)
12	<input type="checkbox"/>	RFC2833 Redundancy	4	1-8

Figure 4.4.3.3-1 Board Base Attributes

Appliances (Devices and IP Phones) can be connected to the iPECS over a managed WAN without the need to employ a VoIP channel.

In this case, the system does not implement security (IPSec) or QoS treatment over the link. To implement the managed WAN connectivity, the iPECS must be assigned with the IP address of the router for all appliances that may attempt a point-to-point connection over the managed WAN, including devices on the iPECS LAN.

Note that if the device's Router IP address is not defined, the system will use the Router IP address defined in System & Device IP Address Plan.

The default codec employed by each device can be specifically defined as G.711, G.729, G.723, G.722, or the system default codec assigned.

Appliances include support for SRTP (Secure Real-Time Protocol), which employs Advanced Encryption Standard (AES) to secure RTP packets. If RTP security is enabled then IPSEC or SRTP is implemented for RTP packet.

Table 4.4.3.3-1 BOARD BASE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
IP Address	Device IP address		Read only
IPv6 Address	Device IP v6 address		Read only
Router IP Address	Enter the Default gateway (Router) IP address associated with the selected devices.	IP Address	
Device Codec Type	Select the CODEC type for each device. G.711, G.723.1, G.729, G.722, SYSTEM CODEC	Refer to description	SYSTEM CODEC
Firewall IP Address	Enter the Firewall IP address of the selected devices.		0.0.0.0
RTP Packet Relay Firewall IP Address	Enter the Firewall IP address associated with the Remote Phone or Gateway if there a dual broadband connection for SIP trunks and Remote phones (using a VOIB/VOIM).		0.0.0.0
RTP Security	SRTP implements AES (Advanced Encryption Standard) for packets between other devices with RTP Security enabled. To reduce bandwidth use or to use an external VPN, this parameter must be OFF.	OFF ON	ON
TNET Enable	When a module or station is to be connected in a Centralized Control network (TNET), the device must be enabled for TNET operation. eMG80/100:ON, eMG800:OFF, UCP: OFF	OFF ON	Refer to description
T38 Enable	FAX over IP Lines is supported when T38 mode is ON.	OFF ON	OFF
USE Board IP for SIP	When the VoIP channels of a VOIB/VOIM are used for SIP, such as a SIP Trunk, the IP address of the VOIB/VOIM must be used for the SIP messages (ON).	OFF ON	OFF
T38 Port Usage	The TCP/IP port employed for T38 packets is negotiated and the system can allow the port to be the same as or different from the preceding Voice packets. The system can also employ NAT to determine the port. Different from Voice, Same as Voice, NAT Triggering	Refer to description	Different from Voice
RFC2833 Payload	Payload value for RFC2833	0~127	101
RFC2833 Volume	Volume(Gain) of RFC2833 payload	0~36(-dB)	10
RFC2833 Redundancy	Sending time of end packet of RFC2833	1~8	4
Web Connection	Setting for Web connect.	OFF ON	ON
Telnet Connection	Setting for Telnet connect.	OFF ON	OFF

4.4.4 CO Line Data

Selecting the CO Line Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

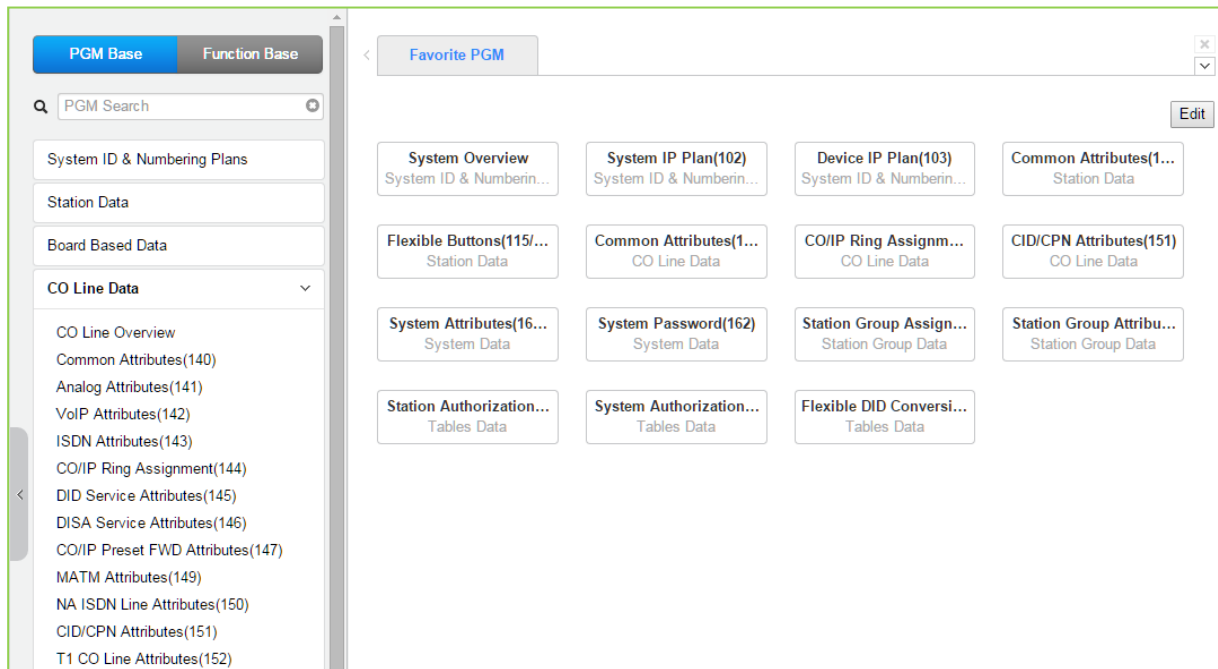

Figure 4.4.4-1 CO Line Data Main Page

Selecting CO Line Overview will show the current overview of CO line. The information may vary depending on installed modules.

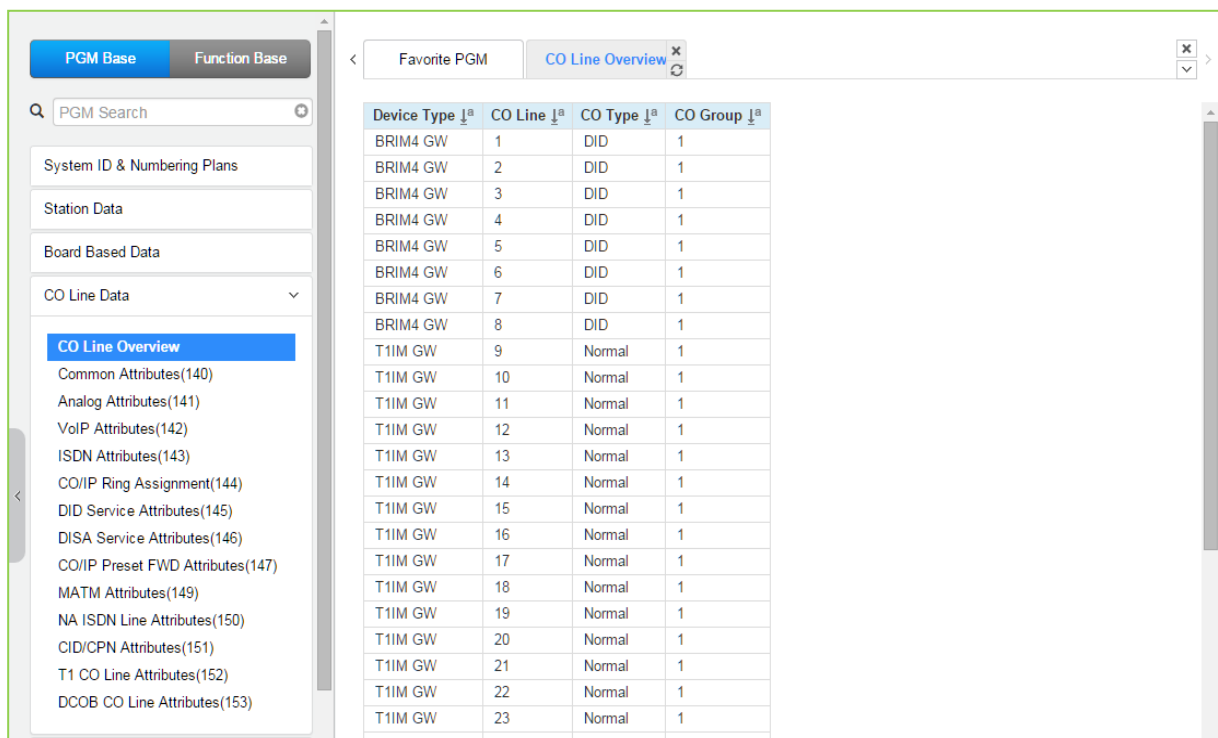

Figure 4.4.4-2 CO Line Overview

4.4.4.1 Common Attributes - PGM 140

Selecting Common Attributes will display the Common Attributes data input page. Enter a valid CO range and click **[Load]** to enter the Common Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

Order	Check All	Attribute	Value	Range
1	<input type="checkbox"/>	CO Type	Normal

Figure 4.4.4.1-1 Common Attributes

Common Attributes define various characteristics of CO lines facilities under control of the system. Most characteristics require an On/Off setting; refer to the following table. Specific descriptions for Class-of-Service and CO line Call Metering tones are provided in Table 4.4.4.1-3.

Table 4.4.4.1-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO Type	Each CO Line is assigned a type, Normal, DID or TIE Line. Normal, DID, TIE, Unused	Refer to description	Normal
CO/IP Group	Each CO/IP Line is assigned to a group; grouping should be based on the Line type, technology and COS. 0-21(eMG80/100), 0-201(eMG800), 0-201(UCP)	Refer to description	1
CO Line COS	Each CO/IP Line is assigned a Class-of-Service that interacts with the Station COS, refer to Table 4.4.4.1-2 CO COS 1: Station COS applies CO COS 2: Exception Table A governs CO COS 3: Exception Table B governs CO COS 4: Restricts LD calls & Exception Table C CO COS 5: Overrides Station COS 2~6 with no restrictions.	COS 1~5	COS 1

Table 4.4.4.1-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO Line Type	Each CO/IP Line can be assigned as connected to a CO Line or a PBX/CTX Line.	PBX CO	CO
Universal Night Answer	Universal Night Answer (UNA) allows any station user to answer a call on the CO/IP line by dialing the UNA code.	OFF ON	OFF
CO/IP Group Authorization	Each CO/IP Group can be assigned to require the user enter an Authorization Code.	OFF ON	OFF
CO Tenancy Group	Only stations in the assigned Tenancy group are permitted access to the defined CO Line. 0-15(eMG80/100), 0-32(eMG800), 0-100(UCP)	Refer to description	0
CO/IP Name Display	The IP Phone display can indicate the CO line/IP channel number or the twelve (12) character name, if assigned below.	OFF ON	OFF
CO Name Assign	Each CO Line and IP group can be assigned a twelve (12)-character name for display purposes.	Max. 12 characters	
DISA Account Code	With DISA Account Code "ON", users are required to enter a DISA Authorization code. Codes are entered in 'Authorization Code Table section'.	OFF ON	ON
DISA CO Access	When enabled, DISA users may access the VoIP facilities of the system.	OFF ON	OFF
Wait If VSF Busy	When a DID/DISA call assigned to receive a VSF announcement arrives and all channels are busy, the call may wait with Ring back until a channel is available (ON) or route to the DID/DISA Destination -PGM 167-.	OFF ON	ON
SMS Outgoing	Each CO line can be assigned to support PSTN SMS.	Disable Enable	Disable
SMS Received Station	When a PSTN SMS is received, the system delivers the message to the assigned station.	Station
Reject Anonymous Incoming Call	When REJECT ANONYMOUS is enabled, incoming calls without Caller ID are rejected.	OFF ON	OFF
Prefix Table ID	When the Prefix Dialing Table (PGM 206) feature is used, this Prefix Table ID is employed. If this value is set to 0, the Prefix Table feature is disabled.	0 – 6. 0(Disable)	0
LDT Table Index	When LCR is configured, this LDT Table index is referenced for outgoing calls on this CO/IP Line. 0-10(eMG80/100), 0-32(eMG800), 0-32(UCP)	Refer to description	1
LDT Zone Number	If the LDT Zone Number of a LDT table (LCR LDT(221)) is equal to this value, the LDT table is available to this CO Line.	1-100	1
ENBLOCK Sending	This entry determines if the system sends dialed digits to the ISDN line as they are received (OFF), or collects all digits and forwards them in a block. (ON).	OFF ON	ON
DID preserve Name	For DID lines, the CLI is normally displayed only during ringing. If enabled here, the CLI will be displayed for the entire call duration.	OFF ON	OFF

Table 4.4.4.1-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Burst Tone to Caller	When DID Call Wait is assigned for the station, the system can send audible off-hook signals as a short burst of tone for DID calls from this CO/IP Line.	OFF ON	OFF
Collect Call Blocking	This parameter defines the type of Collect Call Blocking supported for E1 CO lines with R2 signaling. (Intended for Brazil only) Disable, Double Answer, Double Answer w/Indication	Refer to description	Disable
Collect Call Answer Timer	These parameters determine treatment of an incoming call when Collect Call Blocking Double Answer is assigned. In this case, the system answers the call and maintains the connection for the Call Answer time then, the system will disconnect for the Call Idle time before finally reconnecting the call.	1-250 (100ms)	10
Collect Call Idle Timer		1-250 (100ms)	20
Gain table index	One of three Gain tables can be configured for TDM connections.	1-3	1
Tone table index	One of the five Tone table can be configured for use with the CO/IP Line.	1-5	1
Digit conversion table index	One of the Digit Conversion Tables can be configured for use for this CO/IP Line. 1-15(eMG80/100), 1-32(eMG800), 1-32(UCP)	Refer to description	1
Prepaid Call	The Pre-paid Call feature must be enabled for use by a station. User can set the budget for the station call charge in advance.	OFF ON	OFF
Prepaid Money (0-999999) & Used Prepaid Money	An amount can be associated with the station as prepayment for outgoing calls. The assigned "Pre-paid Money" is reduced by the calculated call cost (Call Metering or cost/minute). This parameter displays the remaining funds for outgoing calls. Prepaid Money is often used in small hospitality businesses. The "Used Pre-paid Money" displays the money that has been used.	0-999999	0
Automatic call recording destination	When desired, the IP CR server can be used to record calls on the CO/IP Line. This value defines the Station Group of the IP CR server. The IP CR Agent object, see PGM 237, must be assigned as CO Line for proper operation.		
ICLID Usage	An incoming call can be routed to the destination based on Calling Name. <ul style="list-style-type: none"> • Disable - ICLID feature is disabled • CLI - ICLID feature is operated with CLI • Name, CLI - ICLID feature is operated with Name and CLI 	Refer to description	CLI
PBX Code Insertion for Emergency call	System can insert PBX code automatically if pre-configured when a user make an emergency call. Disable, PBX code1~4	Refer to description	Disable
Timer Attributes			
Cut Off Timer	When the Station is assigned Call Time restriction is assigned, this timer defines the allowed call duration.	00-99 00 = disable	0

Table 4.4.4.1-1 Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
DISA Delay Timer	Once answered, the system attaches a DTMF receiver to the DISA call to receive caller-dialed digits. This timer introduces a delay before attaching the DTMF receiver to the CO line. (Intended for Russia only)	0-9 seconds	0
DISA Answer Timer	When a call is received on a CO line with DISA service, the system will answer the call when the DISA Answer Timer expires. (Intended for Russia only)	0-9 seconds	0
Tone Attributes			
CO Line MOH	A held call can be connected to one (1) of ten (10) possible audio sources while on Hold as Music-on-Hold (MOH). Refer to Sys Hold, Internal Music, External Music, VSF MOH, SLT MOH1~5, VSF MOH2~30	Refer to description	Refer to Sys Hold
CO Dial Tone	ISDN Lines may provide a digital signal rather than actual tones. In this case, the iPECS can provide the tones. If the ISDN provides the tone, the Tone is "ON", for an iPECS system-generated tone, the tone is set to "OFF".	OFF ON	ON
CO Ring Back Tone		OFF ON	OFF
CO Error Tone		OFF ON	OFF
CO Busy Tone		OFF ON	OFF
CO Line Dial Tone Source	One of eleven sources can be defined as dial tone for use by the CO line. Dial Tone, Internal Music, External Music, VSF MOH, SLT MOH1~5, VSF MOH2~30	Refer to description	Dial Tone
CO Ring Back Tone Source	One of eleven sources can be defined as ring back tone for use by the CO line. Ring Back Tone, Internal Music, External Music, VSF MOH, SLT MOH1~5, VSF MOH2~30	Refer to description	Ring Back Tone
COL Ring Tone	One of sixteen Ring Tones can be configure for use by this CO Line.	00-16 0: NA	0

4.4.4.2 Analog Attributes - PGM 141

Selecting Analog Attributes will display the Analog Attributes data input page.

Enter a valid CO range and click **[Load]** to enter the Analog (PSTN) Attributes data.

Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

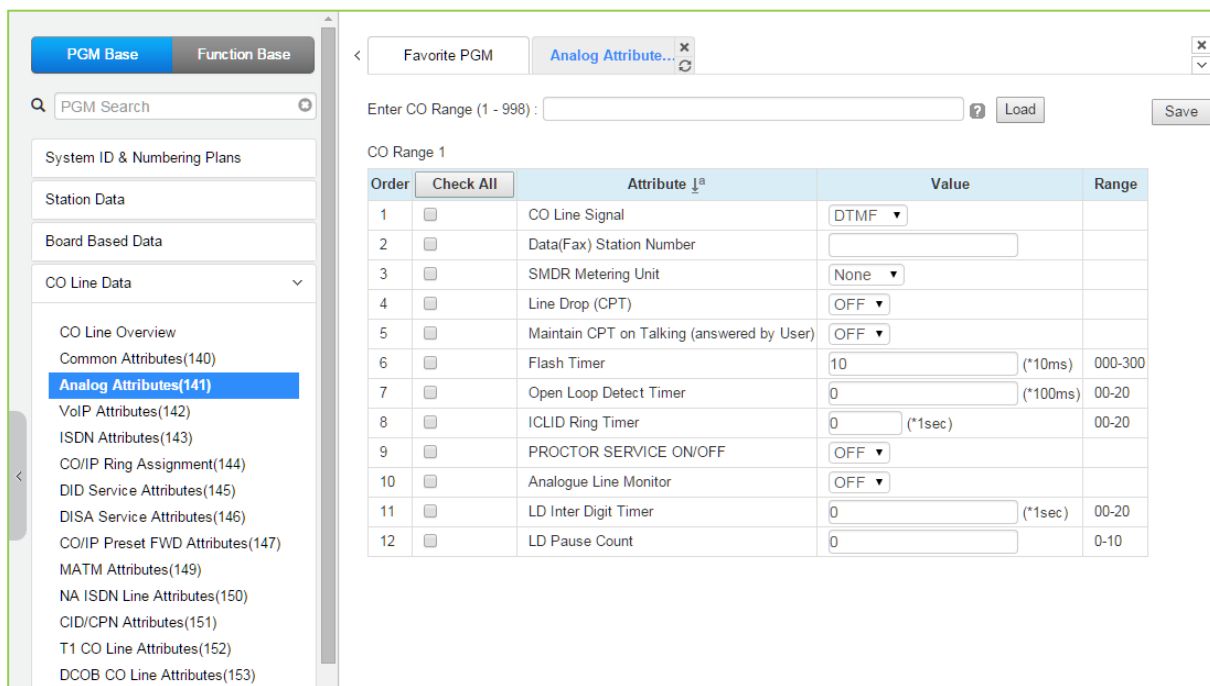

Figure 4.4.4.2-1 Analog Attributes

Analog Attributes define various characteristics of AnalogCO Lines under control of the system.

Most characteristics require an On/Off setting; refer to the following table.

Specific descriptions for CO Line (SMDR) Call Metering tones are provided in the second following table.

Table 4.4.4.2-1 Analog ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO Line Signal	Each analog CO Line can be assigned to send either DTMF or Pulses for dialed digits to the PSTN.	DTMF Pulse	DTMF
Data(Fax) Station Number	Each CO line can be assigned to recognize a FAX call when a specified station answers.	Station Number	
SMDR Metering Unit	This field selects the call-metering signal from the PSTN to indicate call cost, refer to the following table.		None
Line Drop (CPT)	Each CO Line can be programmed to disconnect if error tone is detected.	OFF ON	OFF
Maintain CPT on talking (Answer by User)	The system can continuously monitor the CO Line during a call and, if error tone is detected, drop the call.	OFF ON	OFF

Table 4.4.4.2-1 Analog ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Flash Timer	This time sets the flash time.	000-300 (*10 msec)	50
Open Loop Detect timer	This entry sets the duration of open loop that will be recognized as a "Disconnect Signal".	00-20 (*100 msec)	04
ICLID Ring Timer	When a call is received, the system may use ICLID (Incoming Caller ID) to route the call. The system will delay routing a call for this duration while awaiting ICLID. Enter a 00 to disable ICLID routing.	00-20 (*Sec)	4
Proctor Service	Each analog CO line can be assigned to send the station number as DTMF digits for Proctor service.	OFF ON	OFF
Analog Line monitor	The system can monitor and report faults on an analog CO Line.	OFF ON	ON
LD Inter Digit Timer	This time is for setting the duration between digits for LD (Long Distance) call.	00-20 (*1sec)	0
LD Pause count	This count sets the number of Pause for Long distance call.	0-10	0

Table 4.4.4.2-2 CALL METERING FUNCTION

ENTRY	SMDR METERING UNIT TYPE

01	- 50 Hz
02	- 12 KHz
03	- 16 KHz
04	- Singular Polarity Reverse (SPR)
05	- Plural Polarity Reverse (PPR)
06	- No Polarity Reverse (NPR)

4.4.4.3 VoIP Attributes - PGM 142

Selecting VoIP Attributes will display the Analog Attributes data input page.

Enter a valid CO range and click **[Load]** to enter the VoIP Attributes data.

Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

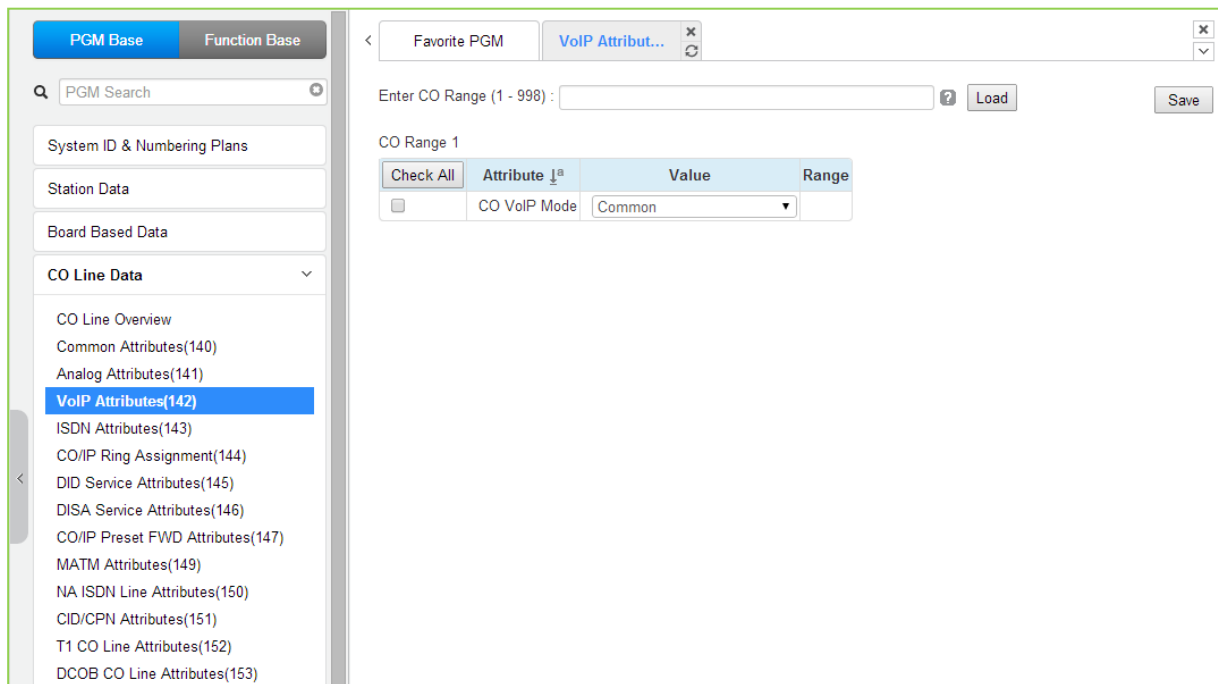

Figure 4.4.4.3-1 VoIP Attributes

Table 4.4.4.3-1 VoIP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO VoIP Mode	<p>The VoIP channels can support iPECS, H.323 or SIP protocols. This field defines the protocol for the VoIP channel(s).</p> <ul style="list-style-type: none"> • COMMON • H323 only • SIP only • RTP-Packet-Relay only • H323 & RTP-Packet-Relay • SIP & RTP-Packet-Relay 	Refer to description	COMMON

4.4.4.4 ISDN Attributes - PGM 143

Selecting ISDN Attributes will display the ISDN Attributes data input page. Enter a valid CO range and click **[Load]** button to enter the ISDN Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

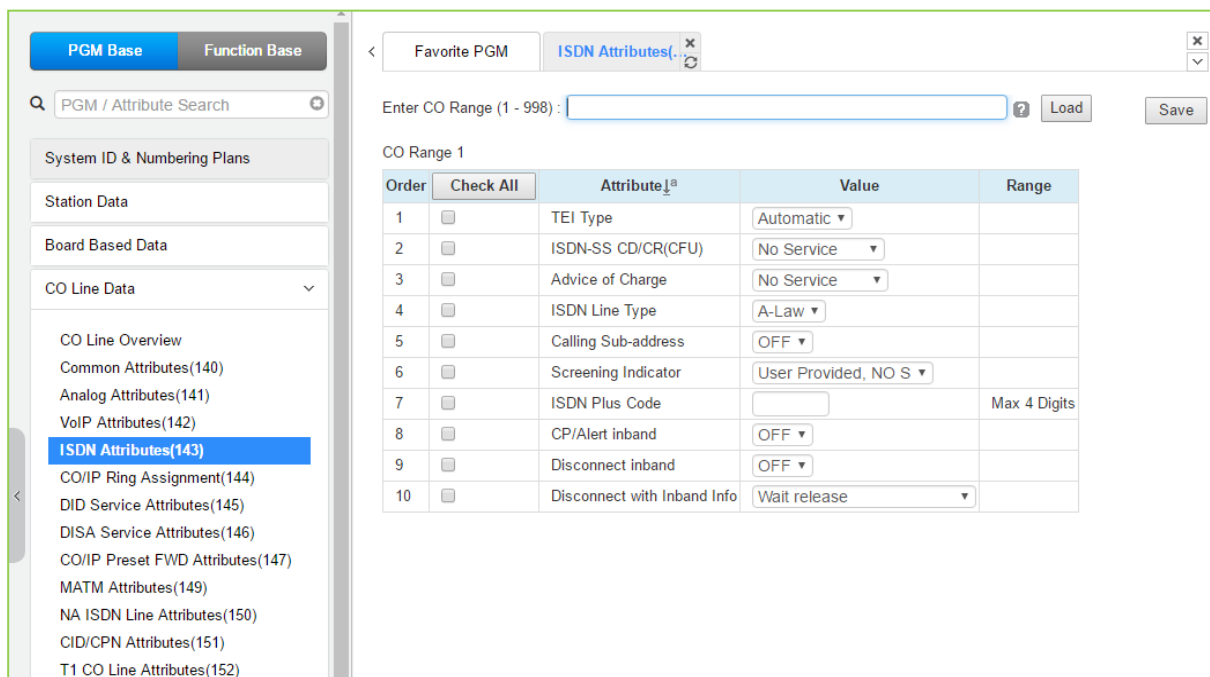

Figure 4.4.4.4-1 ISDN Attributes

PGM 143 assigns attributes associated with ISDN lines in the entered range.

Table 4.4.4.4-1 ISDN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
TEI Type	The TEI (Terminal Endpoint Identifier) is a unique identifier for each device attached to the ISDN line. When the system shares an ISDN connection with other devices, the TEI should be automatic to assure no conflict with the other attached devices. Otherwise, the Fixed identifier option should be employed.	Fixed/ Automatic	Automatic
ISDN – SS CD/CR(CFU)	Permits a user to access to ISDN Supplementary Call Deflection Service. (Except USA version). No Service, Call Deflection, Call Rerouting	Refer to description	No Service
Advice of Charge	When assigned, the system will analyze the Advice of Charge information in the Facility Message according to the ETSI specifications with appropriate regional protocol support. No AOC, Italy & Spain, Finland, Australia, Belgium, ETSI STD	Refer to description	No AOC
ISDN Line Type	The system will encode voice using the A-law or u-law PCM format to match the installed ISDN back bone.	μ-Law/ A-Law	A-Law
Calling Sub-address	For outgoing calls, the user’s station number may be included in the ISDN call SETUP message Sub-address field.	OFF ON	OFF

Table 4.4.4.4-1 ISDN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Screening indicator	The ISDN Screening Indicator can be configured. <ul style="list-style-type: none"> • User Provided, No Service • User Provided, Pass • User Provided, Fail • Network Provided. 	Refer to description	User Provided, No Service
ISDN PLUS Code	When the incoming CLI starts with "+", this value will be inserted in place of the "+" sign.	0000-9999	-
CP/Alert inband	Send progress indication with in-band information in Call proceeding and Alerting messages.	OFF ON	OFF
Disconnect inband	Send progress indication with in-band information in Disconnect message.	OFF ON	OFF
Disconnect with Inband Info	When system receives DISCONNECT message with Inband information from PSTN, the following option can be applied: <ul style="list-style-type: none"> • Ignore Inband information: Line is disconnected • Bypass Inband information: Progress Information is transferred • Wait Release: System wait to send Release message till the other party is disconnected 	Refer to description	Wait Release
ISDN Clock Sync	ISDN clock synchronization is working when "Network Time & Date"(PGM195) is set to "ISDN CLOCK" and "ISDN Clock Sync" (PGM143) is ON. It could be controlled by CO line base.	OFF ON	ON

4.4.4.5 CO/IP Ring Assignment - PGM 144

Selecting CO/IP Ring Assignment will display the CO/IP Ring Assignment data input page. Enter a valid CO range and click **[Load]** to enter the CO/IP Ring Assignment data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

Check All	Attribute	Value	Range	Station Delay Value [Station:Delay]

		<input type="radio"/> Station Group		
		<input type="radio"/> VSF Announcement : <input type="text"/> Auto Drop : <input type="checkbox"/>	0 - 200 (0 : Unused)	
		<input type="radio"/> AA Ring Time	0-30	
		<input type="radio"/> Net Station		

Figure 4.4.4.5-1 CO/IP Ring Assignment

Each “Normal” CO/IP line is assigned to signal a station, station group or VSF Announcement for an incoming call (Ring). Separate ring assignments are made for Day, Night, and Timed Ring mode. A delay from 1 to 9 Ring cycles can also be assigned, based on this assignment, the station/Station group will receive audible ring after a delay of the number of Ring cycles entered. In addition, when assigned to ring a VSF Announcement, the system can be programmed to disconnect after the announcement, ‘Auto Drop’.

When CO/IP Lines are programmed to ring the built-in Auto Attendant, a delay of 0 to 30 seconds can be assigned as the AA Ring Time. The delay allows stations to be assigned Ring and to answer prior to signaling the AA. At expiration of the AA Ring Time, the call is sent to the assigned VSF announcement or announcement 1 when no VSF announcement is assigned.

4.4.4.6 DID Service Attributes - PGM 145

Selecting DID Service Attributes will display the DID Service Attributes data input page. Enter a valid CO range and click **[Load]** button to enter the DID Service Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

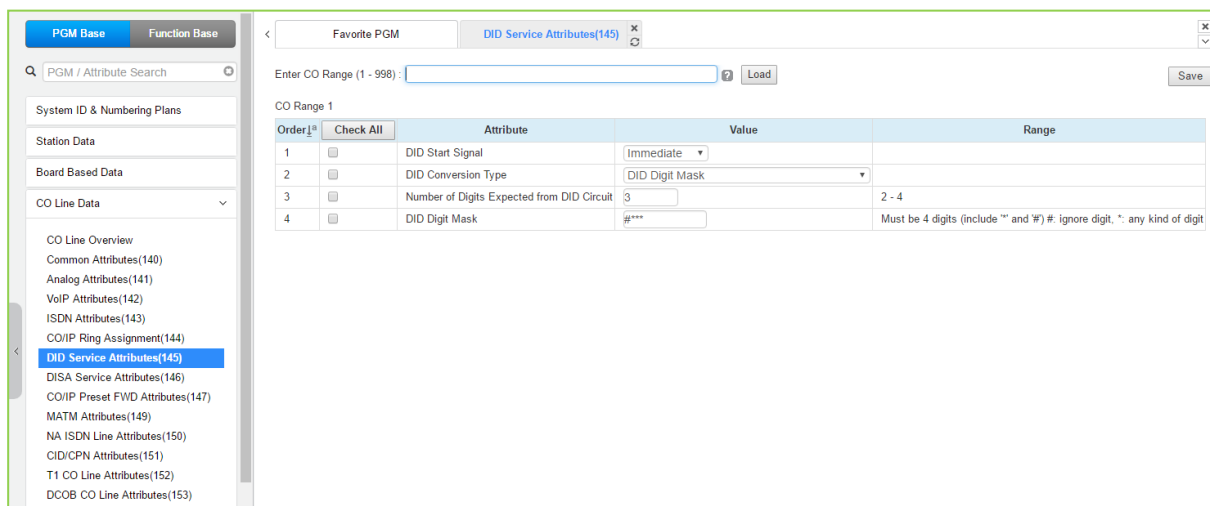

Figure 4.4.4.6-1 DID Service Attributes

DID lines can be assigned the type of “Start” signaling and treatment of received digits. Digits can be used “as is” to route the call within the system, digits can be converted and used to route the call, or digits can be converted to a Table index to determine the call routing from a Table look-up. Refer to the following table for additional description of attributes and values.

Table 4.4.4.6-1 DID SERVICE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
DID Start Signal	Assigns the type of DID start signaling, Immediate, Wink or Delayed for the CO/IP Line. Immediate, Wink, Delayed	Refer to description	Immediate
DID Conversion Type	The received DID digits can be treated to determine call routing, simple conversion (Convert), use “as is” (no treatment), or modify using Flexible DID Conversion Table (Look-up). <ul style="list-style-type: none"> DID Digit Mask Use ‘as is’ Modify using Flexible DID conversion table 	Refer to description	DID Digit Mask
Number of Digits Expected from DID Circuit	The number of digits expected from the PSTN DID circuit.	2~4	3
DID Digit Mask	DID digit modification sequence: “#”, “*”, a digit (0~9) replaces the digit. The modification is based on the position of the digit (1~4) in the received number. It must be 4 digits including # , *. (0~9, *, #)“#”: ignored digit, “*”: any kind of digit	Refer to description	#***

4.4.4.7 DISA Service Attributes - PGM 146

Selecting DISA Service Attributes will display the DISA Service Attributes data input page.

Enter a valid CO range and click **[Load]** to enter the DISA Service Attributes data.

Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

The screenshot displays the 'DISA Service Attributes' configuration page. On the left, a sidebar menu lists various attribute categories, with 'DISA Service Attributes(146)' highlighted. The main content area features a search bar, a 'Favorite PGM' dropdown, and a 'DISA Service Att...' dropdown. Below this is an input field for 'Enter CO Range (1 - 998):' with 'Load' and 'Save' buttons. The central part of the page shows a table titled 'CO Range 1' with the following data:

Order ↓ ^a	Check All	Feature	Value	Range
1	<input type="checkbox"/>	Day	VSF Announcement : 0 Auto Drop : <input type="checkbox"/>	0 - 201 (0:Service OFF, 201:Only Tone Mode)
2	<input type="checkbox"/>	Night	VSF Announcement : 0 Auto Drop : <input type="checkbox"/>	0 - 201 (0:Service OFF, 201:Only Tone Mode)
3	<input type="checkbox"/>	Timed Ring	VSF Announcement : 0 Auto Drop : <input type="checkbox"/>	0 - 201 (0:Service OFF, 201:Only Tone Mode)

Figure 4.4.4.7-1 DISA Service Attributes

DISA Service can be enabled on CO lines based on the system operation mode (Day, Night, and Timed).

DISA calls may be routed to dial tone and await user dialing (simple routing) or through a multi-layered Audio Text menu assigning a VSF Announcement and a Customer Call Route (CCR) Table Index.

The system can be programmed to disconnect after the announcement, 'Auto Drop', or follow the CCR Table routing with a user-recorded announcement requesting specific inputs from the user.

4.4.4.8 CO/IP Preset Forward Attributes - PGM 147

Selecting CO/IP Preset Forward Attributes will display the CO/IP Preset Forward Attributes data input page.

Enter a valid CO range and click **[Load]** to enter the CO/IP Preset Forward Attributes data.

Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

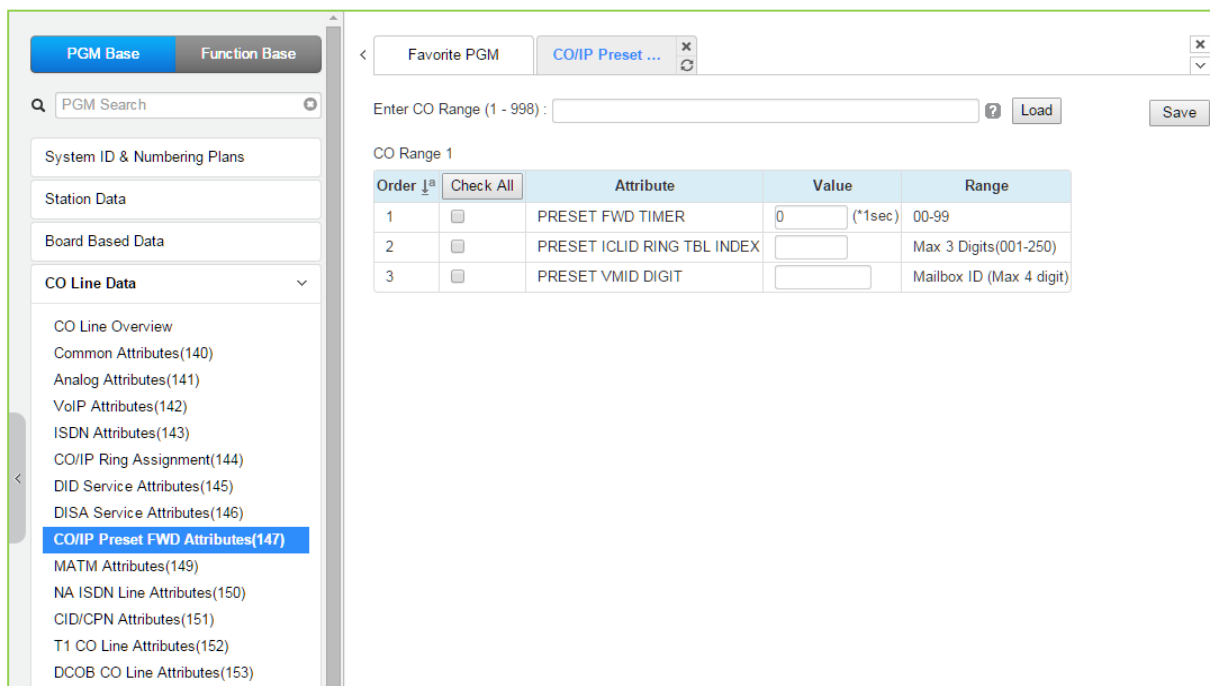

Figure 4.4.4.8-1 CO/IP Preset Forward Attributes

The CO/IP Preset Call Forward feature enables a CO line to initially ring at multiple stations and forward to a pre-determined destination. A separate timer can be defined for each CO/IP line for no-answer.

The destination can be any index to the ICLID Ring Table in section 4.4.7.5 or a Voice Mailbox. The VMID field allows selecting a specific mailbox when the CO line call forwards to an external VM group.

Table 4.4.4.8-1 CO/IP PRESET FORWARD ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Preset FWD Timer	An incoming call, which remains unanswered for this timer, is routed as defined in the 'ICLID Ring Table Index section'.	00-99 (Sec.)	00
Preset ICLID Ring Table Index	If an incoming call remains unanswered after the Preset Fwd time above, the call is routed as defined in the 'ICLID Ring Table index' defined here.	001-250	
Preset VMID Digit	Each CO/IP line can be assigned a VMID (Voice Mail Id) that is sent to the external VM group to identify the desired Mailbox for the call.	Mailbox ID (Max. 4 digits)	

4.4.4.9 MATM Attributes - PGM 149

Selecting MATM Attributes will display the MATM Attributes data input page. Enter a valid CO range and click **[Load]** to enter the MATM Attributes data. Use the check boxes to indicate which attributes to modify; data for checked attributes is stored for the entire range of CO/IP Lines when saved.

Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button. These attributes are available for Country code 82.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

4.4.4.10 NA ISDN Line Attributes - PGM 150

Selecting NA (North America) ISDN Line Attributes will display the NA ISDN Line Attributes data input page.

Enter a valid CO range and click **[Load]** to enter the NA ISDN Line Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

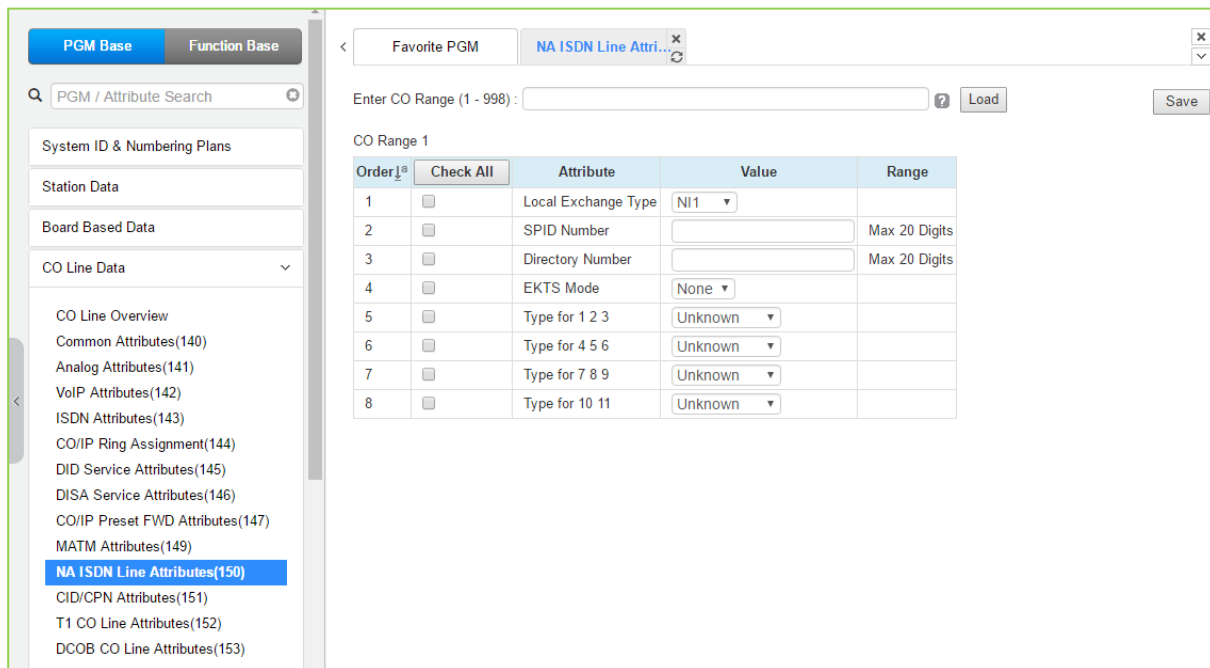

Figure 4.4.4.10-1 NA ISDN Line Attributes

To comply with the North American ISDN standards, certain attributes must be defined for the system. These include Directory (telephone) Number and Service Profile Id (SPID) for the device.

Note that this programming is required only for “Country Code” 1, USA installations. Refer to Table 4.4.4.10-1 for information on individual attributes.

Table 4.4.4.10-1 NA ISDN LINE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Local Exchange Type	The type of ISDN determines several specifics of the protocol and is required for proper operation. NI 1, NI 2, 5 ESS, Nortel	Refer to description	NI 1
SPID Number	The Service Profile Identifier (SPID) is a number assigned to a fully initializing ISDN terminal and enables the Stored Program Control switching System (SPCS) to identify the ISDN terminal at layer 3 of the D-channel signaling protocol. The SPID is a free-formatted numeric string composed of 9 to 20 numeric {0-9} and International Alphabet (IA5) characters. The SPID uniquely identifies a particular set of subscription parameters assigned to a TSP.	20 digits	
Directory Number	Initializing terminals are required to store a 7-digit DN in order to perform the compatibility checking procedures that are part of call termination.	20 digits	

Table 4.4.4.10-1 NA ISDN LINE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
EKTS Mode	The EKTS (Electronic Key Telephone Service) terminal permits a user to operate those features that are specific to EKTS, as well as voice features that may function distinctly in the EKTS environment. EKTS allows a DN to be shared by more than one terminal, on the same or on different interfaces.	NONE/ EKTS	NONE
Type for 1/2/3	ISDN CALLED NO uses the International format, National format, Network format, Subscriber format, or Abbreviated format when the user dials 1~3digits. <ul style="list-style-type: none"> • Unknown • International • National • Network • Subscriber • Abbreviated 	Refer to description	Unknown
Type for 4/5/6	ISDN CALLED NO is constructed with International format, National format, Network format, Subscriber format, or Abbreviated format when the user dials 4~6 digits. <ul style="list-style-type: none"> • Unknown • International • National • Network • Subscriber • Abbreviated 	Refer to description	Unknown
Type for 7/8/9	ISDN CALLED NO is constructed with International format, National format, Network format, Subscriber format, or Abbreviated format when the user dials 7~9 digits. <ul style="list-style-type: none"> • Unknown • International • National • Network • Subscriber • Abbreviated 	Refer to description	Unknown
Type for 10/11	ISDN CALLED NO is constructed with International format, National format, Network format, Subscriber format, or Abbreviated format when the user dials more than 10 digits. <ul style="list-style-type: none"> • Unknown • International • National • Network • Subscriber • Abbreviated 	Refer to description	Unknown

4.4.4.11 CID/CPN Attributes - PGM 151

Selecting CID/CPN Attributes will display the CID/CPN Attributes data input page. Enter a valid CO range and click **[Load]** to enter the CID/CPN Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

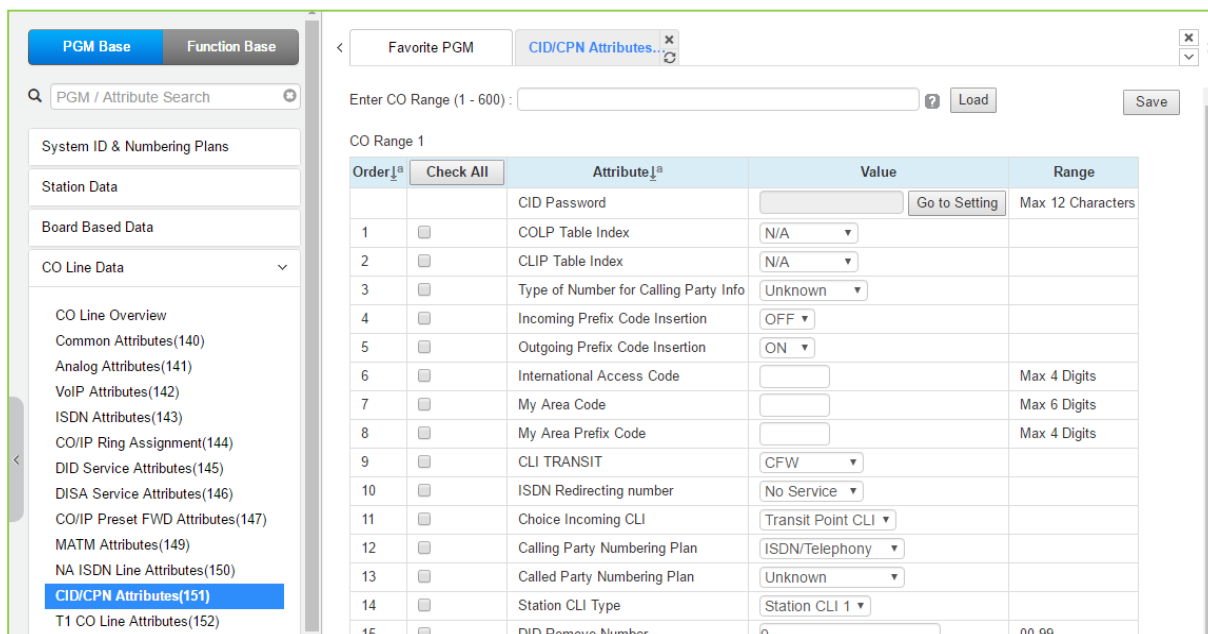

Figure 4.4.4.11-1 CID/CPN Attributes

- COLP: Connected Line Presentation
- CLIP: Calling Line Identification Presentation

Setting CID Password directly

You can set the CID password to click “Go to Setting” button. After clicking it, you will move to the following PGM 162 and set the CID password, and then save CID password to mark tick on the save box and click the Save button.

Refer to Table 4.4.4.11-1 for information on individual attributes.

Table 4.4.4.11-1 CID/CPN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
COLP Table Index	When an incoming call on an ISDN Line is answered, the system will send caller id using the number from the CLIP/COLP Table (section 4.4.7.2) entry defined by this parameter. The station number is included as a suffix of the caller id. For “Using Station’s COLP Attribute”, the Station CLI type entered below will be used in place of the station number.	N/A 0-49 Station CLI	N/A
CLIP Table Index	When a call is placed on an ISDN Line, the system will send caller id using the number from the CLIP/COLP Table entry defined by this parameter. The station number is included as a suffix of the caller id. For “Using Station’s CLIP Attribute”, the Station CLI Type entered below will be used in place of the station number.	N/A 0-49 Station CLI	N/A

Table 4.4.4.11-1 CID/CPN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Type of Number for Calling Party Info	For outgoing calls on an ISDN Line, this parameter defines the "Type of Number Plan" provided in Calling Party Information Element of the ISDN call SETUP message. Unknown, International, National, Unused, Subscriber	Refer to description	Unknown
Incoming Prefix Code Insertion	Regional ISDN providers may use the Local Area Prefix code for special services. In cases where the code is not provided in the incoming call SETUP message, the system can insert the My Local Prefix and My Area Code below in SMDR, LNR, displays, etc.	OFF ON	OFF
Outgoing Prefix Code Insertion	Regional ISDN providers may use the Local Area Prefix code for special services. The system can insert the "My Area Code" and "My Local Prefix Code" in the Connect message as defined in those items below.	OFF ON	ON
International Access Code	When an incoming call includes the international Country code in the ISDN call SETUP message, the Country code can be included in the station display. To include the Country code, Incoming Prefix insertion, and CLI display in StationData must be ON.	Max. 4 digits	-
My Area Code	Regional ISDN providers may use the Local Prefix and Area codes for special services. The system will insert this Local Area Code in the call SETUP messages defined under the Incoming/Outgoing Prefix Code Insertion entries above.	Max. 6 digits	-
My Area Prefix Code	Regional ISDN providers may use the Local Prefix and Area codes for special services. The system will use this code for insertion of the Local Prefix Code in the call SETUP messages if Local Prefix Insertion is enabled above.	Max. 4 digits	-
CLI Transit	When the system must send CLI to the ISDN for an off-net call, the CLI can be either the original caller's CLI or the CLI of the Off-net forwarding/transferring station.	ORI/ CFW	CFW
ISDN Redirecting Number	When the system needs to send a Redirecting number to the ISDN for an off-net call, the Redirecting number can be either the original caller's CLI or the CLI of the Off-net forwarding/transferring station. If it is no service then system will not send this information. If it is configured for OGR CLI (original CLI) then system will send original CLI that is received from incoming CO line. If it is CFW CLI then system will send the redirecting CLI that is the CLI of the off-net call forwarding station. NO SERVICE, ORG CLI, CFW CLI	Refer to description	NO SERVICE
Choice incoming CLI	Incoming CLI Choice – When ISDN setup message has two CLIs (Transit Point CLI / Original CLI), this option determines the CLI the system will recognize. Original CLI, Transit Point CLI	Refer to description	Transit point CLI

Table 4.4.4.11-1 CID/CPN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Calling party numbering Plan	ISDN Calling Party Numbering Plan can be configured. Unknown, ISDN/Telephony, Data/Numbering, Telex, National Std, Private, Reserved	Refer to description	ISDN/ Telephony
Called party numbering Plan	ISDN Calling Party Numbering Plan can be programmable. Unknown, ISDN/Telephony, Data/Numbering, Telex, National Std, Private, Reserved	Refer to description	Unknown
Station CLI Type	When the Station CLI is used with the CLIP or CLOP, one of five Station CLIs as defined in PGM 114 section 4.4.7.2 is used for this CO/IP Line as selected here.	Station CLI 1 –CLI 5	Station CLI 1
DID Remove Number	When a DID call is received on an ISDN Line, this entry determines the number of digits that will be removed starting at the first received digit.	00~99	00
One Digit Remove	Selects one digit remove mode in ISDN Called Digits for Italy DID.	Enable Disable	Disable
CID mode	The type of CID signal can be assigned according to the type of CID from the carrier. Disabled, FSK, DT-AS(TAS) FSK, DTMF, RCID	Refer to description	DT-AS(TAS) FSK
RCID detect	Russia CID Detect Mode.	LOCAL/ ALL	ALL
RCID request	Russia CID Request Mode.	USER/ AUTO	AUTO
RCID Request First Delay Timer	Russia CID First Delay Timer.	010~150 (10msec)	30
RCID No-Answer Timer	Russia CID NO-Answer Timer.	001~300 (Sec.)	20
RCID Digit Number	Russia CID Digit Number.	04~10	07
RCID Request Count	Russia CID Request Count.	1~3	1
RCID Request Retry Delay Timer	Russia CID Retry Delay Timer.	10~30 (10msec)	10
LD DIGIT COUNT	To use LD(Long Distance) Digit Count, 'My Area Prefix code' must set in advance. This option enables the call log to add 'My Area Prefix Code' If Incoming CLI is shorter than 'LD DIGIT COUNT' and is not matched with Multi Area Code or without change if Incoming CLI is equal to or longer than 'LD DIGIT COUNT'. The default is 11 for North America and 0 for other countries.	00-23	11

Table 4.4.4.11-1 CID/CPN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LOCAL DIGIT COUNT	To use this option, 'My Area Prefix code' must set in advance. This option enables the call log to add 'My Area Code' by setting ON for 'ADD MY AREA CODE' If Incoming CLI is equal to or shorter than 'LOCAL DIGIT COUNT'. The default is 7 for North America and 0 for other countries.	00-23	7
ADD MY AREA CODE	To use this option, 'My Area Prefix code' must set in advance. This option selects My Area Code usage by setting ON. This option is related to 'LOCAL DIGIT COUNT'. ** As we mentioned the rule of 'LD DIGIT COUNT' and 'LOCAL DIGIT COUNT', the incoming CLI is followed the above rule. But in case of the other cases, the system compare the incoming CLI with Multi Area Code (PGM 100) and then My Area Prefix Code will be added to the call log.	OFF ON	OFF

4.4.4.12 T1 CO Line Attributes - PGM 152

Selecting T1 CO Line Attributes will display the T1 Line Attributes data input page. Enter a valid CO range and click **[Load]** to enter the T1 Line Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

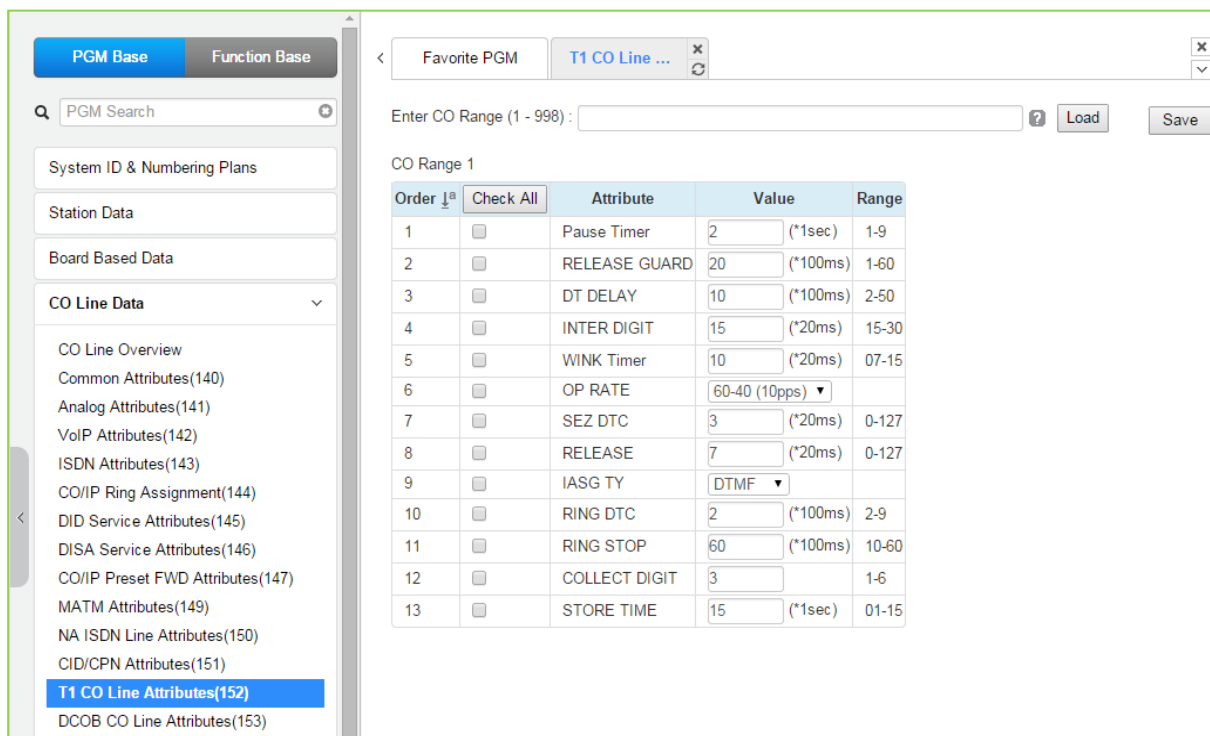

Figure 4.4.4.12-1 T1 CO Line Attributes

North American T1 standards require that the T1 terminating device, in this case iPECS system, include various “adjustable” timers and counters as described below.

Table 4.4.4.12-1 T1 CO LINE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Pause Timer	A timed pause may be included in a Speed Dial number, in which case, the pause time is defined by this entry. Not currently implemented.	1~9 (seconds)	2
RELEASE GUARD	The release guard timer defines the length of time the system will maintain a Line as busy after the call has been terminated to assure the PSTN has sufficient time to ‘clear down’ the circuit. Not currently implemented.	01~60 (100 ms)	20
DT DELAY	The DT (Dial tone) Delay timer defines the duration dial tone must be received for DT recognition. Not currently implemented.	02~50 (100 ms)	10
INTER DIGIT	The Inter Digit timer defines the duration between digit transmissions. Not currently implemented.	15~30 (20 ms)	15
WINK Timer	For TIE or DID Lines the Wink timer defines the length of time the ‘wink’ (T1 TIE line circuit reversal) will last.	7~15 (20 ms)	10

Table 4.4.4.12-1 T1 CO LINE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
OP RATE	For Pulse signaling, defines the duration and make/break ratio of each pulse. 60-40(10pps), 66-33(10pps), 60-40(20pps), 66-33(20pps)	Refer to description	60-40 (10pps)
SEZ DTC	This timer defines the length of a valid 'line seizure' signal.	0~127 (20 ms)	3
RELEASE	For Ground Start, this timer defines the minimum length of time ground will not be applied to the TIP side from the PSTN.	0~127 (20 ms)	7
IASG TY	Incoming Address Signaling Type defines the type of signaling (DTMF or Pulse) expected.	PULSE/ DTMF	DTMF
RING DTC	The Ring DTC (detect) timer defines the minimum acceptable length of the Ring-on time during a ring cycle.	2~9 (100 ms)	2
RING STOP	The Ring Stop timer defines the maximum Ring-off time during a ring cycle.	10~60 (100 ms)	60
COLLECT DGT	Collect DGT (digits) defines the number of digits expected on a DID line.	1~6	3
STORE TIME	For DID lines, this timer defines the maximum delay between incoming DID digits.	1~15 (second)	15

4.4.4.13 DCOB CO Line Attributes - PGM 153

Selecting DCOB CO Line Attributes will display the DCOB Line Attributes data input page. Enter a valid CO range and click **[Load]** button to enter the DCOB Line Attributes data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

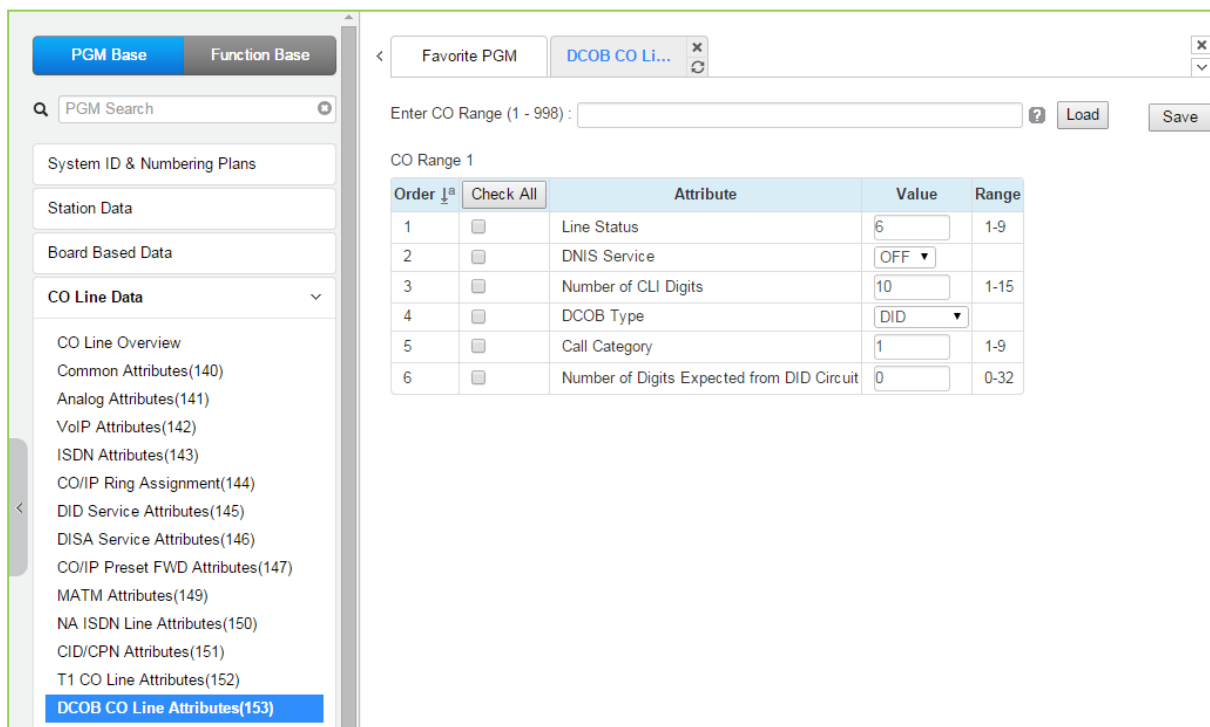

Figure 4.4.4.13-1 DCOB CO Line Attributes

Table 4.4.4.13-1 DCOB LINE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Line Status	This parameter defines the code that the system will send to indicate idle line status in accordance with E1R2 specifications.	1~9	6
DNIS Service	In R2, this field determines whether system will send caller information to PX or not.	OFF ON	OFF
Number of CLI Digits	This parameter defines the number of digits expected as the Calling Line Identification from digital CO lines.	01~15	10
DCOB Type	According to this type, the line can be restricted to the type of service, incoming DID and outgoing calls (DOD).	DID/DOD, DOD, DID	DID
Call Category	This parameter defines the code sent in response to a call category request from the network in accordance with E1R2 specifications.	1~9	1
Number of Digits Expected from DID circuit	This parameter defines the number of digits expected as DID digits from digital CO lines. If set to "0", the number of digits defined in PGM 145 is used.	0~32	0

4.4.5 System Data

Selecting the System Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

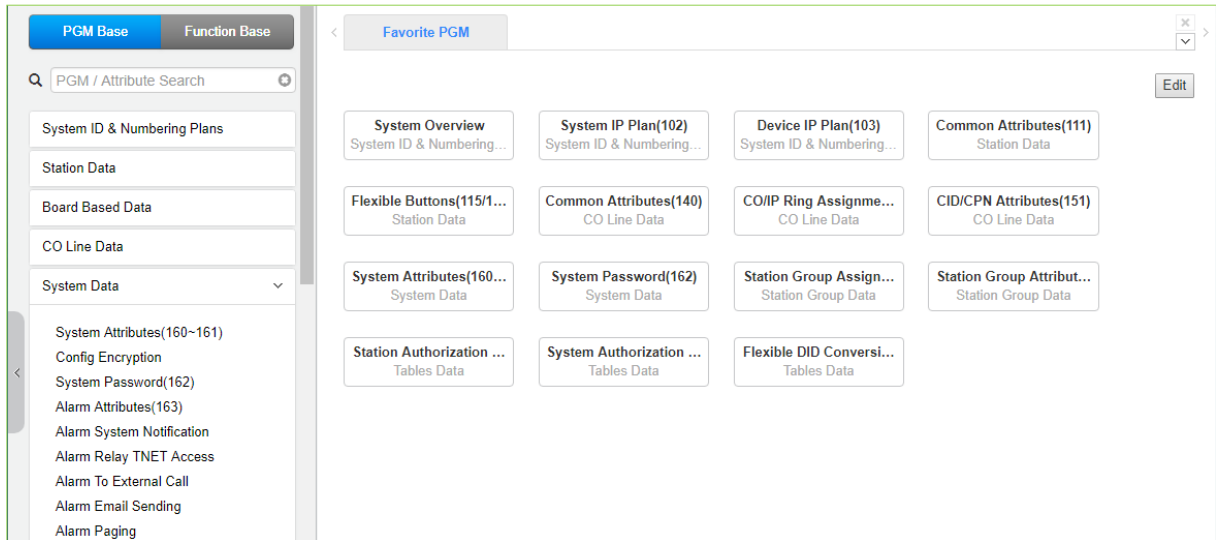

Figure 4.4.5-1 System Data Main Page

4.4.5.1 System Attributes - PGM 160 & 161

Selecting System Attributes will display the System Attributes data entry page. Selecting the blue colored text in the Table header will sort the table based on the selected column. Click **[Save]** button after changing Value.

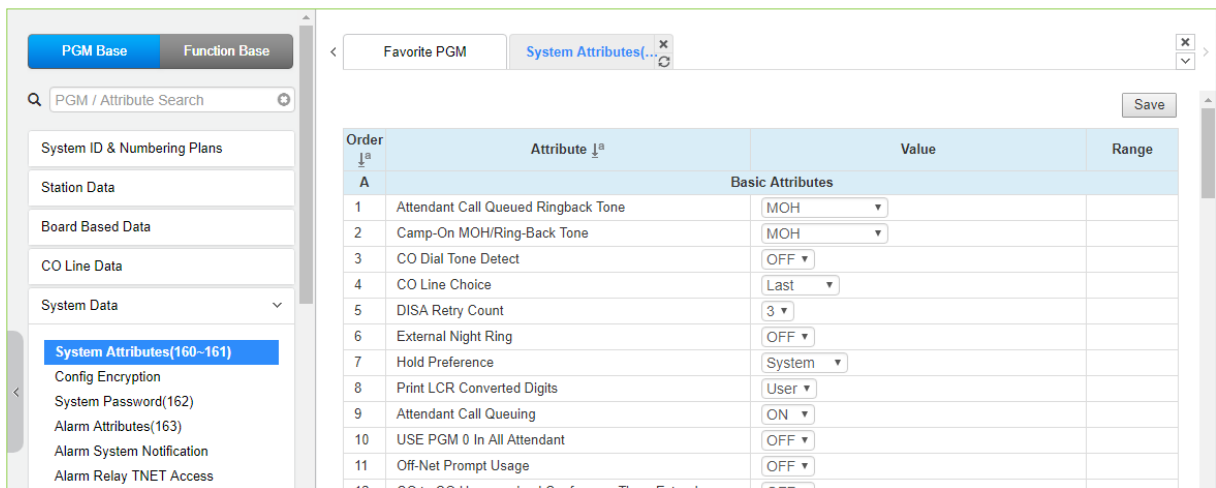

Figure 4.4.5.1-1 System Attributes

System Attributes define settings that affect system wide features and functions. Generally, the entry will turn the feature ON (enable) or OFF (disable). Refer to Table 4.4.5.1-1 for a description of the Attributes and the data entries required.

Setting CID Password directly

You can set the CID password to click “Go to Setting” button. After clicking it, you will move to the following PGM 162 and set the CID password, and then save CID password to mark tick on the save box and click the Save button.

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Attendant Call Queued Ring Back Tone	When Attendant is busy with receiving call, the system will provide either Ring-back tone or Background music (MOH). If MOH is selected, the Music Source must be defined in 'Music source – PGM171'.	MOH/ Ring-BackTone	MOH
Camp-On MOH/Ring-Back Tone	When Camp-On is used, the calling station will receive either ring-back tone or MOH. If MOH is selected, a source must be defined in 'Music source – PGM171'.	MOH/ Ring-Back Tone	MOH
CO Dial Tone Detect	The system can use dial-tone detection or a timed pause for speed dial numbers that contain a Pause.	OFF ON	OFF
CO Line Choice	CO Lines are selected by the system from groups using either the LAST used, FIRST or ROUND robin method.	LAST FIRST ROUND	LAST
DISA Retry Count	A DISA user is allowed to retry erroneous authentication code entries. This entry sets the number of retries before the system disconnects.	1~9	3
External Night Ring	CO/IP calls, which are assigned UNA, can activate the Loud Bell Contact. While in the Night mode, an incoming call will activate the contact.	OFF ON	OFF
Hold Preference	A single depression of the [Hold] button during CO call places the call on the preferred hold, System or Exclusive.	System/ Exclusive	System
Print LCR Converteddigits	SMDR will output the number dialed by either the system's LCR or the user.	LCR/ USER	User
Attendant Call Queuing	The system can be configured to queue incoming calls to a busy Attendant.	OFF ON	ON
USE PGM_0 IN ALL ATD	This field allows Main Attendants to activate Day/Night mode and other System Attendant menu except PGM 06 – Record system announcement. (Not available in USA version.)	OFF ON	OFF
Off-net Prompt Usage	When a call is routed to a destination external to the iPECS, the Off Net routing prompt can be played. (Not available in US version)	OFF ON	OFF
CO to CO Unsupervised Conference Timer Extend	When an Unsupervised Conference is established with DISA, Off-Net Fwd, etc., the Unsupervised Conference timer determines the allowed duration of the call. If enabled here, the user may extend the allowed duration.	OFF ON	OFF
ACD Manager Print	When the optional ACD Event messages are required, the system must be enabled here to send the events.	OFF ON	OFF
Repeat DTMF tone	If enabled, the system will repeat DTMF tones to the caller's station when the call is routed to an off-net location.	OFF ON	ON
Off-Hook Ring Type	Off-hook ring can be a single tone burst or muted normal ring.	MUTE/ BURST	MUTE
Page Warning Tone	A warning tone can be sent prior to a page announcement.	OFF ON	ON

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Automatic Privacy	Automatic Privacy can be disabled, allowing stations to join an active CO/IP call. A warning tone can be provided, see Privacy Warning Tone below.	OFF ON	ON
Privacy Warning Tone	If desired, a warning tone can be provided when privacy is overridden.	OFF ON	ON
ACD Print Enable	ACD statistics can be periodically sent to the assigned serial port. To provide periodic reports, this feature must be ON.	OFF ON	OFF
ACD Print Timer	This entry defines the time, in 10-second increments, between the periodic ACD reports assigned above.	001~255 (1 sec)	10
CALLTRACKING Enable	It transfers the tracking information to 3rd Party VM SIP.	OFF ON	OFF
Clear ACD Database	When a periodic report is sent, the ACD database can be cleared automatically, if "ON".	OFF ON	OFF
Override 1st CO Group	When a user dials '9', the system can search all CO/IP Groups for the first available CO/IP line.	OFF ON	OFF
Codec Type	The default codec can be defined as G.711, G.729, G.722 or G.723.1 for decreased bandwidth needs. The selected codec will be used on all internal communications as well as for remote iPECS devices.	G.729/ G.723.1/ G.711/ G.722	G.711
G.711 Packetization	The G.711 voice frame packetization time determines the interval at which voice samples are packetized and sent when the G.711 codec is used.	10/20/30 (1 msec)	020
G.723 Packetization	The G.723.1 voice frame packetization time determines the interval at which voice samples are packetized and sent when the G.723.1 codec is used.	30/60 (1 msec)	030
Network Time/Date	The system can use ISDN Network time or NTP to synchronize time with the ISDN or data network. ISDN sync is not available in USA version.	Disable/ ISDN/ NTP	Disable
Incoming Toll Check	The system can invoke COS dialing restrictions when a user dials while connected to incoming call.	OFF ON	OFF
Web Server Port/TLS for Web	This field determines the TCP port employed to access the system WEB server. This field also enables Transport Layer Security (TLS) for access to Web Admin. 00001-65535/Enable or Disable	Refer to description	443/ Enable
REST API Service Port	The REST API Service Port is TCP port for REST API service. It will be started with web admin server after refreshing when you assign or change the port. 0(Unused), 1024-65535	Refer to description	0
REST API Session Timeout	The REST API Session Timeout value means duration for REST API service after login with ID and Password. After the timeout value, the session will be expired if there are any requests from user.	1-60 (1 min)	2

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Auth Retry Count	When an Authorization code is required, the user may attempt to enter a Valid code up to the maximum value defined in this field.	1-9	3
Simple Auth Code Usage	System Authorization codes are entered by the user as "*" and the code (ON) or "*" + the Auth code index and the code (OFF).	OFF ON	ON
COS 7 when Auth Fail	If a user fails to enter a valid Authorization code in the number of attempts assigned in Auth Retry Count above, the station is disconnected or the Station COS is changed to COS 7. In the latter case, the user must employ COS Restore in Station User PGM 2 to return the station to the normal COS.	OFF ON	OFF
Unified Message Format	System Integration Messages are sent out the defined serial or TCP channel.	OFF ON	OFF
Conference Room CO Tel Number	ISDN DID number an external party must dial to enter a Conference room.	Max. 15 digits	
Record warning tone	When call recording is active, a tone can be sent to all connected parties to indicate the conversation is being recorded.	OFF ON	ON
UCP (MPB) DIFF SERVE	Diff-Serv Code Point applied to packets from LAN port of the UCP (iPECS eMG LAN port of the MPB). TOS:Route(0),Priority(8),Immediate(16),Flash(24),Flash Override(32),Critic(40),Internetwork Control(48),Network Control(56)	00-63	4
Device Upgrade Mode	Transfer mode for upgrades from MPB to an iPECS device.	FTP TFTP	FTP
CO Transfer Tone	When a CO call is transferred to a busy extension, Ring Back Tone or Music On Hold will be played to the CO Line. MOH, Ring-Back Tone	Refer to description	Ring-Back Tone
Conference Warning Tone	When a new member joins a conference room, the system provides warning tone to conference members.	OFF ON	ON
Dummy Dial Tone	When a CO line does not provide dial tone, the system can provide dummy dial tone.	Unused/ Use	Unused
SIP Station Mode	SIP phones may set-up a point-to-point RTP connection (PTP) or to assure a controlled connection, RTP can be routed via a VoIP channel (RTD).	RTD/ PTP	Routed
SMS Center Number	When the PSTN will be used to send SMS, the phone number of the Short Message Service Center must be entered.	Max. 23 digits	
SMS Center CLI	When the CO/IP Line will be used to receive SMS, the Caller Id expected from the Short MSG Service Center must be defined.	Max. 23 digits	
SMS Protocol	The Short Message Service Protocol must be selected to support SMS. None, ETSI-P1, ETSI-P2, KT-LivingNet, SIP-Text, SIP-XML, KT IP-PBX, SKN IP-PBX, KT XML	Refer to description	NONE

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
G.722 Packetization	The G.722 voice frame packetization time determines the interval at which voice samples are packetized and sent when the G.722 codec is used.	10/20/30 (1 msec)	020
Transit-out security	The system will check the IP address for transit-out calls in the master system. If not valid the transit-out call is denied.	Unused/ Use	Use
Emergency call attendantNotify	The Attendant can be notified when another user in the system dials emergency number.	Unused/ Use	Use
3-Way Conference Preference	When 3-way conference calling, the system uses the selected device to establish the conference mixing. When "Local" is assigned, the device, such as a SIP phone, must provide the mixing. This option is available only for UCP.	Local/ MCIM	Local
First digit * in SPD	Normally, when "*" is the first digit in a Speed Dial number, the Display Security feature is activated so that the number is not shown in the LCD of iPECS IP or LDP Phones. Otherwise, the "*" is sent as the first digit to the carrier. Display Security, Digit *	Refer to description	Display Security
Use Strong Password	When enabled, passwords in PGM 162 must be longer than 10 digits and include both numbers and characters.	OFF ON	ON
Station password minimum length	If strong password is ON, then "minimum station password length" is used. If input station password length is less than "minimum station password length", then it is not saved.	01~12	6
VSF SMTP port	SMTP port used for the VSF and UVM gateway (VMIU/VMIB).	00001~ 65535	25
CTI IP	When assigned, the system will accept 3rd party TAPI messages only from assigned IP address.		0.0.0.0
Intercom busy service	When busy, an intercom call may use Off-hook Voice-Over, intrusion, or multi barge in room to connect to the called intercom party. Voice-over, Intrusion, Barge in (Monitoring), Barge in(Conference)	Refer to description	Voice over
Auto save new message	After listening to a voice message, if the user takes no action, the system can automatically save the message or leave the message in the new message category.	Unused/ Use	Unused
IGMP query usage	The system employs multi-cast packets for registration and certain general functions such as MOH. With some multicast snoop enabled Layer 2 switches, multicast packets are not forward unless an IGMP query device exists in the network. This entry enables the IGMP query option and system sends periodic IGMP query message to avoid multicast blocking.	OFF ON	OFF
IGMP query interval timer	This timer defines the interval for each IGMP query message.	0~3600 (Sec.)	180

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
IGMP query all host	IGMP queries are sent to all IP hosts (ON) on the network or to iPECS devices only. For All Hosts, IP address 224.0.0.1 is used otherwise the iPECS specific 239.20.19.50 IP address is used. If problems occur with MOH, the "All Hosts" may correct the issue.	OFF ON	ON
IGMP query generic	This entity specifies a group addresses being queried. If ON is selected, all multicast group are queried. If OFF is selected, iPECS registering device group (239.20.19.50) is queried only. This should be ON when there is a MOH problem.	OFF ON	OFF
Restrict star and pound	If enabled, calls using * or # as the first digit are prohibited by the system.	OFF ON	ON
Restricted Dialing Display After Answer	If a restricted number is called, the system will output an SMDR record for the call after the call is answered.	OFF ON	ON
IP BIND USAGE	If It's ON, VOIU/VOIB/VOIM will apply IP-Binding with information in PGM130 / PGM133 (Media port).	OFF ON	OFF
New 5 Wake Up Usage	With the "New Wake-Up" option, the user can assign five alarm notification times, otherwise only one Wake-Up time can be set.	OFF ON	OFF
Easy 5 Wake Up Usage	If this value is set to ON, and New 5 Wake Up Usage is also set to ON, each station user can enter his/her wake up time without entering wake up type and wake up index.	OFF ON	OFF
Station VM Feature Usage	If this option is set to ON, Station VM feature (PGM 127) can be used. Enhanced features of the VSF/UVM can be disabled. Features controlled by this setting include as below: <ul style="list-style-type: none"> • Company Directory • Remote Announcement Recording • Administrator Mailbox • Distribution List • Mark a Message as Private, • Urgent or Delivery Confirmation • Record Greeting through CCR • Voice Mail Class of Service 	OFF ON	OFF
End code(#) usage in System Auth Code	If this option is set to ON, End code (#) must be entered when system Auth code is entered.	OFF ON	OFF
Remote VM Access	If this value is OFF, the user cannot access to VSF mailbox via DID, DISA CO call and so on (i.e. through CO line channel).	OFF ON	ON
Transfer Tone Usage	If this value is ON, Warning tone is served to the [transfer to] station. This is only applied to screened transfer case.	OFF ON	OFF
CID Password Usage	If this value is ON, a user must enter the CID password to modify an admin value about CID setting.	OFF ON	OFF

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LCR Dial Tone Detect	If this value is set to ON, the system first checks dial tone in case on analog CO Lines then LCR dialing is completed. If no dial tone is detected, the call is rerouted to Alternate DMT Index. If LCR type is set to M13, LCR dial tone detect option is not applied.	OFF ON	OFF
Mobile Phone Presence Service port	This is for an interface between eMG and external server that sends http/xml data. Currently the first usage of this port is 'mobile phone presence' service. If set to a valid port the presence service will be implemented and the system will await messages for presence from the external server.	00001~ 65535	00000
Mobile Phone Presence State Sync	When the system receives presence information for a mobile extension from external server, the system synchronizes the station's call state with this presence information. A busy presence will set the station to busy. OFF, DSS LED only, Station Status	Refer to description	Station Status
Mobile Phone Presence Force Idle Timer	The system will return a station's state to idle if there is no updated presence information from external server for the duration of this timer.	0~3600 (Sec.)	0
Attendant Password Usage	If this value is set to ON, system requests a password: When a user enters Attendant program ([PGM] + 0, When an Attendant enters Speed program, When a user assigns attendant program code ([PGM] + 0) to Flexible button,	OFF ON	OFF
Picked-up station name usage	Name of picked up station is display when pickup internal call.	OFF ON	OFF
Display LCR mode	Display "LCR MODE" when LCR is activated.	OFF ON	ON
VM Notify to Mobile Extension over CO	If this value is set to ON, an analog Loop Start CO Line can be used for the VM notification call to the Mobile Extension.	Disable Enable	Disable
MODEM Associated Station/CO line	When a call is received by the assigned CO Line, the call is routed to the system's built-in modem. This option is available only for eMG80/100& eMG800. eMG80/100: STA/239, eMG800: STA/ 2199	CO/STA	Refer to description
Display {MEET ME} Soft button	If this value is set to OFF, {MEET ME} soft button is not displayed during a paged.	OFF ON	ON
Number of CLI Wait List	The system check the status of each device with a polling message periodically using this timer.	0-255	0
Emergency Mailbox Station	When an Emergency Mailbox Station is assigned, an emergency call placed by a station is recorded automatically to the assigned mailbox.		

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
MSVC XML Port	The XML port used to support Web callback, call-through and iPECS ClickCall application for MSVC (Mobile Service) must be defined.	00001~ 65535	7878
Security (option for MSVC XML Port)	<p>It is security option for MSVC XML Port. (7878) If it is "TLS1.2" then system accepts only TLS 1.2. Other TLS1.1(or below) and SSL will be rejected. "Default" option is used for application compatibility as below.</p> <p><u>UCS version that can support TLS1.2:</u></p> <ul style="list-style-type: none"> • UCS Win Client: 6.1.5 • UCS Mac Client: 6.1.3 • UCS Android Client: 6.1.6 • UCS iOS Client: 6.1.3 <p><u>iPECS Click Call version that can support TLS1.2:</u></p> <ul style="list-style-type: none"> • 1.0Ar • 2.0Ac <p><u>Report plus, CCS that can support TLS1.2:</u> (TBD: it will be supported in 2019 Q2)</p> <p>So, if both UCS and report plus are used then "Default" should be used before new report plus/CCS package is released.</p>	DEFAULT TLS 1.2	DEFAULT
IPCR Announce for recording warning	When ON, the IPCR server Call Recording notification announcement is played to the caller in place of the warning tone.	OFF ON	OFF
IPCR Announce for only incoming	User can select IPCR Announce only when it's incoming by setting ON.	OFF ON	OFF
Mobile EXT CO Access Password Check	When a mobile extension places an external call using an iPECS CO/IP Line, the user may be required to enter a valid Authorization code to place the call.	OFF ON	OFF
Hold key usage on paging	When ON, the Hold key is used for paging.	OFF ON	ON
Device Info Request Interval	The system checks the status of each device with a polling message at intervals of this timer.	15 ~ 255 (seconds)	15
Dial By Name List	<p>The Dial by Name feature can allow stations in any ICM tenancy groups to call a station any in ICM Tenancy group. When desired, Dial by Name can be limited to function within allowed Tenancy calling groups, PGM 125.</p> <p>All, Accessible ICM Group only</p>	Refer to description	ALL

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Default Web Language	The user can select the display language used in the Web pages. Either English or the "Local" language can be selected. Note the "Local Language" must be entered in the Multi-Language file in Maintenance section. English, Local language	Refer to description	English
No Range Load Limit on Web Admin	OFF: Limited index range will be accepted (e.g. 1-100) ON: No limitation of table index (e.g. 221, 222, 270, etc)	OFF/ON	ON
Forward limitation by caller COS	Caller(internal station) call to a station offnet forwarded. It can be forwarded by caller COS if it's ON.	OFF/ON	OFF
No CLI Call Log	Leave system Call log even though there is no CLI information if it is ON. Otherwise Call log is not leaved.	OFF ON	OFF
Remote VM Forward Access	If the value is ON, Call Forwarding setting from remote access is enabled. If the value is OFF, Call Forwarding setting from remote access is disabled.	OFF ON	ON
DB Backup to USB monthly	System downloads the database to USB periodically. The user can access, copy and delete files in USB drive via web admin. So you can back up DB by choosing the specific date for	N/A, 1, 15	N/A
DB Backup to USB weekly	Monthly or Weekly. vUCP/eMG100 is not available for this feature.	N/A, Mon ~ Sun.	N/A
SLT Line Monitor	SLT line supervision is to be supported to check the line connection/disconnection periodically as programmed - daily or programmed time. When the line is disconnected, alarm call/message notification is provided to pre-defined destinations like other alarms. System will send e-mail notification according to "Common SMTP Attributes" and "Alarm Attributes". This is to provide more reliability for mission-critical services for hospitality or health care solutions (i.e. bath alarms using SLT line).	OFF ON	OFF
SLT Line Monitor	Conditions <ul style="list-style-type: none"> Normal SLT service is not available during detection period since the detection takes several seconds. Ringer test determines the presence of appropriate ringer terminations on the line. The measured impedance must be within the defined limits: 1.4 kΩ (5 REN) ~ 40 kΩ (0.175 REN). Otherwise the test fails, which means that normal SLT device can be detected, but if simple device which does not provide the proper ringer impedance is connected, then we cannot detect it properly. Supported system options: UCP/eMG80/100/800 with Unified 2.1 software Supported G/W & Boards: UCP-SLTM, UCP100 SLTU, eMG80/100/800 SLIB 	OFF ON	OFF

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SLT Line Monitor Time	The system monitors if SLT Line functions correctly at a preset time in this field.	0-23	0
UCS Ring ACK Count	UCS Client can be checked by Ring ACK Message. If the Ring ACK message is sent and get no ACK message, System set the state of UCS Client onOOS(Out of service) after the set of Ring ACK count. If the Ring ACK Count is 0, the UCS Client goes to OOS (Out Of Service) after 1 time. If the count is 2, UCS Client can goto OOS (Out Of Service) at 3 times. UCS Client is ringing before expiring the Ring ACK timer set on System Timers 'UCS Ring ACK Timer' and afterwards will hear Error tones.	0-9	0
Dial Back to Caller from Remote VM Access	A user accesses to voice mail from remote, the user can make a call to the caller of the voice mail like below. If 'Toll Free' is selected, the user can make a call to the caller of the voice mail.If 'toll check' is selected, Station COS will be applied.If 'Rejected' is selected, the user can't make a call to the caller of the voice mail. Toll Free, Toll Check, Rejected	Refer to description	Toll Free
Web Admin Login Failure count to block	For security, administrator can set the limited count to log in Web admin from 5 to 63.	5-63, 0(unused)	5
Web Admin Hacking Block Period	This setting time is the duration of blocking the access to Web admin if Web admin login fails.	5-60 minutes	5
Web Admin Hacking Block Email Notification	If this option is enable, System send the notification by email about blocking the web admin. The email address is following the below 'Alarm Receiver E-Mail Address(To) & Notification Receiver E-Mail Address(To)'.	Disable, Enable	Disable
RTP/SRTP SSRC filtering	It is used to remove noise by SSRC filtering. LIP phone could be lockup ifLIP-9002/9008/9008G version is lower than 1.2Aa when it is enable.	Disable, Enable	Disable
USB serialusage	It should be enabled when USB terminal is used. vUCP/eMG100 is not available for this feature.	Disable, Enable	Disable
Display Forward Reason	This option shows the forward reason and the original station number for external call on the upper part of LCD by setting ON.The related PGM are as below: <ul style="list-style-type: none"> The normal forward from Station to Station. The value 'Attendant' is checked in 'DID/DISA Destination (167)'. The type 'Attendant' is selected in 'CCR Table (228)'. 'Reroute Destination' is selected 'Station' in 'Flexible DID Conversion (231)'. 	OFF ON	OFF

SLT conference hook switch time	It is used to make conference call on SLT. User has to make hook flash two times within this time.	2 – 9	AUS,NZ: 3 Others: 2
IPDECT Message Server Port	This port is used to send/receive message with IPDECT. Setting must be changed in IPDECT Base.	0, 1024- 65535	0(Unused)
XSI Service Port	This port is used to search directory through Braodsoft XSI(Extended service interface) protocol Setting must be changed in IPDECT Base.	0, 1024- 65535	0(Unused, Web Reload)
ICM Hold Preference	Depression of the [Hold] button during ICM call places the call on the preferred hold, System or Exclusive.	System/ Exclusive	Exclusive
DTMF across the Page - Usage	This is for Telephone event of DTMF sending and ACK functionalit during a Page. DTMF functionalit flow : A Page caller can send DTMF to Paged end points. A Paged end point can send DTMF ACK to Page caller. The Page is stopped and a confirm tone or announcement is played to the Page caller.	Disable Enable	Disable
DTMF across the Page - DTMF ACK codes	DTMF ACK digit codes programmed for comparision.	[empty], 0- 9, *, #	[empty]
DTMF across the Page - DTMF ACK functionality	Selection of following action after receiving of DTMF ACK digit string.	No action, Disconnect Page followed by Confirm Tone, Disconnect Page followed by Announce ment	No action
DTMF across the Page - DTMF following Announcement	DVU Announcement number that is used for DTMF ACK following action.	[empty], 1- 200	[empty]
SMDR/ACD/Alarm Mail Attribute			
Common SMTP Attributes			
SMTP Server IP Address	SMTP server IPv4 address to receive the SMDR E-mail reports.	12-digits	0.0.0.0

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SMTP Server Domain Address	SMTP Mail server Domain address to receive the SMDR e-mail reports.Check DNS IP address setting.		
SMTP Port	This field defines the TCP/IP port that the system will employ when communicating with the SMTP E-mail server.(It is moved to web admin PGM 160-161)	1-65535	25
SMTP Security Connection	The system can support basic security policies when communicating with the SMTP E-mail server. Note the server must also be configured for the selected security protocol. No security, SSL, TLS	Refer to description	No security
E-Mail Account ID	This field defines the user's ID for SMTP server. If the user's ID and password is assigned, SMTP server will check the validity of the user ID and password.	Max.64characters	
E-Mail Account Password	This field defines the user's password for SMTP server. If the user's ID and password is assigned, SMTP Mail server will check the validity of user ID and password.	Max.64 characters	
Sender E-Mail Address (From)	E-Mail address used by the system as the "From" address when sending Database, SMDR, ACD, and Alarm reports.	Max.64characters	
Sender System Domain Name	Domain name of SMTP Mail server to receive SMDR reports. This field is used in place of SMTP Mail Server IP Address above.	Max. 18 characters	
Database Attributes [Send Mail]			
[Send Mail] button is used for sending the mail after filling out the below menu			
Database Mail Send Monthly Set	Sets day of month for Database to be sent on a monthly basis (NA for no monthly reports, select the day for 1 or 15).	NA/ 1/ 15	NA
Database Mail Send Weekly Set	Sets day of week to send Database weekly.	Day-of week	N/A
Database Type	Select the desired database type: All database, System speed, Station speed, LCR, etc.		All Database
Database Receiver Mail Address	E-mail address to receive the Database E-mail reports.	Max. 64 characters	
SMDR Attributes			
[Send Mail] button is used for sending the mail after filling out the below menu			
SMDR Mail Send Weekly Set	Sets day of week to send SMDR data weekly.	NA, Monday to Sunday	N/A
SMDR Mail Send Daily Set	Sets time-of-day for SMDR data to be sent on a daily basis (00 for no daily records, 01-23 for hour of the day).	00-23	
SMDR Mail Auto Send Set	If the SMDR buffer is full, the system can automatically send a notification by E-mail.	OFF ON	OFF

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SMDR Mail Auto Delete Set	Delete SMDR records after sending E-mail.	OFF ON	OFF
SMDR Receiver Mail Address	E-mail address to receive the ACD E-mail reports.	Max.64characters	
ACD Attributes			
[Send Mail] button is used for sending the mail after filling out the below menu			
ACD Mail Send Weekly Set	Sets day of week to send ACD statistic data weekly.	NA, Monday to Sunday	N/A
ACD Mail Send Daily Set	Sets time-of-day for ACD statistic data to be sent on a daily basis (00 for no daily records, 01-23 for hour of the day).	00-23	N/A
ACD Database Delete After Mail Send	Delete ACD statistic data after sending E-mail	OFF ON	OFF
ACD Receiver Mail Address	E-mail address to receive the ACD E-mail reports.	Max.64characters	
Alarm Attributes			
[Send Mail] button is used for sending the mail after filling out the below menu			
Alarm Receiver E-Mail Address(To) & Notification Receiver E-Mail Address(To)	The system will send email to saved E-Mail Address when system alarm is occurred or system restarts and UCP System sends the information by email when changing to ACT mode during Redundancy.	Max.64characters	
LDAP Server Settings			
Server Display Name	When the UCS Client requires access to an LDAP server, the system will provide the LDAP server information to the client. The server name is defined in this field.	15 characters	LDAP Server
Server IP	When an LDAP server is employed, the IP address of the server must be defined.		0.0.0.0
Server Port	When an LDAP server is employed, the TCP/IP port of the server must be defined.	0001-65535	
Require Login	The UCS Client ID and Password may be required for log in to the LDAP server.	OFF ON	ON
Use SSL	When supported by the server, the client can employ SSL (Secure Sockets Layer) for added security.	OFF ON	OFF
Search Base	Server base means Search option. You can get the search option from LDAP Server manager. For example, if OU (Organization Unit) is OC and DC (Directory Company) are ucapp and com, you can give the option "OU=OC, DC=ucapp, DC=com" in this field. You will get the desired directory.	Max. 100 characters	

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LDAP User ID	ID and Password must be required to connect to LDAP Server.	All characters	
LDAP User Password			
Resource Monitoring			
Resource monitoring is a software function to log the over usage events of some CPU resources. This function is implemented to find out the root cause of unwanted system reboot by high CPU load. The log data by resource monitoring is built in system DB file and checked by using maintenance CLI 'smblog view'.			
Resource Monitoring Process	This option determines whether to turn on/off a function.	OFF ON	OFF
Event Log Interval Time	This value specifies an interval time of event log when same event is detected consecutively. The purpose is to avoid CPU overhead from logging events frequently. A minimum value can be programmed is 10 seconds.	10-3600sec	60
Reboot on Detecting because of File Open Overflow	By software bug, file open leak problem can happen and user can't connect to web page or system can't work correctly if this type of leak happens, System will be rebooted if this field is configured to ON after log event.	OFF ON	OFF
Reboot on Detecting because of Memory Usage Overflow	The system will reboot by itself when memory over usage happens. Up to now this function is not implemented.	OFF ON	OFF
Free Memory Threshold	This value specifies a threshold value to detect memory leakage event.	KB, 1-65535	4096
Reboot on Detecting because of CPU Usage Overflow	The system will reboot by itself when CPU over usage happens. Up to now this function is not implemented.	OFF ON	OFF
CPU Usage Threshold	This value specifies the threshold value to detect CPU overusage event.		95
Reboot on Detecting because of Network Busy Traffic	The system will reboot by itself when a busy network usage (receiving side) happens. Up to now this function is not implemented.		OFF
Received Packet Count Threshold	This value specifies the threshold value to detect the busy Ethernet traffic (receiving side). The value is packets count per second.		40000
Received Octet Count Threshold	This value specifies the threshold value to detect the busy Ethernet traffic (receiving side). The value is bytes count per second. When both Packet and Octet count values are specified, packet count is used for detecting.		0

Table 4.4.5.1-1 SYSTEM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT

XSI Service Port	This port is used to search directory through Braodsoft XSI(Extended service interface) protocol Setting must be changed in IPDECT Base.	1024- 65535, 0(Unused)	

4.4.5.2 Config Encryption

Passphrase is used for DB encryption. If the value is set, the private data in your system will be encrypted. Therefore even if the files which include private data are leaked, they cannot be read. When you don't want to this encryption feature, you have to set the passphrase to blank.

Note that, before the encryption, it is better backup your DB for emergency case and remember the passphrase. Otherwise, you cannot decrypt the system DB.

If the passphrase is assigned, the system DB which includes private data will be encrypted.

If the passphrase is lost, you cannot change it or decrypted system DBs,

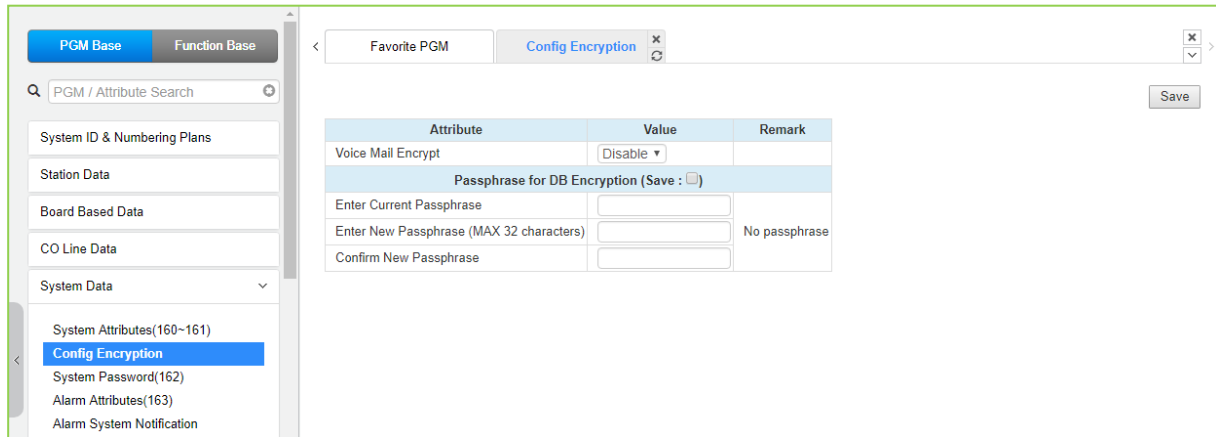

Figure 4.4.5.2-1 Config Encryption

Table 4.4.5.2-1 Config Encryption

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Voice Mail Encrypt	VM recording message (user message wait) is encrypted if it is ON. The e-mail attached file is not encrypted. so "Attach Message Option" in PGM127 should be OFF if user does not want to send un-encrypted recording file. ON: VM recording file is encrypted. OFF: VM recording file is not encrypted.	OFF ON	OFF
Passphrase for DB Encryption	System DB that has personal information is encrypted if Passphrase is assigned. It could not be changed if Passphrase is lost (there is no way to change/remove it)	max 32 characters	Not assigned

4.4.5.3 System Password - PGM 162

Selecting System Password will display the System Password data entry page. Use the check boxes to indicate which attributes to modify; data for checked attributes is stored for the Keypad Admin, Remote Access Password, or CID password when saved. Click **[Save]** button after changing Value.

It is important to use strong password for lowering overall risks of a security breach. The best way to choose good password are designed to make passwords less easily discovered by intelligent guessing.

Figure 4.4.5.3-1 System Password

Access to the system database and maintenance functions can be protected by passwords up to twelve (12) digits. Three passwords can be defined, Keypad Admin, Remote Access and CID.

Check the save box and enter the password and click the save button.

The following success message is displayed if the password is correct and saved successfully.

Figure 4.4.5.3-2 System Password

4.4.5.4 Alarm Attributes - PGM 163

Selecting Alarm Attributes will display the Alarm Attributes data entry page. Click **[Save]** button after changing Value.

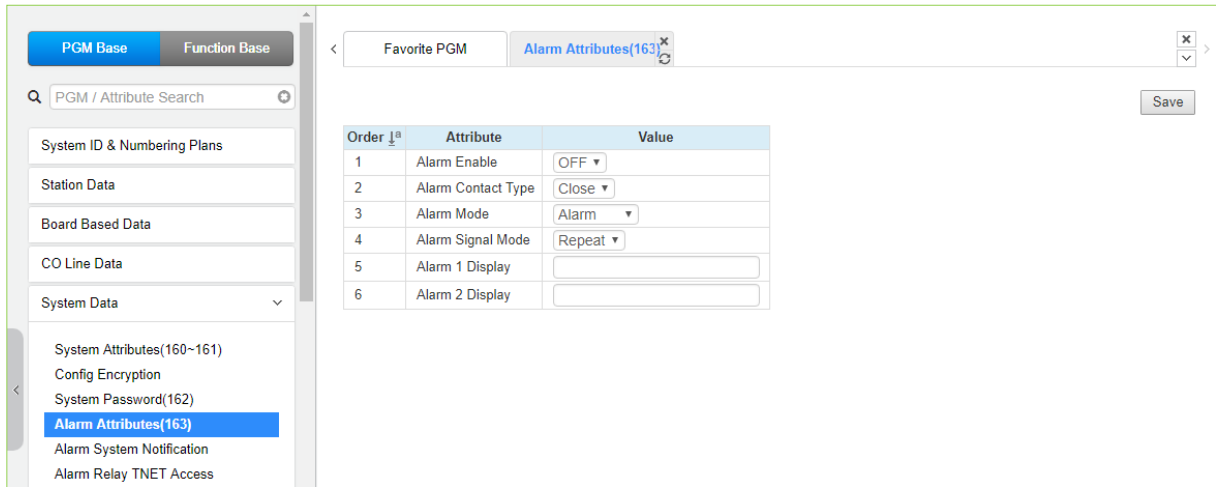

Figure 4.4.5.4-1 Alarm Attributes

The system can monitor an external contact. This contact is most often employed as an Alarm indicator or Doorbell. The Alarm attributes define the operation of the external contact. For the Alarm, the signal to assigned stations can be repeating or a single burst, the former is often desired. For the Doorbell, a single tone is sent each time the contact activates. Refer to Table 4.4.5.3-1 for a description of the features and the data entries required for each attribute.

Table 4.4.5.4-1 Alarm Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Alarm Enable	This entry enables/disables the contact monitoring circuitry.	OFF ON	OFF
Alarm Contact Type	This parameter establishes the contact state that will activate the Alarm, close or open.	Close/ Open	Close
Alarm Mode	The contact can be treated to function as a doorbell or an alarm.	Alarm/ Door-Bell	Alarm
Alarm Signal Mode	The assigned stations will receive a Repeating signal or single burst (Once) of alarm tone.	Repeat/ Once	Repeat
Alarm 1 Display	In case of eMG100/UCP600/2400, {Alarm 1 Display} and {Alarm 2 Display} are added. Otherwise, {Alarm Display} is added. When alarm port 1 is activated, the string of {Alarm 1 Display} or {Alarm Display} is displayed in assigned stations.		
Alarm 2 Display	When alarm port 2 is activated, the string of {Alarm 2 Display} is displayed in assigned stations.(eMG100/UCP600/2400)		

4.4.5.5 Alarm System Notification

Selecting Alarm Attributes will display the Alarm Notify Condition data entry page. Click [Save] button after changing Value. Alarm signal is provided to internal/external/e-mail/page.

System Notification	
Emergency Call Notify	This entry enables/disables the Emergency call notification.
DCOB Fault Notify	This entry enables/disables DCOB Fault notification.
SIP Registration Fault Notify	This entry enables/disables SIP Registration Fault notification.
Station Capacity Full Notify	This entry enables user to get the notification as alarm when Station Capacity is over the capacity.
CO Capacity Full Notify	This entry enables user to get the notification as alarm when CO Capacity is over the capacity.
SMDR Full Notify	This entry enables user to get the notification as alarm when SMDR is over the capacity.
VM Memory Full Notify	This entry enables user to get the notification as alarm when the memory of Voice Mail is full.
WTIM (WTIB) Base Fault Notify	This entry enables user to get the notification as alarm when WTIM (WTIB) base gets the fault.
WTIM (WTIB) Chain Fault Notify	This entry enables user to get the notification as alarm when WTIM (WTIB) chain gets the fault.
I SMDR Full Notify	This entry enables user to get the notification as alarm when I SMDR is over the capacity.
Cabinet Fault Notify	This entry enables user to get the notification as alarm when the cabinet has fault only for eMG800 & UCP.
Bar Full Notify	This entry enables user to get the notification as alarm when Bar is full.
IPCR Fault Notify	This entry enables user to get the notification as alarm when IPCR gets the fault.
IP Watch Fault Notify	This entry enables user to get the notification as alarm when IP Watch has fault only for eMG800 & UCP.
Bath Alarm Notify	This entry enables user to get the notification as alarm about Bath Alarm.
Temp activation of all license Expiry Notify	This entry enables user to get the notification as alarm before Temp activation of all license expires.
Maintenance Expire Notify	This entry enables user to get the notification as alarm before Maintenance license expires.
Excessive Registration over license Notify	This entry enables user to get the notification as alarm in case of the excessive registration over License.
Geo-Slave/Survival Mode (T-NET LCM) Expire Notify	This entry enables user to get the notification as alarm before Geographical slave/Survival mode (T-NET LCM) license expires.
TAPI Disconnected Notify	This entry enables user to get the notification as alarm when TAPI is disconnected.
Mitel PMS Link Down Notify	This entry enables user to get the notification as alarm when Mitel PMS links down.
UCS Server Link Down	UCS Server is disconnected
PUSH Server Link Down	PUSH Server is disconnected
System Act on Slave	Alarm Notification on CPU Redundancy is Act on Slave UCP <ul style="list-style-type: none"> • Slave/Act - Slave UCP Activated : Alarm and Email • Master/Act - Master UCP Activated : Email

WEB API SMDR Full	This entry enables user to get the notification as alarm when WEB API SMDR is over the capacity.
Timeslot Full	This entry enables user to get the notification as alarm when timeslot is full on eMG800.

Below alarm notify condition can be set for each alarm type.

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Internal Noti. Alarm Ring	Alarm ring to alarm ring enabled stations. Alarm enabled stations : system-attendant, Alarm / Door Bell Enabled Stations, Emergency Call Notification Stations, DCOB Fault Notify Station , Stations who have Alarm Ring Coverage button(s) Alarm coverage button assignment: [Trans/PGM] + Flex button + 76 + ## + Alarm Type(0-22) Alarm Type : All(0), Emergency(1), DCO Fault(2), SIP Reg Fail(3), BATH(4), DOOR-Bell(5), Alarm-Bell(6), Station Overflow(7),CO Overflow(8), SMDR(9), VM FULL(10), WTIM Base fail(11), WTIM Chain fail(12), I-SMDR full(13), CABINET alarm(14), BAR full(15), IPCR fault(16), IPWATCH fail(17), Temp License Expire(18), License Expire(19), License Overflow(20),TNET License Expire(21), TAPI fail(22), PMS fail(23)	ON/OFF	ON
Internal Noti. Alarm Ring	To stop an alarm: alarm stop is supported only by alarm ringing station or external called party after answer. So, at least one of station for alarm internal ring needed to be assigned and "Internal Noti. Alarm Ring = ON" is strongly suggested currently <ul style="list-style-type: none"> • By dial "alarm reset" code on a station who has the alarm ring • By press "stop" soft button on a station who has the alarm ring • By press "alarm coverage" button and select '1(me)/0(all)' on a station who has the alarm ring • By dial [alarm reset code] by external party after answer the alarm ring 	ON/OFF	ON
Internal Noti.Annc No.	Play & Repeat VSF announcement when a station answers an alarm-to-internal ring. 0(not assign), 1-200	Refer to description	0
External Noti. Annc No.	Play & Repeat VSF announcement when an external party answers an alarm-to-external ring Even without a valid announcement, external ring is implemented. 0(not assign), 1-200	Refer to description	0
External Noti. Initial Delay	Duration of delay before external ring starts 0(immediate), 1-3600 sec	Refer to description	0

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
External Noti. Cancel at Answer	Option to cancel simultaneous ring or cancel on-going failover scenario when an external party answers the alarm ring <ul style="list-style-type: none"> Do not Cancel Other Trying Calls: leave all of on-going ring or retrying calls Cancel All Other Trying Calls: cancel all of on-going ring or retrying calls except answered calls Cancel All Except Prior Trying: cancel all except on-going ring or retrying calls in prior Priority and answered calls 	Refer to description	Cancel all other trying calls
External Noti.Next Prio. On Failover	Option for condition to start of failover scenario to next priority (from 0 to 9) <ul style="list-style-type: none"> Immediately Go To Next: immediately implement next(less) priority at first busy/error/unanswered status of previous(prior) calls After Retry All Counts: implement next(less) priority after previous(prior) calls are all (re)tried and stopped by failure(busy/error/unanswered). 	Refer to description	Immediate ly go to next
External Noti.Next Prio. On Answer	Normally failover scenario is not implemented anymore if anybody answers the alarm ring. But if this timer is set(1-3600 sec.) then failover scenario is started/resumed after this duration even after somebody answers the alarm ring. 0(immediate), 1-3600 sec	Refer to description	0
Page Noti. Annc No.	Play & Repeat VSF announcement to page group(s) Without a valid announcement, paging is not implemented 0(not assign), 1-200	Refer to description	0
Page Noti. Initial Delay	Duration of delay before paging starts 0(immediate), 1-3600 sec	Refer to description	0
Page Noti. Page Urgency Level	'0' is highest and '255' is lowest level Privilege to override other on-going page Case 1) page group busy - If page group is occupied by other paging, higher level page will override the lower page, so the previous on-going page will be stopped Case 2) page member busy - If a station is receiving a lower paging then it is overridden by a higher level paging, so the station will hear new paging Emergency, SoS pages are fixed to level '0' Normal page are fixed to level '255' Alarm page are programmable from level '0' to '255'	0-255	0
Page Noti. Override By Urgency	Override paging call only or override all calls. Override paged call only/ Override all calls	Refer to description	Override paged call only
Page Noti. Override DND	Override DND/Pre-selected-msg. status of a station	ON/OFF	OFF
Page Noti. Page Repeat Count	Repeat count of paging Total Play count : default(1) + repeat count(0-99)	0-99	2

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Page Noti. Page Repeat Interval	Interval of paging repeat	0-255	10
Page Noti. Annc Repeat Count	Repeat count play announce per one repeat of paging Total Play count : default(1) + repeat count(0-99)	0-99	2
Page Noti. Next Prio. on Failover	Option for condition to start of failover scenario to next priority (from 0 to 39) <ul style="list-style-type: none"> Immediately Go To Next: immediately implement next(less) priority at first busy status of previous(prior) paging After Retry All Counts: implement next(less) priority after previous(prior) paging are all (re)tried and stopped by failure(busy) 	Refer to description	Immediate ly go to next
Page Noti. Next Prio. after Page	Normally failover scenario is not implemented anymore if a page to a group is played to external page or listened by at least one station internally. But if this timer is set(1-3600 sec.) then failover scenario is started/resumed after this duration even after paging is done successfully. 0(immediate), 1-3600 sec	Refer to description	0

4.4.5.6 Alarm Relay TNET Access

Selecting Alarm – External Relay Control will display the following page. Click **[Save]** button after changing Value.

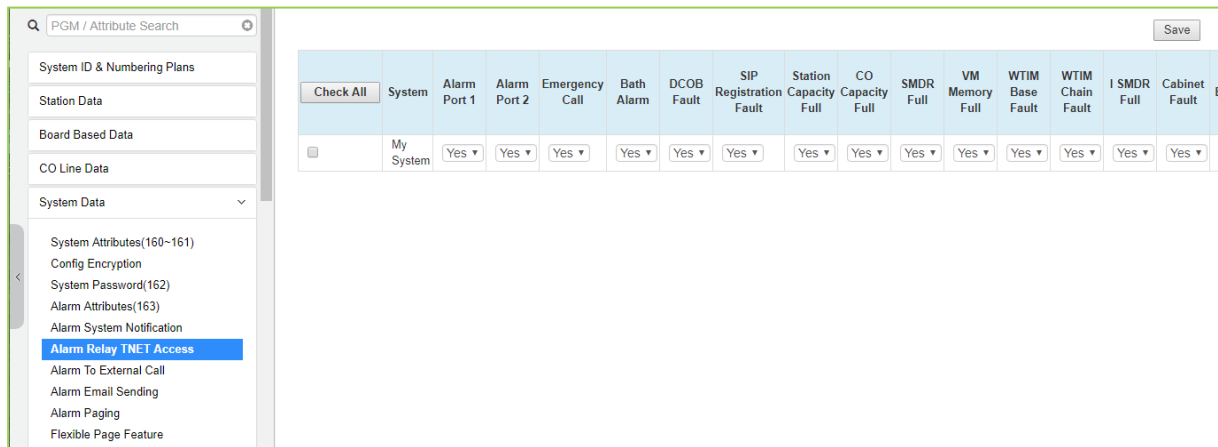

Figure 4.4.5.6-1 Alarm Relay TNET Access

By associating an alarm type with an external relay port, system can control an external circuit connected to the relay. The association will create a hardwired signaling externally when an alarm condition is initiated.

Operation

- 1) Assign Target system of T-NET including my system.<Alarm – External Relay Control>

	Alarm Port1	Alarm Port2	Emergency Call	DCO Fault	...
My System	On/Off	On/Off	On/Off	On/Off	On/Off
CM	On/Off	On/Off	On/Off	On/Off	On/Off
LM 1	On/Off	On/Off	On/Off	On/Off	On/Off
LM 2	...				
LM 3					

- 2) Set usage to 'Alarm' for external control contact port(s) and mark alarm types for association.<External Control Contacts (168)><T-NET Control Contact (334)>

External Control Contact	Usage
First	(x) Unused (x) LBC (x) Door Open (x) External Control Device 1 (x) External Control Device 2 (O) Alarm [Mark] Alarm Port 1, Alarm Port 2 911, DCO, SIO, STA, CO,STA, CO, ...

4.4.5.10 Flexible Page Feature

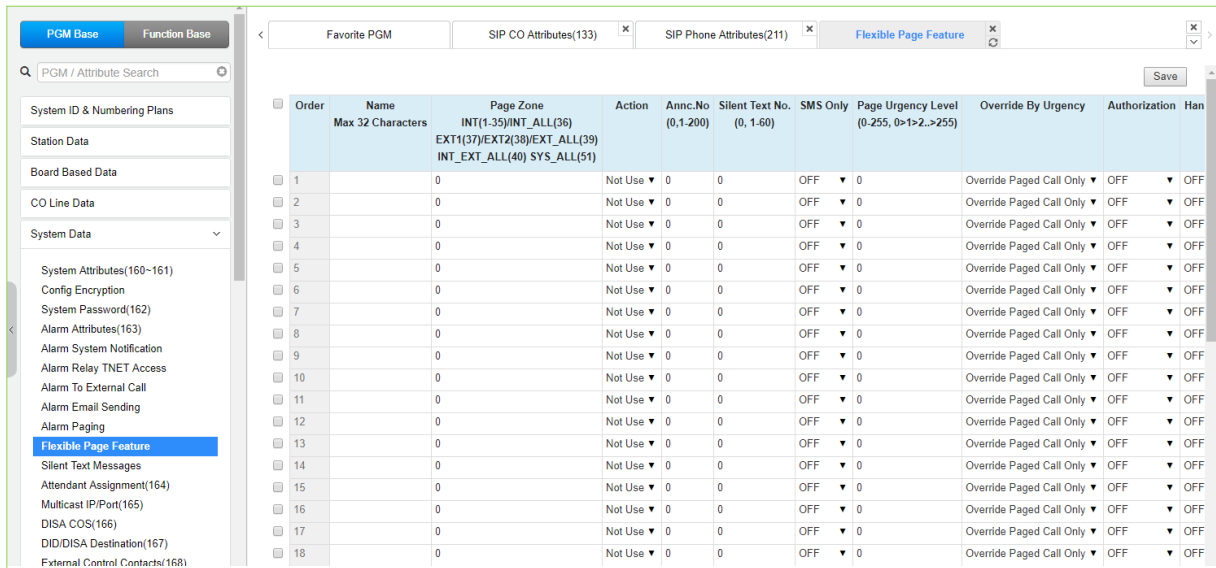

Figure 4.4.5.10-1 Flexible Page Feature

Table 4.4.5.10-1 Flexible Page Feature

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Name	Subject (Identity) of the Page that is used for display of Paging on paged station.	Max.32 character	
Page zone	Page zone is page group number. It is mandatory attributes to be a valid page code. Range of each System as below <ul style="list-style-type: none"> eMG80/100: INT(1-35) / INT_ALL(36) / EXT1(37) / EXT2(38) / EXT_ALL(39) / INT_EXT_ALL(40) / SYS_ALL(51) eMG800/UCP: INT(1-100) / INT_ALL(101) / EXT1(102) / EXT2(103) / EXT_ALL(104) / INT_EXT_ALL(105) / SYS_ALL(106) 	0 (not assign)/ Refer to the Description	0
Action	Action is page source. It is mandatory attributes to be a valid page code. Not Use, Live Voice, Announce Play, Silent Message	Refer to the Description	Not Use
Annc. No	It is announcement play related attribute. Annc. No is system announcement # recorded.	0,1-200	0
Silent Text No.	It is silent message related attributes. Silent Text No. is index # of silent text messages.	0,1-60	0
SMS Only	It is silent message related attributes. It sends both of Paging and SMS or send SMS only.	OFF ON	OFF
Maintain Text Display	It is used to maintain display of silent text paged forever till meet any of user's physical action.	OFF ON	OFF
Page Urgency Level	It is common attributes. Page Urgency Level is resolution for conflict of page zone # between on-going pages and making page with higher level urgency overrides on-going page with lower level urgency.	0-255 0 is highest	0

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Override By Urgency	It is common attributes and emergency oriented attribute. Override Paged Call Only, Override All Call Only	Refer to the Description	Override Paged Call Only
Authorization	It is common attributes. It ask station password before paging.	OFF ON	OFF
Hands Free	It is live voice related attributes. It asks handset off-hook before paging.	OFF ON	OFF
Page Repeat Count	It is announce play related attributes. How many times to repeat the announce page.	0-99	0
Page Repeat Interval	It is announce play related attributes. Pause interval between the page repeat counting.	5-255(sec)	5
Annc. Repeat Count	It is announce play related attributes. How many times to repeat play of announcement at one repeat of announce page.	0-99	0
Do Not Prompt Paging EXT	It is used to do not play "extension XXX" in front of a flexible announce play pageprompt.	OFF ON	OFF
ANNC Play Start Delay	A safety time to give a wait for voice path connection between devices before start of playing announcement. This is used to guard full audible playing of announcement. If you need immediate start of playing announcement right after user input then set this time to '0'.	0-5(sec)	3

4.4.5.11 Silent Text Messages

Pre-defined silent text messages to serve by SMS sending when user conduct a Silent Paging.
60 messages in System Data > Silent Text Messages.

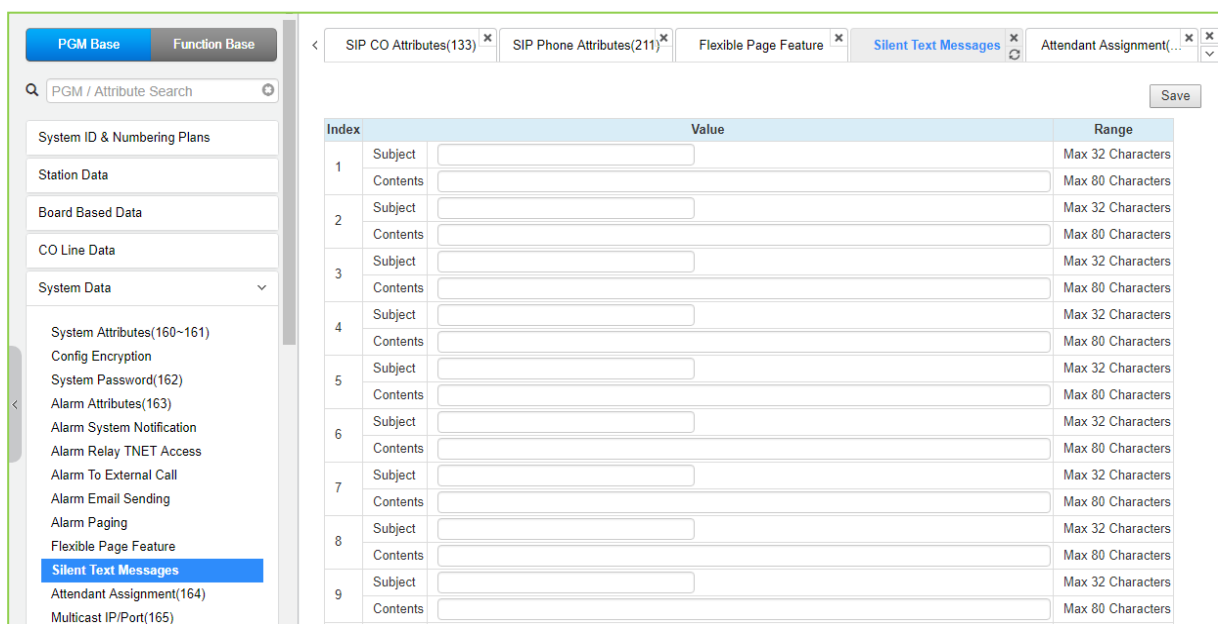

Figure 4.4.5.11-1 Silent Text Messages

Table 4.4.5.11-1 Silent Text Messages

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Subject	Normally, just dummy(not used). Backup for 'Name' of Page (Used instead of 'Name' of the Flexible Page if it is empty). Backup for 'Contents' (Used instead of 'Contents' of a Silent Text message if it is empty).	Max. 32 character	
Contents	Used for SMS message.	Max. 80 character	

4.4.5.12 Attendant Assignment - PGM 164

Selecting Attendant Assignment will display the Attendant Assignment data entry page. Click **[Save]** button after changing Value.

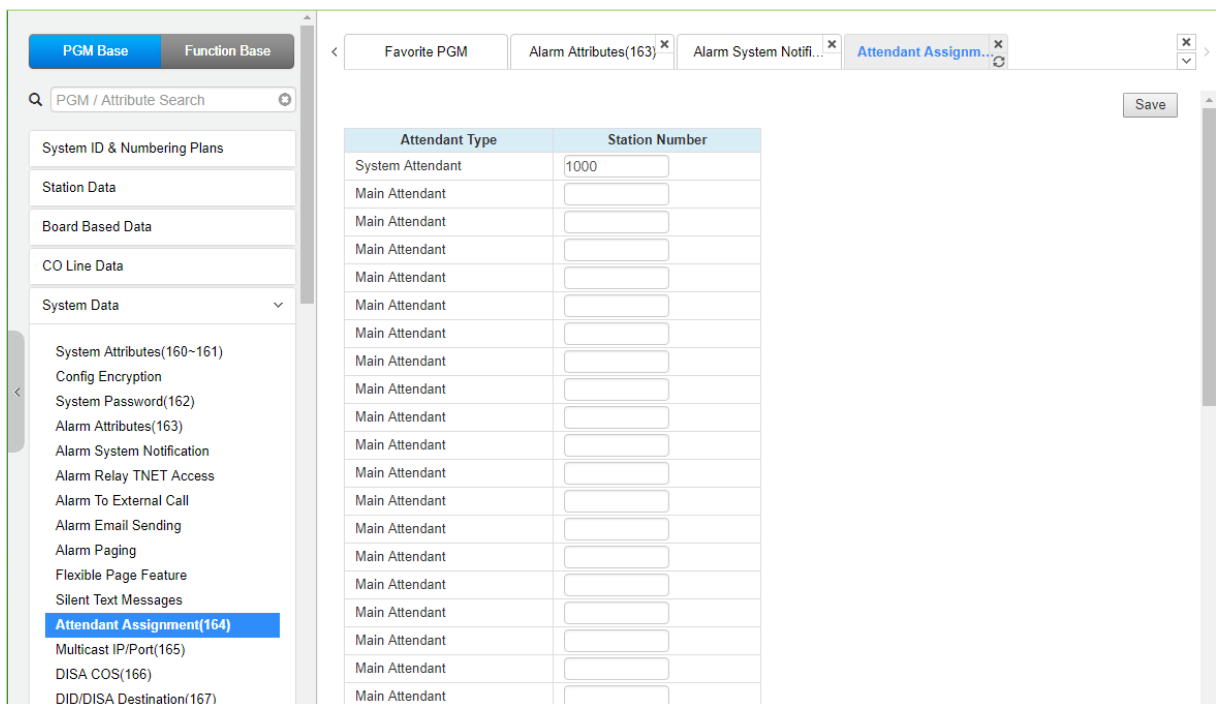

Figure 4.4.5.12-1 Attendant Assignment

The eMG80/100 is consist of 1 System attendant and 3 Main attendant. eMG800 is consist of 1 System attendant and 4 Main attendant. UCP is consist of 1 System attendant and 49 Main attendant.

The System Attendant has higher priority in call handling and system management functions. As a default, the System Attendant is assigned Station 100 for eMG80/100& Station 1000 for eMG800/UCP. Main Attendants are not assigned by default.

4.4.5.13 Multi-cast IP/Port - PGM 165

Selecting Multi-cast IP/Port will display the Multi-cast IP/Port data entry page. Click **[Save]** button after changing Value.

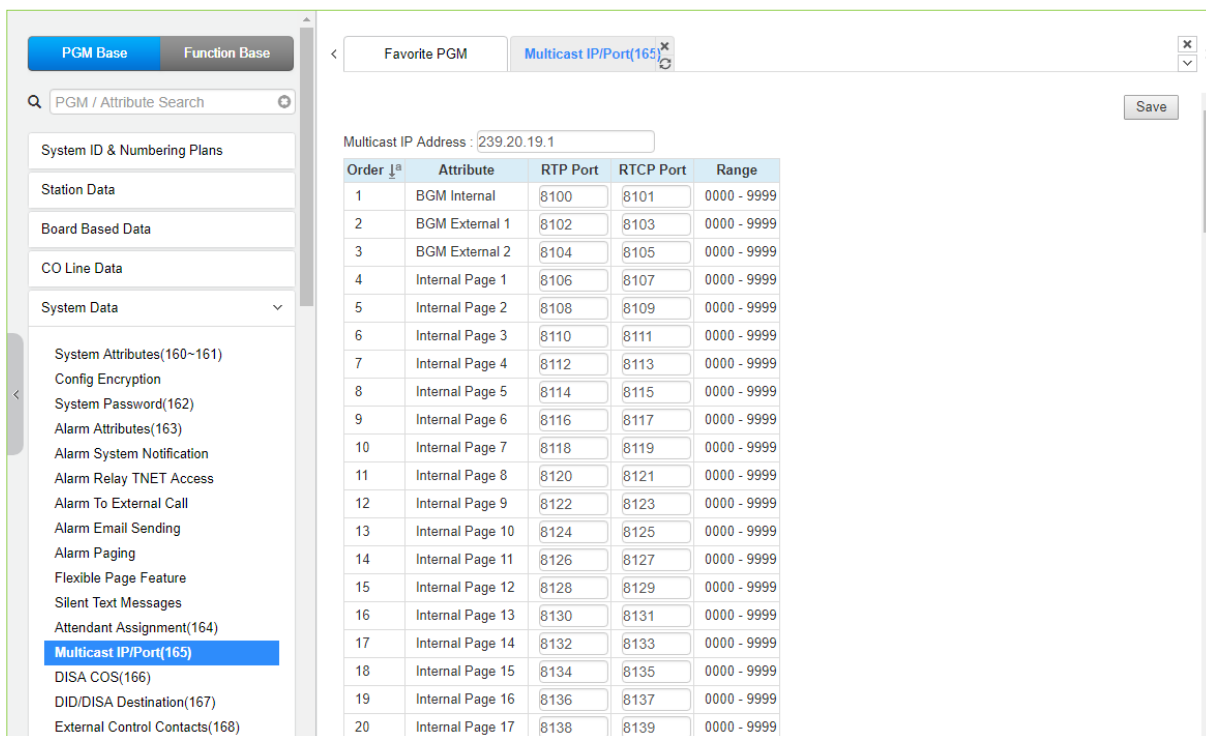

Figure 4.4.5.13-1 Multi-cast IP/Port

Multi-cast is employed by the system to send BGM, MOH, paging and Push-To-Talk packets.

Employing a single multi-cast packet reduces the overall LAN traffic. In some cases, specifically when multiple systems are connected to the same default gateway (router) it may be advantageous to define different IP ports for each system.

2	Error Destination	<input checked="" type="radio"/> Tone <input type="radio"/> Attendant (Ring Assign) <input type="radio"/> Station Group <input type="text"/> <input type="radio"/> VSF Announcement <input type="text"/>
3	No Answer Destination	<input checked="" type="radio"/> Tone <input type="radio"/> Attendant (Ring Assign) <input type="radio"/> Station Group <input type="text"/> <input type="radio"/> VSF Announcement <input type="text"/>
4	DND Destination	<input checked="" type="radio"/> Tone <input type="radio"/> Attendant (Ring Assign) <input type="radio"/> Station Group <input type="text"/> <input type="radio"/> VSF Announcement <input type="text"/>
5	VSF Prompt Usage	Busy Prompt Usage <input type="text" value="OFF"/> Error Prompt Usage <input type="text" value="OFF"/> Dnd Prompt Usage <input type="text" value="OFF"/> No Ans Prompt Usage <input type="text" value="OFF"/> Atd Xfer Prompt Usage <input type="text" value="OFF"/>

Figure 4.4.5.15-1 DID/DISA Destination

When a DID line or DISA user dials an invalid/vacant or busy station number the caller will be sent to the assigned destination that is selected according to the CO Tenancy group of the DID/DISA line.

The destination is separately defined for invalid, busy, and No Answer conditions and can be defined as the Attendant, busy tone, a Station Group or a VSF Announcement.

For calls on a DID line to a busy station, DID Call Wait can be assigned, refer to 'Common Attributes section', and the call will queue for the station for the No-Answer time. After the No-answer time, the call routes to the DID/DISA Destination unless forwarded.

Also, for DID calls only, announcements (prompts) can be sent from the VSF or UVM gateway (in case of UCP) to the caller for various conditions, busy, error, DND, No Answer, or Attendant Transfer.

4.4.5.16 External Control Contacts - PGM 168

Selecting External Control Contacts will display the External Control Contact data entry page. Click **[Save]** button after changing Value.

The number of External Control Contact: 2 (eMG80/100), 2 (eMG800), 4 (eMG100/UCP)

The vUCP is not available for this feature.

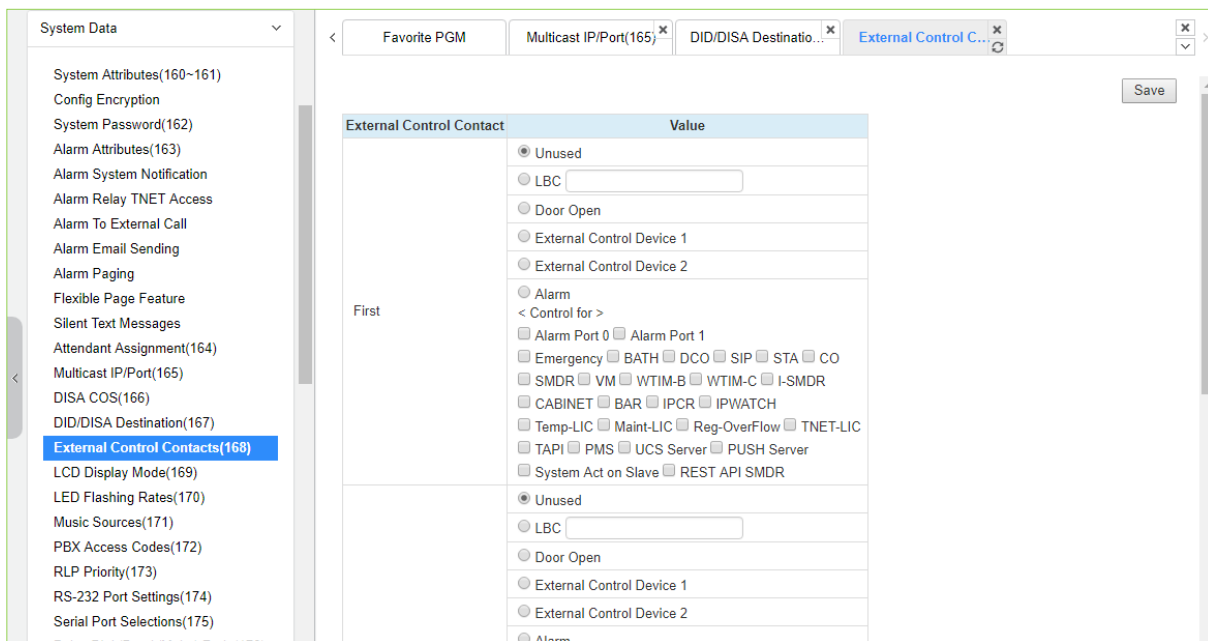

Figure 4.4.5.16-1 External Control Contact

The system includes a programmable contact, which can be used to control external devices. Refer to the table 'System capacity' for number of available contacts. Each contact is assigned to activate under one of several conditions. As a Loud Bell Contact (LBC), the contact will activate when the assigned station or group receives an external call. For LBC, when the system is in the Night or Timed Ring mode, the contact will activate for incoming UNA (Universal Night Answer) calls and will ignore any station assignment. The contact may alternatively activate as a Door Lock Release contact, when External Page Zone 1 is accessed or when External Page Zone 2 is accessed.

In case of setting Alarm, you can select the desired alarm type each contacts.

4.4.5.17 LCD Display Mode - PGM 169

Selecting LCD Display Mode will display the data entry page. Click **[Save]** button after changing Value.

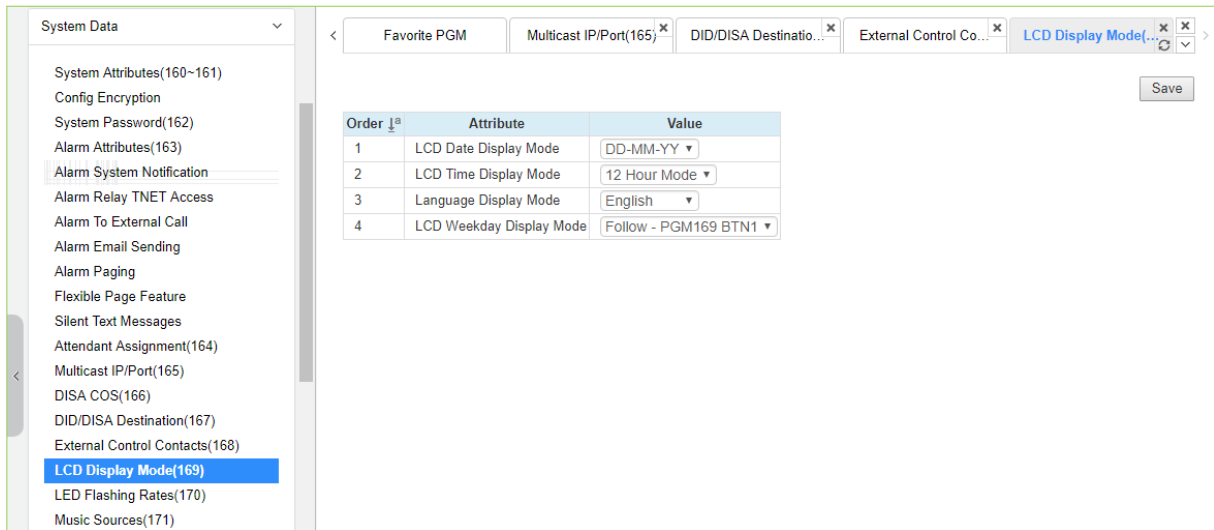

Figure 4.4.5.17-1 LCD Display Mode

The LCD display mode sets the time (12/24 hr.), date (day/month order) and language. Refer to Table 4.4.5.10-1 and Table 4.4.5.10-2 for a description of the modes and the data entries required.

Table 4.4.5.17-1 LCD DISPLAY MODES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LCD Date Display Mode	Sets the Date display as month/day or day/month. DD-MM-YY, MM-DD-YY	Refer to description	DD-MM-YY
LCD Time Display Mode	Sets the Time display mode as 12 hour or 24-hour (military) time. 12 Hour Mode, 24 Hour Mode	Refer to description	12 Hour Mode
Language Display Mode	Sets the Language used in the display; refer to Table 4.4.5.10-2 below.		English
LCD Weekday Display Mode	Sets the Day-of-Week (DoW) display mode: No DoW display mm/dd/DoW, alpha month display, overrides setting of button 1 above. display mm/dd/DoW, numeric month display, overrides setting of button 1 above. <ul style="list-style-type: none"> Follow - PGM169 BTN1 Type1(MM/DD WDY) Type2(MM DD WDY) 	Refer to description	Follow - PGM169 BTN1

4.4.5.19 Music Sources - PGM 171

Selecting Music Sources will display the Music Sources data entry page. Click **[Save]** button after changing Value.

The vUCP is not available for this feature.

Order	Attribute	Value
A Basic Attributes		
1	BGM Type	Internal/External Music 1
2	MOH Type	Internal/External Music 1
3	Internal/External Music	Internal Music
4	Internal Music Type	First
B SLT MOH TYPE Station Number		
1	SLT MOH 1	
2	SLT MOH 2	
3	SLT MOH 3	
4	SLT MOH 4	
5	SLT MOH 5	
C EXT VSF MOH ASSIGN VSF Number		
1	VSF MOH 2	(1 - 200)
2	VSF MOH 3	(1 - 200)

Figure 4.4.5.19-1 Music Sources

Music inputs are provided for use as the Background Music and/or Music-On-Hold source inputs. Up to thirty VSF announcements may be recorded and played as MOH to the connected caller. The “VSF MOH” selection employs System announcement number 201, and for the VSF MOH 2~30 selections, any unused announcement can be employed. In addition, up to five SLT ports may be used as MOH to the held caller.

4.4.5.20 PBX Access Codes - PGM 172

Selecting PBX Access Codes will display the PBX Access Codes data entry page. Click **[Save]** button after changing Value.

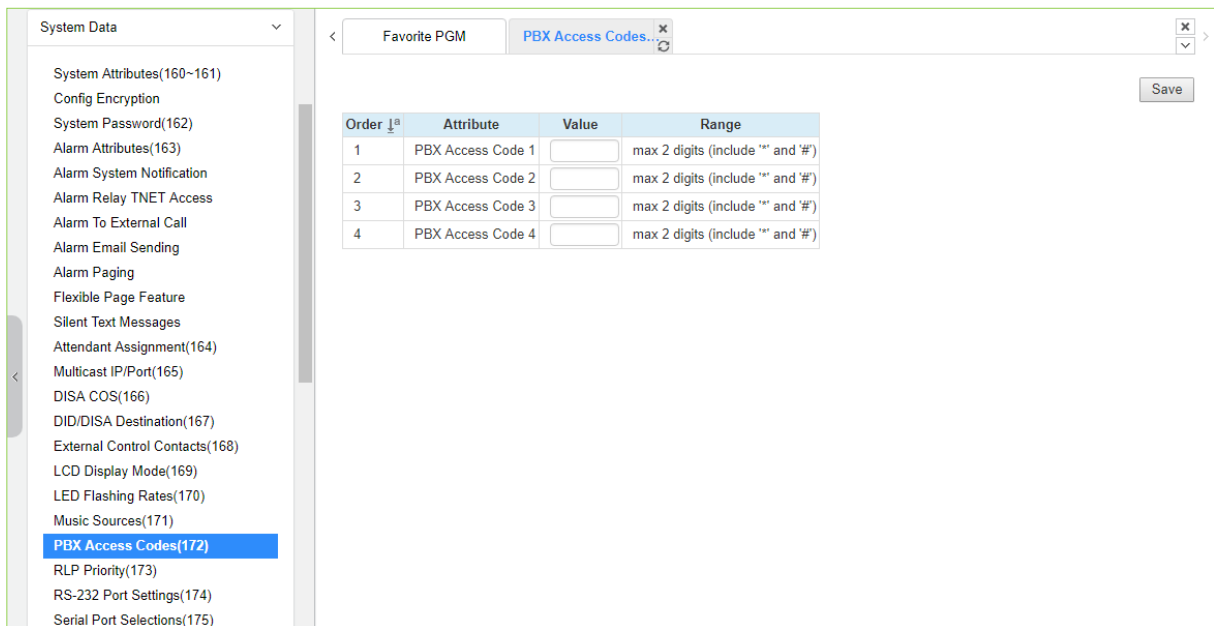

Figure 4.4.5.20-1 PBX Access Codes

When the system is used “behind” a PBX/CTX, the system needs to recognize the PBX/CTX Trunk access codes to implement proper dialing restriction, tone detection sequences and Flash timing. A maximum of four (4) Trunk Access Codes of one (1) or two (2) digits can be entered.

4.4.5.21 Ringing Line Preference Priority - PGM 173

Selecting Ring Line Preference Priority will display the Ringing Line Preference Priority data entry page. Click **[Save]** button after changing Value.

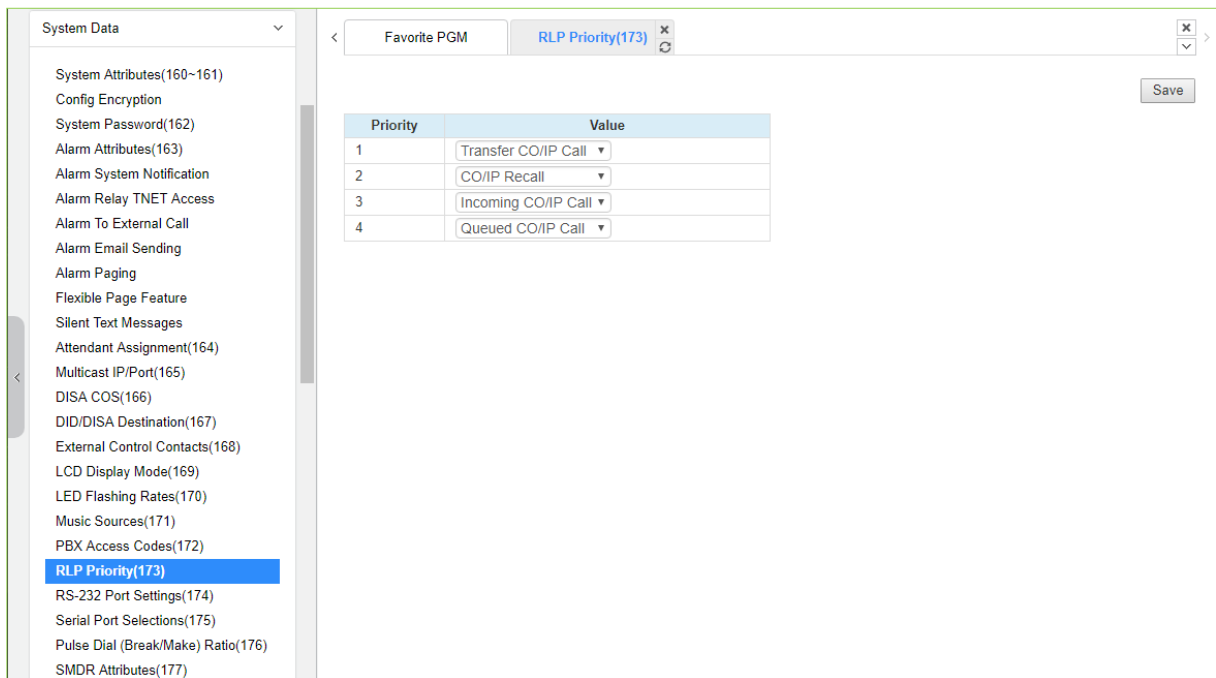

Figure 4.4.5.21-1 Ringing Line Preference Priority

When multiple calls are ringing at the same time to a station assigned Ringing Line Preference, the order of preference is based on the type of call: CO/IP Transfer, CO/IP Recall, Incoming call, CO/IP Queue. A queued CO/IP call is always assigned the lowest priority.

4.4.5.22 RS-232 Port Settings - PGM 174

Selecting RS-232 Port and USB 1&2 port Settings will display the RS-232 Port and USB 1&2 port Settings data entry page. Click **[Save]** button after changing Value.

The vUCP is not available for this feature.

eMG100 does not support USB serial feature.

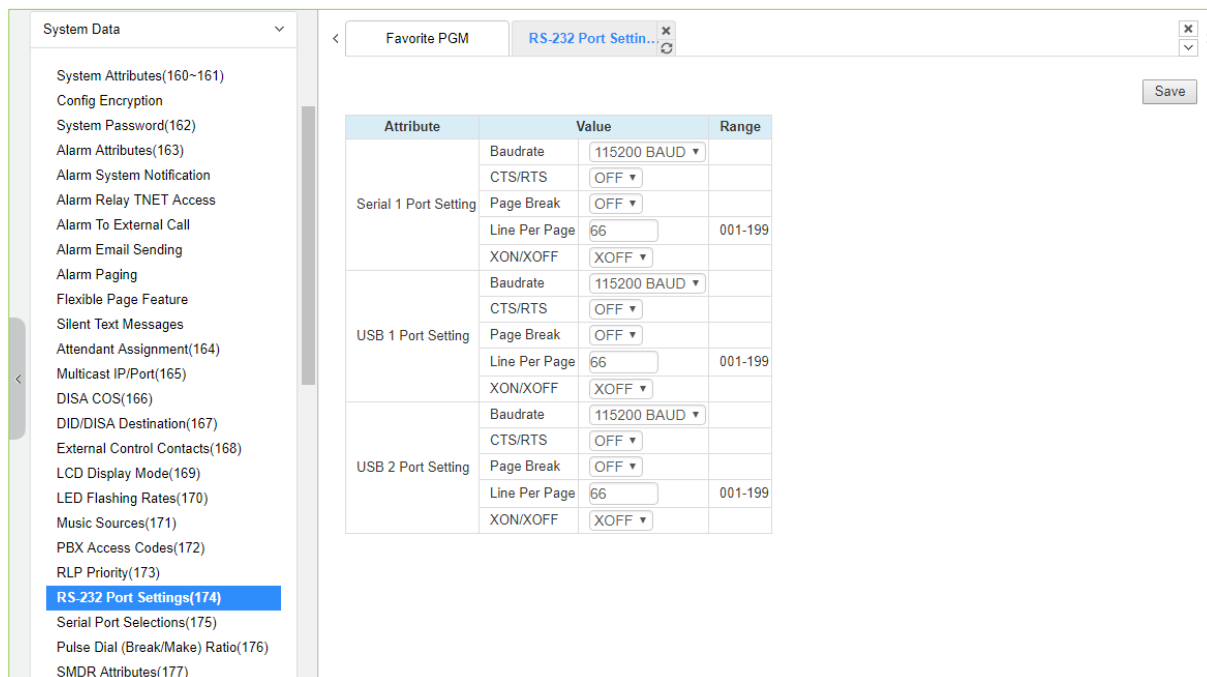

Figure 4.4.5.22-1 RS232 Port and USB 1&2 port Settings

Certain characteristics of each port are programmable including baud rate, RS 232 control, and page settings. Refer to the following table for a description of the settings and the data entries available.

Table 4.4.5.22-1 RS232 PORT and USB 1&2 port Settings

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Baud Rate	This entry establishes the BAUD rate for the RS-232 serial port. Unknown, 9600, 19200, 38400, 57600, 115200	Refer to description	115200
CTS/RTS	The system's RS232 port can support Clear-to-Send (CTS) and Ready-to-Send (RTS), control leads.	OFF ON	OFF
Page Break	The system can send a page break command over the serial port at the end of each page. See Lines per Page below for page length set-up.	OFF ON	OFF
Line Per Page	This entry sets the page length, the number of lines the system will send before sending the page break.	001~199	66
XON/XOFF	This entry enables/disables XON/XOFF protocol.	XON/ XOFF	XOFF

4.4.5.23 Serial Port Selections - PGM 175

Selecting Serial Port Selections will display the Serial Port Selections data entry page. For each function select the desired output using the drop-down menu and, if a TCP channel is assigned, enter the TCP port. Click **[Save]** button after changing Value.

The vUCP is not available for this feature.

Order	Attribute	Value	TCP PORT (Peer IP Address)
1	Off-line SMDR/Statistics Print	Serial Port 1	NULL
2	ADMIN Data Print	Serial Port 1	NULL
3	Traffic Print	Serial Port 1	NULL
4	SMDI Print	Serial Port 1	NULL
5	Call Information Print	Serial Port 1	NULL
6	On-line SMDR Print	Serial Port 1	NULL
7	Trace Print	Serial Port 1	NULL
8	Debug Print	Serial Port 1	NULL
9	ACD Manager Print	Serial Port 1	NULL
10	SMDR Interface Data Print	Null	NULL

Figure 4.4.5.23-1 Serial Port Selections

The system has six (6) serial ports (1 RS232, 3 TCP Channels and 2 USB serial). A serial port is assigned to each function that requires a serial output.

4.4.5.24 Pulse Dial (Break/Make) Ratio - PGM 176

Selecting Pulse Dial (Break/Make) Ratio will display the Break/Make Ratio data entry page. Click **[Save]** button after changing Value.

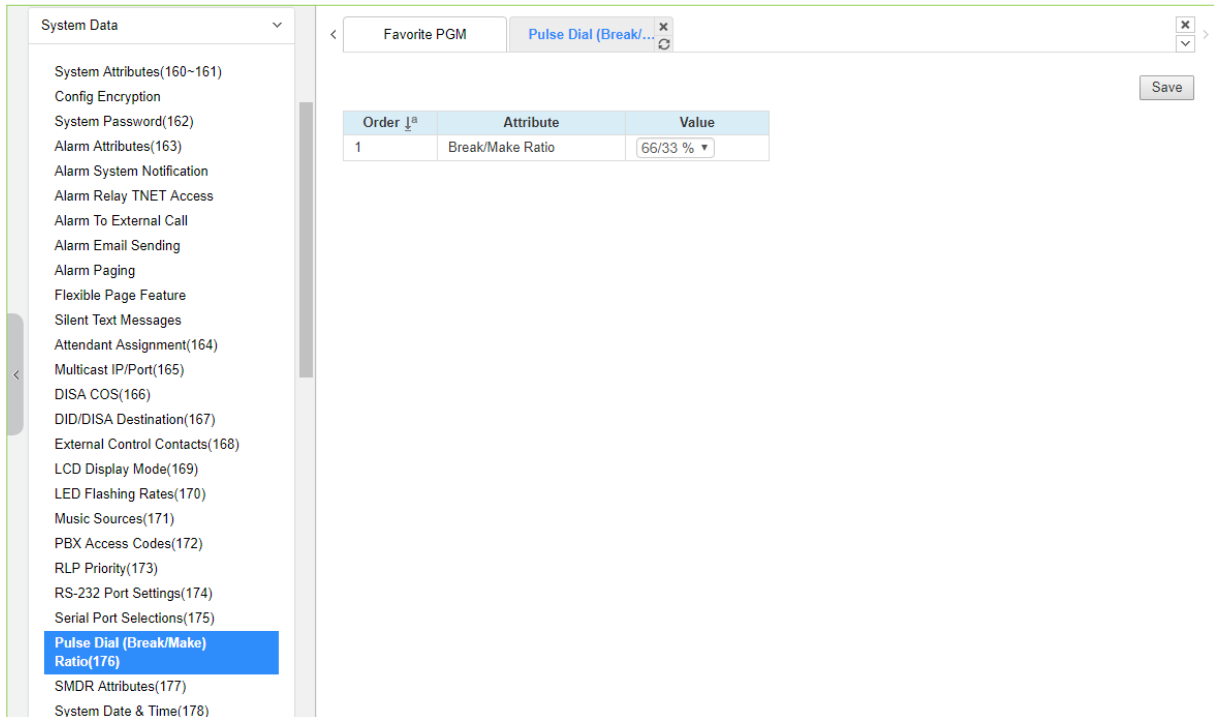

Figure 4.4.5.24-1 Break/Make Ratio

For Pulse dial CO Lines, the system supports 10pps and break/make ratios of 60/40% or 66/33%.

4.4.5.25 SMDR Attributes - PGM 177

Selecting SMDR Attributes will display the SMDR Attributes data entry page. Click **[Save]** button after changing Value.

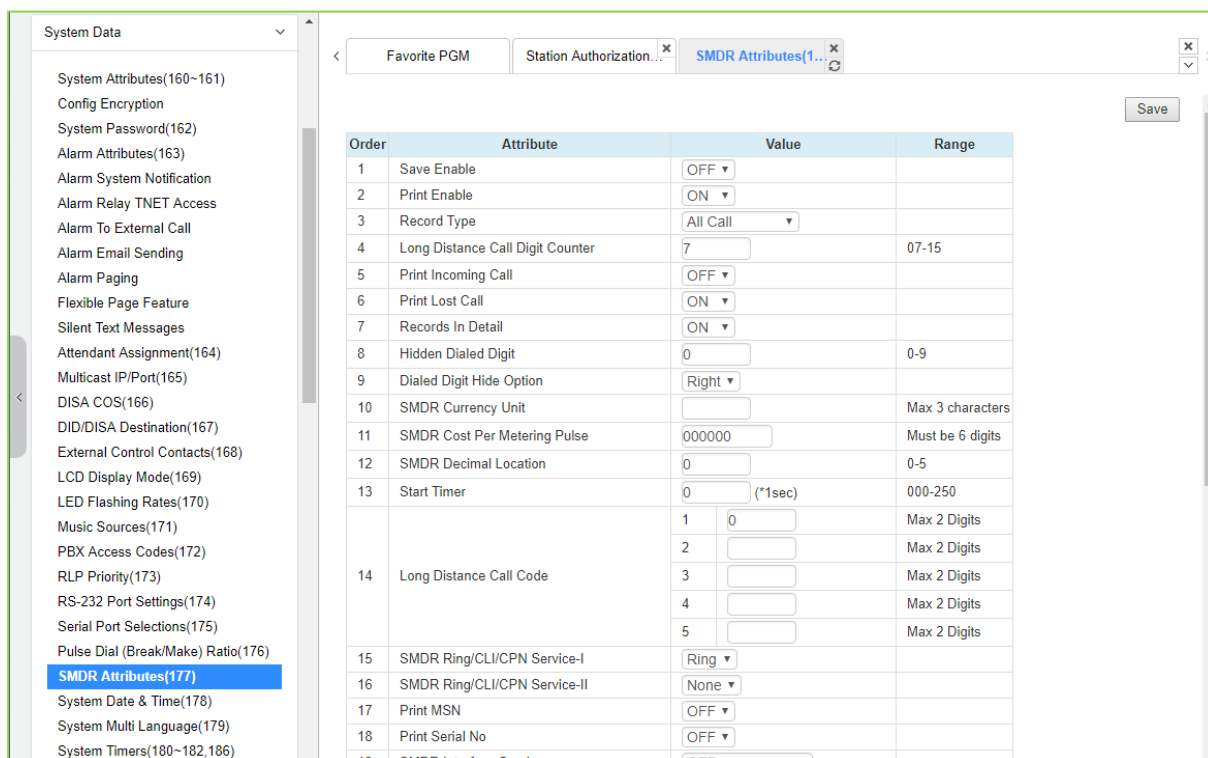

Figure 4.4.5.25-1 SMDR Attributes

Station Message Detail Recording (SMDR), which is output over an RS 232 port or TCP channel, contains details on both incoming and outgoing calls. Various SMDR attributes can be assigned including; output records for all calls or LD only, call cost per pulse when using call metering, etc.

Refer to the following table for a description of each Attribute and the data entries required.

Table 4.4.5.25-1 SMDR ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Save Enable	The system can output all outgoing call records (ON) or, to allow for PSTN call set-up times, only records for calls that exceed the SMDR Timer (OFF). For SMDR Timer settings refer to “Start Timer” as the below.	OFF ON	OFF
Print Enable	The system can output SMDR records automatically as they occur (real-time) or only when requested. When this attribute is ON, SMDR is sent at call completion.	OFF ON	ON
Record Type	The system can record all outgoing calls or only long distance calls. Long distance calls are identified by the LD digit count and LD codes assigned in “Long Distance code”.	Long Distance/ ALL calls	Long Distance
Long Distance Call Digit Counter	Dialed numbers, which exceed the assigned LD digit count are considered long distance calls for SMDR and COS purposes.	07-15	07

Table 4.4.5.25-1 SMDR ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Print Incoming Call	The system can output records for Incoming calls as well as outgoing calls.If enabled, incoming as well as outgoing calls are recorded.	OFF ON	OFF
Print Lost Call	When incoming call records are enabled, the system can also provide records for unanswered incoming (abandoned) calls.	OFF ON	ON
Records In Detail	The system can output detailed call records (ON) or summary call information (total number of calls, cost and cost for each station).	OFF ON	ON
Hidden Dialed Digit	For security purposes, digits dialed for an outgoing call can be hidden and replaced with “*”. This field defines the number of digits to hide. The Dialed Digit Hide Option below defines whether leading or trailing digits are hidden The station must be assigned for SMDR Hidden digits in ‘Common Attributes section’.	0-9	0
Dialed Digit Hide Option	When “HIDDEN DIALED DIGIT” is enabled, above, this field determines if leading or trailing digits are hidden.	Right/ Left	Right
SMDR Currency Unit	The unit of currency used for call cost can be identified with 3-characters for easy reference.	Max. 3 characters	
SMDR Cost Per Metering Pulse	When call metering is provided by the PSTN, the cost per metering pulse can be assigned.	6-digits	000000
SMDR Decimal Location	This value determines the position of the decimal in the Cost per Pulse entry above, starting from the right most digits.	0-5	0
Start Timer	To allow for call set-up times through the PSTN, a “Valid call timer” can be set.	000-250 (msec)	0
Long Distance Code	For SMDR and COS purposes, five (5) Long Distance codes of up to two (2) digits each can be assigned. If dialed as the 1st digits, the call is considered an LD call. 5 two digit LD codes,use * as wild card(any digit)	Refer to description	
SMDR CLI or Ring Service I	For incoming calls, the system will send the defined data item for “Field I”. The data item may be CLI, CPN or Ring Service Time. Note the User dialed number is always provided for an outgoing call.	RING/ CLI/ CPN	RING
SMDR Ring/CLI/CPN Service II	For incoming calls, the system will send the defined data item for “Field II”. The data item may be CLI, CPN or Ring Service Time.	RING/ CLI/ CPN/ None	None
Print MSN	For an ISDN call involving an MSN number, the MSN number Information can be included in the SMDR Record.	OFF ON	OFF
Print Serial No	Each SMDR Record can include a record number starting at 1 and incrementing until the records are deleted. The record number will reset to 1 when SMDR capacity is reached or SMDR Mail Auto Delete Set is enabled under System Attributes.	OFF ON	ON

Table 4.4.5.25-1 SMDR ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SMDR Interface Service	When enabled, the system stores SMDR data to send to applications including NMS (Network Management System) upon request. OFF, CO CALL, CO & ICM CALL	Refer to description	OFF
SMDR ICM Save	When enabled, intercom call data is stored as part of the SMDR data.	OFF ON	OFF
SMDR ICM Print	When enabled, intercom call data is printed as part of the On-line SMDR.	OFF ON	OFF
SMDR Disconnect Cause	When enabled, the disconnect cause is stored in Off-line SMDR data and printed as part of the On-line SMDR.	OFF ON	OFF
Long time call	To monitor long duration external calls, a "Long Time Call" can be set. If CO call duration exceeds this value, a notification will be sent to NMS server and alarm. If set to "000" the feature is disabled.	000 ~ 144 (10 min.)	0
Print SMDR from any CO to NET call	When a CO call is transferred to a Net transit-out CO, the local SMDR record is deleted.	OFF ON	OFF
Transfer Call Charge Rate	When a call is transferred by a station, the SMDR record can be charged based on the following options. <ul style="list-style-type: none"> • Individual station: When a call is transferred to another station, the transferred call is charged both stations based on the time on the call. • Integrate transferring station: When a call is transferred to another station, the call is charged to the transferring station. • Integrate transferred station: When a call is transferred to another station, the call is charged to the station receiving the transfer. 	Refer to description	Individual station
Attendant Transfer Charge Rate	When a call is transferred by a station, the SMDR record can be charged based on the following options. <ul style="list-style-type: none"> • Individual charging: When the Attendant places an outgoing call and transfers the call to a station, the Transfer Call Charge Rate above. • Attendant station charging: When Attendant places an outgoing call and transfers this call to a station, the call is charged to the Attendant. • Transferred station charging: When the Attendant places an outgoing call and transfers this call to a station, the call is charged to the receiving station. 	Refer to description	Individual charging
International Access Code	The system will recognize the digits assigned as the International access code digit sequence when dialed as the first digits.	Max. 4 digits	
Mobile Access Code	The system will recognize the digits assigned as the Mobile network access code digit sequence when dialed as the first digits.	Max. 4 digits	

Table 4.4.5.25-1 SMDR ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
VSF Voicemail indication	Calls to the Voice Mail may be shown as I (Incoming call) or V(New indication) for Voice Mail in the SMDR record. I (Incoming call), V (New indication)	Refer to description	I
Display Nxxxx for Net number	An "N" can be included in the SMDR to identify the call as a Network call.	OFF/ ON	OFF
Outgoing call type	Select SMDR type for outgoing call. <ul style="list-style-type: none"> • All call: SMDR can be provided for all outgoing call. • Answered call: SMDR can be provided in case the called party is answered. 	Refer to description	All Call
Print Dialed number	According to this option, you can print the dialed number. Dialed digits to PSTN, Dialed digits by user	Refer to description	Dialed digits to PSTN
SMDR REST API Service	When enabled, the system stores SMDR data to send to REST API application.	OFF ON	OFF
SMDR ICM Ring Info	When enabled, intercom call data has additional information about ringing duration. With this option disabled, cannot differentiate calls if they are answered or unanswered because TIME field is used for both of talking and ringing durations. With this option enabled, TIME is only for talking duration, and RING duration is presented separately as it is presented for CO call data.	OFF ON	OFF
SMDR ICM CPN Info	When enabled, intercom call data has additional information about original dialed digits. With this option disabled, always only the last talking or ringing station is specified as called party. With this option enabled, the original dialed number is presented separately in CPN field.	OFF ON	OFF

4.4.5.26 System Date & Time - PGM 178

Selecting System Date & Time will display the System Date & Time and DST data entry page. Click **[Save]** button after changing Value.

Order	Attribute	Value	Range
Time & Date (Don't Save : <input checked="" type="checkbox"/>)			
1	Time	Hour	11 00-23
		Minute	14 00-59
2	Date	Month	02 01-12

Figure 4.4.5.27-1 System Multi-Language

The VSF (VMIU, VMIB, UVM) supports multiple languages (19 languages); up to six languages may be supported simultaneously.

Once the prompts are downloaded to the VMIU and VMIB, the caller receives the Language selection announcement for DISA and CCR calls as well as preceding a Station Group announcement or DID error announcement.

The language selection announcement will only affect the language prompts enabled for use with the device indicated by the Sequence number.

4.4.5.28 System Timers - PGM 180 ~ 182 & 186

Selecting System Timers will display the System Timers data entry page. Click **[Save]** button after changing Value.

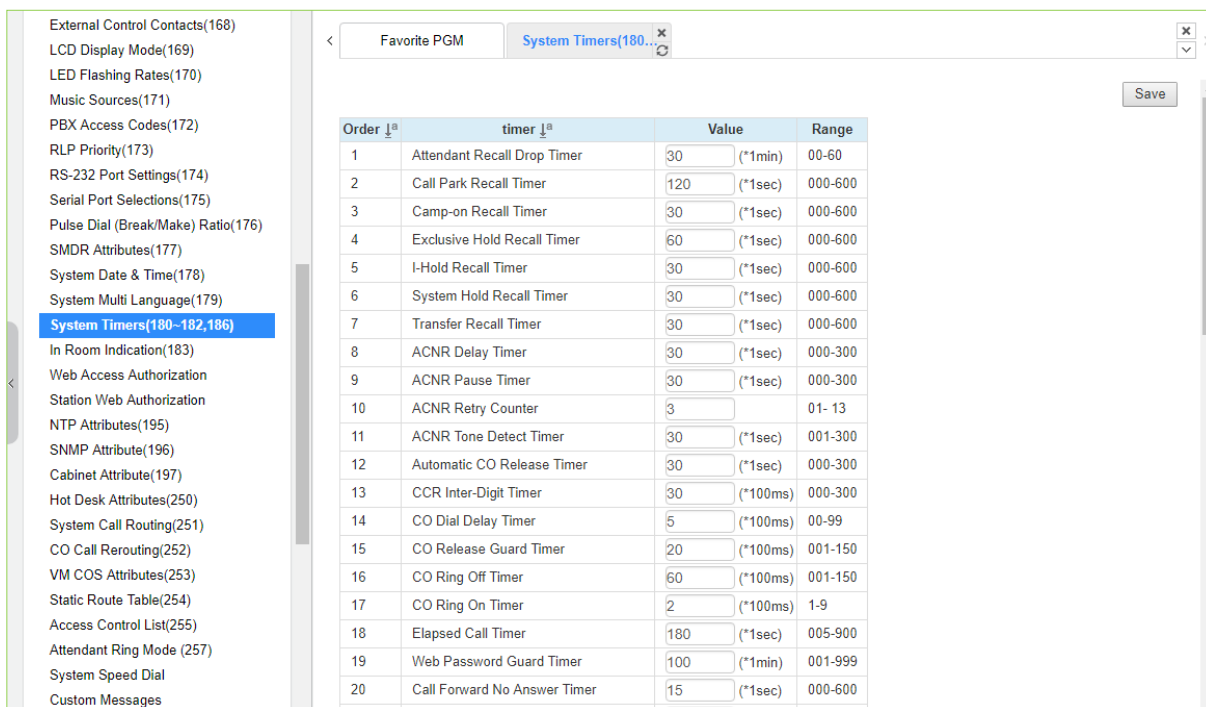

Figure 4.4.5.28-1 System Timers

A number of timers can be assigned to control and affect many features and functions. Refer to the following table for a description of the timers and the input required.

Table 4.4.5.28-1 SYSTEM TIMERS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Attendant Recall Drop Timer	Enter the desired time that Attendant receives recall after the system will disconnect the call.	00~60 (minutes)	30
Call Park Recall Timer	Enter the desired recall time for call park. Parked call will recall the station at a specified time.	000~600 (seconds)	120
Camp-on Recall Timer	When a call is transferred using Camp-On, this field determines the desired recall time for Camp-on. The station receives the call again with a specified time.	000~600 (seconds)	030
Exclusive Hold Recall Timer	Enter the desired time for Exclusive hold. The station receives the call again after a specified time.	000~600 (seconds)	060
I-Hold Recall Timer	Enter the desired time for Hold recall. The station receives the call again after a specified time.	000~600 (seconds)	030
System Hold Recall Timer	Enter the desired time for System hold recall time. The station receives the call again after a specified time.	000~600 (seconds)	030
Transfer Recall Timer	Enter the desired time for transferring the call again to the receiving station.	000~600 (seconds)	030

Table 4.4.5.28-1 SYSTEM TIMERS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ACNR Delay Timer	If the ACNR Pause Timer expires and no CO/IP Line is available for ACNR recall, in this filed, you can set the delay time before ACNR attempts to access a CO/IP line again. This feature doesn't affect the ACNR retry counter.	000~300 (seconds)	030
ACNR Pause Timer	Enter the desired time for pause between ACNR recall attempts.	000~300 (seconds)	030
ACNR Retry Counter	Enter the number of ACNR retry attempts. ACNR will finish after a specified times. Regarding CIS country, the range is from 1 to 9.	1~13	03
ACNR Tone Detect Timer	If call progress tones are not available for ACNR, the system will wait the specified time after dialing before considering the called party as "busy/no answer".	001~300 (seconds)	30
Automatic CO Release Timer	If a user accesses a CO/IP Line and takes no action, the system will automatically release the CO/IP Line when the specified time is over or expired.	000~300 (seconds)	030
CCR Inter-digit Timer	Inter-digit timer used with Customer Call Routing function.	000~300 (seconds)	030
CO Dial Delay Timer	To prevent dialing when CO/PBX has slow response, dialing by the system can be delayed using this timer.	00~99 (minutes)	05
CO Release Guard Timer	When a CO/IP Line is returned to idle, the system will deny access for the specified time to assure the PSTN returns the CO/IP Line circuitry to be idle.	010~150 (seconds)	020
CO Ring Off Timer	This timer sets the maximum 'OFF' duration of the incoming ring cycle for the Ring Detect circuitry of the system to detect an abandoned call.	001~150 (seconds)	060
CO Ring ON Timer	This timer sets the 'ON' time of the incoming ring cycle for the Ring Detect circuitry of the system to recognize an incoming call.	1~9 (100 msec)	2
Elapsed Call Timer	Users can receive a periodic tone indicating the length of an outgoing call. This timer sets the time before and between the tones. Note CO Warning Tone must be enabled for the station in Station Data in 'Station Data section'.	005~900 (seconds)	180
Web Password Guard Timer	If no data packet is received during a Web connection, after the guard time a password check will be initiated by the system.	001~999 (minutes)	5
Call Forward No Answer Timer	When a user activates No-Answer Forward, calls will ring for this duration before being forward. The Station No-Answer Forward timer section will take precedence.	000~600 (seconds)	15
DID/DISA No Answer Timer	A DID/DISA call to a busy station will forward to the DID/DISA Destination assigned under section should this timer expires.	000~255 (seconds)	20
VSF User Maximum Record Timer	This timer sets the maximum duration allowed for the User Greeting in the system's VSF.	000~999 (seconds)	60
VSF Valid User Message Timer	This timer sets the minimum duration allowed for a User Greeting.	0~9 (seconds)	4

Table 4.4.5.28-1 SYSTEM TIMERS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Door Open Timer	This timer sets the minimum time required to activate the contact assigned as a door open contact.	00~99 (100 msec)	20
ICM Dial Tone Timer	If a user goes off-hook to receive Intercom dial tone and takes no action for this timer, the user will receive error tone.	001~255 (seconds)	10
Inter Digit Timer	This timer sets the maximum time allowed between each user-dialed digit. At expiration, the user will receive error-tone.	01~20 (seconds)	5
MSG Wait Reminder Tone Timer	An iPECS IP or LDP Phone user will receive periodic reminder tones of a message waiting at intervals of this timer.	00~60 (minutes)	00
Paging Timeout Timer	Determines the maximum duration of a page after which the caller and Page Zone are released.	000~255 (seconds)	15
Pause Timer	A Timed pause of this duration is used in speed dial and during other automatically dialed digits sent to the PSTN.	1~9 (seconds)	1
Soft auto RLS Timer	When a Soft Key is used on the 6000 or 7000 series iPECS IP or LDP Phone, after expiration of this timer, the display will return to the previous display.	1-30 (seconds)	10
VM Pause Timer	When the system sends a "Pause" to Voice Mail using in-band signals, this timer defines the Pause duration. (Not available in the USA.)	1-90 (ms)	30
SLT Hook Switch Bounce Timer	This timer determines the duration the system considers an actual state change in the hook-switch and not a spurious contact bounce.	01~25 (100 msec.)	1
SLT Maximum Hook Switch Flash Timer	This timer sets the maximum time an SLT user can depress the hook-switch for a Flash signal.	01~25 (100 msec.)	1
SLT Minimum Hook Flash Timer	This time sets the minimum time an SLT user must depress the hook-switch for a Flash signal.	000~250 (10 msec.)	4
Station Auto Release Timer	For an internal call, the system will return a station to idle if the call remains unanswered for this duration.	000~300 (seconds)	60
Unsupervised Conference Timer	This timer determines the duration of an "Unsupervised Conference" before the station is recalled or the conference is dropped. 00 means 10 minutes.	00~99 (minutes)	10
Prime Line Delay Timer	This timer sets the delay (no action duration) for delayed (Warm) Prime Line operation.	01~20 (seconds)	5
Wink Signal Timer	This timer sets the duration of the "Seize Acknowledge Signal" (Wink) sent to the PSTN on a DID line.	010~200 (10 msec.)	10
En-block Inter Digit Timer	When an ISDN Line is assigned to send digits En-block, CO Attribute section, the system will send digits if the user dials "#" or this En-block inter-digit timer expires.	01~20 (seconds)	5
DTMF Duration Timer	This timer establishes the duration of DTMF tones sent on an analog CO line.	04~99 (10 msec.)	10

Table 4.4.5.28-1 SYSTEM TIMERS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Flex DID Timer	The system will receive DID digits for this timer. After the timer expires, the system will use the last 2 to 4 digits received as DID digits.	01~99 (100 msec)	10
R2 Out Manage Timer	Reserved for future usage for R2 timers.	01~50 (seconds)	14
R2 In Manage Timer	Reserved for future usage for R2 timers.	01~50 (seconds)	14
R2 Disappear Timer	Reserved for future usage for R2 timers.	01~50 (seconds)	14
R2 Pulse Timer	Reserved for future usage for R2 timers.	01~30 (*20ms)	7
R2 Ready Timer	Reserved for future usage for R2 timers.	000~500 (*200ms)	7
Dial Tone Delay Timer	Reserved for future usage for R2 timers.	01~30 (*20ms)	20
Wake Up Fail Timer	At expiration of this timer, the system will notify the Attendant when a user does not respond to a Wake up alarm.	00~99	20
VSF Cut Error Tone Timer	The duration of Voice Messages in the built-in Voice Mail are reduced by this timer to remove error tone that may be sent by the carrier after disconnect.	00~90 (seconds)	0
On Hook Auto Idle Timer	When an iPECS IP or LDP Phone receives a disconnect message or signal from CO line the phones goes to idle after this timer.	00~99 (seconds)	0
IP Watch Timer	When Local redundancy is implemented, should the LAN cable fail, both call servers may attempt to be active. To protect against this "dual active" case, the system can periodically check for an active back-up module.	0~250 (1 sec.)	0
Prepaid Call Drop Warning Timer	When the Prepaid funds are exhausted, the user will receive a warning tone indicating the call will be dropped after this timer expires.	00-99	10
Emergency retry timer	System try to make emergency call according to the CO access rule/Prefer CO/CO group if system could not seize predefined emergency Co line within this timer.	00~99 (seconds)	0
Record Warning Repeat Timer	If record warning tone is set and this timer is set greater than 1, it works periodically when it's recorded.	000~999 (seconds)	0
Error Tone Timer	This timer sets the duration for Error Tone.	5~180 (seconds)	30
Howling Tone Timer	This timer sets the duration for Howling Tone.	0~180 (seconds)	30
VM Notify Play Delay Over CO Timer	When VM notification to the mobile uses an analog loop start Line, system will treat the call as the answered after this timer and play the new message prompt.	1~99 (1 sec.)	10

Table 4.4.5.28-1 SYSTEM TIMERS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Fax Detect timer	It is maximum fax tone detection time to deliver FAX call to fax destination.	1~20 (1 sec.)	10
Auto Pause Release timer	IPCR Mute function will be released by this auto pause released timer.	0~255 (1 sec.)	0
UCS Ring ACK Timer	UCS Client is ringing before expiring the Ring ACK timer and afterwards will hear Error tones.	0~20 (seconds)	0
Short Modem Timer	If {Short modem} of a SLT is ON, the SLT maintains the modem mode for this time.	01~60 (1 sec.)	10
Button Idle Timer	<p>When a button is pressed, auto idle timer is added. A button is pressed in idle state, It goes to a menu list state(not calling state). In menu list state, this auto idle timer is applied. The button that is applied this timer is as below.</p> <ul style="list-style-type: none"> • Transfer / PGM. • Speed. • Menu. • Directory. • Message. • Call Log. <p>Condition The ButtonIdle timer is supported only below phones.</p> <ul style="list-style-type: none"> • LIP-90xx series(9010/20/30/40) • LIP-80xxE series(8012E/24/40E) • LDP phones. <p>Firmware of LIP-90xx & LIP-80xxE series should be upgraded.</p> <ul style="list-style-type: none"> • LIP-90xx: A.0Eb or later version • LIP-80xxE: A.1Fn or later version <p>The DECT phone and LIP-9070 do not support the Button Idle timer.</p>	00, 10-99 (1 sec.)	0
CCR No Digit Error Timer	'CCR No Digit Error Timer' is the specific time when digit is not entered after announcement. After CCR no digit error timer, the call is routed to 'Error destination' that set in CCR Table (228).	01-99 (100ms)	50
Fax No Answer Timer	When Data(Fax) station number is defined in the analog CO line, the incoming call is answered by system automatically to detect the Fax tone. If the fax tone is not detected, the call is routed to the ring assigned destination. If the destination does not answer the call, it is disconnected after fax no answer timer is expired.	10-99 (1 sec.)	30

4.4.5.29 In-Room Indication - PGM 183

Selecting In-Room indication will display the In Room data entry page. Click **[Save]** button after changing Value.

Figure 4.4.5.30-1 Web Access Authorization

Three different passwords can be assigned for the access to the iPECS Web administration so that the different levels of access to the program fields can be allowed. Four levels (User, Administrator, Custom1, and Custom2) have access to the assigned fields in this page by selecting N/A, Read, Read/Write. The Maintenance password has access all the programming fields and the maintenance fields including trace settings, device log view, gain & cadence control, lock key install and device delete feature. In addition, the Maintenance level user can assign the authorities of the other user levels.

In the Maintenance menu, the Database, SMDR, and Voice Mail Delete fields can be chosen by User level or Admin Level.

4.4.5.31 Station Web Access Authorization

Selecting Station Web Authorization will display the Web authorization data entry page. Click **[Save]** button after changing Value.

The screenshot displays the 'Station Web Authorization' configuration window. On the left is a navigation menu with 'Station Web Authorization' selected. The main area contains two tables for configuring access levels.

Figure 4.4.5.31-1 Station Web Access Authorization

Three access levels can be assigned to each station for access to the Station Web pages in Station Data (Common Attributes (111): 'Station Web Level'). Level 1 has access to all Station pages and attributes. The pages and attributes for Levels 2 and 3 are programmable.

4.4.5.32 NTP Attributes - PGM 195

Selecting NTP Attributes will display the System NTP Attributes entry page.

The screenshot shows the 'NTP Attributes(195)' configuration page. On the left, a sidebar lists various system attributes, with 'NTP Attributes(195)' highlighted. The main content area is titled 'NTP Attributes(195)' and contains two sections: 'NTP Client Attributes' and 'NTP Server Attributes'. The 'NTP Client Attributes' section includes:

- Order 1: Network Time & Date, set to 'Disable'.
- Order 2: NTP Primary Server Address, with a text input field and a note: 'Check DNS server address(PGM102) if you use URL.'
- Order 3: NTP Secondary Server Address, with a text input field and a note: 'Check DNS server address(PGM102) if you use URL.'
- Order 4: Standard Time Zone, set to '(GMT+09:00)Seoul'.

 The 'NTP Server Attributes' section includes:

- Order 1: NTP Server Service, set to 'Disable'.
- Order 2: DDoS Protector, set to 'Disable'.

 Buttons for 'Save Client & Server Attributes' and 'Apply Server Attributes' are located at the top right of the configuration area.

Figure 4.4.5.32-1 NTP Attributes

The system can employ the Network Time Protocol (NTP) to synchronize the system time with an NTP time server. The system requests the time from the NTP server at 10-minute intervals and then determines the time differential. If the system time is more 2 seconds off the NTP time, the system time is adjusted to synchronize with the NTP server time.

4.4.5.33 SNMP Attribute - PGM 196

Selecting SNMP Attribute will display the SNMP Attributes entry page. Click **[Save]** button after changing Value.

Figure 4.4.5.33-1 SNMP Attribute

SNMP Attributes, as shown on the screen, are divided into three categories: SNMP Agent, SNMP Security, and SNMP Trap. The SNMP Service field enables the SNMP agent running in the iPECS call server. The SNMP port field defines the UDP port used for communications from iPECS system for SNMP messages. This port should not be changed.

In SNMP Security are the Read Only and Read Write SNMP Community fields, 4 to 16 characters. The SNMP community designates an SNMP communication group to which an SNMP message belongs, and is a logical relationship between the SNMP agent (iPECS system) and SNMP manager (iPECS NMS). The SNMP community settings must be the same for the iPECS system and the iPECS NMS server.

- Read Only Community (default=Public)—Defines a community string used when the iPECS NMS reads data from iPECS system.
- Read Write Community (default=Private)—Defines the community string used when iPECS NMS reads or writes data to iPECS system.

Although iPECS system can accept packets from any SNMP manager such as iPECS NMS, for improved security, the IP address of specific servers can be defined and allowed Read only or Read Write access. It is recommended that the system be assigned with the IP address of a specific NMS server with Read Write access.

The SNMP Trap configuration defines the Trap Community, and the Trap Destination, which includes the IP Address of the SNMP manager, iPECS NMS, and the .message type. The Trap Community designates a communication group to which a Trap message belongs, and is a logical relationship between the SNMP agent (iPECS system) and SNMP manager (iPECS NMS).

This 4 to 16 character string should be the same as the Trap community string defined in the iPECS NMS. The Trap community should be the same for all iPECS systems registered to an iPECS NMS server whereas the SNMP community may be defined with different strings for each iPECS system.

The Trap Destination defines the IP address of the iPECS NMS server and the port, 162. Enter the IP address of the NMS server but, the port should not be changed. The pull down menu next to the address is used to define the message type. Three values are available:

- Trap – message type is defined in SNMPv1, but because iPECS-NMS and iPECS system use SNMPV2, the Trap type message is not recommended.
- Notification – message type sent from the SNMP agent once without checking thereception of the message.
- Inform – message type requires an acknowledgement from the SNMP manager. If the agent does not receive a response, the message is resent. Inform messages are intended for use in environments with high packet loss however, use of the Inform message type may detrimentally affect iPECS system performance.

The iPECS SNMP attributes are defined here. Refer to Table 4.4.5.26-1 for description and values that can be entered.

Table 4.4.5.33-1 SNMP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SNMP service	SNMP Service field is used to set the SNMP agent in the iPECS ON or OFF.	OFF ON	OFF
SNMP MIB Type	Select SNMP MIB specification. U-CEMS is KOREA telecom speciation.	iPECS-NMS/ U-CEMS	iPECS-NMS
SNMP Port	SNMP Protocol port number.		161
Read Only Community	Read only community should be used when SNMP manager (NMS) is trying to read data from SNMP agent (eMG)	4 ~ 16 characters	public
Read Write Community	When the SNMP manager (NMS) needs to read and write data to the agent (iPECSsystem).This attribute should be enabled.	4 ~ 16 characters	private
Trap Community	For the SNMP agent (eMG/UCP), this field defines the destination IP address to receive trapped messages (Alarm/fault events).	4 ~ 16 characters	public
Trap Destination	IP address of iPECS NMS server, port 162 should not be changed.	IP address	Public
Message Type	Defines how the agent sends the Message.	Notification/ Inform/ Trap	Notification

4.4.5.34 Cabinet Attribute for UCP - PGM 197

4.4.5.35 Hot Desk Attributes - PGM 250

Selecting Hot Desk Attributes will display the Hot Desk Attributes data entry page. Click **[Save]** button after changing Value.

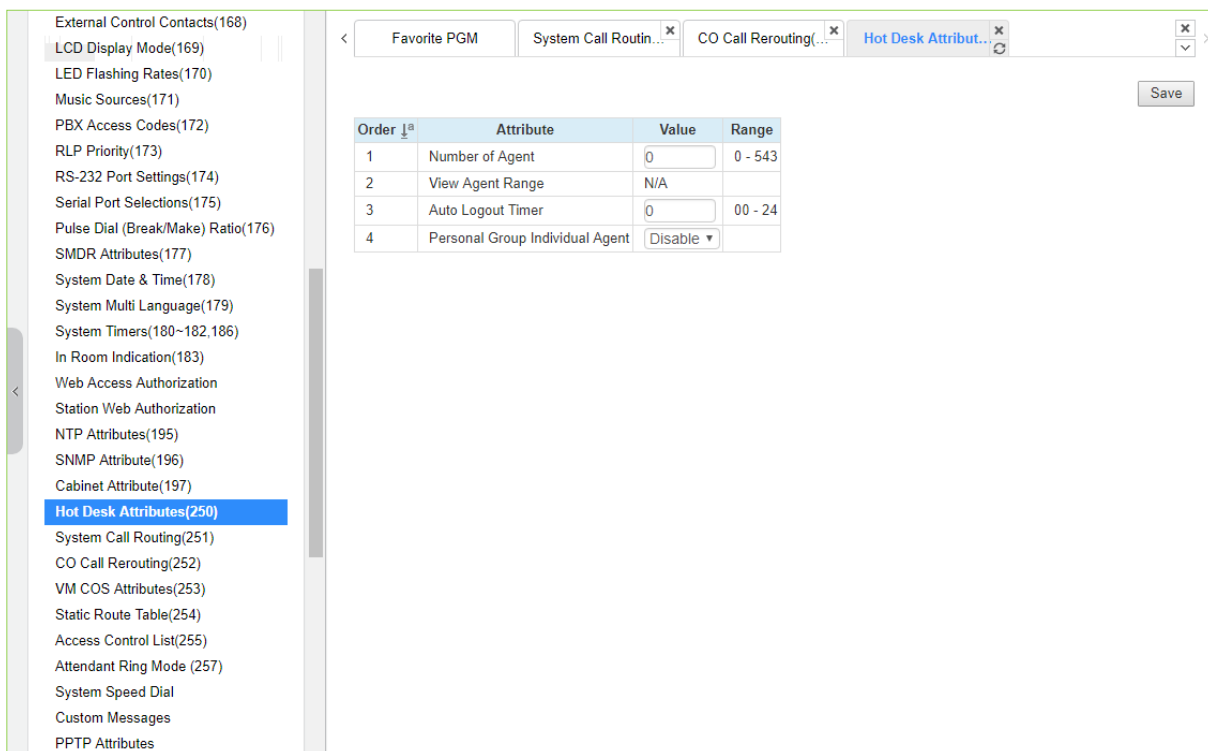

Figure 4.4.5.35-1 Hot Desk Attributes

Hot Desk feature is available only for LIP phone, NOT for Digital phone and LIP-8002/2E.

A Hot Desk station allows a user to login for access to the system features and resources. Once logged in, the user is provided access to system features and resources employing the database for the user’s assigned station.

User station numbers, which are used as the Agent ID, are assigned automatically by the system. The system assigns station numbers to each agent starting at the highest station number available.

Table 4.4.5.35-1 HOT DESK ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Number of Agent	Assign number of Hot desk agent.	eMG80/100: 0-100 eMG800: 0-300 UCP:0-1200	0
View Agent Range	View the assigned station numbers for agents.		N/A
Auto Logout Timer	A Hot desk station will return to inactive if the logged in user takes no action for the Auto Logout timer.	00~24 Hrs.	00
Personal Group Individual Agent	If this is enabled then Hot desk login/logout will work individually. To use UCS call control then it should be enabled.	Enable/Disable	Disable

4.4.5.36 System Call Routing - PGM 251

Selecting System Call Routing will display the System Call Routing data entry page. Enter a valid Index range and click **[Load]** to enter Call Routing data. Click **[Save]** button after changing Value.

Del Order	Attribute	Value	Range
1	Caller ID	N/A	Max 23 Digits

12	Scenario Start CO	0	Start Co line (0 - 998)

Figure 4.4.5.36-1 System Call Routing

System Call Routing establishes scenarios with criteria to route calls. Criteria include time of day, day of week, Caller and Called numbers, etc. System Call Routing takes precedence over other system based call routing. However, Station and CO Call Routing scenarios take precedence over System Call Routing scenarios.

Table 4.4.5.36-1 System Call Routing Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Caller ID	This field defines the Caller Id for the scenario.	Max. 23 Digits	N/A
Called Num	This field defines the Called number for this scenario.	Max. 23 Digits	
Time condition (Start Day and End Day, weeks, start time and end time)	The time and day for activation of the scenario can be defined. YYYY-MM-DDhhmm(Must be 4 digits)	Refer to description	
Destination (Type and Value)	This field defines the destination type and value for call routing when the scenario criteria are met. N/A, STA, Station Group, SPD, PABX, VSF, VSF(#), Net Station, Company room, INT Page, EXT Page, All Page, VM, ICLID Table	Refer to description	N/A
Scenario Priority	Each scenario can be assigned a priority. The highest priority scenario meeting the criteria is used to route the call.	0-9 (Highest priority)	

Table 4.4.5.36-1 System Call Routing Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Scenario Active	A scenario must be active to be employed. If not active the scenario is ignored.	ON OFF	OFF
Scenario VMID	A Voice Mail Id can be associated with the scenario for routing to a Voice Mailbox.	Voice mail ID	
Scenario COS	If DISA is active for the scenario, the COS can be assigned for the call. 0-11(COS level)	Refer to description	0
Scenario DISA Active	The scenario can employ DISA for the incoming call routing.	OFF/ ON	OFF
Scenario ICM Group	The scenario can route calls to a specific Tenancy group. eMG80/100:0-15, eMG800:0-32, UCP:0-100	Refer to description	0
Scenario Zone No.	A zone can be assigned so that only CO calls to a CO/IP Line in the Zone will route based on the scenario.	0-32	0
Scenario Start CO and End CO	This field defines a range of CO/IP Lines that will employ to the scenario. eMG80/100:0-74, eMG800:0-600, UCP:0-998	Refer to description	0
Scenario Group: this is used for scenario group by attendant.	Scenarios can be group allowing the Attendant to select a group of scenarios to route calls. <ul style="list-style-type: none"> eMG80/100: Group number(01~15/ 00: unused), eMG800: Group number(01~32/ 00: unused), UCP: 0-100 	Refer to description	0
Zone Holiday	A Zone can be assigned for routing calls using the scenario during Holiday periods defined for the Zone.	0-32	0

4.4.5.37 CO Call Rerouting - PGM 252

Selecting CO Call Rerouting will display the CO Call Rerouting data entry page. Enter a valid Index range and click **[Load]** to enter Call Routing data. Click **[Save]** button after changing Value.

Figure 4.4.5.37-1 CO Call Rerouting

CO Call Rerouting establishes routing for CO/IP calls with a specified caller id on CO/IP Lines from a specified group. The rerouting sends calls out over another CO/IP Line or group, a network destination, a DISA call or to another station. The incoming CO group and compare digits determine if the call should be rerouted and the destination is determined by the CO code and Telephone number, which is dialed when the incoming group and compare digits are matched. The routing type determines if the call is routed normal (N/A) or if the call is routed over a network or employs DISA. The example CRR chart is as below

Index	Incoming CO group	Compare Code	CO Code + Tel number	Routing Type
0	1	454	88005123456	N/A
1	2	456**	8901123456	N/A
2	1	42*555	9123456	N/A
3	5	353	8901123456	NET Type
4	5	401		DISA Type

- Index 0: If an incoming call on a CO/IP Line from group has digits “454” then seize CO 5 and send digit 123456.
- Index 1: If an incoming call on a CO/IP Line from group 2 has digits “456**” then seize CO group 1 and send digit 123456.
- Index 2: If an incoming call on a CO/IP Line from group1 has digits “42*555” then seize the first CO/IP Line and send digit 123456.
- Index 3; ifan incoming call on a CO/IP Line from group 5 has digits “353” then seize CO group 1 and send digit 123456 as a transit-out call over the Network.
- Index 4: If an incoming call on a CO/IP Line from group 5 has digits “401” then activate DISA and await digits from the caller.

4.4.5.38 VM COS Attributes – PGM 253

Selecting VM COS Attributes will display the VM COS Attributes data entry page. Select a valid VM COS and click **[Load]** to enter VM COS data. Click **[Save]** button after changing Value.

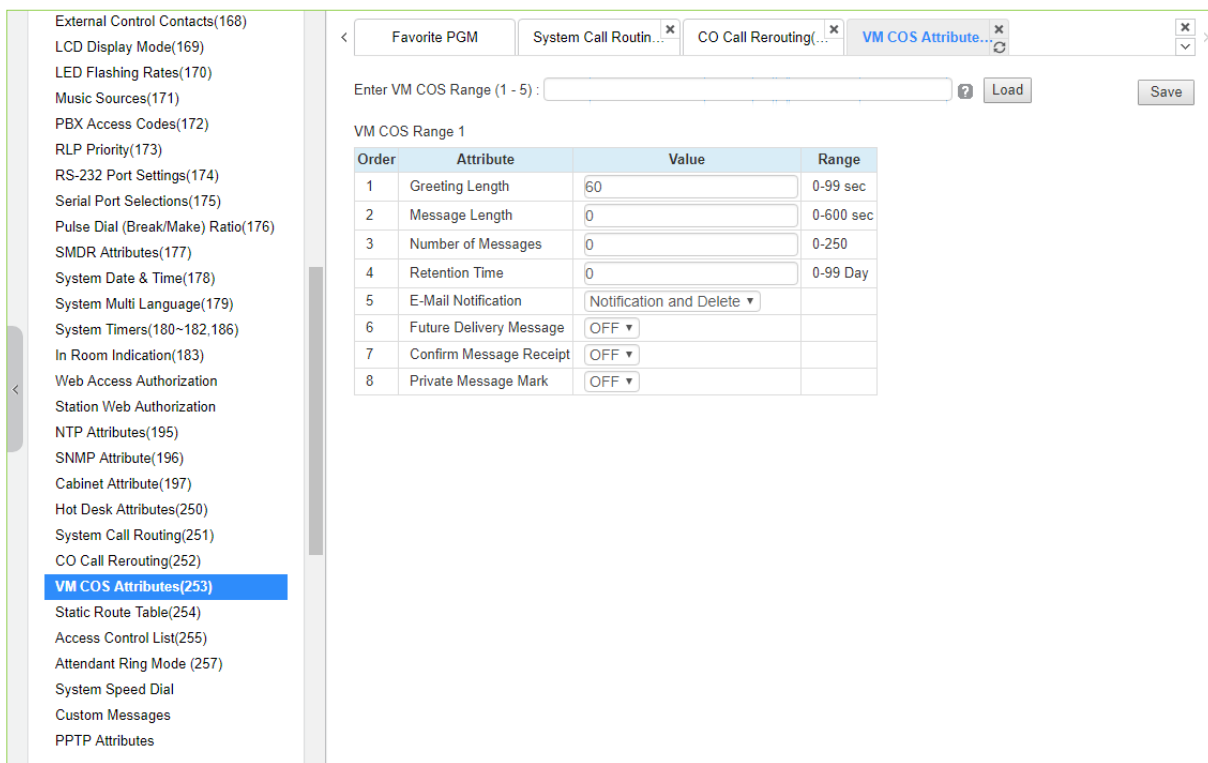

Figure 4.4.5.38-1 VM COS Attributes

VM COS establishes various common characteristics of the user’s Voice Mailbox including greeting and message length, E-mail notification, message retention, etc.

Table 4.4.5.38-1 VM COS ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Greeting Length	This defines maximum user greeting length.	0-99(Seconds)	60
Message Length	This defines maximum user message recording time.	0-600(Seconds)	0
Number Of Messages	This defines maximum number of voice mail message.	0-250	0
Retention Time	Voice mail messages will be automatically deleted after this number of days.	0-99Days	0
E-Mail Notification	E-mail notification can be enabled or disabled and, if enabled, the message can be deleted after notification. Disable, Notification Only, Notification & Delete	Refer to description	Notification & Delete
Future Delivery Message	Future Delivery of messages can be enabled or disabled.	OFF ON	OFF
Confirm Message Receipt	Confirm message receipt can be enabled or disabled.	OFF ON	OFF
Private Message Mark	Private message mark can be enabled or disabled.	OFF ON	OFF

4.4.5.39 Static Route Attributes – PGM 254

Selecting Static route Attributes will display the static route attributes data entry page. Click **[Save]** button after changing Value.

Index	Feature	Value
1	Net Address	<input type="text"/>
	Net Mask	<input type="text"/>
	Gateway IP Address	<input type="text"/>
2	Net Address	<input type="text"/>
	Net Mask	<input type="text"/>
	Gateway IP Address	<input type="text"/>
3	Net Address	<input type="text"/>
	Net Mask	<input type="text"/>
	Gateway IP Address	<input type="text"/>
4	Net Address	<input type="text"/>
	Net Mask	<input type="text"/>
	Gateway IP Address	<input type="text"/>
5	Net Address	<input type="text"/>
	Net Mask	<input type="text"/>
	Gateway IP Address	<input type="text"/>

Figure 4.4.5.39-1 Static Route Table Attributes

Table 4.4.5.39-1 STATIC ROUTE TABLE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Net address	Network IP address	IP address	
Net mask	Net mask		
Gateway IP address	Gateway(route) IP address	IP address	

4.4.5.40 Access Control List – PGM 255

Access Control List will display the access control attributes data entry page. Enter a valid index range and click **[Load]** to enter ACL data. Click **[Save]** button after changing Value.

Figure 4.4.5.40-1 Access Control List

Access Control determines the Source IP addresses that can access the system for specific protocols.

Table 4.4.5.40-1 ACCESS CONTROL LIST

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Protocol	This field defines the accessing protocol type. N/A, ALL, TCP, UDP, ICMP	Refer to description	N/A
Port number	This field further defines the protocol TCP/IP port number.		
Port type	The port number can be configured as either the source or destination port number.	DEST/ SRC	
Source IP address	The allowed source IP address and net mask allowed access is defined by this field.		
Remark	This is a general remark field.		

4.4.5.41 Attendant Ring Mode – PGM 257

Selecting Attendant ring mode will display Attendant ring mode entry page. Click **[Save]** button after changing Value.

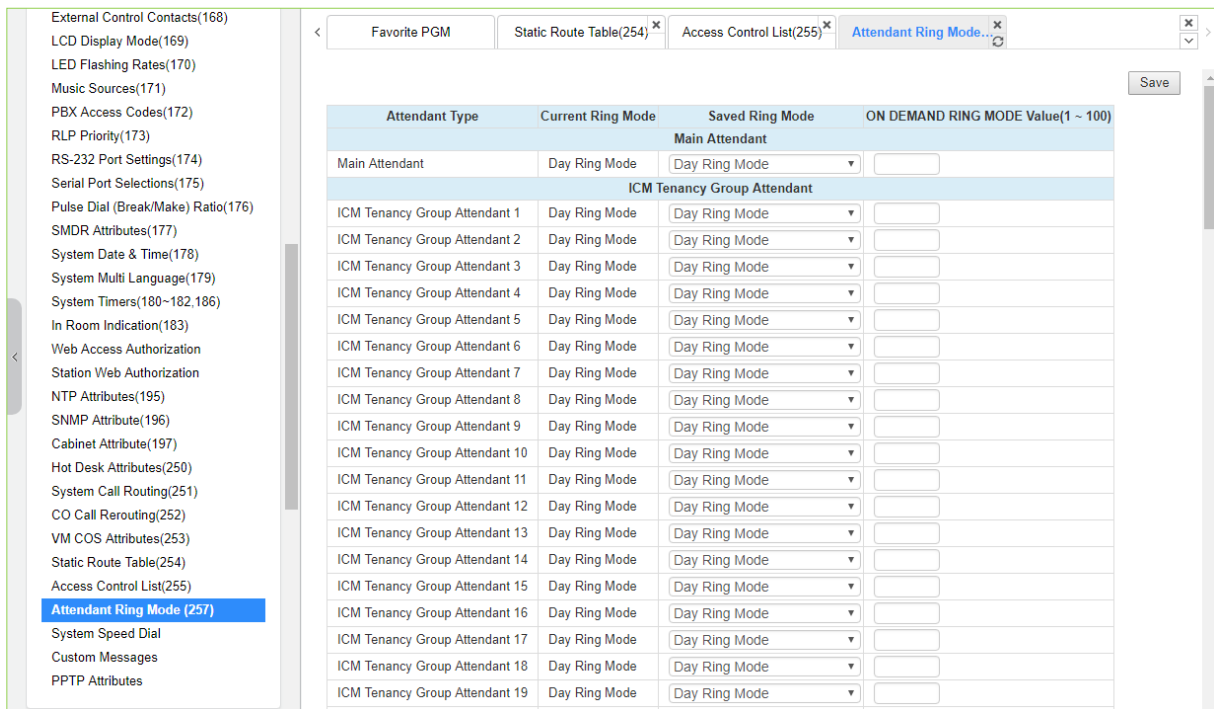

Figure 4.4.5.41-1 Attendant Ring Mode

Administrator assigns the ring mode to 1 Main attendant and 15 ICM Tenancy Group Attendant.

Five ring modes are supported as Day, Night, Timed, Auto, On demand ring mode (eMG80/100: 1~15/ eMG800: 1~32/UCP: 1~100).

The Attendant controls the system Ring mode changing from Auto ring Mode to Day, Night, Timed or On demand ring mode. Based on the ring mode selected in the field of Saved Ring Mode, different ring assignments, COS (Class of Service) and answering privileges are invoked for the system users.

In case Main attendant select the other ring mode of Day ring mode in the field of Saved Ring Mode, ICM Tenancy group attendant controls the system ring mode instead of Main attendant. So Current Ring Mode and Saved Ring Mode of ICM Tenancy group attendant may be different.

4.4.5.42 System Speed Dial

Selecting System Speed Dial will display the System Speed Dial entry page. Enter a valid range of System Speed Dial numbers and click **[Load]** to enter Speed Dial data. For convenience, the copy, paste, and drag is available to enter or modify data. Click **[Save]** button after changing Value.

The index range is flexible according to selecting 'Speed Numbering' in 'System ID (100)'.

Enter Index range: eMG80/100: 2000-4999 / eMG800: 2000-9999 / UCP: 20000-31999

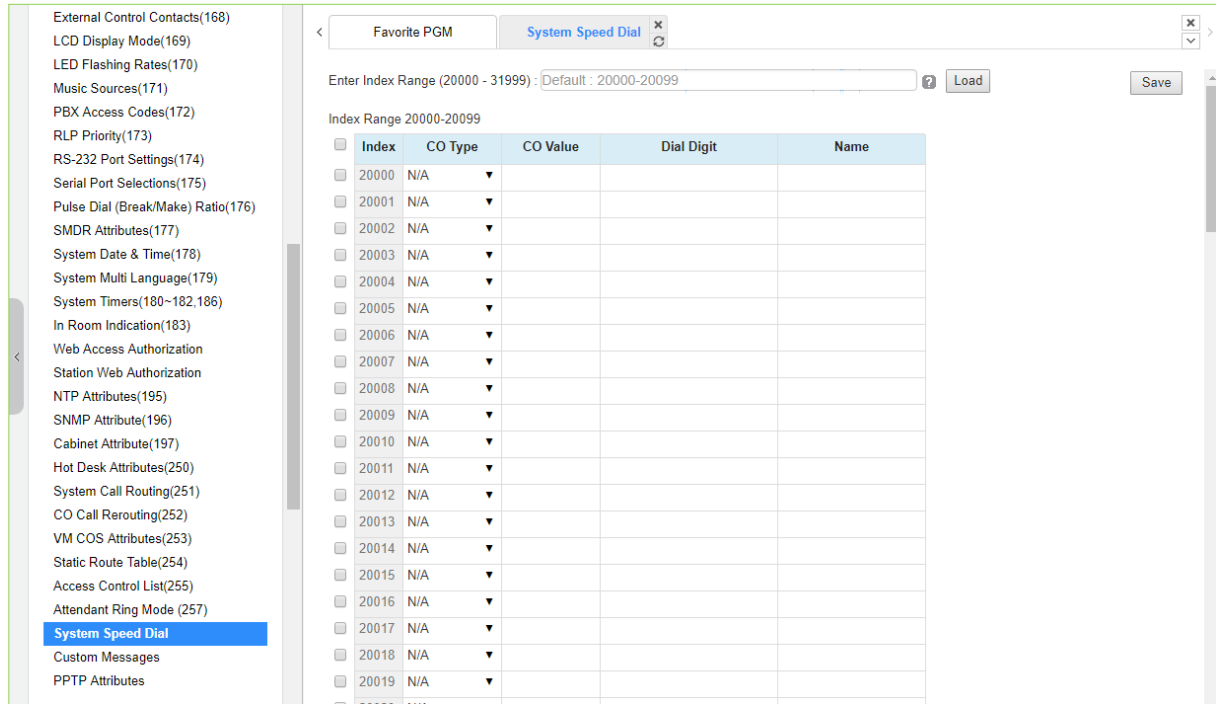

Figure 4.4.5.42-1 System Speed Dial List

The eMG80/100 (eMG800/UCP) has memory for 3000(8000/12,000) Speed Dial numbers of up to 25 digits each. Each System Speed bin (index) is assigned the CO/IP Line for the Speed Dial, the number to be dialed and a name for Dial-by-Name.

Administrator can assign each index to the desired speed number by entering CO Type, CO value, Dial Digit, and name. In the field of CO Type, there are many types; N/A, CO Line, CO Group, Loop, Transit-out, and Net Station. According to the CO type, you can fill out CO Value, Dial digit, and Name.

Network station number can be saved in speed dial that could be used for Dial by Name. It is used to use dial by name feature for networking number.

4.4.5.43 Custom Messages

Selecting Custom Messages will display the Custom Message Table data entry page. Click **[Save]** button after changing Value.

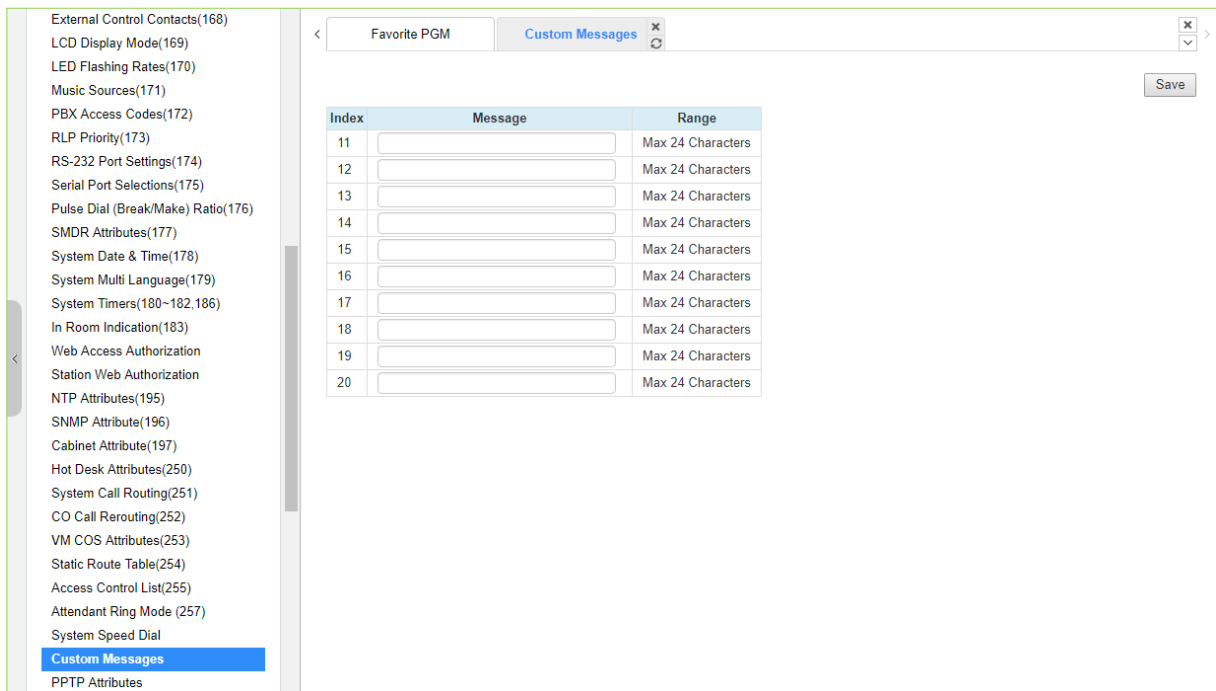

Figure 4.4.5.43-1 Custom Message

The system's 10 Custom messages can be defined with up to 24 characters each

4.4.5.44 PPTP Attributes

Selecting PPTP Attributes will display the PPTP Attributes Table data entry page. Click **[Save]** button after changing Value.

Order	Attribute	Value	Range
1	PPTP Usage	OFF	
2	PPTP Server IP Address	<input type="text"/>	IP Address
3	PPTP ID	<input type="text"/>	Max 24 Chars
4	PPTP Password	<input type="text"/>	Max 24 Chars
5	PPTP Service CLI	<input type="text"/>	Max 23 Digits

Figure 4.4.5.44-1 PPTP Attributes

When required, the system supports Point to Point Tunneling Protocol (PPTP). PPTP must be enabled and values for the PPTP server IP address, Id and password must be entered and a server name may be entered.

4.4.5.45 PPP Attributes for eMG– PGM 205

Selecting PPP Attributes will display the PPP Attributes data entry page. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

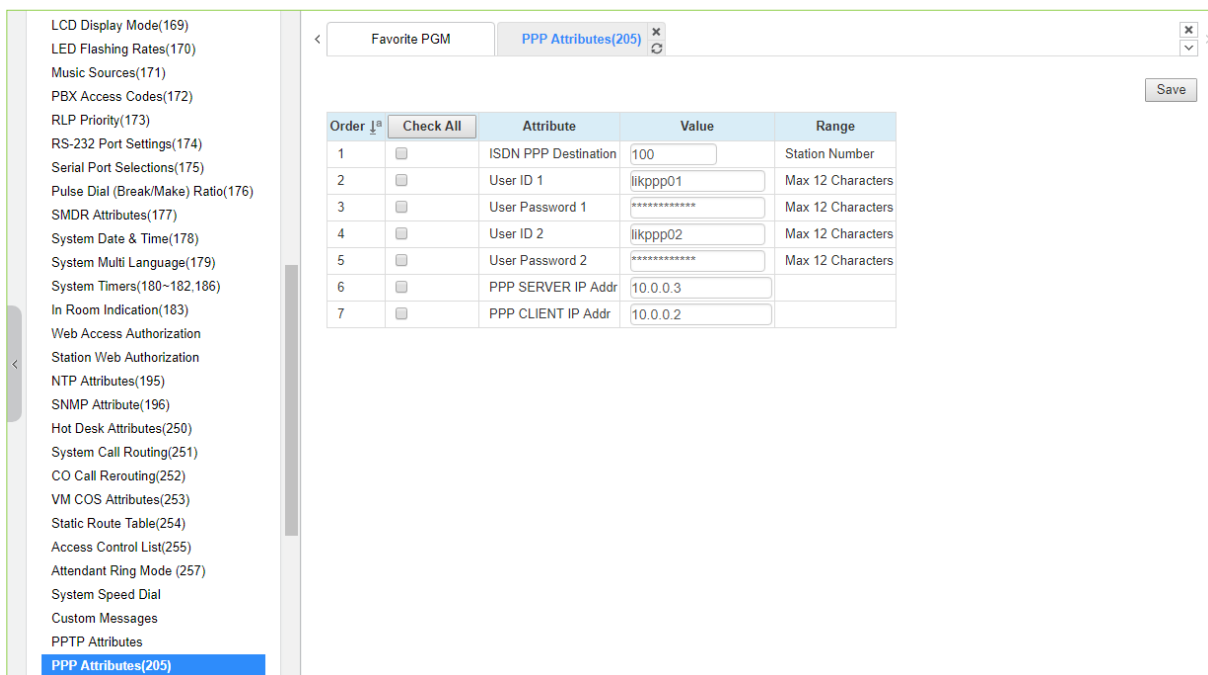

Figure 4.4.5.45 PPP Attributes

In addition to remote access via an IP network connection, the system database may be accessed remotely via an ISDN connection. Placing a call over an ISDN Line to the designated PPP Station will provide a connection to the system database. The system will request a user id and password, which must match one of the User Ids and passwords assigned. After a matching id and password are received, the iPECS Login Home page is provided.

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ISDN PPP Destination	If the incoming capability is 64 Kbps unrestricted digital and the called party number matches the PPP destination, the system will automatically answer the call and request PPP ID and password.	Station number	
User ID 1	The System accepts this PPP ID 1 as valid.	Max. 12 characters	likppp01
User Password 1	The password entered is used to authorize PPP ID 1.	Max. 12 characters	lpkts01
User ID 2	The System accepts this PPP ID 2 as valid.	Max. 12 characters	likppp02
User Password 2	The password entered is used to authorize PPP ID 2.	Max. 12 characters	lpkts02
PPP Server IP Address	When configured, the PPP Server IP Address must match this entry. To apply this option the system must be restarted.	IP Address	
PPP Client IP Address	When configured, the PPP Client IP Address must match this entry. To apply this option the system must be restarted.	IP Address	

4.4.6 Station Group Data

Selecting the Station Group Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

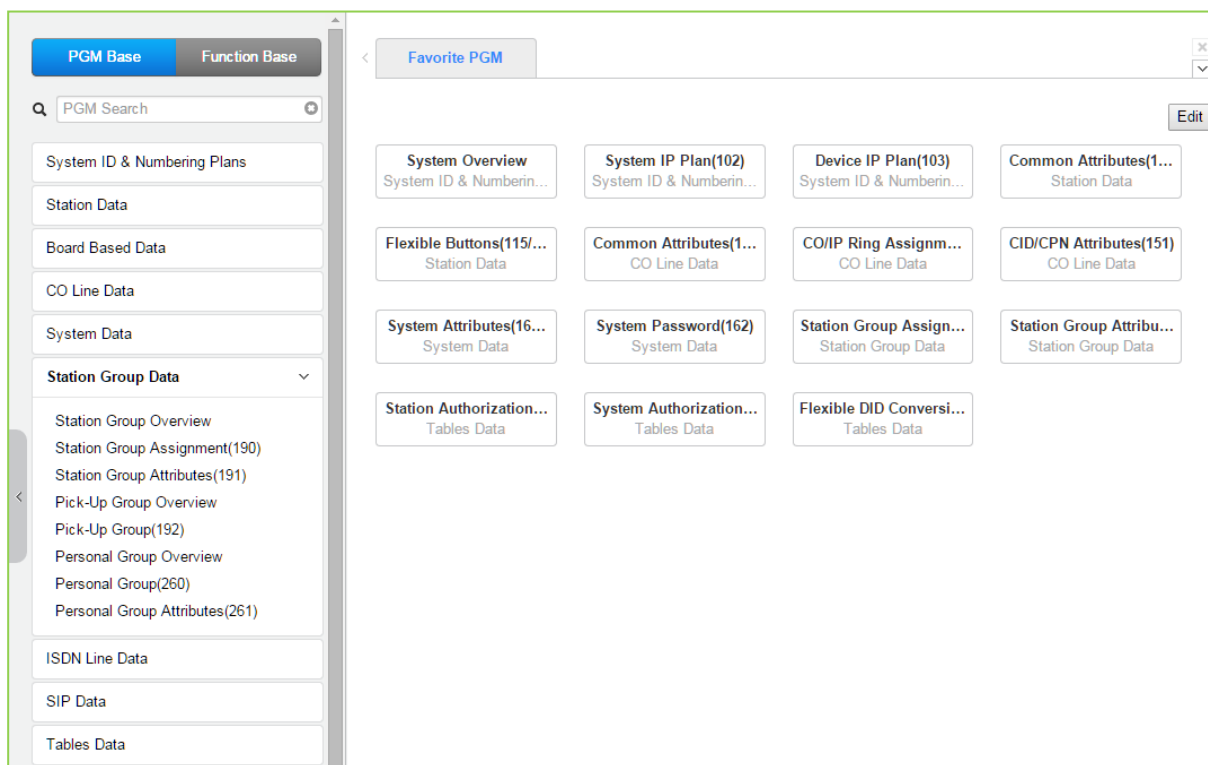

Figure 4.4.6-1 Station Group Data

Stations can be grouped so that incoming calls will search (Station) for an idle station in the group. The system allows assignment of three Station processes, Circular, Terminal and ACD. In addition, there are eight (8) functional groups available: ACD (Automatic Call Distribution) based on ACD station, Ring, Call Pick-Up, External Voice Mail (SLT connected), VSF-Voice Mail, iPECS Feature Server Voice Mail and Network Voice Mail, and UCS Groups.

Certain types of groups can incorporate announcements, which are given to the calling party. The system's VSF can store up to two hundreds (200) announcements for use with Station Groups.

Note that a station can belong to multiple groups if the groups are all of the same type. Also note that when a station group is assigned to a group type (Circular, Terminal, ACD, VM, FS VM, VSF-VM, Net VM, UCS and Ring), the group attributes are initialized to the default values.

4.4.6.1 Station Group Overview

Selecting the Station Group Overview item will return the Station Group Overview page. This page displays the Station Group attributes (type, pick-up attribute, Member list, and Group name) for all the Station Groups.

Group Number	Type	Pickup Attribute	Member List	Group Name	
*401	Circular	OFF			Go to Assignment
*402	ACD	OFF			Go to Assignment
*403	Ring	OFF			Go to Assignment
*404	Voice Mail	OFF			Go to Assignment
*405	Pick-Up	ON			Go to Assignment
*406	VSF-VM	OFF			Go to Assignment
*407	UMS-VM	OFF			Go to Assignment
*408	UCS	OFF			Go to Assignment
*409	N/A	OFF			Go to Assignment
*410	N/A	OFF			Go to Assignment
*411	N/A	OFF			Go to Assignment
*412	N/A	OFF			Go to Assignment
*413	N/A	OFF			Go to Assignment
*414	N/A	OFF			Go to Assignment
*415	N/A	OFF			Go to Assignment
*416	N/A	OFF			Go to Assignment
*417	N/A	OFF			Go to Assignment
*418	N/A	OFF			Go to Assignment
*419	N/A	OFF			Go to Assignment
*420	N/A	OFF			Go to Assignment
*421	N/A	OFF			Go to Assignment
*422	N/A	OFF			Go to Assignment
*423	N/A	OFF			Go to Assignment
*424	N/A	OFF			Go to Assignment
*425	N/A	OFF			Go to Assignment
*426	N/A	OFF			Go to Assignment

Figure 4.4.6.1-1 Station Group Overview

All information of each group will be displayed and changed the assignment on this page.

Each Group can be assigned Type, Pickup attributes, Member list, and Group name by clicking “Go to Assignment” on this page. Station Group Assignment (190) will be displayed and directly go to Station Group Attributes (191) of the group by clicking “Go to Attributes”.

4.4.6.2 Station Group Assignment - PGM 190

Selecting Station Group Assignment will display the Station Group data entry page. Enter the desired Station Group number and click **[Load]** to display the Group Assignment.

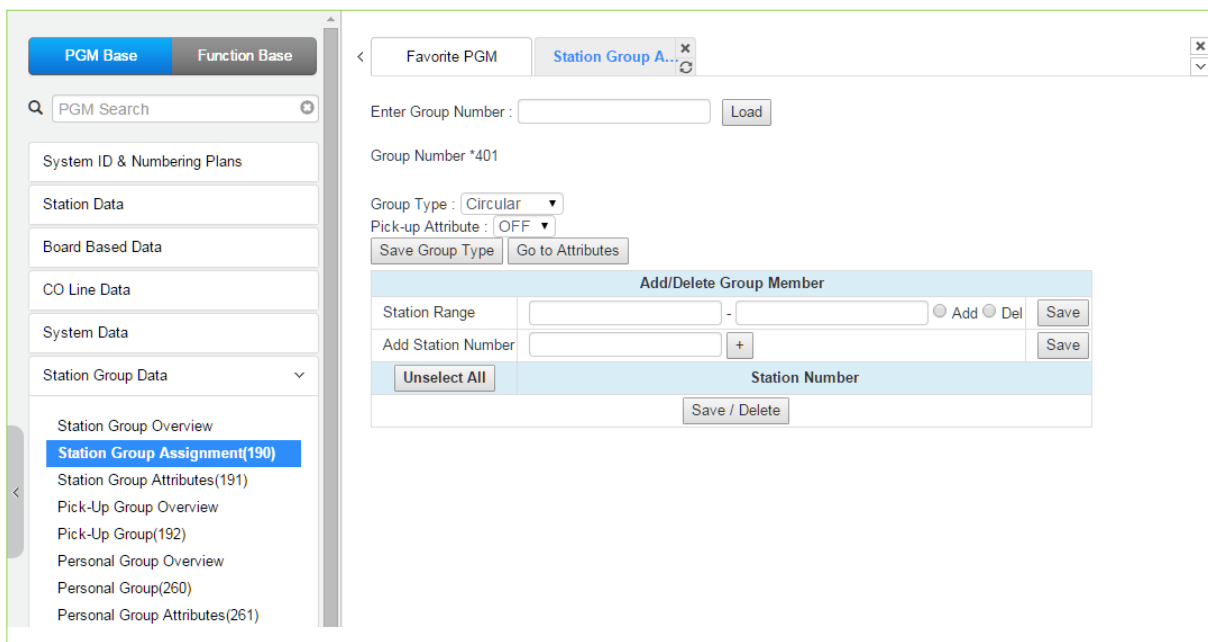

Figure 4.4.6.2-1 Station Group Assignments

Under Station Group Assignments the type, members and Pick-Up attributes are assigned to the Station Group. Note for the Net VM group, the network number must be assigned as the Net VM group member station.

Table 4.4.6.2-1 STATION GROUP ASSIGNMENT

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Group Type	Defines the type of station group. N/A, Circular, Terminal, ACD, Ring, Voice Mail, Pick-Up, VSF-VM, UMS VM, NET VM, UCS	Refer to description	N/A
Pick-up Attribute	Stations can pick-up group calls ringing at other stations in the group. This does not apply to the VM groups.	OFF ON	OFF
Member	Assigns stations as members of a station group or, for the Net VM group type, defines the Net Number of the group.		-

4.4.6.3 Station Group Attributes - PGM 191

Selecting Station Group Attributes will display the Station Group Attributes data entry page. Enter the Station Group number and click **[Load]**, the Web page for the selected group will be displayed as in Figure 4.4.6.3-1 to Figure 4.4.6.3-8 based on the Group type.

Each type of group has a different set of available attributes relating to announcements, timers, overflow, etc. Table 4.4.6.3-1 through Table 4.4.6.3-8 provides descriptions for the attributes and data entries required. Note that the attributes for the Circular and Terminal Station groups are given in Table 4.4.6.3-1 and the UCD attributes include the ACD functions Table 4.4.6.3-2.

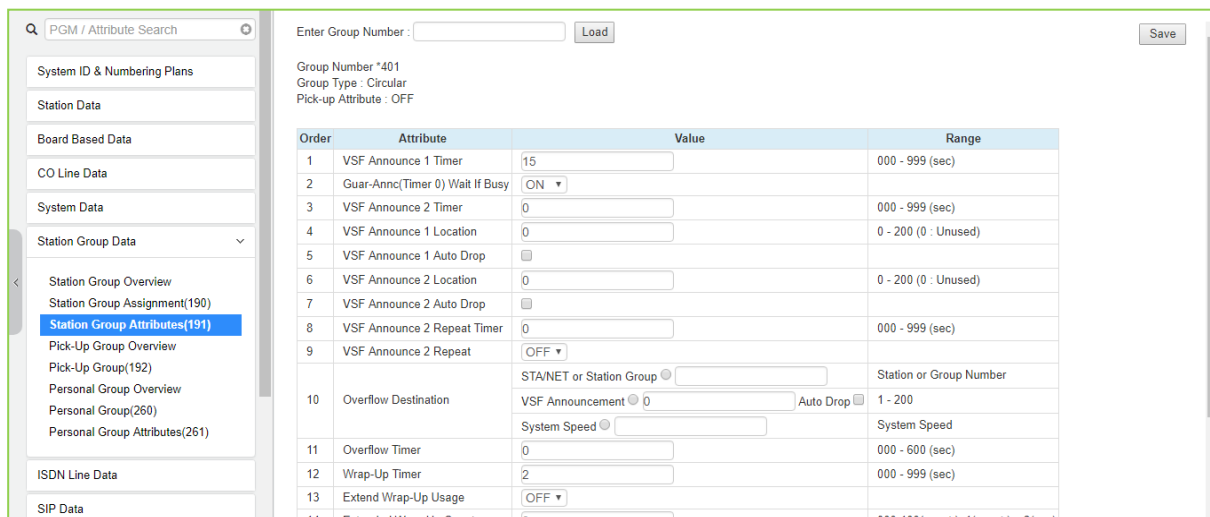

Figure 4.4.6.3-1 Terminal & Circular Group Attributes

Table 4.4.6.3-1 TERMINAL & CIRCULAR GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
VSF Announce 1 Timer	If all stations in the group are busy when a call is offered, the call may continue to wait (queue) for an available station. If the queue period exceeds the VSF Announce 1 timer, the call is sent to a VSF announcement. If the timer is set to 000, the call will receive the first announcement, in full, prior to the station process (guaranteed announcement).	000~999 (seconds)	015
Guar-Annc(Timer 0) Wait If Busy	When a call assigned to receive a guaranteed announcement arrives and all channels are busy, the call may wait with Ring back until a channel is available (ON) or bypass the announcement (OFF).	OFF ON	ON
VSF Announce 2 Timer	After the 1st announcement, the 2nd ANNC TMR is activated. At expiration, if the call remains queued to the group, the call is sent to the assigned 2nd VSF announcement.	000~999 (seconds)	000
VSF Announce 1 Location	The Station Group can be assigned an announcement, which is played if the call remains queued beyond the VSF Announce 1 Timer duration. The announcement location is the VSF Announcement number. An entry of 00 indicates no announcement.	00~200	00: none
VSF Announce 1 Auto Drop	If this attribute is selected, the call will drop after the 1st VSF announcement.	Check box	

Table 4.4.6.3-1 TERMINAL & CIRCULAR GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
VSF Announce 2 Location	The Station Group can be assigned a 2nd announcement, which is played if the call remains queued beyond the VSF Announce 2 Timer duration. The announcement location is the VSF Announcement number. An entry of 00 indicates no announcement.	00~200	00: none
VSF Announce 2 Auto Drop	If this attribute is selected, the call will drop after the 2nd VSF announcement.	Check box	
VSF Announce 2 Repeat Timer	The 2nd announcement can be repeated to callers that remain in queue at intervals of the Announcement 2 Repeat Timer. Note VSF Announce 2 Repeat below must be "ON".	000~999 (seconds)	000
VSF Announce 2 Repeat	After the 2nd announcement, if the call remains queued to the group, the 2nd VSF announcement can be repeated at the Announce 2 Repeat Timer interval, defined above.	OFF ON	OFF
Overflow Destination	A call to the group will continue to route through the group until answered or all group members have been tried. The call will remain at the last station or route to the assigned overflow destination. If VSF Announcement is selected, Auto Drop can be checked. STA/NET or Station Group, VSF Announcement, Auto Drop, System SPD	Refer to description	
Overflow Timer	A call to the group will remain at the last station in the group or can be sent to the assigned Overflow Destination after expiration of the Overflow Timer.	000~600 (seconds)	180
Wrap-Up Timer	After terminating a group call, a Group member will be maintained in a busy state for the duration of the Wrap-Up timer.	000~999 (seconds)	002
Extend Wrap-Up Usage	Sometimes, special wrap-up duration is required for an agent to allow the agent to do follow-up actions after hold or park a call connected. The basic wrap-up duration is not enough to care for an agent to allow some more extended interval before receiving a new incoming ring. <ul style="list-style-type: none"> Following rings are protected for the agent in wrap-up duration. <ul style="list-style-type: none"> - New incoming Station Group call - Queued call or indication ring - New incoming normal internal or external call Following rings are not protected by the wrap-up duration. <ul style="list-style-type: none"> - Directly transferred call to the agent - Recalling ring 	OFF ON	OFF
Extended Wrap-Up Count	In every 1 count (3 seconds), system checks the status of a held/parked Station Group call. If none of held/parked Station Group call remained then system clears the wrap-up status for the agent automatically.	000-100 (count),	0
Extended Wrap-Up Count	If any of held/parked Station Group call remained then system continues the wrap-up status during next 1 count(3 seconds) till the max count of this input.	1(count) = 3(sec)	0

Table 4.4.6.3-1 TERMINAL & CIRCULAR GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
No Answer Timer	Calls to a station in the group are directed to the station, if unavailable or unanswered in the No Answer Timer, the call can be routed based on the assigned hunt process.	00~99 (seconds)	15
Pilot Station Group	A circular/terminal Station group can be set so that only calls to the pilot number (station group number) will hunt.	OFF ON	ON
REPT No Member	If a call is received and no members are on-duty, an ICM call will return re-order tone, while a CO/IP call will be routed to the overflow destination.	OFF ON	OFF
Music Source	A Music source can be assigned so that calls to the group will receive audio from the assigned source in place of ring-back tone. Ring back tone, Internal Music, External Music VSF MOH, SLT MOH1~5, VSF MOH2~30	Refer to description	Internal Music
Allow Forward Member	A member activating Call forward may be placed in an unavailable state for Station group calls (ON). When OFF, group calls are sent to the member as normal (OFF).	OFF ON	ON
Mailbox Message Wait Station	When a call overflows or routes to the VM group, a station number is used to identify the Mailbox for the group messages.	Station Number	
Mailbox Password	The password associated with a group Mailbox is defined here. The password is used in conjunction with the group Mailbox as with a normal station.	Max. 12 digits	
Forced Forward Destination	Calls to a Station group may forward directly to a defined destination, bypassing the hunt process. "Forced Forward", below, must be enabled. STA/NET or Station group, VSF Announcement, Sys. Speed	Refer to description	
Forced Forward Destination Usage	Calls to a Station group may forward directly to a defined destination, see above "Forced Forward Destination" when Forced Forward is enabled for the group.	OFF ON	OFF
Group Name	A name can be designated for the group.	Max. 12 characters	
Maximum Queued Call Counter	When the number of calls queued to the group match this parameter, new calls will receive error tone and be disconnected after the VSF Announcement 1, if assigned, is played.	00-99	99
Ring Tone	When a call is routed to a group, programmed ring tone is served to the group member.	00-16 (00:N/A)	0
Group Ring Back Tone	When group member is ringing for group, The ring back tone can be provided to the caller according to ring back tone for group. <ul style="list-style-type: none"> Ring back tone : ring back tone is provided when the member for group is ringing MOH : MOH is provided when the member for group is ringing. MOH (after connection): MOH is provided when system answered the call 	Refer to description	Ring back tone

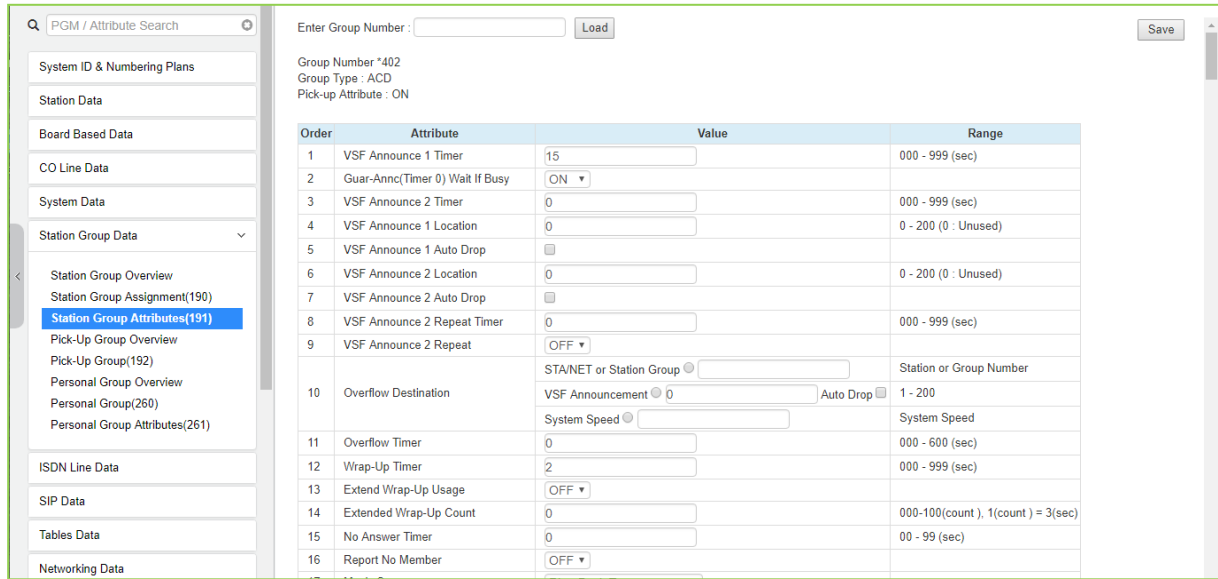

Figure 4.4.6.3-2 ACD Group Attributes

Table 4.4.6.3-2ACD GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
VSF Announce 1 Timer	If all stations in the group are busy when a call is offered, the call may continue to wait (queue) for an available station. If the queue period exceeds the VSF Announce 1 Timer, the call is sent to a VSF announcement. If the timer is set to 000, the call will receive the first announcement, in full, prior to the hunt process (guaranteed announcement).	000~999 (seconds)	015
Guar-Annc (Timer 0) Wait If Busy	When a call assigned to receive a guaranteed announcement arrives and all channels are busy, the call may wait with Ring back until a channel is available (ON) or bypass the announcement. (OFF)	OFF ON	ON
VSF Announce 2 Timer	After the 1st announcement, a 2nd timer is activated. At expiration, if the call remains queued to the group, the call is sent to the assigned 2nd VSF announcement.	000~999 (seconds)	000
VSF Announce 1 Location	Each Station Group can be assigned an announcement, which is played if the call remains queued beyond the VSF Announce 1 Timer duration. The announcement location is a VSF announcement number. An entry of 00 indicates no announcement.	00~200	00: none
VSF Announce 1 Auto Drop	If this attribute is selected, the call will drop after the 1st VSF announcement		
VSF Announce 2 Location	The Station Group can be assigned a 2nd announcement, which is played if the call remains queued beyond the VSF Announce 2 Timer duration. The announcement location is a VSF announcement number. An entry of 00 indicates no announcement.	00~200	00: none
VSF Announce 2 Auto Drop	If this attribute is selected, the call will drop after the 2nd VSF announcement		

Table 4.4.6.3-2ACD GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
VSF Announce 2 Repeat Timer	The 2nd announcement can be repeated to calls that remain in queue at intervals of the VSF Announce 2 Repeat Timer. Note repeating must be "ON" under VSF Announce 2 Repeat below.	000~999 (seconds)	000
VSF Announce 2 Repeat	After the 2nd announcement, if the call remains queued to the group, the 2nd VSF announcement can be repeated at the VSF Announce 2 Repeat Timer interval.	OFF ON	OFF
Overflow Destination	A call to the group will continue to route through the group until answered or all group members have been tried. The call will queue to the group or route to the assigned Overflow Destination. If VSF Announce is assigned, Auto Drop is available. <ul style="list-style-type: none"> • STA/NET or Station Group, • VSF Announcement, • Auto Drop, • System SPD 	Refer to description	
Overflow Timer	A call to a group will remain queued to the group or be sent to the assigned Overflow Destination after expiration of the Overflow Timer	000~600 (seconds)	180
Wrap-Up Timer	After terminating a group call, a Station Group member will be maintained in a busy state for the duration of the Wrap-Up timer.	000~999 (seconds)	002
Extend Wrap-Up Usage	Sometimes, special wrap-up duration is required for an agent to allow the agent to do follow-up actions after hold or park a call connected. The basic wrap-up duration is not enough to care for an agent to allow some more extended interval before receiving a new incoming ring. Following rings are protected for the agent in wrap-up duration. <ul style="list-style-type: none"> • New incoming Station Group call • Queued call or indication ring • New incoming normal internal or external call Following rings are not protected by the wrap-up duration. <ul style="list-style-type: none"> • Directly transferred call to the agent • Recalling ring 	OFF ON	OFF
Extended Wrap-Up Count	In every 1 count (3 seconds), system checks the status of a held/parked Station Group call. If none of held/parked Station Group call remained then system clears the wrap-up status for the agent automatically. If any of held/parked Station Group call remained then system continues the wrap-up status during next 1 count(3 seconds) till the max count of this input.	000-100 (count), 1(count) = 3(sec)	0
ACD No Answer Timer	Calls to an agent in the group are directed to the station, if unanswered in the NO ANSWER TIMER, the call can be routed another agent	00-99 (seconds)	00

Table 4.4.6.3-2ACD GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
REPT No Member	If a call is received and no members are on-duty, an ICM call will return re-order tone, while a CO/IP call will be routed to the overflow destination.	OFF ON	OFF
Music Source	A Music source can be assigned so that calls to the group will receive audio from the assigned source in place of ring-back tone while in queue. <ul style="list-style-type: none"> • Ring back tone, • Internal Music, • External Music, • VSF MOH, • SLT MOH1~5, • VSF MOH2~30 	Refer to description	Internal Music
ACD Warning Tone	An ACD supervisor can monitor agent conversations. A warning tone can be provided to the agent and connected party when the supervisor activates the monitor feature.	OFF ON	OFF
Alternate Destination	When a call comes into the group and there are no group members available, the call will be routed to the assigned Alternate Destination. STA/NET or Station, Group, System SPD	Refer to description
Supervisor Timer	When calls have been in queue longer than the Supervisor Timer, the ACD supervisor is notified by a display of the longest queue time.	000~999 (seconds)	030
Supervisor Call Count	When the number of calls in queue exceeds the Supervisor Call Count, the ACD Supervisor is notified by a display of queued calls.	00~99	00
Maximum Queued Call Counter	When the number of calls queued to the group match this parameter, new calls will receive error tone and be disconnected after the VSF Announcement 1, if assigned, is played.	00-99	99
Supervisor 1 to 5	Any valid iPECS IP or LDP Phone with display can be assigned as a Supervisor, max. 5 ACD Supervisors.	Station	
ACD DND Wrap Timer	This parameter sets the duration a station will receive ring before the system places the station in ACD DND and unavailable for group calls. A setting of '00' disables automatic ACD DND.	002~200 (Sec.)	010
Entered Caller ID ICLID Usage	Within 5 seconds of a guaranteed announcement, the caller may dial digits as an ICLID. The user-dialed digits are compared to the ICLID Table entries, for routing or, for a single dialed digit, to the ACD CCR table below.	OFF ON	OFF
Forward Member Calls	A member activating Call Forward may be placed in an unavailable state for Station group calls (ON). When OFF, group calls are sent to the member as normal. OFF : no FWD, ON : FWD	Refer to description	ON
Group Name	An ACD group name can be designated.	Max. 12 characters	

Table 4.4.6.3-2ACD GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CIQ Route 1	When an ACD call is queued, the caller may be allowed to dial a digit to exit the queue and route to another destination. The alternate destination is based on the user-dialed digit and can be a station, Station group, system-speed bin, or network station. Dial the digit below for the type of destination and enter the value associated with the destination. 1: Enter a station number. 2: Enter a Station group number. 3: Enter a system speed bin. 4: Enter a network station number		Not selected

4.4.6.4 Pick Up Group Overview

Selecting the Pick Up Group Overview item will return the Station Pick Up Group Overview page. This page displays the Station Group member stations for all the Station Pick Up Groups. Note that data cannot be entered on this page.

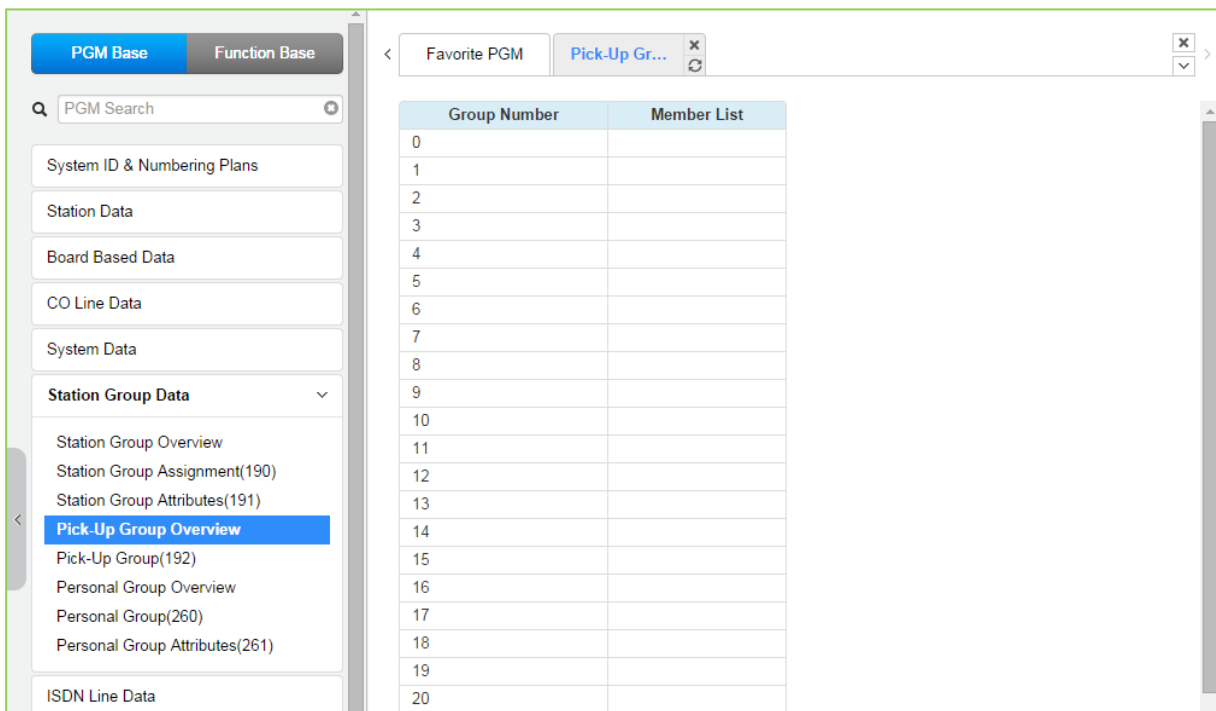

Figure 4.4.6.4-1 Pick Up Group Overview

4.4.6.5 Pick Up Group - PGM 192

Selecting Pick Up Group will display the Pick Up Group entry page. Enter the desired Pick Up Group number and click **[Load]** to display the group member Assignment.

Enter Group Number: eMG80/100: 0-49 / eMG800: 0-199 / UCP: 0-199

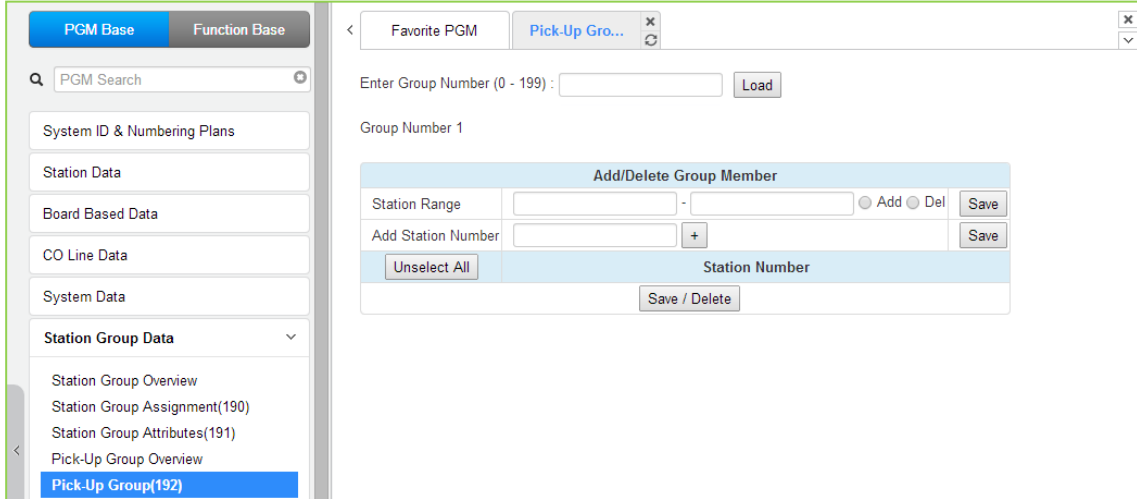

Figure 4.4.6.5-1 Pick Up Group

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Member	Assign stations as members of the Pick-Up group.		

4.4.6.6 Personal Group Overview

Selecting Personal Group Overview displays the master station and member list for all the personalgroups.

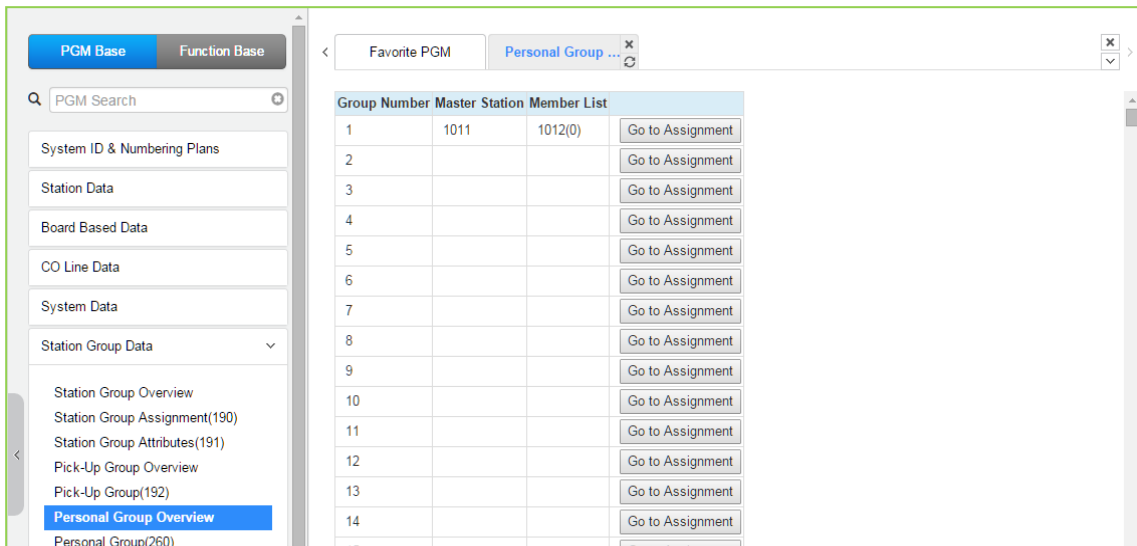

Figure 4.4.6.6-1 Personal Group Overview

Clicking **[Go to Assignment]** goes to move Personal group (260) for assigning Master station&Member Station and setting Personal group attributes directly.

4.4.6.7 Personal Group - PGM 260

Selecting Personal Group will display the Personal Group entry page. Enter a valid Personal Group number and click load to enter group data.

Enter Group Number: eMG80/100: 1-70 / eMG800: 1-600 / UCP: 1-1200

Figure 4.4.6.7-1 Personal Group

Several stations can share same station number. That means Personal Group is extended feature of Linked Pair. A Personal Group is composed with a master station and several member stations. A master station and all member stations share master station's number. In case of Member station, each member station can be set the delay (Dly) time.

By using this shared number, almost features (Call To xxx / Call From xxx / SMDR / Message Wait...) can be activated. But, some features can be chosen by PGM 261 attribute about all station activating or individual station working.

In PGM 260, Personal group master and member can be assigned.

In PGM 261, Personal group attribute can be set.

4.4.6.8 Personal Group Attribute - PGM 261

Selecting Personal Group Attribute will display the Personal Group Attribute entry page. Enter a valid Personal Group number to enter the group data. Click **[Save]** button after changing Value.

Enter Group Number: eMG80/100: 1-70 / eMG800: 1-600 / UCP: 1-1200

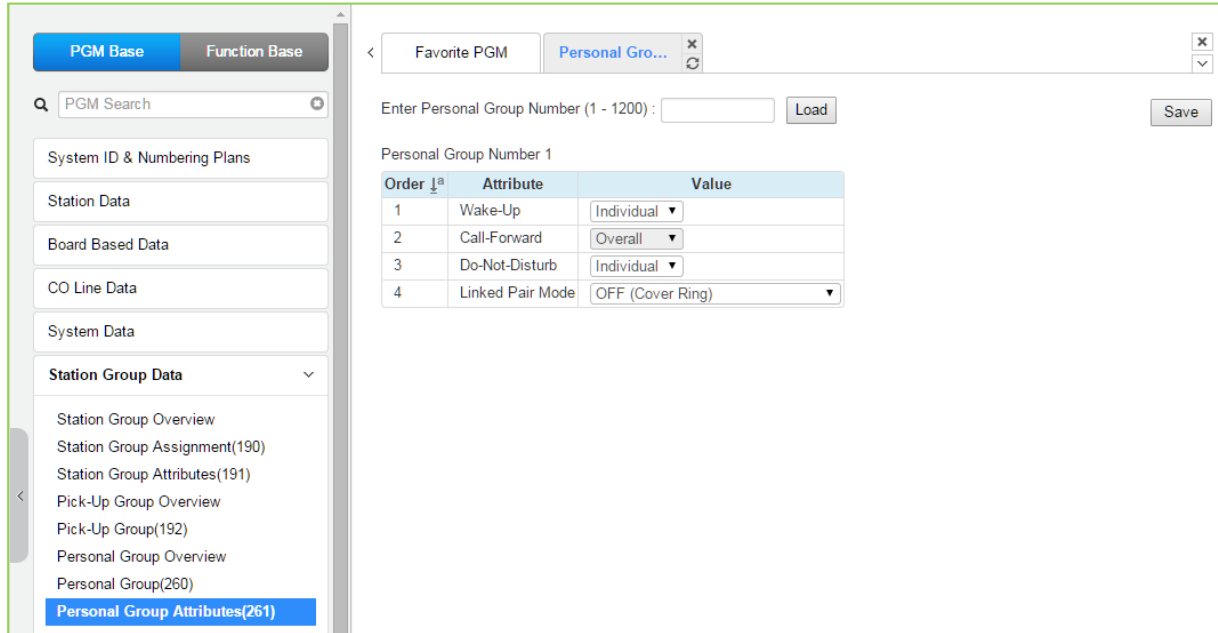

Figure 4.4.6.8-1 Personal Group Attributes

Table 4.4.6.8-1 PERSONAL GROUP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Wake-Up	If this value is set to Overall, all member wake-up follow by master wake up. If this value is set to Individual, individual wake-up is worked by each station.	Individual/ Overall	Individual
Call-Forward	If this value is set to Overall, call forward setting affect to Master and all members. If this value is set to Individual, individual Call Forward is worked by each station.	Individual/ Overall	Overall
Do-Not Disturb	If this value is set to Overall, DND setting affect to Master and all members.If this value is set to Individual, individual DND is worked by each station.	Individual/ Overall	Individual
Linked Pair Mode	If this value is set to ON, Master and Member Stations are linked and only one station can be activated. OFF (Cover Ring), ON (Cover Ring and State Sync.)	Refer to description	OFF (Cover Ring)
PAGE/PTT Receive	If this is set to Overall, PAGE and PTT calls are received by Master and all members by the Master who is belong to the PAGE zone and PTT group. If this is set to Individual, PAGE and PTT calls are received only by each station who is belong to the PAGE zone and PTT group.	Individual / Overall	Overall

4.4.7 ISDN Line Data

Selecting the ISDN Line Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

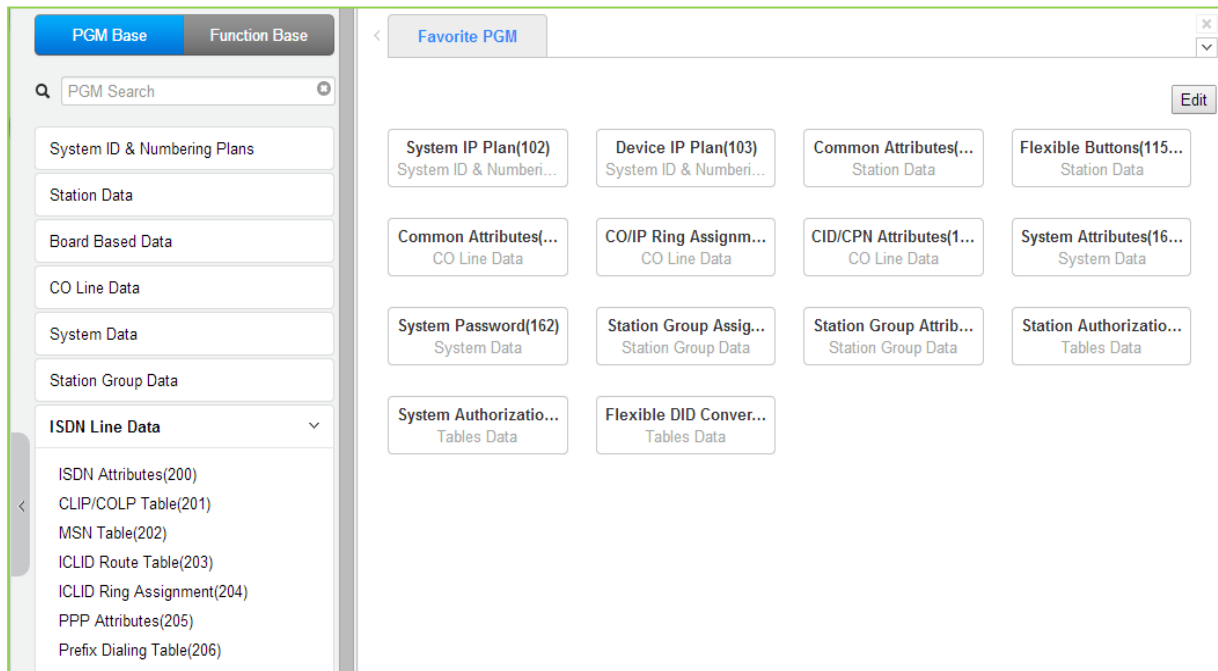

Figure 4.4.7-1 ISDN Line Data

Each ISDN (Integrated Services Digital Network) Line provides digital services to the end-user. Basic Rate Lines have three (3) channels, 2 B channels and a D channel. The 2 B channels provide 64 Kbps each, a total of 128 Kbps for “Bearer” or voice channels. The D channel provides a 16 Kbps signaling channel. Primary Rate Lines have 23/30 64 Kbps ‘B’ channels and 1/2 64 Kbps signaling channels. For proper operation, entries are required for various attributes and Tables to match the ISDN circuit and services.

4.4.7.1 ISDN Attributes - PGM 200

Selecting ISDN Attributes will display the ISDN Attributes data entry page. Click **[Save]** button after changing Value.

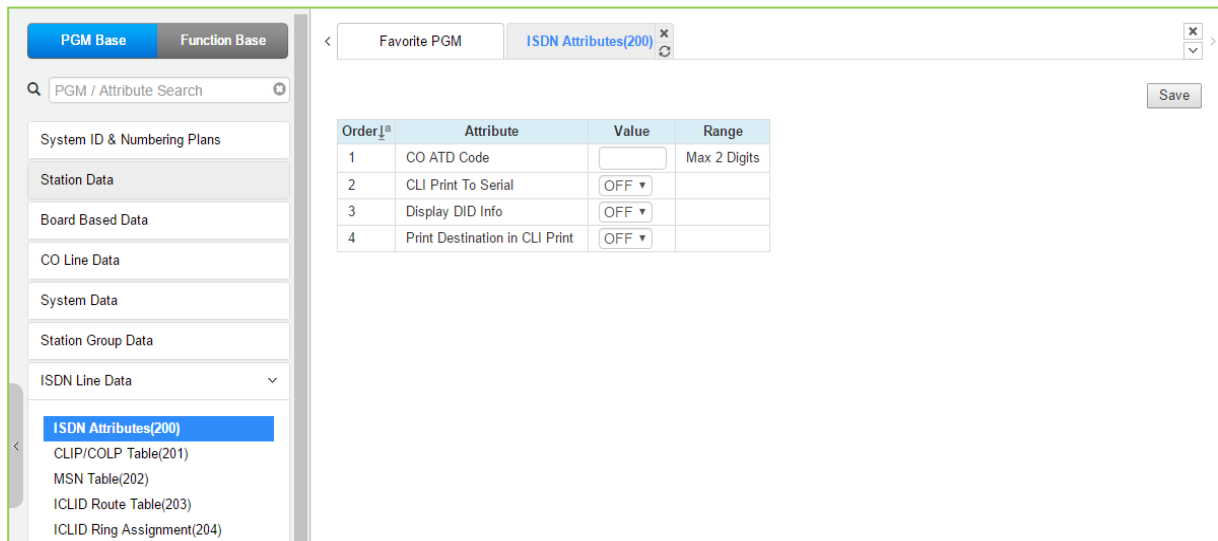

Figure 4.4.7.1-1 ISDN Attributes

ISDN attributes define several characteristics of the ISDN interface. ISDN call cost services (Advice of Charge), CLI modification, voice encoding, and other characteristics of the interface are defined, refer to the following table.

Table 4.4.7.1-1 ISDN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO ATD Code	When the system is set to send the station number with ISDN CLIP or COLP, either the station number or this ATD code will be sent based on Common Attributes section, EXT or ATD assignment.	Max.2 Digits	
CLI Print To Serial	The ISDN Calling Line Id may be included in call records, refer to SMDR Attributes section.	OFF/ ON	OFF
Display DID Information	Display DID digit information on LCD and print it to serial port.	OFF/ ON	OFF
Print Destination in CLI Print	If this set to ON, the following destination number is provided with ring Information. Station Number, Station Group, CCR, Net station, Conference room	OFF/ ON	OFF

4.4.7.2 CLIP/COLP Table - PGM 201

Selecting CLIP/COLP Table will display the CLIP/COLP Table Attributes data entry page. Click **[Save]** button after changing Value.

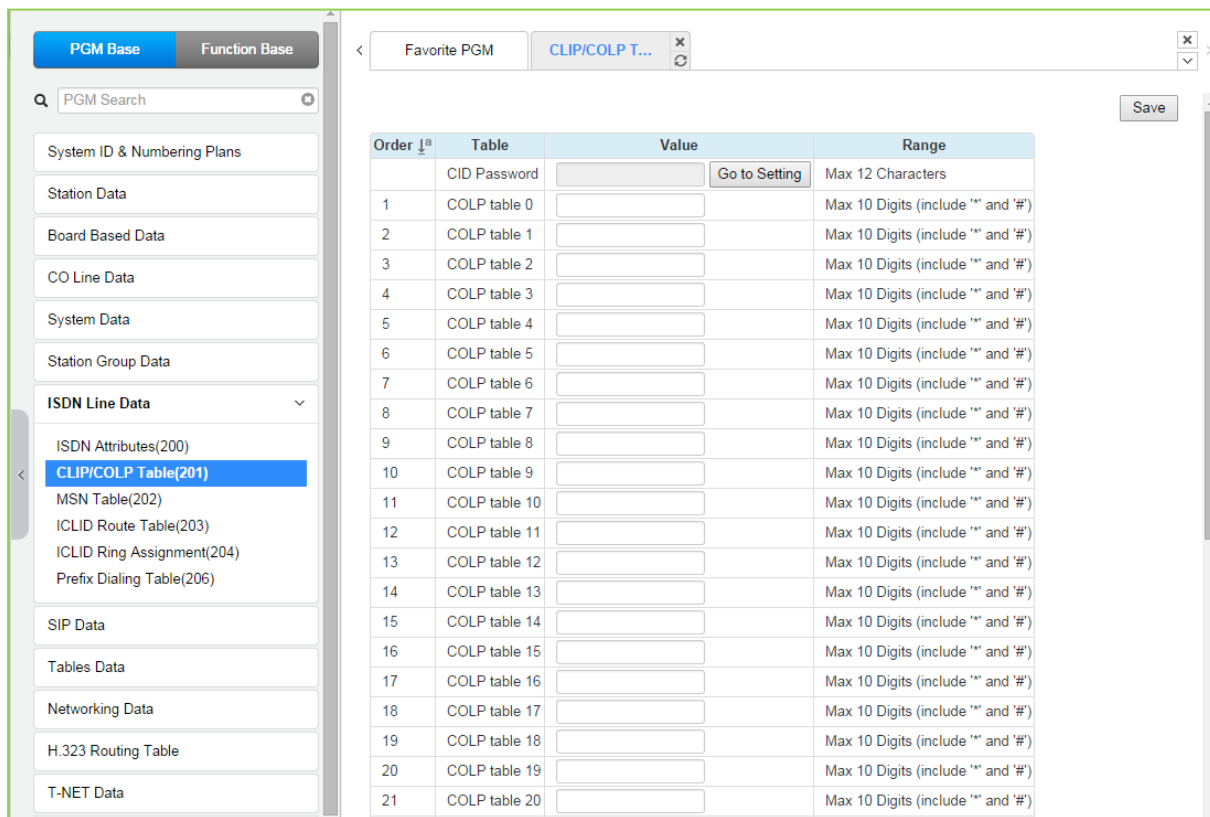

Figure 4.4.7.2-1 CLIP/COLP Table

Normally, the system will send the primary Directory Number of the ISDN Line in the ISDN call SETUP and CONNECT messages to identify the caller (CLIP) or the answering (COLP) party respectively. Under certain circumstances, it may be desirable to provide the secondary or DID number for the ISDN Line. In these cases, the CLIP/COLP Table may be used to define the digits sent. The number sent is selected based on the index assigned for the CO/IP Line under 'CID/CPN Attributes section'.

The CLI Station Number is sent in place of the station number. For all other entries, the station number is sent as a suffix to the number in the Table. Note that this number is sent only if CLIR/COLR is disabled under the CLIR Service and COLR Service assignments in the Station ISDN Attributes.

Setting CID Password directly

You can set the CID password to click "Go to Setting" button. After clicking it, you will move to the following PGM 162 and set the CID password, and then save CID password to mark tick on the save box and click the Save button.

4.4.7.3 MSN Table - PGM 202

Selecting MSN Table will display the MSN Table data entry page. For convenience, the copy, paste, and drag is available to enter or modify data. Click **[Save]** button after changing Value.

Enter Index Range: eMG80/100: 1-500 / eMG800: 1-1500 / UCP: 1-2400

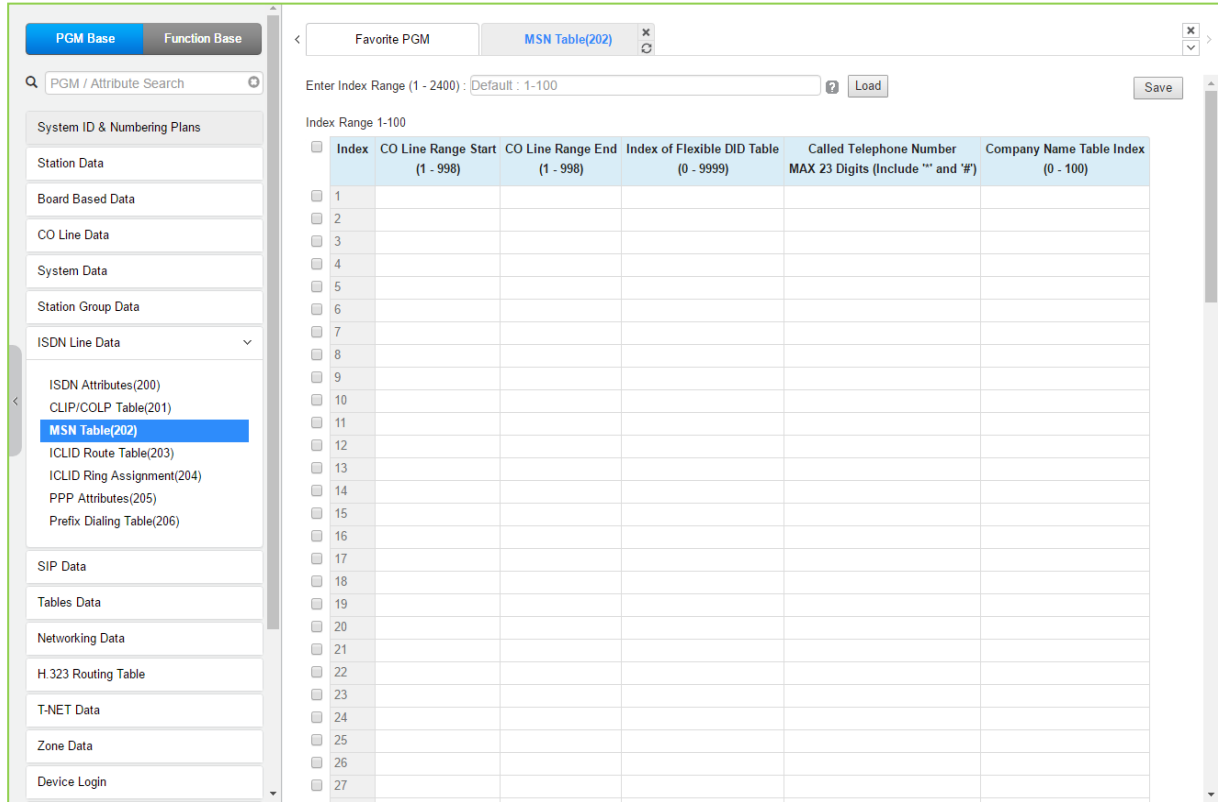

Figure 4.4.7.3-1 MSN Tables

When an ISDN Line assigned for DID operation receives an incoming call, the call will be routed to a station based on the Flexible DID Table Index assigned in the MSN Table. Each iPECS configuration has a different capacity as indicated by the entry range in the following table.

Table 4.4.7.3-1 MSN TABLE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO Line Range	Enter the CO Line Range. eMG80/100:1-74, eMG800:1-600, UCP:1-998	Refer to description	None
Index of Flexible DID Table	Index to the Flexible DID Table.	0-9999	None
Called Telephone Number	When the received MSN number matches this entry, the call is routed based on the DID Table index entered above. Max. 23 Digits(Include * and #)	Refer to description	None
Company Name Table Index	System provides the company name of MSN table for MSN call according to assigning Company Name Table (241).	0-100 (0:Station Name)	None

4.4.7.4 ICLID Route Table - PGM 203

Selecting ICLID Route Table will display the ICLID Route Table data entry page. Click **[Save]** button after changing field.

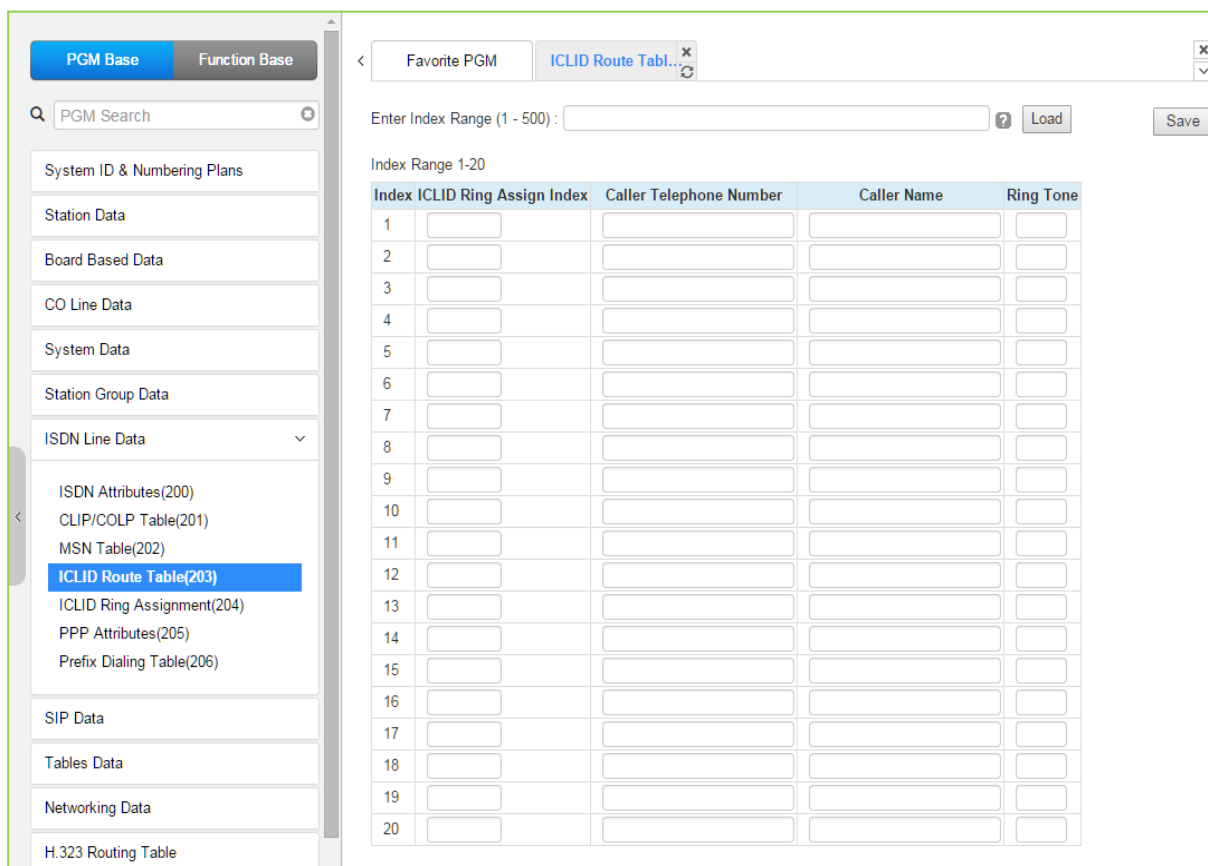

Figure 4.4.7.4-1 ICLID Route Table

The system can employ ICLID (Incoming Calling Line Id) to determine the routing of incoming external calls. Each CO/IP Line, including DID Lines and ACD group calls may be assigned to employ ICLID routing. The system will compare the received ICLID to entries in the ICLID Route Table and, if a match is found, will route the call to the destination defined in the ICLID Ring Assignment Table index assigned here.

Table 4.4.7.4-1 ICLID ROUTE TABLE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ICLID Ring Assign Index	Index to the ICLID Ring Assignment Table that determines the call routing. eMG: 001~250, UCP: 001~500	Refer to description	None
Caller Telephone Number	ICLID (Incoming Caller Id) to match for the index. If the Caller Id matches the Table entry, the index is used to select the route.	24 Digits	None
Caller Name	ICLID name that is sent by the system to the destination for the ICLID routed call.	12characters	None
Ring Tone	If the received Caller Id matches the Caller Telephone Number, the Ring tone selected here is employed for the call alerting.	01 ~ 16	Ring Tone

4.4.7.5 ICLID Ring Assignment Table - PGM 204

Selecting ICLID Ring Assignment Table will display the ICLID Ring Assignment Table data entry page. The station number starts 100 for eMG80/100 and 1000 for eMG800/UCP. Click **[Save]** button after changing Value.

The screenshot shows the 'ICLID Ring Assignment' configuration page. On the left is a sidebar with a search bar and a list of tables: System ID & Numbering Plans, Station Data, Board Based Data, CO Line Data, System Data, Station Group Data, ISDN Line Data, ISDN Attributes(200), CLIP/COLP Table(201), MSN Table(202), ICLID Route Table(203), **ICLID Ring Assignment(204)**, PPP Attributes(205), and Prefix Dialing Table(206). The main area shows 'Table Number : 1' and a table with the following structure:

	Attribute	Value	Range	Station Delay Value [Station:Delay]
Day	<input checked="" type="radio"/> Station Range	Range : <input type="text"/> - <input type="text"/> Delay : <input type="text"/>	0-9	[1000:0]
	<input type="radio"/> Station Group	<input type="text"/>		
	<input type="radio"/> VSF	Announcement : <input type="text"/> Auto Drop : <input type="checkbox"/>	0 - 200 (0 : Unused)	
	<input type="radio"/> AA Ring Time	<input type="text"/>	0~30	
	<input type="radio"/> Net Station	<input type="text"/>		
Night	<input checked="" type="radio"/> Station Range	Range : <input type="text"/> - <input type="text"/> Delay : <input type="text"/>	0-9	[1000:0]
	<input type="radio"/> Station Group	<input type="text"/>		
	<input type="radio"/> VSF	Announcement : <input type="text"/> Auto Drop : <input type="checkbox"/>	0 - 200 (0 : Unused)	
	<input type="radio"/> AA Ring Time	<input type="text"/>	0~30	
	<input type="radio"/> Net Station	<input type="text"/>		
	<input checked="" type="radio"/> Station Range	Range : <input type="text"/> - <input type="text"/> Delay : <input type="text"/>	0-9	[1000:0]

Figure 4.4.7.5-1 ICLID Ring Assignment Table

If the Incoming Caller ID matches an entry in the ICLID Route Table, the index from the Table is used to determine the call routing from the ICLID Ring Assignment Table. Separate ring assignments are made for Day, Night, and Timed Ring mode for each index, 001 to 250, in this table. When assigned to ring to a VSF announcement, the call can be automatically dropped after the announcement by entering '#' after the announcement number.

When CO Lines are programmed to Ring an external AA/VM, VSF or Feature Server Group as an Automated Attendant, the Ring signal can be on an immediate or delayed basis allowing other stations/groups to be assigned Ring and answer prior to signaling the AA. The delay is defined in seconds from 00 to 30.

4.4.7.6 PPP Attributes for UCP - PGM 205

Selecting PPP Attributes will display the PPP Attributes data entry page. Use the check boxes to indicate which attributes to define; data for checked attributes is stored for the entire range of stations when saved. Click **[Save]** button after changing Value.

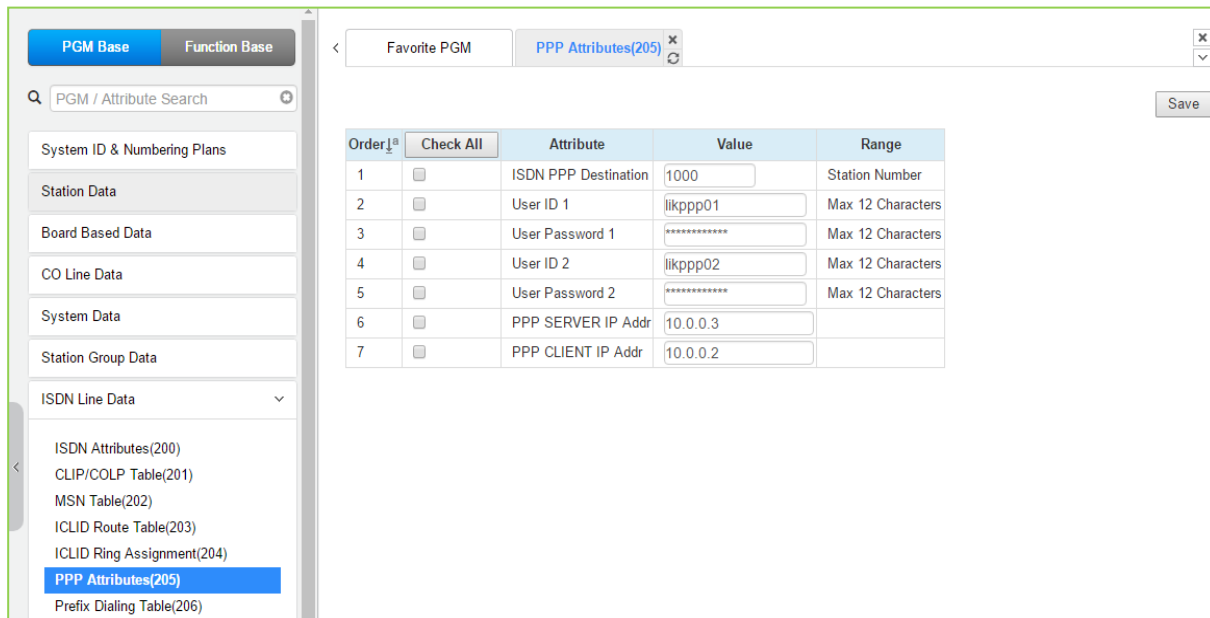

Figure 4.4.7.6-1 PPP Attributes

In addition to remote access via an IP network connection, the system database may be accessed remotely via an ISDN connection. Placing a call over an ISDN Line to the designated PPP Station will provide a connection to the system database. The system will request a user id and password, which must match one of the User Ids and passwords assigned. After a matching ID and password are received, iPECS Login Home page is provided.

Table 4.4.7.6-1 PPP ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ISDN PPP Destination	If the incoming capability is 64 Kbps unrestricted digital and the called party number matches the PPP destination, the system will automatically answer the call and request PPP ID and password.	Station number	None
User ID 1	The System accepts this PPP ID 1 as valid.	Max. 12 characters	likppp01
User Password 1	The password entered is used to authorize PPP ID 1.	Max. 12 characters	lpkts01
User ID 2	The System accepts this PPP ID 2 as valid.	Max. 12 characters	likppp02
User Password 2	The password entered is used to authorize PPP ID 2.	Max. 12 characters	lpkts02
PPP Server IP Address	When configured, the PPP Server IP Address must match this entry. To apply this option the system must be restarted.	IP Address	
PPP Client IP Address	When configured, the PPP Client IP Address must match this entry. To apply this option the system must be restarted.	IP Address	

4.4.7.7 Prefix Dialing Table - PGM 206

Selecting ISDN Prefix Dialing Attributes will display the Prefix Dialing Table Attributes data entry page. For convenience, the copy, paste, and drag is available to enter or modify data. Click **[Save]** button after changing Value.

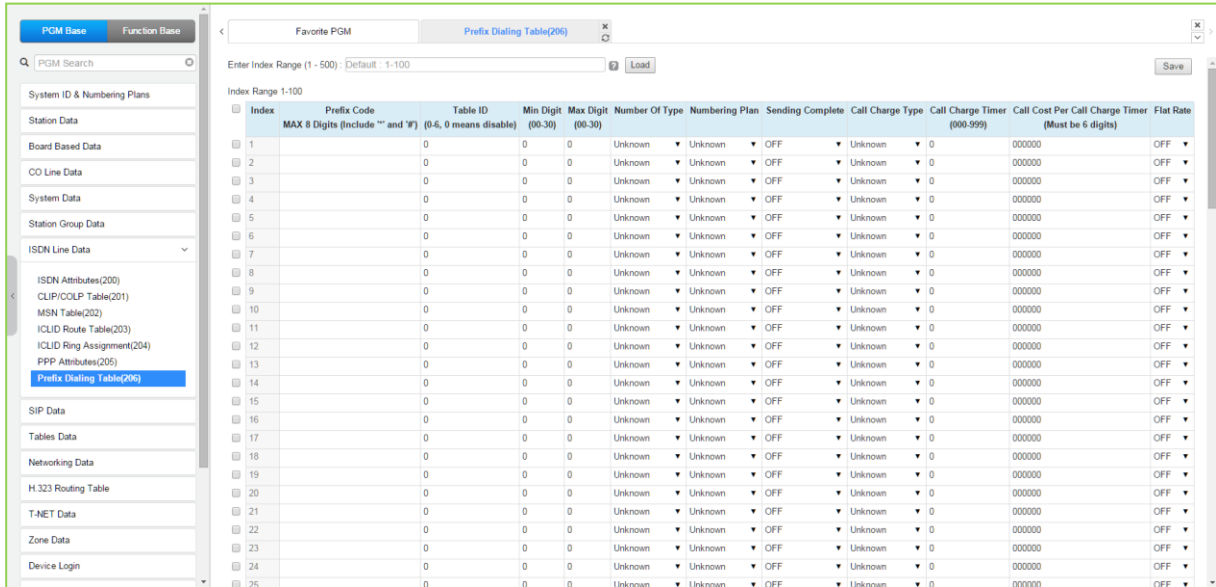

Figure 4.4.7.7-1 Prefix Dialing Table Attributes

Prefix Dialing Table. With this table, three features can be supported.

- CO Call Charge with NPR metering.
- SIP direct dialing with no wait inter-digit timer.
- ISDN Prefix Call – ISDN en-block Dialing with Prefix Call Setup.

If first some digits (up to 8 digits) of outgoing dial number are matched with Prefix Code of each table, this table can start work. By each Co-line (PGM 142 – F20), Table ID (0-6) can be set. This table ID (PGM 142 – F20) is associated with PGM 206 – each table ID.

Table 4.4.7.7-1 Prefix dialing Table Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Prefix Code	Enter the Prefix code. (Max 8 digits) Max. 8 Digits(Include * and #)	Refer to description	
Table ID	Enter Table ID (0-6). 0 means NOT used.	0-6	0
Min Digit	Select the minimum dial digits (00-30).	00-30	0
Max Digit	Select the maximum dial digits (00-30).	00-30	0
Number Of Type	Select Number of Type (0~6). <ul style="list-style-type: none"> • Unknown • International • National • Network Spec • Subscriber • Abbreviated • Reserved. 	Refer to description	Unknown

Table 4.4.7.7-1 Prefix dialing Table Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Numbering Plan	Select Numbering Plan (0~6). <ul style="list-style-type: none"> • Unknown • ISDN Telephony • Data numbering • Telex • National standard • Private • Reserved 	Refer to description	Unknown
Sending Complete	Select Sending Complete option. (On/Off)	ON/OFF	OFF
Call Charge Type	Call Charge Type (0~5). <ul style="list-style-type: none"> • Unknown • Local • LongDistance • International • Mobile • Reserved 	Refer to description	Unknown
Call Charge Timer	Call Charge Timer can be assigned. By this timer value Call Metering can be established.	000-999	0
Call Cost	Call Cost is calculated by CALL TIMER. (ex : timer is 1 min, cost is 000020, then after 3 minute call, total call cost is calculated to 000060)	000000-999999	000000
Flat Rate	If Flat Rate is ON, Flat Rate is applied by CALL COST per a call.	ON/OFF	OFF
Base Call Cost	If this value is set, base cost is applied. That means first charge is applied to Base Call Cost, and second charge is applied to Call Cost Per Call Charge Timer. If Base Call Cost is 0, base cost is not applied.	000000-999999	000000

4.4.7.8 ISDN Clock Priority for eMG800 - PGM 207

Selecting ISDN Clock Priority will display the ISDN Clock priority Attributes data entry page. Click **[Save]** button after changing Value.

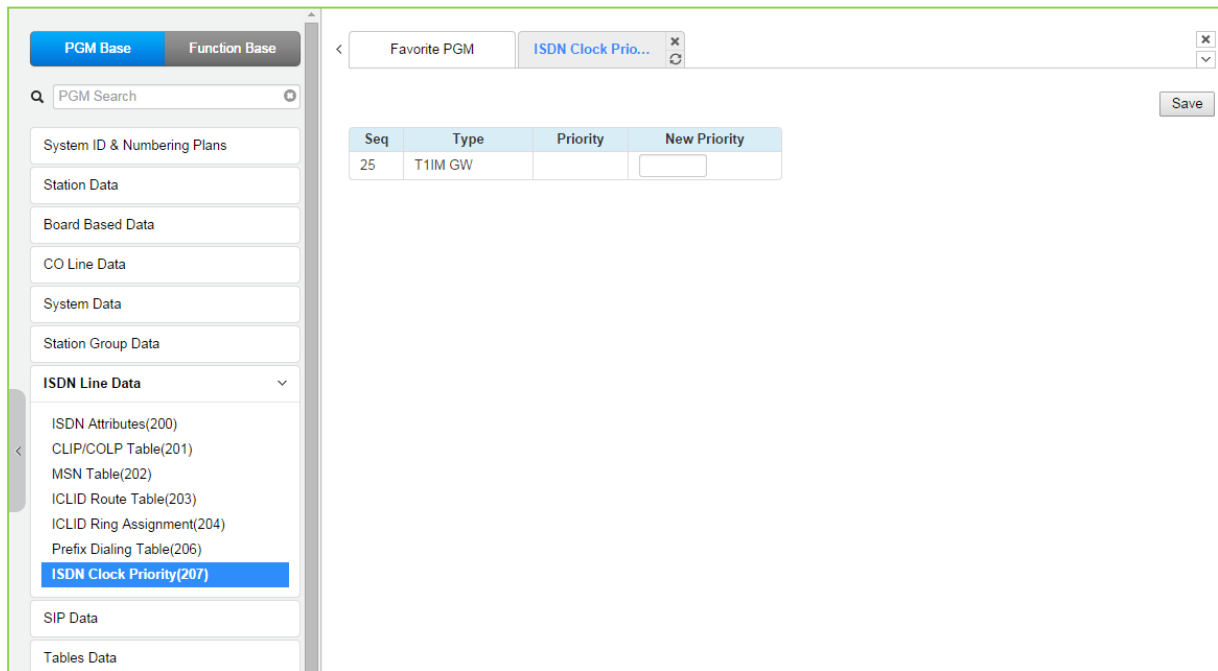

Figure 4.4.7.7-1 ISDN Clock Priority Attributes

Table 4.4.7.7-1 ISDN Clock Priority Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Priority	Clock priority if more than one ISDN boards are used	1-18	

4.4.8 SIP Data

Selecting the SIP Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

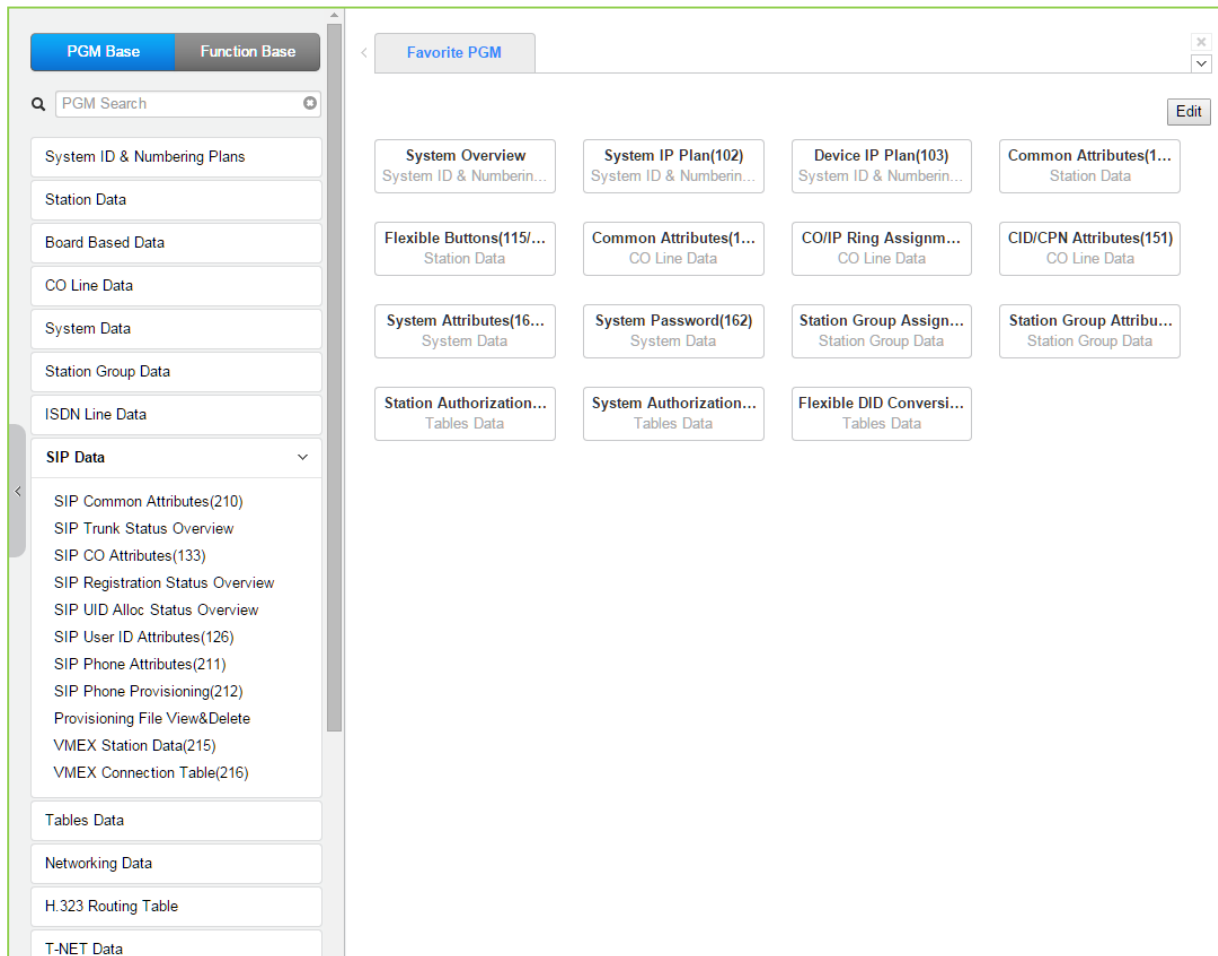

Figure 4.4.8-1 SIP Data

4.4.8.1 SIP Common (System based) Attributes - PGM 210

Selecting SIP Common Attributes will display the SIP System based Attributes data entry page. The attributes are system based SIP server data that running on MPB/UCP. Click **[Save]** button after changing Value.

DNS server address is where system can get IP address of external party that was written in Name in system. Local UDP/TCP/TLS Port is MPB/UCP’s SIP signaling port number.

‘Signal TLS Option’ is for the SIP signaling by TLS configuration.

‘SIP Status’ the status of is running of SIP server in MPB/UCP.

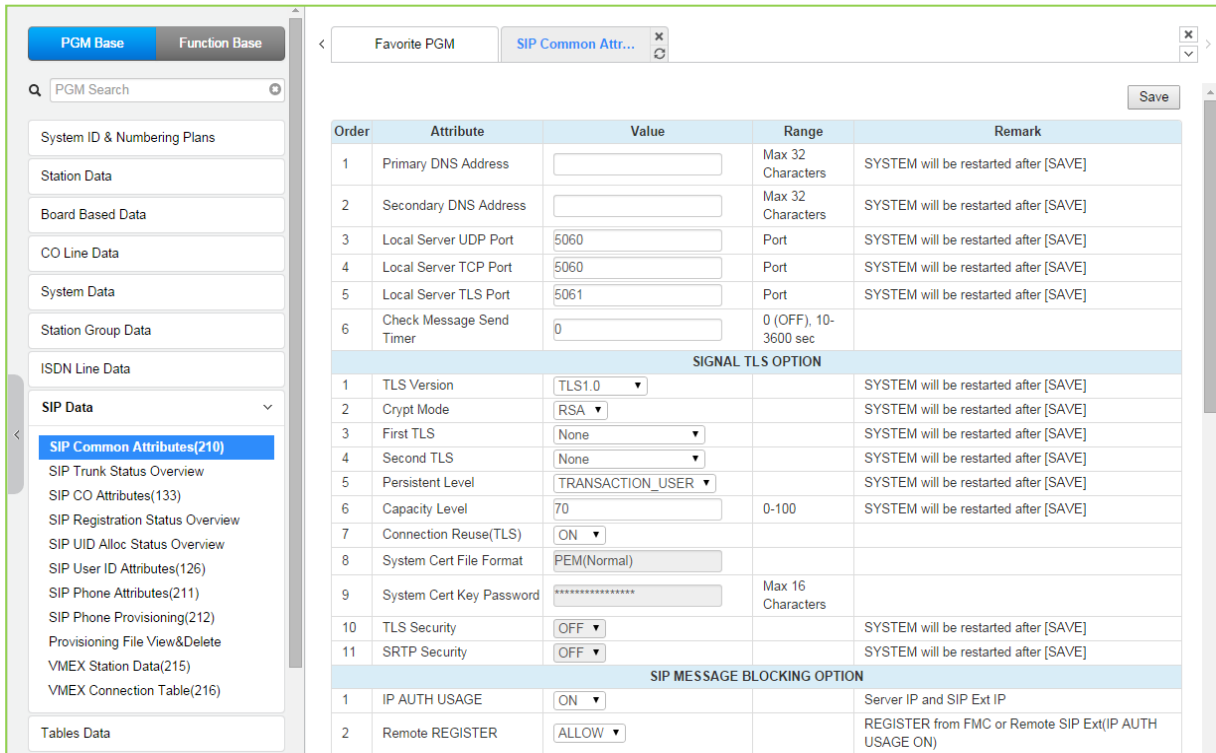

Figure 4.4.8.1-1 SIP Common Attributes

Check Message Send Timer – This is Keep Alive Message (OPTIONS) frequency from SIP server (MPB/UCP) to SIP Phone. If a SIP Phone does not respond to system’s Keep Alive Message then system will make the status of SIP Phone to ‘disconnected’ in system.

Keep Alive Message (OPTIONS) programming for a SIP station is as below:

- Frequency: SIP Data / SIP Common Attributes (210) - Check Message Send Timer.
- Usage ON/OFF for a SIP Extension: SIP Data / SIP Phone Attributes (211) – Keep Alive Usage.
- Retry Count: IP Data / SIP Phone Attributes (211) – Retry Count.

Table 4.4.8.1-1 SIP Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Primary DNS Address	Name Resolution Server.System will be restarted after Save. IP Address(Max. 32 characters)	Refer to description	
Secondary DNS Address	Name Resolution Server.System will be restarted after Save. IP Address(Max. 32 characters)	Refer to description	
Local Server UDP Port	SIP UDP signaling port. System will be restarted after Save.		5060

Table 4.4.8.1-1 SIP Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Local Server TCP Port	SIP TCP signaling port. System will be restarted after Save.		5060
Local Server TLS Port	SIP TLS signaling port. System will be restarted after Save.		5061
Check Message SendTimer	Keep Alive (OPTIONS Message)sending frequency 0(Off) , 10 ~ 3600(Sec.)	Refer to description	0
Signal TLS option			
TLS Version	TLS version.System will be restarted after Save. <ul style="list-style-type: none"> • TLS1.0: TLS1.0 is used for TLS connection. • TLS1.2: TLS1.2 is used for TLS connection. • SSL3(Auto) : TLS1.0 or TLS1.2 is used – auto negotiation 	Refer to description	TLS1.0
Crypt Mode	TLS Crypt Mode.System will be restarted after Save.	RSA/ECC	RSA
First TLS	SIP signaling TLS encryption primarykey method. System will be restarted after Save. <ul style="list-style-type: none"> • None • ARIA-128 • AES-128 • ARIA-128-SHA2 • AES-128-SHA2 • AES-256-SHA2(RSA) 	Refer to description	None
Second TLS	SIP signaling TLS encryptionsecondary key method. System will be restarted after Save. <ul style="list-style-type: none"> • None • ARIA-128 • AES-128 • ARIA-128-SHA2 • AES-128-SHA2 • AES-256-SHA2(RSA) 	Refer to description	None
Persistent Level	TLS signaling path method. System will be restarted after Save. <ul style="list-style-type: none"> • TRANSACTION : different path with INVITE, INFO, MESSAGE • TRANSACTION_USER : same pathwith INVITE, INFO, MESSAGE 	Refer to description	TRANSACTION_USER
Capacity Level	TLS session maintenance rate,maximum 70%. System will be restarted after Save.	0 - 100	70
Connection Reuse (TLS)	TLS session maintain or not.	OFF ON	ON
System Cert File Format	The system supports two certification formats Privacy-Enhanced Electronic Mail (PEM) or Distinguished Encoding Rules (DER). PEM(Normal), DER (Normal)	Refer to description	PEM (Normal)
System Cert Key password	Password to encrypt private key.	Max. 16 characters	
TLS Security	Change password that is used to encrypt TLS certification periodically.	OFF ON	OFF

Table 4.4.8.1-1 SIP Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SRTP Security	Allow only SRTP call (blocking none SRTP call).	OFF ON	OFF
SIP Message blocking option			
IP AUTH USAGE	ON: Discard SIP Request (INVITE, REGISTER, NOTIFY, OPTIONS, MESSAGE ...) if VIA IP and From IP are neither the server IP nor SIP Extension IP.	OFF ON	ON
Remote Register	<ul style="list-style-type: none"> ALLOW: Proceed REGISTER from remote site. DENY: Discard all remote REGISTER. It is applied with IP AUTH USAGE ON	ALLOW/ DENY	ALLOW
REGISTER Check Time	Time interval to check invalid remote REGISTER flooding.(It is applied with IP AUTH USAGE ON and Remote REGISTER ALLOW)	0~3600 (Sec.)	0
REGISTER Threshold	Threshold value to decide if it is invalid remote REGISTER flooding.(It is applied with IP AUTH USAGE ON and Remote REGISTER ALLOW)	0~60000	0
REGISTER Lock Time	Time interval to discard remote REGISTER if it is REGISTER flooding state.(It is applied with IP AUTH USAGE ON and Remote REGISTER ALLOW)	0~250 (Min.)	0
SIP SMS Option			
SMS Domain	Domain Name used for sending SIPSMS	Max. 32characte rs	
SMS request URI	Request URI for sending SIP SMS. This is only for Korea telecom.	Max. 32characte rs	1549
SMS Mode	Assign SMS mode(normal or external) This is only for Korea telecom.	Normal, External	Normal
SIP FAX Option			
Start w/ G.711 Fax	G711 Fax path through Mode. G711 will be negotiated as voice path and Fax will send this voice path.	OFF ON	OFF
G.711 Fax method	G711 Fax Mode. VBD – VBD codec attribute will be added in SDP. 711A, 711U, 711A(VBD), 711U(VBD)	Refer to description	711A
T38 FAX Failover(711)	When T38 Negotiation is failed, G711 Codec will be used for Fax Transmission.	OFF ON	OFF
Miscellaneous Option			
OCS Prefix Code	When the server type assigned for a SIP Trunk is OCS, the system will send these digits as a prefix to the number in the SIP "To:" header.	Max. 8 Digits	

Table 4.4.8.1-1 SIP Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SIP Pound Use	SIP employs Enblock dialing where the user dials all digits before they are sent to the carrier for processing. When the user completes dialing of a SIP call, '#' is used to indicate end of dialing. If users must be able to dial '#', SIP Pound Use can be disabled and the system will automatically send digits at expiration of the inter-digit time.	OFF ON	OFF
BLF SYNC NOTIFY Timer	When the system reboots, the button LEDs of SIP phones may indicate erroneous status. To display proper status LEDs, the system sends a Notify message to synchronize the LED states at expiration of this timer.	10-360	10
SRTP PATH(SIPEXT)	For SIP extensions connected to the same LAN as the system, the SRTP path can be established through a VoIP channel (Packet Relay) or directly between the end-points.	VOIM RELAY or DIRECT	VOIM RELAY
DNS SRV Usage	The system can be configured to query the DNS for the SRV resource record, which defines domains for various services.	OFF ON	OFF
Out OF Rsc Response	When the system has no resources available for the SIP Request, the system will respond with this code.	503/ 486	503
Error Code For Trunk Rerouting	If iPECS system receives this Error Code in response to a request, the call will be rerouted. The semi-colon (;) is used to separate multiple SIP message codes.		
Intercom Busy Service	When SIP extension hears busy tone, Call Back feature can be activated pressing # key. <ul style="list-style-type: none"> • System Rule: Follow PGM160- Intercom Busy Service • CallBack: Call Back feature 	Refer to description	System Rule
Incoming Trunk Choice	Incoming SIP trunk will be seized based on this admin setting <ul style="list-style-type: none"> • System Rule: Follow PGM160 - CO Line Choice. • Round: round robin rule. • Last: last available trunk • First: first available trunk 	Refer to description	System Rule
SIP QOS Option			
SIP QOS Method Selection	For SIP messages, the system can employ Diff Serv or TOS to implement QoS.	DSCP/ TOS	TOS
SIP Signal DSCP value	When Diff Serv is selected as the QoS method, the DSCP value for SIP signaling messages is defined.	0-63	0
SIP Signal TOS value	When TOS is selected as the QoS method, the TOS value for SIP signaling messages is defined.	0-7	5
RTP DSCP value	When DSCP is selected as the QoS method, the DSCP value for RTP packets is defined.	0-63	0
RTP TOS value	When TOS is selected as the QoS method, the TOS value for RTP packets is defined.	0-7	5
SIP T-NET Option			
CM Prefix	Korea Telecom only, when employing an iPECS system as the CM, iPECS system will require a Prefix to set-up a SIP trunk call.	Max. 6 Digits	

Table 4.4.8.1-1 SIP Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CM Prefix Method	Korea Telecom only, enables the Prefix method for processing a call with a SIP trunk through iPECS system.	Normal, With prefix	Normal
SIP Trunk Register Option			
Register Retry Timer	When registration fails, iPECS system attempts to register periodically at intervals of this timer.	20~3600	60
Option Check number	Korea Telecom only, a SIP Options message is used for redundancy. If the system does not respond to the Option message after the number of attempts, the redundant server becomes active	1~20	1
Option Check Interval	Korea Telecom only, a SIP Options message is used for redundancy. The Option message is sent at intervals of this timer.	20~3600	20
SIP Alarm Server Option			
Alarm Server Usage	If this value is changed, all WTIB will restart.	OFF/ON	OFF
Alarm Server Address	Enter the alarm server address up to 32 characters.	Max. 32 characters	
Alarm Server UDP Port	Default UDP port for Alarm server.	Port	5060
Alarm Server Check Usage	If iPECS doesn't receive reply for this option 3 consecutive times, will not send Message and Information to Alarm server. PGM 210 check message send timer.	OFF/ON	OFF
Terminal State Announcement	Information (Terminal state) is sent to Alarm server if this value is ON, not sent to Alarm server if this value is OFF.	OFF/ON	OFF
600BE Channels for Alarm	The number of 600BE channels reserved for Alarm SMS.	0~1	0
SIP MULTIHOMER Option			
SIP Multi-home Usage	Usage for Secondary IP and Secondary UDP port in SIP signaling. <ul style="list-style-type: none"> • OFF: Secondary IP and secondary UDP port is not used. • EXT UDP Port: PGM210-SIP Multi-home Ext UDP Port is used as secondary UDP port. • 2nd IP: PGM210-SIP Multi-home 2nd IP is used as secondary IP. Multi-home 2nd IP UDP Port, Multi-home 2nd IP TCP Port and Multi-home 2nd IP TLS Port are used with secondary IP. • EXT UDP Port+2nd IP: Multi-home Ext UDP Port and Multi-home 2nd IP are used. 	Refer to description	OFF
SIP Multi-home Ext UDP Port	Ext UDP Port is used for secondary UDP port. This port is just used for SIP Extension.	Port	5070
SIP Multi-home 2nd IP	Multi-home 2nd IP is used for secondary IP for SIP signaling. It is different with System IP	Max. 32 characters	0.0.0.0
Delete Second Route	If this value is Yes, routing table for PGM 210-SIP Multi-home 2nd IP is delete. Default route is used for 2nd IP.	No, Yes	No

Table 4.4.8.1-1 SIP Common Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
SIP Multi-home 2nd IP UDP Port	Multi-home 2nd IP UDP Port is UDP port used with Secondary IP. UDP port(Secondary IP:UDP Port) will be opened.	Port	
SIP Multi-home 2nd IP TCP Port	Multi-home 2nd IP TCP Port is TCP port used with Secondary IP. TCP port(Secondary IP:TCP Port) will be opened.	Port	
SIP Multi-home 2nd IP TLS Port	Multi-home 2nd IP TLS Port is TLS port used with Secondary IP. TLS port(Secondary IP:UDP Port)will be opened.	Port	
System IPV6 Usage	Usage of IPV6 Address in SIP signaling	No, Yes	No
System IPV6 Address	IPV6 address used for System - User can set Unicast IP or set based on SLAAC Info.		
System IPV6 Router	IPV6 Router used for System - User can set Router IP or set based on SLAAC Info.		
System IPV6 Net Prefix	IPV6 Prefix used for System - User can set Prefix or set based on SLAAC Info.		64

4.4.8.2 SIP Trunk Status Overview

Selecting SIP Trunk Status Overview displays the overview page. The page displays the Proxy, Domain, etc. for the SIP Trunks configured in PGM 133.

Index	Proxy Address	Domain	COL Range	SIP Group	UID Range	State	UIDSEL

4.4.8.3 SIP CO Attributes - PGM 133

Selecting SIP CO Attributes returns the SIP CO Attributes data input page. Enter the CO Range and click **[Load]** to enter attribute values. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter CO Range: eMG80/100: 1-74 / eMG800: 1-600 / UCP: 1-998

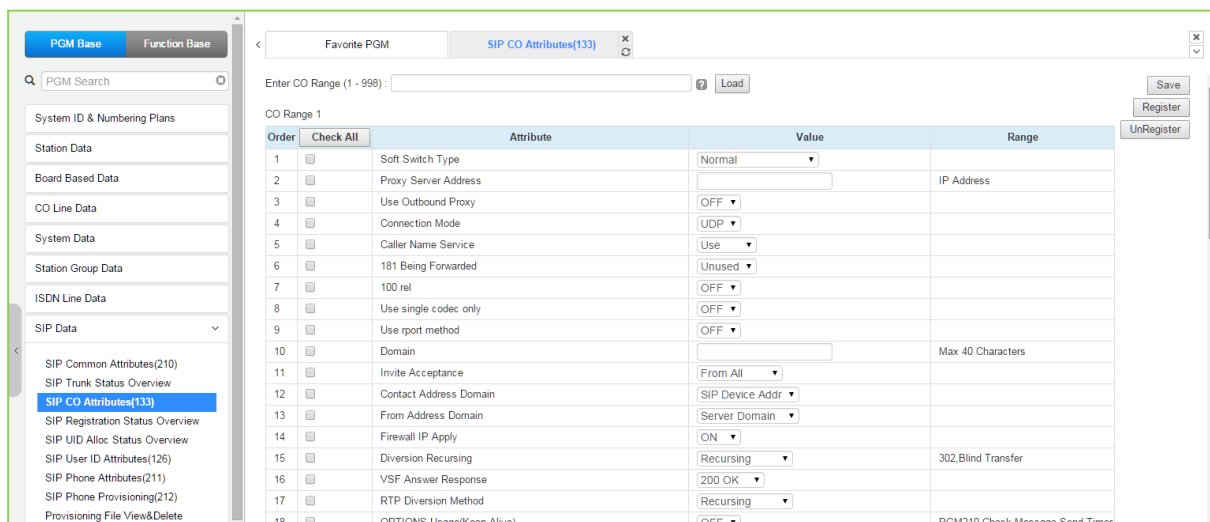

Figure 4.4.8.3-1 SIP CO Attributes

Various parameters must be entered for proper operation of SIP Trunk including the SIP proxy and Registrar as outlined in the following table.

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Soft Switch Type	Allows identification of soft-switch to support extended soft-switch capabilities. KT, SK TELINK, etc.: Service Provider. Normal, Broadsoft, KT, SK TELINK, KT-C, MS OCS, SKYPE CONNECT, SIP-CC, TI PK0, ERICSSON IMS, DNS REDUNT(Tele2), MS LYNC, KT-CENTREX	Refer to description	Normal
Proxy Server Address	SIP Proxy server IP address up to 64 characters.	IP address	
Use Outbound Proxy	The SIP module will communicate only to SIP Proxy Server. In this case, destination address of all communication will be the IP of SIP Proxy Server. Use Outbound Proxy flag should be 'OFF' when you use that SIP module for channels of 3rd-party SIP Extensions.	OFF/ ON	OFF
Connection Mode	This field establishes the SIP connection mode as UDP, TCP or TLS for SIP signaling messages.	UDP/ TCP/ TLS	UDP
Caller Name Service	The caller name may be included in SIP messages. When included, the name can display in the LCD of iPECS IP and LDP Phones. In addition, the Contact Display Name assigned to the SIP User Id (PGM 126) will be sent in the SIP message.	Unused / Use	Use

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
181 Being Forwarded	A SIP 181 Message is sent when a call is being redirected or forwarded, if enabled.	Unused / Use	Unused
100rel support	To improve reliability of Provisional SIP messages, the system is configured to send and expect to receive an ACK response to such messages.	OFF ON	OFF
Use single codec only	During capabilities negotiation, the system sends the first priority codec id or the prioritized list of codecs as defined in the Codec priority settings below.	OFF ON	OFF
Use rport method	When employed behind a NAPT server, the system can use the Rport parameter in the SIP Via header to request the SIP server respond to the IP address and port of the originator.	OFF ON	OFF
Domain	Domain name of the Service Provider's SIP Call server that is used in SIP "To:" headers.	Max. 40characte rs	
Invite Acceptance	The system can accept SIP INVITE requests from any domain or only from the "Domain" specified above.	Domain Only / From All	From All
Contact Address Domain	The system will populate the SIP "Contact" header Domain with either the iPECS device IP address or the "Domain" specified above. SIP Device Addr, Server Domain	Refer to description	SIP Device Addr
From Address Domain	The system will populate the SIP "From" header Domain with either the iPECS device IP address or the "Domain" specified above. SIP Device Addr, Server Domain	Refer to description	Server Domain
Firewall IP Apply	When the iPECS system and VoIP devices are assigned a Firewall IP address, the system can use either the Firewall or local IP address in the Via and Contact headers as well as in SDP messages.	OFF ON	ON
Diversion Recursing	When a SIP call is redirected by a 3xx Diversion response such as when a call forwards, the SIP message can be forked (recursing) or forwarded (non-recursing). Recursing, Non-Recursing	Refer to description	Recursing
VSF Answer Response	The system can respond to a SIP Invite with a SIP 183 Session Progress message. This allows a VSF announcement to play and user dialed digits to be analyzed by CCR and, if the CCR destination is an external number, the system can send a SIP 3xx call diversion message to forward the call via the SIP network.	183 Msg. 200 OK	200 OK
RTP Diversion Method	Reserved Currently. Recursing, Non-Recursing	Refer to description	Recursing
OPTIONS Usage (Keep Alive)	With "OPTIONS Usage" ON, an Option message is sent at intervals of the Check Message Send Timer assigned in PGM 210 to assure a connection with the SIP CO. SIP COs generally provide an Option message. In this case, the UCP should not be enabled here.	OFF ON	OFF

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Proxy Registration Timer	Periodically, the system must re-register with the SIP Registrar. While this timing is often negotiated with the Registrar, the system can be configured with this timer to establish the re-register interval.	1-65535	3600
Proxy Server UDP Port	When employing UDP transport, this port number is employed for messages to the SIP proxy.	Port	5060
Proxy Server TCP Port	When employing TCP transport, this port number is employed for messages to the SIP proxy.	Port	5060
Proxy Server TLS Port	When employing TLS transport, this port number is employed for messages to the SIP proxy.	Port	5061
Registration UID Range	The User Id indices from the SIP User ID Attributes Table PGM 126 that will register with the SIP Service Provider's SIP Registrar must be configured.	Max. 140 Entries	
DTMF Type	DTMF dialing signals can be sent from the system using in-band or various Info messages. The method or type must match the SIP Call Server. <ul style="list-style-type: none"> • INBAND, 2833, • INFO (DTMF), • INFO (DTMF RELAY), • INFO(TELEPHONE EVENT), • INFO(NORTEL NETWORKS) 	Refer to description	INBAND
Action with REG Failure	When registration fails, the link is down to the SIP Call server, or the system receives no response to an Invite message in the "Call Setup No-response" timer below, the call will return error tone (Wait Idle), or Fail-over to a Line from the Fail-over CO Group specified below (Idle).	IDLE/ WATI IDLE	IDLE
Secondary Proxy Server			
Secondary Proxy Server Address	It is used for SIP proxy server redundancy. KOREA telecom only.	IP Address	
Secondary Domain	It is used for SIP proxy server redundancy. KOREA telecom only.	Max. 32 Characters	
Secondary Proxy Server UDP Port	It is used for SIP proxy server redundancy. KOREA telecom only.	Port	
ID Presentation Option			
ID Usage			
P-Asserted-ID	The system normally provides a P-Asserted ID in SIP messages. The system can be configured not to provide the header.	Unused Use	Use
Remote-Party-ID	The system normally provides a Remote-Party-ID in SIP messages. The system can be configured not to provide the header.	Unused Use	Use

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Privacy(CLIR) Presentation	<p>SIP employs various headers that include a User Id and Name. In some cases, it may desirable to restrict the called party from receiving this information. Several options for Caller Id restriction can be applied.</p> <ul style="list-style-type: none"> • Anonymous Name & Anonymous Number, • Anonymous Name, • Privacy: user, Privacy: id, • Privacy: user;id;critical, • Privacy: id & anonymous & P-Preferred-ID 	Refer to description	Anonymous Name & Anonymous Number
ID Individuality

SIP UID Assignment			
SIP User ID Fixed Table Index	When a header is assigned to use “Fixed Table”, the ID from this SIP User ID (PGM 126) Table index is used.	Index	
SIP User ID SELECTION	When a header is assigned to use the “Extension SIP-User-ID Table”, the SIP User ID is selected using this SIP UID index in the Station Attributes (PGM 111).	Index, Index 2, Index 3	SIP User Table Index

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
External CODEC Priority Configuration			
1st ~5th priority	1st. priority, 2nd. Priority, 3rd. priority, 4th. Priority, 5th. Priority If specify priority to a specific CODEC then it will work for negotiation RTP data.If only 1st. priority is specified and the others are none, then it will work as single CODEC only does None/ g.711-u/ g.711-a/ g.723.1/ g.729/ g.729-a/ g.722	Refer to description	none
SIP Call Setup Failover Option			
Call Setup No Response	When the system initiates a SIP Trunk call and receives no response from the SIP proxy server, after expiration of this timer the SIP call is canceled and a Fail-over call placed on the Fail-over CO/IP Line group specified below. Note the timer can be set at 3 to 15 seconds and '0', which disables Fail-over.	0, 3 ~ 15 sec	5sec
Failover CO Group Number	When the system attempts to initiate a SIP Trunk call and the SIP Trunk is in an OOS state or the SIP proxy server does not respond in the No Response time above, the system will cancel the SIP call and place a call over a CO/IP Line from this group. eMG80/100:1 ~ 21,eMG800/UCP:1~201	Refer to description	none
SIP Session Timer			
Session Timer Usage	During a SIP call or "session", there are no signaling packets sent or received from the SIP Call server. In order to assure a session is still active, the system can periodically send an Option message that the SIP Call server should acknowledge.	ON/OFF	OFF
Session Timer Value	When "Session Timer Usage" is enabled, the system will verify the session at this timer interval.	90~ 3600	360
Min SE	During negotiation with "Session Timer Usage" enabled, the system will use this value as the minimum Session expiration timer and will not respond to a SIP Option message prior to expiration of this timer.	90~ 3600	90
URI Formatting and Rules			
General Formatting			
To Field Method	The SIP "To:" header is formatted using the SIP or Telephony method as shown below. <ul style="list-style-type: none"> SIP method To: < sip:[Number]@[Domain];user=phone > Telephony method To: < tel:+[Number] >Domain 	Refer to description	SIP: method
Numbering Format	When assigned the Telephony method for the "To" header, the number format can be: <ul style="list-style-type: none"> Local - [tel:+Number]@[Domain] Global(+E164) - [tel:+E.164 Address]@[Domain] E.164 Address: Nation + Area Code + Number 	Refer to description	Local

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Local: include Area Code	The Area code (PGM 143) can be added as a prefix if the 'Numbering Format' is set as Local. Example: user dials '8701234' and the Area code is '042' The resulting "To" field URI is tel:+0428701234@[Domain]	Yes No	No
Global: include phone-context	If the 'Numbering Format' is Global and the 'To Field Method' is Telephony, the 'phone-context' can be added as below. user dials '0011428701234' from Country code 82 The resulting "To" field URI is, tel:+0011428701234@[Domain];phone-context=+82	Yes No	No
Add '+' in Outgoing Call	Add "+" in front of dialed number when it is YES	Yes No	No
Specific Formatting by Conversion (example)			
From 4 digits	To 6 digits	User Dial	Result
0	+82	0314504639	+82314504639
00	+	0082314504639	+82314504639
1588	1588	15886724	15886724
031		0314504639	4504639
SRTP Setting			
SRTP Usage	When implemented by the carrier, the system can encrypt media (RTP) packets employing SRTP (Secure Real-Time Transport Protocol). But VoIP Virtual switching channel does not support SRTP.	OFF ON	OFF
1st CRYPTO	The first priority Crypt method for SRTP. None <ul style="list-style-type: none"> • ARIA_CM_192_HMAC_SHA1_80 • AES_CM_128_HMAC_SHA1_80 • ARIA_CM_128_HMAC_SHA1_80 • AES_CM_192_HMAC_SHA1_80 • ARIA_CM_256_HMAC_SHA1_80 • AES_CM_256_HMAC_SHA1_80 	Refer to description	None
2nd CRYPTO	The second priority Crypt method for SRTP. None <ul style="list-style-type: none"> • ARIA_CM_192_HMAC_SHA1_80 • AES_CM_128_HMAC_SHA1_80 • ARIA_CM_128_HMAC_SHA1_80 • AES_CM_192_HMAC_SHA1_80 • ARIA_CM_256_HMAC_SHA1_80 • AES_CM_256_HMAC_SHA1_80 	Refer to description	None
Caller/Called ID			

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ID Option			
Caller ID Selection	For the purposes of display and ICLID call routing, iPECS employ this header as the "Caller ID". P-Asserted-ID, Remote-Party-D, From ID	Refer to description	P-Asserted-ID
Display Caller Name(Though Id is Anonymous)	Even though the User ID is Anonymous, the system can display the SIP "From" header "Display Name" field for the call.	No Yes	No
Called ID Selection	For the purposes of call routing, the "SIP Request" or "To" header will be employed by the system as the "Called Party ID". Request URI, To ID	Refer to description	Request URI
SIP Timer set			
T1 Timer	First retransmission timer in case of No Reply.	0.5 / 1 / 2	0.5 (Sec)
Miscellaneous set			
Drop Busy Station	While busy, the system can be configured to terminate a station call, and accept and connect any new call from the SIP Trunk. For special use, it is available only in Italy.	No Yes	No
Ignore INBAND DTMF	In some situations, DTMF tones from the connected party may be received along with the DTMF Type specified above. This can cause errors in detection such as double digits. In this case, the system can be configured to ignore Inband DTMF signals. Note do not disable Inband signals if selected as the "DTMF Type" above as this may disable DTMF detection.	No Yes	No
SIP Trunk Group	Multiple SIP User ID ranges may register with the SIP CO, for example, SIP COs from different providers. When different SIP User ID ranges are required on a SIP CO, a different SIP Trunk Group should be assigned to each range. Note this has no relationship with the CO/IP Line Group. 0~71 (0:Normal, 1-71:Check To header)	Refer to description	0
Send Refer for Transfer	The system can employ the SIP Refer method to forward or transfer incoming calls to an "Off-net" location if supported by the SIP Service Provider.	No Yes	No
CN Payload Insert	When Comfort Noise generation is desired, the system will provide a Comfort Noise Payload during periods of silence.	No Yes	No
Ignore 180 after 183	If the option is Yes, an appropriate ringback tone may be played to the calling party when the called party's phone is alerting without changing the internal or system ring back tone. For example, when placing a call from USA to Korea, a Korean ringback tone is heard by the caller.	No Yes	No
Add "user=phone" parameter	For outgoing SIP call, "user=phone" will be added in Request URI of INVITE.	No Yes	No

Table 4.4.8.3-1 SIP CO ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Advice of Charge	When assigned, The system estimates the call cost for display on the phone with appropriate regional protocol support. No Service, SIP AOC	Refer to description	No Service
TGID Usage	Usage of “trgp” and “trunk-context” parameter in Contact header in INVITE <ul style="list-style-type: none"> YES: “trgp” and “trunk-context” are added in Contact header. NO: “trgp” and “trunk-context” is not used. 	No Yes	No
Local Address Selection	User can select Local IP(From, Via and Contact address) used for SIP trunk. It is applied when PGM210- Multi-home Usage is 2nd IP or EXT UDP Port+2nd IP. First: System IP. Second: PGM210-SIP Multi-home 2nd IP.	First Second	First
ALTC Usage	User can set ALTC sequence when IPv6 is used with SIP Trunk. <ul style="list-style-type: none"> OFF: IPV4 or IPV6 only in SDP. IPV4: IPV4 and IPV6 in ALTC info IPV6: IPV6 and IPV4 in ALTC info. 	OFF IPV4 IPV6	OFF

4.4.8.4 SIP Registration Status Overview

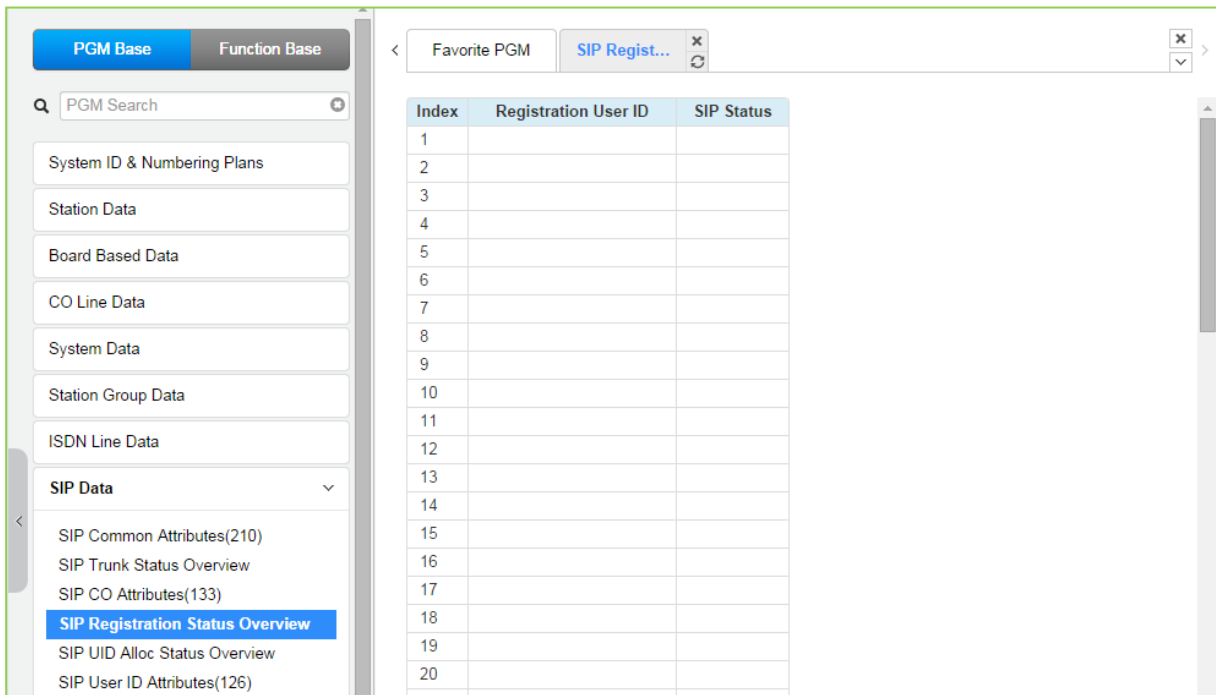

Figure 4.4.8.4-1 SIP Registration status overview

4.4.8.5 SIP UID Allocation Status Overview

Selecting SIP User ID Allocation Status will display the allocation overview page. The SIP User Id Allocation Status Overview page displays the station(s) assigned to each SIP User Id index in the Station Common Attributes PGM 111.

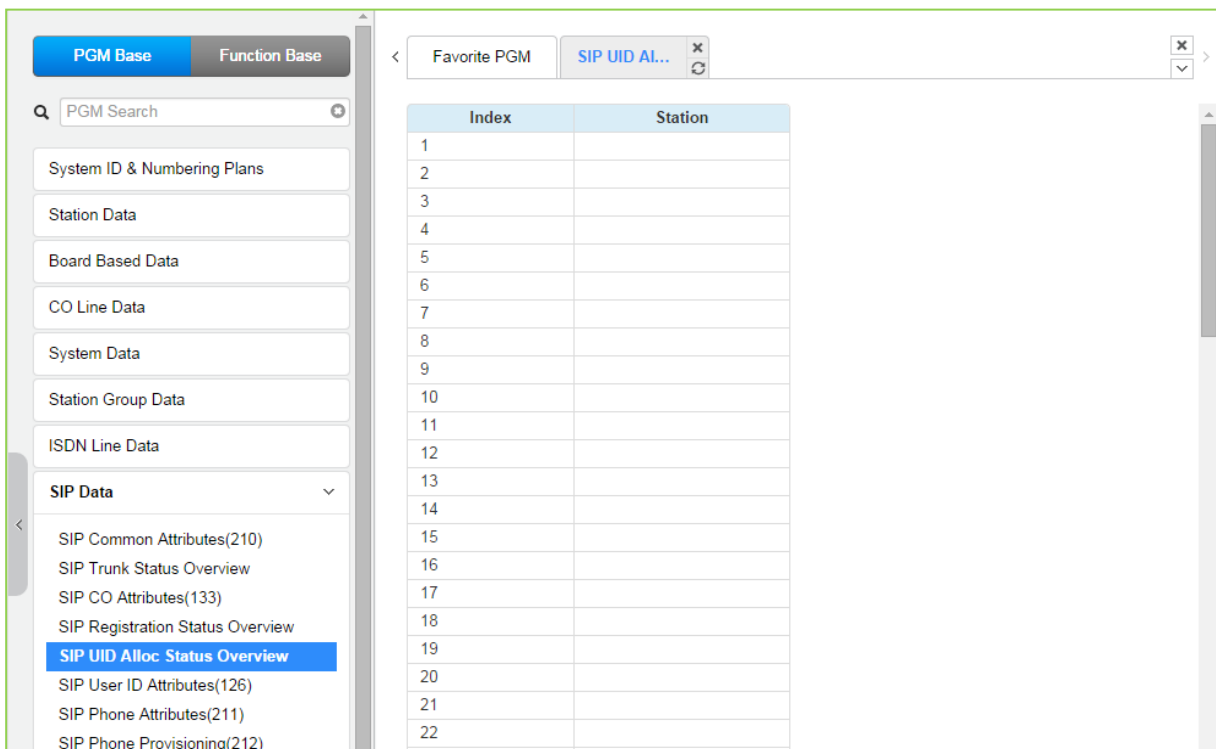

Figure 4.4.8.5-1 SIP UID Allocation Status Overview

4.4.8.6 SIP User ID Attributes – PGM 126

Selecting SIP User ID Attributes will display the SIP User ID input page.

Enter a valid SIP User ID Index Number range, see Station Data, and click **[Load]** to view the SIP User ID Attributes for the first index in the range.

Enter new data and click **[Save]** to modify the attributes for the index range.

Enter SIP User ID Index number: eMG80/100: 1-140 / eMG800: 1-1200 / UCP: 1-2400

Figure 4.4.8.6-1 SIP User ID Attributes

For each station, an index to the SIP User Id Attributes Table is defined in PGM 111 Station Attributes.

The SIP User Id Attributes Table defines SIP characteristics associated with the index including User ID, Authentication name, etc.

These characteristics are required for proper operation of the system and registration of the iPECS IP and LDP phones when employed with SIP trunk. See also, PGM 133.

Note PGM 126 and PGM 133 are accessible only via Web Admin.

Setting CID Password directly

You can set the CID password to click “Go to Setting” button. After clicking it, you will move to the following PGM 162 and set the CID password, and then save CID password to mark tick on the save box and click the Save button.

Table 4.4.8.6-1 SIP User ID ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Registration User ID	This field defines the SIP User Id from by the SIP Service provider. The User Id has the format User ID@Domain. Note the domain is commonly the system IP address.	Max. 64 characters	

Table 4.4.8.6-1 SIP User ID ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Authentication User ID	The SIP Service Provider may require authentication of the user for registration and at other times during call setup. The Authentication name from the provider must be entered for proper SIP registration.	Max. 64 characters	
Authentication User Password	The SIP Service Provider may require authentication of the user for registration and at other times during call setup. The Authentication password from the provider must be assigned for proper SIP registration.	Max. 32 characters	
Contact Number	The Contact header of SIP messages is populated with the specified SIP User ID.	Max. 16 characters	
Contact Display Name	The Display Name specified is used for the Contact header Name field.	Max. 21 characters	
Associative Station Number	Not used.	Station number	
User ID Register	The SIP Trunks are provided in two formats. <ul style="list-style-type: none"> • Registered: the system must register for service often using Authentication • Provision: the provider sends all SIP messages to a fixed IP; the system does not register for service. 	Refer to description	Provision
Authorized Representative ID Table Index	The User Id can be assigned an index of another User ID. When the SIP CO is configured to employ the Authorized Representative Id as the SIP "From" or "Contact" header, the indexed User ID is employed. eMG80/100:0~140, eMG800:0~1200, UCP:0~2400	Refer to description	0
User ID Usage	If registration is enabled (User ID Register above) the iPECS can send the User ID or Authorized Representative ID to the SIP Proxy to register the ID. Otherwise, only the Authentication Name and password are used.	OFF ON	OFF
Ring Route Type	Incoming calls from a SIP trunk can be routed to the ID assigned Station (any station with any of the SIP User ID Table Indices in PGM 111 matching the incoming SIP User Id), based on CO/IP Ring assignments (PGM 144), using DID treatment defined below table. follow the MSN Table routing (PGM 145). <ul style="list-style-type: none"> • ID Assigned Station, • Ring Assignment, • DID Conversion, • MSN-DID Conversion(PGM145) 	Refer to description	ID assigned Station

Table 4.4.8.6-1 SIP User ID ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
DID Conversion Type	<p>When the Ring Route above is defined as DID, the system will send the call to a destination based on the DID conversion selected here. The digits in the SIP User ID may be used “as is” to identify the desired station, modified based on the DID Digit mask below and routed to the resulting station or the modified DID number can be used as an index to the Flexible DID Conversion Table, PGM 231 to route the call.</p> <ul style="list-style-type: none"> • DID DigitConversion, • Use ‘as is’, • Modify Using Flexible DID Conversion Table 	Refer to description	Use ‘as is’
Number of Digits (2-4) Expected from DID Circuit	<p>When DID Digit Conversion or Flexible DID Conversion Table routing is used, the number of digits received is defined in this field.</p> <p>eMG80/100:3 , eMG800:4 , UCP: 4</p>	2-4	Refer to description
DID Digit Mask	<p>When DID Digit Conversion or Flexible DID Conversion Table routing is used, the digit conversion is defined in this field. For each of the four (4) digits, use “*” to accept any digit, “#” to delete the digit, or a digit 0-9 to replace the digit.</p> <p>eMG80/100:#*** , eMG800:**** , UCP: ****</p>	4 Digits: * , #, 0-9	Refer to description
SMS Received Station Number	<p>When an SMS is received for this User Id, the Station to receive the SMS must be defined.</p>		

4.4.8.7 SIP Phone Attributes - PGM 211

Selecting SIP Phone Attributes will display the SIP Phone input page. Enter a valid SIP Station Number or range, and click **[Load]** to view the SIP Phone Attributes for the first Station Number in the range. Enter new data and click **[Save]** to modify the attributes for a Station or range.

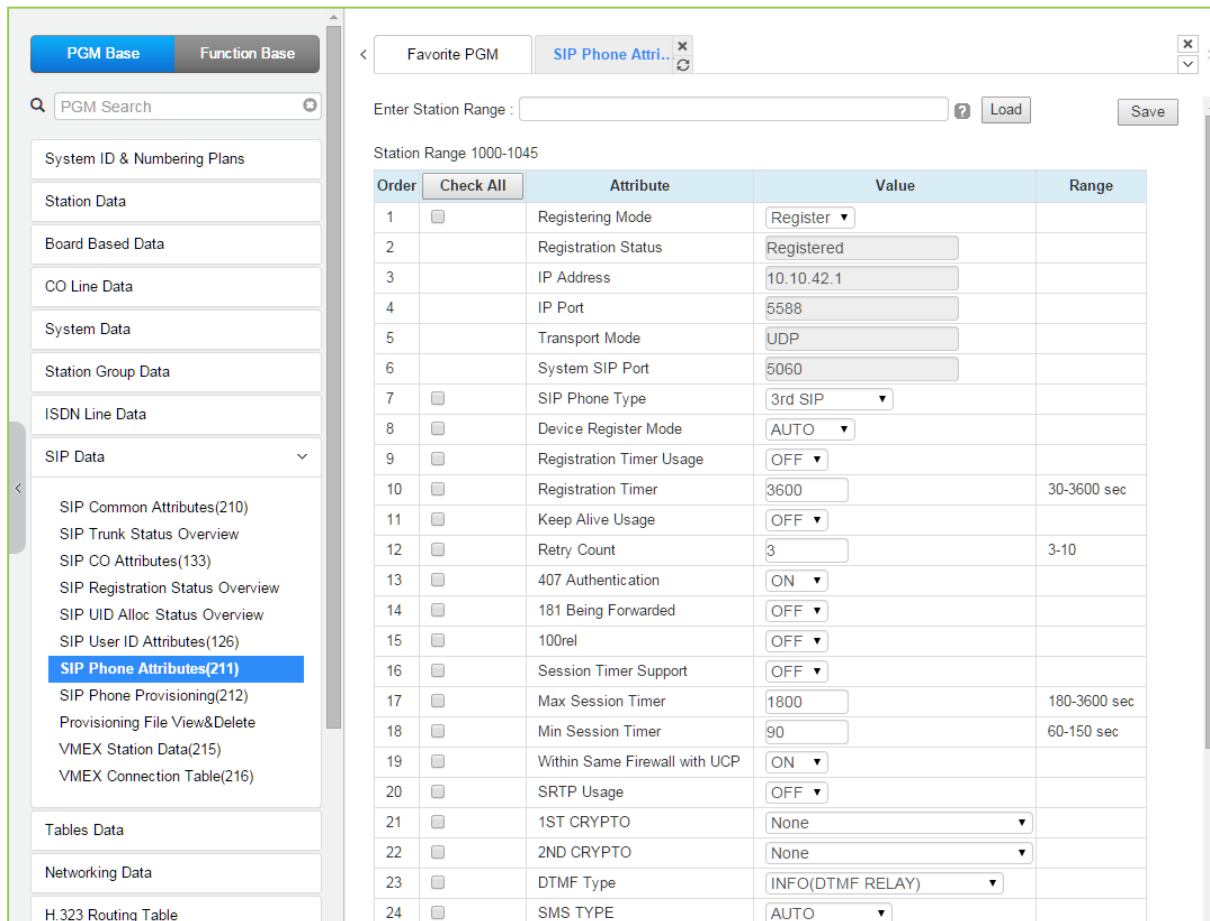

Figure 4.4.8.7-1 SIP Phone Attributes

Registration

For a new registration of SIP station, input ID/PWD & Desired Station Number in PGM 443 of Station User Login Table. This SIP Phone Attributes are for Stations that are already registered to system.

- Register Mode - Register/ Manual: Set Registration Time Out or Not
- Registration Status: View connection status (Disconnected or Not) for a station
- IP Address: SIP Phone's IP address
- IP Port: SIP Phone's IP Port Number
- Transport Mode: SIP signaling method
- SIP Phone Type: Automatically Assigned by System
- Device NAT Usage: Automatic Detection
- Registration Timer Usage: OFF – Assign (Re-) Registration Timer by Provisioning (212), ON – Assign (Re-) Registration Timer by SIP Phone Attributes (211).
- Registration Timer: more than 10 minute recommended.
- 407 Authentication: Authentication of Registration (and Call Setup). To implement authentication, user login Password should be available in PGM 443 for the Station.

Keep Alive / NAT Resolution

To keep stable information of SIP Phone's Connection, IP address and Port number that is under NAT environment, system uses 'OPTIONS' message to implement Keep Alive and assist NAT resolution - effort to maintain IP address of SIP Phone by sending message so often from system to SIP Phone.

SIP Phone should be capable to answer for 'OPTIONS' message

- Check Message Sending Timer in [SIP Data / SIP Attributes (210)] : 120 seconds
- Keep Alive Usage for a SIP Station in [SIP Data / SIP Phone Attributes (211)] : ON
- Retry Count for a SIP Station in [SIP Data / SIP Phone Attributes (211)] : 3

System Firewall Resolution

In case of firewall routed with MPB, to distinguish remote SIP Phone that is outside of firewall from system local area a check bit is required per a SIP Station.

With this check bit, system can determine whether to serve communication using firewall mapped WAN IP address of MPB or serve communication using LAN IP address of MPB/UCP.

- SIP Phones that are outside of system protect firewall : [SIP Data / SIP Phone Attributes (211)] – 'Same Firewall with MPB/UCP' to 'OFF'

Session Timer

To confirm talk state frequently during in talk state, system sends 'UPDATE' message to SIP Phone. If there is no response for the UPDATE message with in Maximum session timer, system will disconnect the talking call.

- [SIP Data / SIP Phone Attributes (211)] – Session Timer Support : ON
- [SIP Data / SIP Phone Attributes (211)] – Max Session Timer : if exceed, disconnect talking call
- [SIP Data / SIP Phone Attributes (211)] – Min Session Timer: minimum guard timer for session timer negotiation.

SRTP

Voice & Video Data Encryption requires synchronization of CRYPTO method between system and SIP Phone side.

If system specifies SRTP information then same information should be in SIP Phone side by Phone user programming.

SRTP usage requires a SRTP relay channel via system VOIU and VOIB/VOIM.

- [SIP Data / SIP Phone Attributes (211)] – SRTP Usage: ON
 - SIP Phone self-programming is required, too – SRTP ON
- [SIP Data / SIP Phone Attributes (211)] – 1st CRYPTO key generation type:one of ARIA_CM_192_HMAC_SHA1_80, AES_CM_128_HMAC_SHA1_80,ARIA_CM_128_HMAC_SHA1_80
 - SIP Phone self-programming is required, too – 1st/2nd CRYPTO method
- [SIP Data / SIP Phone Attributes (211)] – 2nd CRYPTO key generation type:one of ARIA_CM_192_HMAC_SHA1_80, AES_CM_128_HMAC_SHA1_80,ARIA_CM_128_HMAC_SHA1_80
 - SIP Phone self-programming is required, too – 1st/2nd CRYPTO method

DTMF

- INFO (OUT BAND) type DTMF
 - Presented in SIP signaling message.
 - INFO (SIMPLE DTMF) / INFO (NORTEL NETWORKS) / INFO (DTMF RELAY) / INFO (TELEPHONE EVENT)
 - Default: INFO (DTMF RELAY)
- TONE (INBAND) type DTMF
 - Presented in RTP packet
 - Additional VOIU/VOIB (VOIM) DSP channel is required to detect DTMF in RTP
 - INBAND / 2833

CO DIAL TONE

This is to avoid double play of CO dial tone. 'Set' if SIP phone plays CO dial tone by itself. If not, there will be another CO dial tone from external.

Request URI Type

Some SIP Phone will reject Request-URI if IP and port in domain field is different from its contact IP and port.

- 'Normal': IP and port number in Request URI domain field will be the real IP and port number of the SIP phone.
- 'KT-FMC': IP and port number in Request URI domain field will be system IP and port

Busy Serve

System Busy Tone: there will be a 'busy-tone' on busy state that is presented by system. Additional VOIB/VOIU/VOIM DSP channel is required. 486 Busy Message: there will be '486 busy' SIP signaling response on busy state.

Call Initiation Mode

For a SIP station, system can establish multiple or single call sessions. With this option system can control 'call-wait' option in system side. Normally, the SIP Phone has its 'call-wait ON/OFF' option by itself. Options are as below:

- 'Multiple': for a new additional call to SIP Phone, system initiates every call for the SIP Phone regarding it is on idle state. The 'call-wait allow/deny' is decided by SIP Phone itself.
- 'Single': system initiates only one call for a SIP Phone. The 'call-wait' is denied by system side. So, a call to a busy SIP station will be implemented on a busy state call-control.

Table 4.4.8.7-1 SIP PHONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Registration Mode	Initial registration of a SIP phone is accomplished employing the parameters set in Station User Login PGM 443. The SIP phone can be required to register with the system periodically based on the Registration Timer or the registration can be maintained without the need for the SIP phone to reregister with the system (Manual).	Manual Register	Register
Registration Status	The system will display the status of the SIP phone registration.		
IP address	The system will display the IP address of the registered SIP phone.		
IP Port	The system will display the IP port used for the registered SIP phone.		
Transport Mode	The system will display the IP transport used by the registered SIP phone for signaling messages (UDP, TCP or TLS). In case of TLS, the options configured in the SIP Common Attributes (PGM 210) apply.		UDP
System SIP Port	The system will display the system SIP Port.		
SIP Phone Type	The type of SIP phone is generally determined by the system and can be an Ericsson-LG standard SIP phones or the 3rd party SIP phone type.		3rd SIP
Device register mode	The Register Mode determines if the SIP phone is behind a NAT server. When set in the Auto mode, the system will determine if the phone is behind a NAT server.	AUTO, NO NAT, NAT	AUTO
Registration Timer usage	When the Registration Mode is "Register", the phone must register with the system periodically. The timer that determines the period can be the Registration Timer below (ON) or, when OFF, the timer is assigned through provisioning (PGM212).	OFF ON	OFF
Registration Timer	When the Registration Timer is enabled above, the system informs the SIP phone that registration is required at intervals of this Registration Timer. If the phone does not register within the timer, the phone is placed in an Out-of-Service state until the phone registers. Note shorter times will increase LAN traffic.	30-3600	3600
Keep Alive Usage	The system will periodically send an Option message to assure a connection with the registered SIP phone. Note when separated by a NAT server, Keep-Alive should be employed to maintain the NAT table record. The Check Message Sending Timer in PGM 210 determines the frequency.	OFF ON	OFF
Retry Count	The system periodically sends an Option message to assure a connection with the registered SIP phone. If there is no response, the system sends additional Option messages, and, after the retry count, considers the SIP phone Out-of-Service.	3-10	3

Table 4.4.8.7-1 SIP PHONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
407 Authentication	The system can challenge the SIP phone during registration and outgoing call set-up with a SIP 407 Authentication message requiring the SIP phone to provide the Authentication Id and password assigned in the Station Login PGM 443.	OFF ON	ON
181 Being Forwarded	N/A	OFF ON	OFF
100 rel Support	N/A	OFF ON	OFF
Session Timer Support	During a SIP call or “session”, there are no signaling packets sent or received from the SIP Call server. In order to assure a session is still active, the system can periodically send an Update message that the SIP Call server should acknowledge.	OFF ON	OFF
Max Session Timer	When “Session Timer Support” is enabled, the system will verify the session at this timer interval.	180-3600	1800
Min Session Timer	During negotiation with “Session Timer Support” enabled, the system will use this value as the minimum Session expiration timer and will not respond to a SIP Option message prior to expiration of this timer.	60-150	90
Within same firewall with UCP (MPB)	For a remote SIP phone, the system must communicate with the phone employing the system’s “Firewall” address (OFF). Otherwise, the system employs the LAN address to communicate with the SIP phone.	OFF ON	ON
SRTP Usage	When supported by the SIP phone, the system can encrypt media (RTP) packets employing SRTP (Secure Real-Time Protocol).	OFF ON	OFF
1st CRYPTO	The first priority cryptographic method for SRTP is selected from the below: None <ul style="list-style-type: none"> • ARIA_CM_192_HMAC_SHA1_80 • AES_CM_128_HMAC_SHA1_80 • ARIA_CM_128_HMAC_SHA1_80 • AES_CM_192_HMAC_SHA1_80 • ARIA_CM_256_HMAC_SHA1_80 • AES_CM_256_HMAC_SHA1_80 	Refer to description	None
2nd CRYPTO	The second priority cryptographic method for SRTP is selected from the below: None <ul style="list-style-type: none"> • ARIA_CM_192_HMAC_SHA1_80 • AES_CM_128_HMAC_SHA1_80 • ARIA_CM_128_HMAC_SHA1_80 • AES_CM_192_HMAC_SHA1_80 • ARIA_CM_256_HMAC_SHA1_80 • AES_CM_256_HMAC_SHA1_80 	Refer to description	None

Table 4.4.8.7-1 SIP PHONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
DTMF Type	DTMF dialing signals sent by the SIP phone must be defined for the system to detect the tones properly. For Inband DTMF, a VoIP channel is required. <ul style="list-style-type: none"> • INBAND • 2833 • INFO(SIMPLE DTMF) • INFO(NORTEL NETWORKS) • INFO(DTMF RELAY) • INFO(TELEPHONE EVENT) 	Refer to description	INFO (DTMF RELAY)
SMS Type	The Short Message Service Protocol (type) must be selected to support SMS. <ul style="list-style-type: none"> • AUTO, • Text/plan, • Text/plan(KR), • Xnipm+xml 	Refer to description	AUTO
CO DIAL TONE	When the user of a SIP phone dials a CO/IP Line access code with Enblock dialing, the system can provide virtual dial tone to the user.	OFF ON	OFF
MWI NOTIFY	For compatible SIP phones, the system supports SIP Subscribe/Notify. When enabled here, the system sends Message Waiting notifications to the SIP phone. OFF, message-summary	Refer to description	OFF
Request URI Type	The SIP Request header Domain field can use the SIP phone's IP address and port (Normal) or for 'KT-FMC' the Request URI Domain field will be system IP and port.	Normal KT FMC	Normal
Busy Service	To indicate a busy condition to the SIP phone, the system can provide RTP packets with busy tone or the SIP 486 Busy message. Providing busy tone requires a VoIP DSP channel in the system. System Busy Tone, 486 Busy Message	Refer to description	System Busy Tone
Call Initiation Mode	The system can route calls to the SIP phone while busy (Multiple). In this case, the SIP phone determines if Call Waiting is supported. Otherwise, if the SIP phone is busy, the system routes calls based on the busy treatment (Single).	Multiple, Single	Multiple
Pre Audio Connection For DTMF	The system normally provides the 183 Session Progress SIP message to establish a "Pre-audio" connection. The "Pre-audio" connection permits the system to send tones (CO dial tone or ringback tone) to the SIP phone. In addition, the SIP phone can send DTMF tones the user dials in response to CO dial tone or a remote IVR message. Some SIP phones may require the 200 OK messages, which "answer" the call, to allow dialing after the call has been initiated. 183 Session Progress,200 OK	Refer to description	183 Session Progress

Table 4.4.8.7-1 SIP PHONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Do Not Overwrite Station Name	This feature can be set in case of the following Range: <ul style="list-style-type: none"> OFF(REG): Extension name will be updated with displayed in REGISTER message. ON: Extension name will not be updated. OFF(INV): Extension name will be updated with displayed in INVITE message. OFF(REG+INV): Extension name will be updated with displayed in REGISTER or INVITE message. 	Refer to description	OFF (REG)
Follow CO Enblock Process	Skip "dial tone by system" phase and deliver transparent message of CO trunk to SIP phone.	OFF ON	OFF
Suffix DID Tbl to CLI	If this option is ON, CLI is published by suffixing DID Conversion table index.	OFF ON	OFF
SIP Profile	Select the SIP Profile type between Default and CISCO-CP. Default: Normal SIP phone. CISCO-CP: CISCO SIP phone.	Default, CISCO-CP	Default
SIP Name Display	Deliver display name of SIP extension to SIP trunk without modification. ON: Deliver display name of SIP extension to SIP trunk without modification. OFF: Send name according to system rule (station name / speed name etc)	OFF ON	OFF
CO Access Code	When ELG SIP phone receives incoming trunk call, Call-Info header is inserted. - "Call-Info: co-access:XX" XX value is used for callback from SIP phone log. <ul style="list-style-type: none"> OFF: Call-Info is not inserted. 1st Co Code: PGM106- Access CO in First CO Group will be used as XX. CO Grp Code: Co Group Code+Co Group number will be used as XX. CO Number : Individual CO Access Code + Co Number will be used as XX. 	Refer to description	1st Co Code.
ALTC Usage	ALTC Usage of SIP phone in case of IPV6 connection. OFF: ALTC is not used. ON: ALTC is used.	OFF ON	OFF
INVITE(Replace) Usage	Original Caller ID is shown in ringing for blind transfer in below case. If "INVITE(Replace) Usage" is on and Replace header in INVITE message is supported on SIP phone	OFF ON	OFF

4.4.8.8 SIP Phone Provisioning - PGM 212

Selecting SIP Phone Provisioning will display the SIP Phone Provisioning Data input page.

Select one of CONFTYPE (Ericsson-LG Enterprise SIP Phone Type) and set the attributes you want to set for those types of SIP Phones on their registration to system and press **[Save]** button.

To store provisioning files that have been uploaded to iPECS system, press **[Store uploaded Provision files]**. To view the stored configuration files, press **[View Provision files]**.

To download Provision files, press **[Download Provision files]**. To view TLS Cert. files, press **[View TLS Cert files]** button.

The screenshot shows the 'SIP Phone Provisioning' configuration page. The left sidebar contains a search bar and a list of navigation options, with 'SIP Phone Provisioning(212)' selected. The main area contains a table with columns for Order, Attribute, Value, and Range. The table is divided into sections: CONFTYPE, MAC Address, Register Timer, Local ports (UDP, TCP, TLS, RTP), Proxy ports, Transport Mode, Signaling Port, Preferred Voice Codec Priority, and NTP Setting. The right-hand panel contains buttons for 'Save', 'Load', 'Store uploaded Provision files', 'View Provision files', 'Download Provision files', and 'View TLS cert files'.

Order	Attribute	Value	Range
1	CONFTYPE	None	
MAC Address must just be entered for Private Conf file			
2	Private Mac		Private MAC Addr
Don't enter MAC address for common Conf file			
3	Register Timer	3600	120-3600
4	Local UDP Port	5060	Port(1-65535)
5	Local TCP Port	5060	Port(1-65535)
6	Local TLS Port	5061	Port(1-65535)
7	Local RTP Port	23000	Port(1-65535)
8	Proxy TCP Port	5060	Port(1-65535)
9	Proxy TLS Port	5061	Port(1-65535)
10	Transport Mode	UDP	
11	Signaling Port	5060	Port(1-65535)
Preferred Voice Codec Priority			
1	1st priority	None	
2	2nd priority	None	
3	3rd priority	None	
4	4th priority	None	
NTP Setting			
1	NTP Server Address		Max 32 Characters
2	NTP Interval	1	0-120(Hours)

Figure 4.4.8.8-1 SIP Phone Provisioning

Why?

To pre-assign default attributes and download configuration to SIP Extensions when they register to System.

For who?(For all of specified Phone type or for one MAC specified Phone)

CONFTYPE: select Phone Type / Mandatory

< Ericsson-LG Enterprise WIT-400HE>

Currently MPB/UCP (TFTP only) does not proceed provisioning for WIT400H(http only) because of different method. But, WIT-400HE follows System's default provisioning by itself automatically.

<Ericsson-LG Enterprise LIP8002 / LIP88xx/LIP-8XXXE>

MPB/UCP proceed provisioning for LIP8002 / LIP88xx/LIP-8XXXE

< Other 3rd party SIP Extensions >

Does not proceed provisioning

Private Mac

Specify MAC address if provisioning target is only for one specific SIP extension / Optional

For what?

Re-Registration Timer

This will be useless if [SIP User ID Attributes (PGM 126) - Registration Timer Usage] is ON

SIP Extension's Local UDP/TCP/TLS Port number

Proxy Port

Server port number in sight of SIP Extension toward MPB/UCP

Transport

Signaling mode

SIP Extension's CODEC Priority

NTP Server and DST setting

The default volume of Speaker/Handset/Headset, maximum volume of Handset

Table 4.4.8.8-1 SIP PHONE PROVISIONING

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CONFTYPE	To modify or view a Configuration file, from the drop-down, select an Ericsson-LG Enterprise SIP Phone type.		None
MAC address must just be entered for Private Conf file			
Private MAC	There are two types of Config files, a global file for all phones of a specific type and a phone specific file. To view or modify a Phone specific file, enter the MAC address of the SIP phone.	Private MAC address	
Don't enter MAC address for common Conf file			
Registration Timer	When the SIP User ID Attributes are configured with Registration Mode=Register and the Registration Timer Usage=OFF, this timer is used to determine the valid registration period.	120-3600	3600
Local UDP Port	When employing UDP transport, this port number is employed for messages from the SIP phone.	Port (1-65535)	5060
Local TCP Port	When employing TCP transport, this port number is employed for messages from the SIP phone.	Port (1-65535)	5060
Local TLS Port	When employing TLS transport, this port number is employed for messages from the SIP phone.	Port (1-65535)	5061
Local RTP Port	The system sends RTP packets to the SIP phone using the first port available starting with this port number.	Port (1-65535)	23000
Proxy TCP Port	The SIP phone will send messages to the system over this SIP Server port.	Port (1-65535)	5060
Proxy TLS Port	The SIP phone will send messages to the system over this SIP Server port.	Port (1-65535)	5061
Transport Mode	The IP packet transport mode used between the system and SIP phone for signaling messages is defined as UDP, TCP or TLS. In case of TLS, the options configured in the SIP Common Attributes (PGM 210) apply.	UPD TCP TLS	UDP

Table 4.4.8.8-1 SIP PHONE PROVISIONING

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Signaling Port	When SIP phone transports the message to the system, this port number is employed for messages from the SIP phone.	Port (1-65535)	5060
Preferred Voice CODEC Priority			
1st priority ~ 4th priority	When the system negotiates with the SIP phone, the Codec priority specified is employed. If only the 1st. priority Codec is defined, only that Codec is available from the phone. If the Codec is not supported by the remote party, the call will fail.	G.711-u G.711-a G-729 G.722	None
NTP Setting (Need for TLS)			
NTP Server Address	The IP8800 series phones employ NTP to determine the time of day. The NTP server id must be configured for the phone.	Max. 32 Characters	
NTP Interval	The phone periodically checks the NTP server to determine the proper time of day.	0-120(Hours)	1
NTP Time Zone	The phone must be configured with the local Time Zone for proper operation and time display.	GMT	
DST Usage	The phone must be configured to support Daylight Saving Time.	ON OFF	OFF
DSP Setting			
Speaker Volume	The default volume level of SIP phone speaker can be set through the Config file.	1-11, 1-7 (IP8850)	6
Handset Volume	The default volume level of SIP phone handset can be set through the Config file.	1-11, 1-7 (IP8850)	6
Headset Volume	The default volume level of SIP phone headset can be set through the Config file.	1-11, 1-7 (IP8850)	6
MAX Handset Volume	The default maximum volume level of SIP phone handset can be set through the Config file.	1-11	11
Digit Map			
Dial Tone Digit	A digit string can be defined in the Config file so that the SIP phone will provide a "Second Dial Tone" to the user.	Max. 256Digits	
Inter Digit Timer	Inter digit timer between Dial digit in SIP Phone.	01-20(Sec.)	3
Pause Timer	Dial Pause timer in SIP Phone.	01-20(Sec.)	3
Digit Map	Send setup to system numbering plan.	Max. 1000	
Emergency Code	The Emergency dial code for the SIP phone can be set through the Config file.	Max. 1000	
System Setting			
Feature Sync.	With Do Not Disturb and Call Forward feature synchronization ON, when SIP Phone changes the DND or Call Forward state, the system is informed of the change in status.	ON OFF	ON
Auto Idle Timer	Phone goes to idle after this timer when the phone receives disconnect message or signal from system.	00-99(Sec.)	5

Table 4.4.8.8-1 SIP PHONE PROVISIONING

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Check Domain	The IP8800 SIP Phones can be configured to verify the domain in SIP messages match the registered proxy server.	OFF ON	ON
Telnet Usage	The IP8800 series phones can support Tenet access to the CLI.	Enable Disable	Disable
WEB Usage	The IP8800 series phones incorporate a Web server for access to the phone configuration files.	Enable Disable	Disable
Security Setting			
Cert File Format	The system supports two certification formats Privacy-Enhanced Electronic Mail (PEM) or Distinguished Encoding Rules (DER). PEM(Normal), DER (Normal)	Refer to description	PEM (Normal)
Crypt Mode	The system provisioning cryptosystem is configured to employ either RSA or ECC (Elliptic Curve Cryptography).	RSA ECC	RSA
TLS Version	TLS (Transport Layer Security) version can be selected. The default is TLS 1.2 for strong secure.	TLS1.0 TLS1.2	TLS1.2
First TLS Crypto	SIP signaling TLS encryption primary key method. System will be restarted after Save. <ul style="list-style-type: none"> None, AES_128_CBC_SHA, ARIA_128_CBC_SHA, AES_128_CBC_SHA256, ARIA_256_CBC_SHA256 	Refer to description	None
Second TLS Crypto	SIP signaling TLS encryption second key method. System will be restarted after Save. <ul style="list-style-type: none"> None, AES_128_CBC_SHA, ARIA_128_CBC_SHA, AES_128_CBC_SHA256, ARIA_256_CBC_SHA256 	Refer to description	None
SRTP Usage	When implemented by the carrier, the system can encrypt media (RTP) packets employing SRTP (Secure Real-Time Transport Protocol).	Disable, Enable	Disable
First SRTP Crypto	The first priority Crypt method for SRTP. <ul style="list-style-type: none"> None, AES_CM_128_HMAC_SHA1_80, ARIA_CM_128_HMAC_SHA1_80, ARIA_CM_192_HMAC_SHA1_80 	Refer to description	None
Second SRTP Crypto	The second priority Crypt method for SRTP. <ul style="list-style-type: none"> None, AES_CM_128_HMAC_SHA1_80, ARIA_CM_128_HMAC_SHA1_80, ARIA_CM_192_HMAC_SHA1_80 	Refer to description	None

View Provision files button: display all of saved provisioning information. View TLS Cert files button: display all of saved TLS Cert files information. 		

4.4.8.9 Provisioning File View & Delete

Selecting Provisioning File View & Delete displays a list of all the Provisioning files stored in the provisioning files directory as shown in the following figure. Note this does not included files that have been uploaded to iPECS eMG/UCP file system but not “stored” under PGM 212. To delete a file from the provisioning file directory, check the box in front of the file to be deleted then click **[Delete]**.

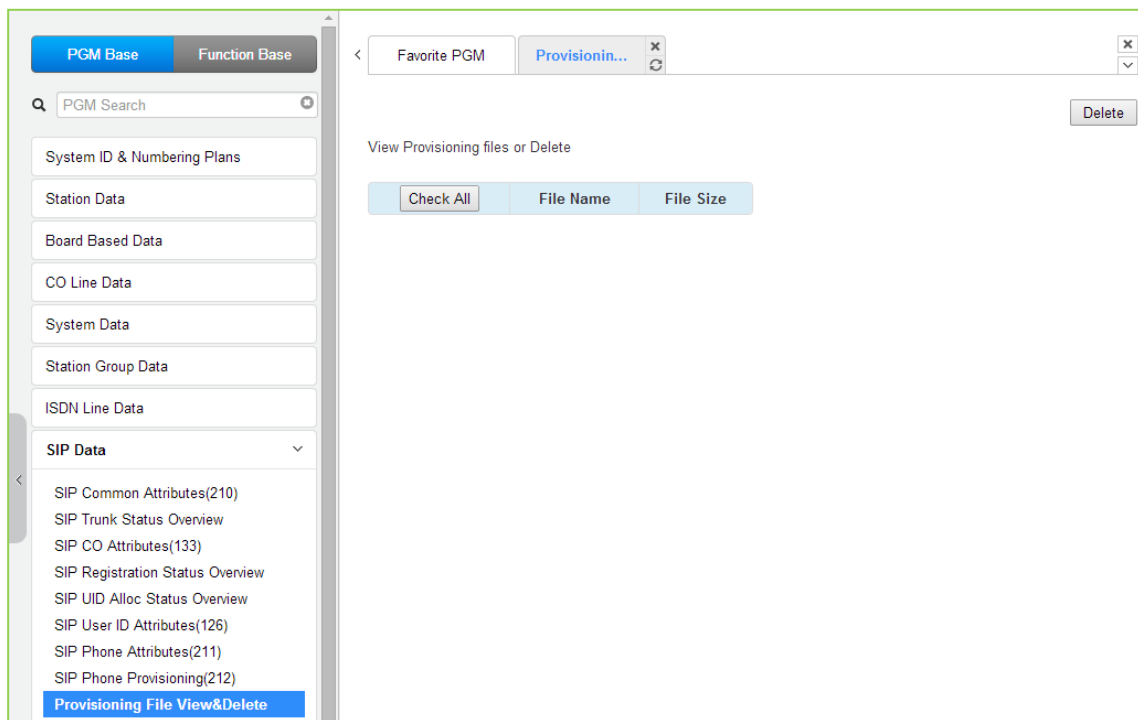

Figure 4.4.8.9-1 Provisioning File View & Delete

4.4.8.10 VMEX Station Data - PGM 215

Selecting VMEX Station data will display the VMEX Station Data input page as shown in the following figure. Enter a range, and click **[Load]** to view the VMEX Data for all stations in the range. Use the check boxes to indicate the VMEX Station Data to modify. After modifying the data, click **[Save]** to store the VMEX Station Data.

Enter VMEX Station Index Range: eMG80/100: 1-140 / eMG800: 1-1200 / UCP: 1-2400

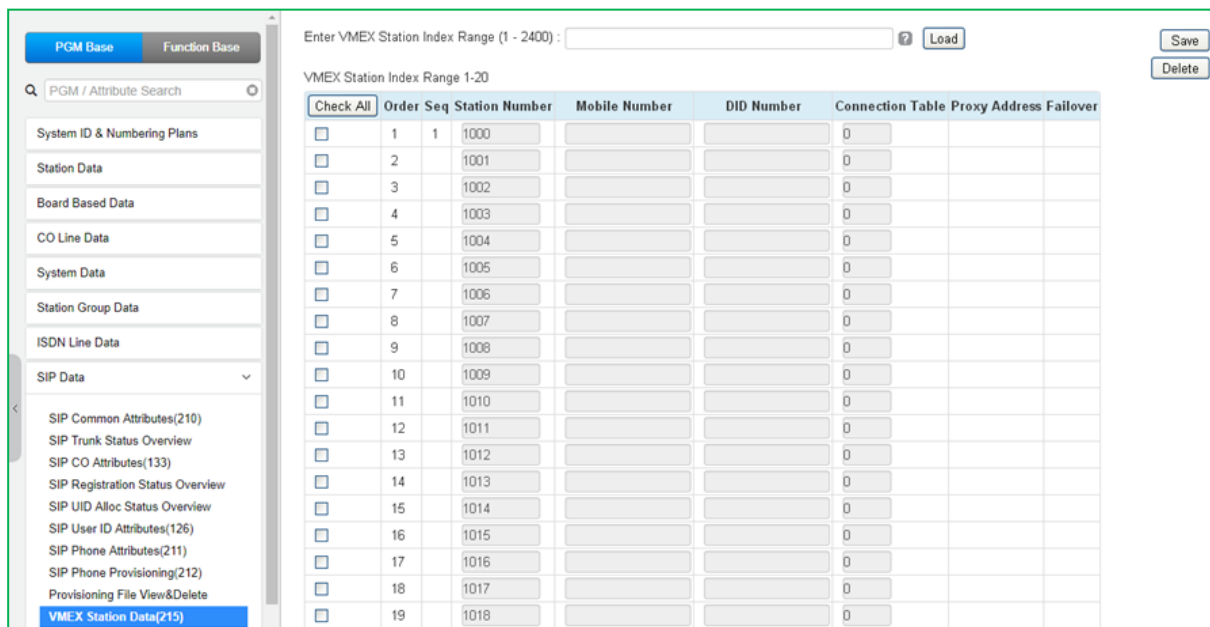

Figure 4.4.8.10-1 VMEX Station Data

The Virtual Mobile Extension feature permits a remote mobile phone to act as a station within the system employing SIP. For proper operation, various parameters as shown in the following table must be configured for the Station data.

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Station Number	The station number of the VMEX can be modified. The VMEX station number must not conflict with other numbering plans. The station number can be modified here or in PGM 105 and is affected by the 8 Digit Table	Station Number	
Mobile Number	The Caller Id of the Mobile phone must be entered to allow the system to recognize the VMEX phone. The mobile number here must match the number in the SIP From header.		
DID Number	The DID number associated with the VMEX must be configured to allow for recognition of calls to the VMEX.		
Connection Table	An index to the Connection Table PGM 216 must be entered. One of ten indices can be assigned permitting the use of multiple SIP Call servers.	0 ~ 10	
Proxy Address	The SIP Proxy for the VMEX must be configured for access to the VMEX.		
Fail-over	The index (Station Number) of the Mobile Extension Table (PGM 236) can be assigned for Fail-over operation. In this case, the Table entry must be configured for fail-over operation.	Station Number	

4.4.8.11 VMEX Connection table - PGM 216

Selecting VMEX Connection table will display the VMEX Connection Data input page. Use the check boxes to indicate the Table index data to modify and click **[Save]** button to store.

Check All	Index	Proxy IP	Domain Name	Port	Firewall	E164 Type	To Prefix	From/Contact Prefix	Outband Prefix	Outband Usage	Diversion Usage
<input type="checkbox"/>	1			5060	Apply	Unknown				OFF	ON
<input type="checkbox"/>	2			5060	Apply	Unknown				OFF	ON
<input type="checkbox"/>	3			5060	Apply	Unknown				OFF	ON

Figure 4.4.8.11-1 VMEX Connection Table

With VMEX, the carrier’s Mobile network sends calls to and from the Mobile phone directly to the system employing a SIP Call server. For proper operation, the SIP Call server must be configured and special prefix codes must be defined for calls from and to the mobile phone.

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Proxy IP	This field assigns the IP address or URL of the Service Provider’s SIP Proxy server.		
Domain Name	Domain name of the Service Provider’s SIP Call server that is used in SIP “To:” headers.		
Port	Normally SIP signaling messages are sent on port 5060. If desired a different port can be defined.		5060
Firewall	The iPECS system can use the Firewall address or LAN address of the iPECS system board when communicating with the VMEX.	Not/ Apply	Apply
E164	The structure of the received SIP invite To header from the VMEX can be defined for proper conversion. This field is not presently used. Unknown, International, National, Local	Refer to description	Unknown
To Prefix	A special prefix code is included in the SIP invite “To” header sent from iPECS system to the carrier’s SIP Call server to identify VMEX service	3 to 5 digits	
From Contact Prefix	A special prefix code is included in the SIP invite “From” and “Contact” header sent from iPECS system to the carrier’s SIP Call server to identify VMEX service	3 to 5 digits	
Outbound Prefix	A special prefix code that must be in the SIP invite “To” header received by iPECS system for calls from the VMEX. If the prefix received does not match this entry, the call is rejected.	8 digits	
Outbound Usage	Not used.		
Diversion Usage	Not used		

4.4.9 Tables Data

Selecting the Tables Data group returns the sub-menu displayed in the left frame as shown in the following figure.

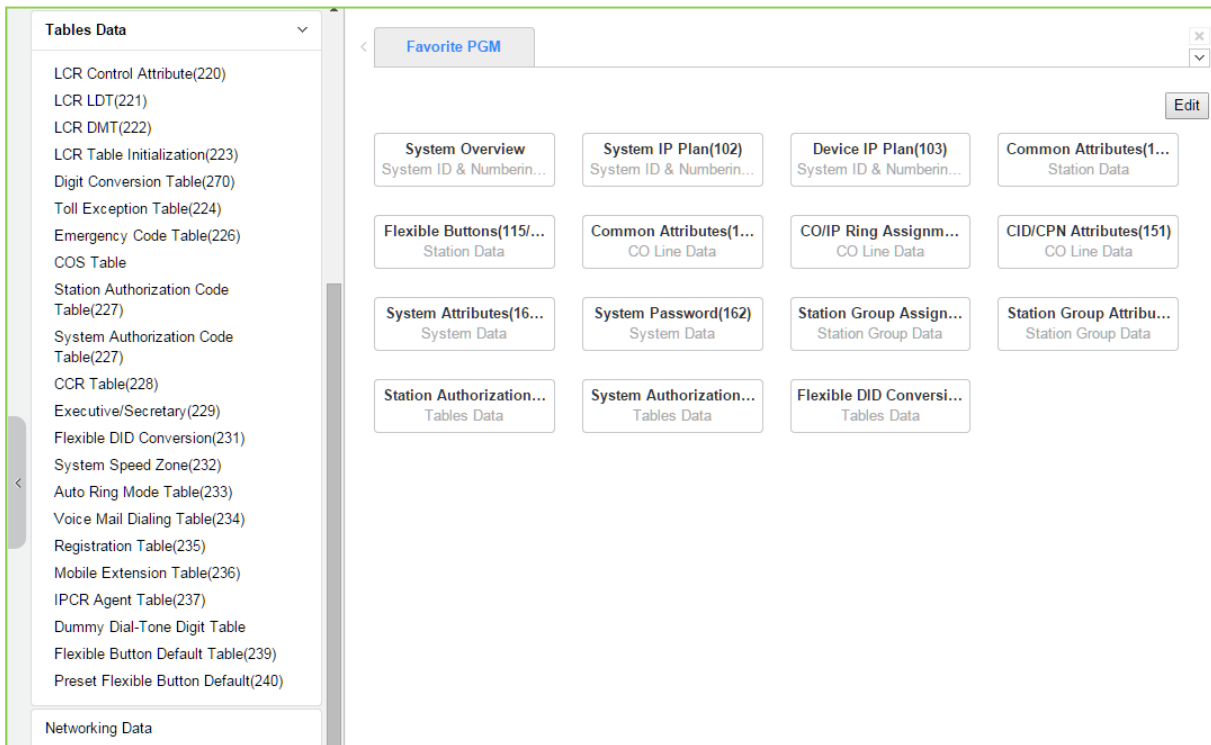

Figure 4.4.9-1 Tables Data

4.4.9.1 LCR Control Attributes - PGM 220

Selecting LCR Control Attributes will display the LCR Control Attributes data entry page. Click **[Save]** button after changing Value.

The LCR Tables provide a mechanism to define the database, which will route outgoing calls, particularly long distance, using the most cost effective route.

User dialed digits are compared to table entries and modified appropriately based on time of day, day of week, and assigned routes.

There are four LCR Tables, LCR Control Attributes, LCR Leading Digit Table, LCR Digit Modification Table, and LCR Initialization Table.

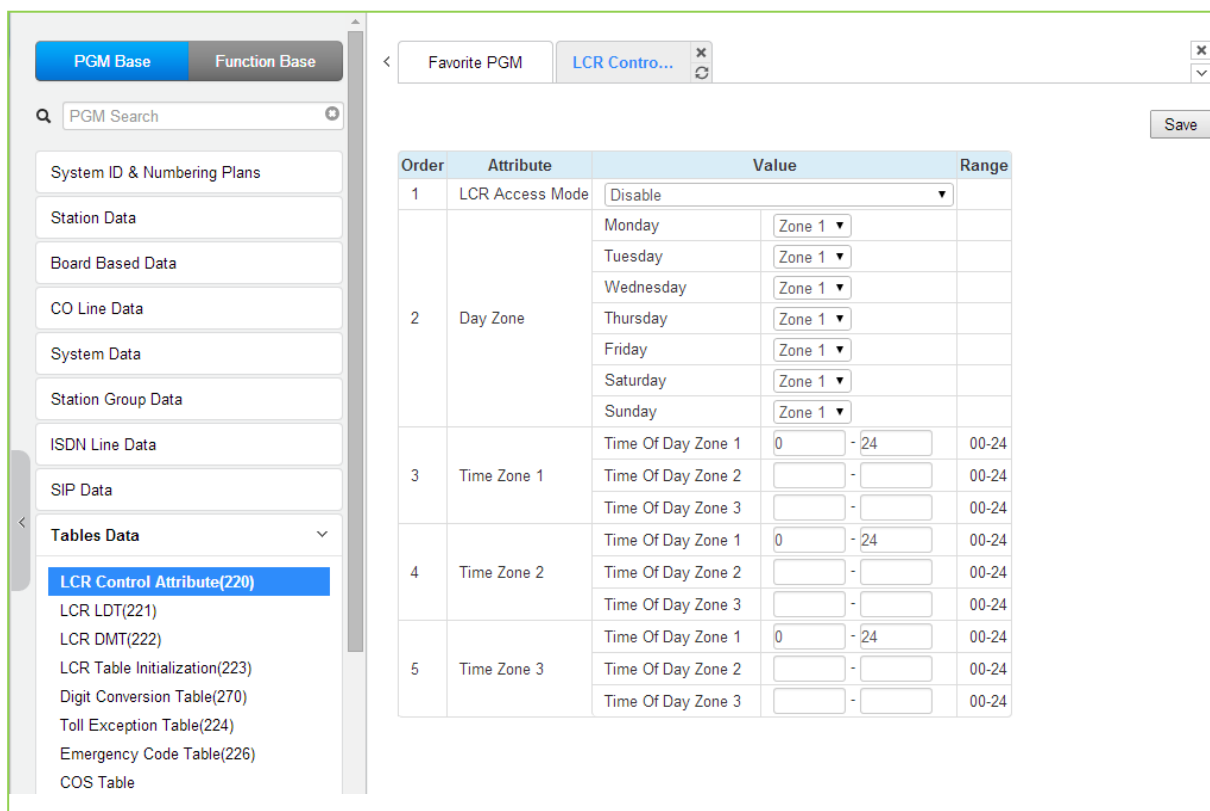

Figure 4.4.9.1-1 LCR Control Attributes

The LCR Control Attributes Table, among other items, allows assignment of the LCR Access Modes. The LCR Access Modes defines the user operations that will access the LCR feature.

The LCR Access Modes are:

- LCR Disabled.
- Loop (user dials '9' or CO/IP Group code (8xx), or presses a Loop button).
- Loop and Internal (user dials digits without a CO/IP Access Code prefix).
- Loop and Direct CO Line (user dials CO Line Access Code (88xx) or pressing a {CO line} button).
- Loop, Direct CO Line, and Internal.
- Internal, Loop, Direct CO and Direct Loop.

In addition, days of the week are grouped into zones (Day Zones) and the time of day can be set into three groups (Time Zones). The following table provides general descriptive information and input ranges.

Table 4.4.9.1-1 LCR Control Attribute

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LCR Access Mode	This entry defines the effective LCR modes, the modes by which the user can access LCR. Disable Only Loop LCR Internal and Loop LCR Loop and Direct CO LCR Internal, Loop and Direct CO LCR Internal, Loop, Direct CO and Direct Loop LCR	Refer to description	Disable
Day Zone	Each day of the week is assigned to a Day Zone (1~3). The active Day Zone is the Zone assigned to the current day of the week.	Zone1~3 (days of the week)	Zone 1
Time Zone1	This entry defines the hours of the day during which each Zone is active for Time Zone 1. Note hours not defined in Time Zone 2 and 3 are automatically part of Time Zone 1.	00~24	00~24
Time Zone2	This entry defines the hours of the day during which each Zone 2 is active for Time Zone 2. Note hours not defined in Time Zone 2 and 3 are automatically part of Time Zone 1.	00~24	00~24
Time Zone3	This entry defines the hours of the day during which Zone 3 is active for Time Zone 3. Note hours not defined in Time Zone 2 and 3 are automatically part of Time Zone 1.	00~24	00~24

4.4.9.2 LCR LDT (Leading Digit Table) - PGM 221

Selecting LCR-LDT (Leading Digit Table) will display the LCR-LDT data entry page. Select the LDT Index range desired, blue text above the table header. Click **[Save]** button after changing Value.

Enter LDT Table Index Range: eMG80/100: 1-10 / eMG800: 1-32 / UCP: 1-32

Figure 4.4.9.2-1 LCRLeading Digit Table

The Leading Digits Table is used to analyze the user-dialed digits to determine an appropriate Digit Modification Table Index.

LDT Tables are provided for 10 for eMG80/100 system& 32 for eMG800/UCP system. The Table is divided into bins. The applicable LCR Access Modes (LCR Type) and the digits (up to the first 12) dialed by the user are compared with the entries in the Leading Digit Table.

In addition, indices to the Digit Modification Table are defined for each of the three (3) Zones and Time Zones configured in the LCR Control Attributes. The following table provides a brief description and entries for the Leading Digit Table.

Table 4.4.9.2-1 LCR LEADING DIGITS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
LCR Type	This entry defines the LCR modes that will apply to this LDT index.	Internal, CO Line, Both	Both
Compared Digits	Up to 12 digits that, if matched by the user dialed digits, will access the DMT Indices of the associated Leading Digit Table bin.	Max. 12 digits (Include * and #)	
Check Password	If enabled (ON), when the dialed digits match the LDT digits, the system will send second dial tone to request the user input a valid Authorization code.	OFF ON	OFF
LDT Zone Number	If the LDT Zone Number of a station/co line is equal to this value, this LDT table is available to the station/co line.	1-100	1

Table 4.4.9.2-1 LCR LEADING DIGITS

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
	(Station Data->Common Attributes(111), CO Line Data->Common Attributes(140))		
DMT1	This entry defines the Digit Modification Table index (00~99) for each Time Zone for Day Zone 1. The appropriate index will be selected for the current Day and Time Zone. One entry (DMT index) is made for each Time Zone, six (6) digits.	Must be 6 digits 3 DMT indices	
DMT2	This entry defines the Digit Modification Table index (00~99) for each Time Zone for Day Zone 2. The appropriate index will be selected for the current Day and Time Zone. One entry (DMT index) is made for each Time Zone, six (6) digits.	Must be 6 digits 3 DMT indices	
DMT3	This entry defines the Digit Modification Table index (00~99) for each Time Zone for Day Zone 3. The appropriate index will be selected for the current Day and Time Zone. One entry (DMT index) is made for each Time Zone, six (6) digits.	Must be 6 digits 3 DMT indices	

4.4.9.3 LCR DMT (Digit Modification Table) - PGM 222

Selecting LCRDMT (Digit Modification Table) will display the LCR-DMT data entry page. Enter the DMT Table Index range then click **[Load]** to modify the DMT data. Click **[Save]** button after changing Value.

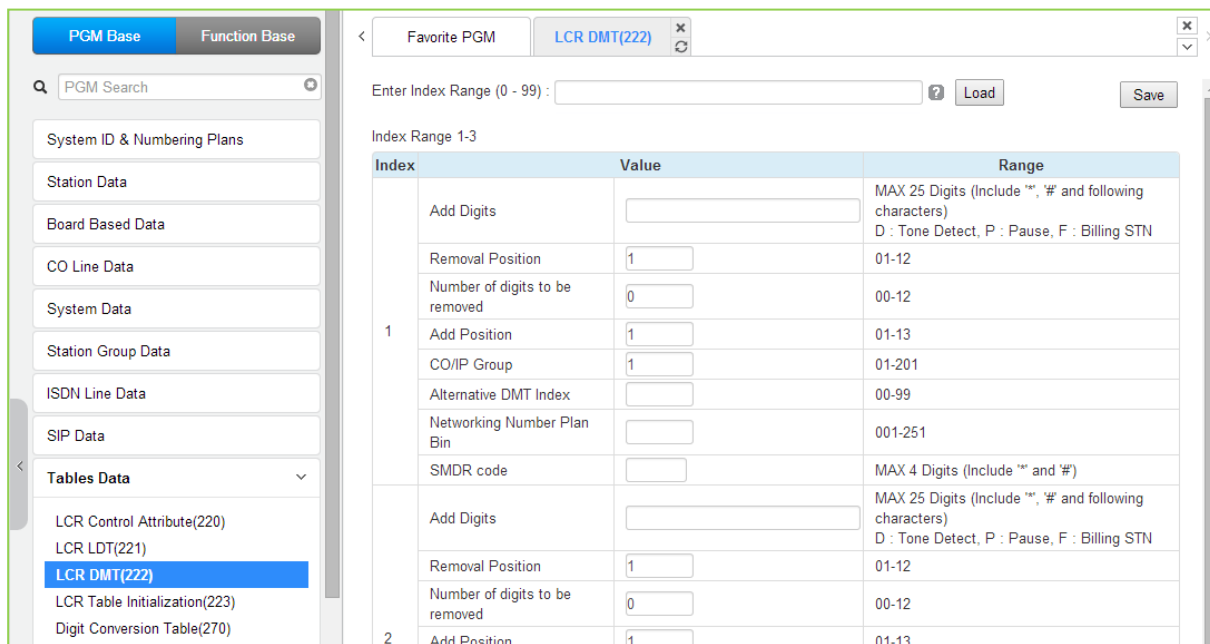

Figure 4.4.9.3-1 LCR Digit Modification Table

Using the index determined from the analysis of the LCR Leading Digits Table, the dialed number is modified in accordance with the Digit Modification Table and sent over the CO/IP group assigned for the index.

Digits of the dialed number can be deleted based on the “Removal Position” and “Number of digits to be removed” entries and a digit stream can be inserted in the resulting number. Counting from the first dialed digit, the Removal Position defines the location of the digit where removal begins and, the Number of digits to be removed defines the number of digits to remove. The “Add Digits” are then inserted in the resulting number at the digit position assigned by the Add Position entry. The resulting number is then dialed over the CO/IP path assigned. If the assigned path is not available, the “Alternate DMT index” is used to determine the number and CO/IP path to be used.

Table 4.4.9.3-1 LCR DIGIT MODIFICATION

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Add Digits	This entry defines the digit stream to insert in the number after digit removal. Digits 0~9, *, #, and special characters, <ul style="list-style-type: none"> • P: timed Pause • D: Dial tone detect • F: Billing station number 	Max. 25 digits	
Removal Position	This entry defines the position of the digit where removal is to begin, starting with the 1st dialed digit (01).	01~12	1
Number of digits to be removed	This entry defines the number of digits to remove starting at the “Removal Position	00~12	0
Add Position	This entry defines the position in the number, after digit removal, where the Add Digits are inserted.	01~13	1

Table 4.4.9.3-1 LCR DIGIT MODIFICATION

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CO/IP Group	This entry defines the CO/IP Group that the system will attempt to use for the call.	eMG80/100:01-21 eMG800:01-201 UCP: 01-201	1
Alternative DMT Index	This entry defines an Alternate Digit Modification Table Index to use if no path is available in the assigned CO/IP Group.	00~99	
Networking Number Plan Bin	This entry defines the Net Number Plan Table bin that the system will attempt to use for the transit out call.	001-251	
SMDR Code	This only used for TNET with CM. This code will be send to CM when the TNET status is changed from Local survival mode to bypass mode.	Max. 4 digits (Include * and #)	

4.4.9.4 LCR Table Initialization - PGM 223

Selecting LCR Table Initialization will display the LCR Table Initialization data entry page. Click **[Initialize]** button to initialize input data.

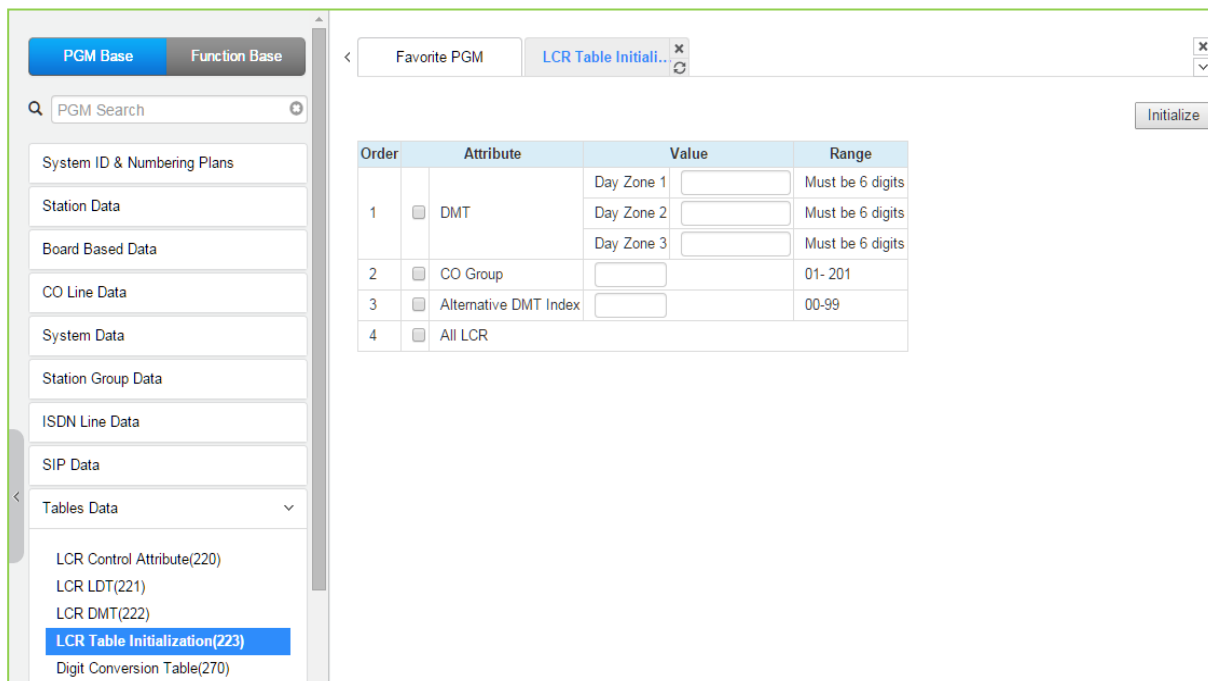

Figure 4.4.9.4-1 LCR Table Initialization

The LCR Table Initialization allows global values to be assigned to the various Digit Modification Table entries. In addition, the LCR Leading Digits and LCR Digit Modification Tables can be initialized to the default (no entries) state.

The CO group range is from 1 to 21 for eMG80/100 and from 1 to 201 for eMG800/UCP.

4.4.9.5 Digit Conversion Table - PGM 270

Selecting Digit Conversion Table will display the page shown. Click **[Save]** button after changing Value.

EnterTable Number: eMG80/100: 1-15 / eMG800: 1-32 / UCP: 1-32

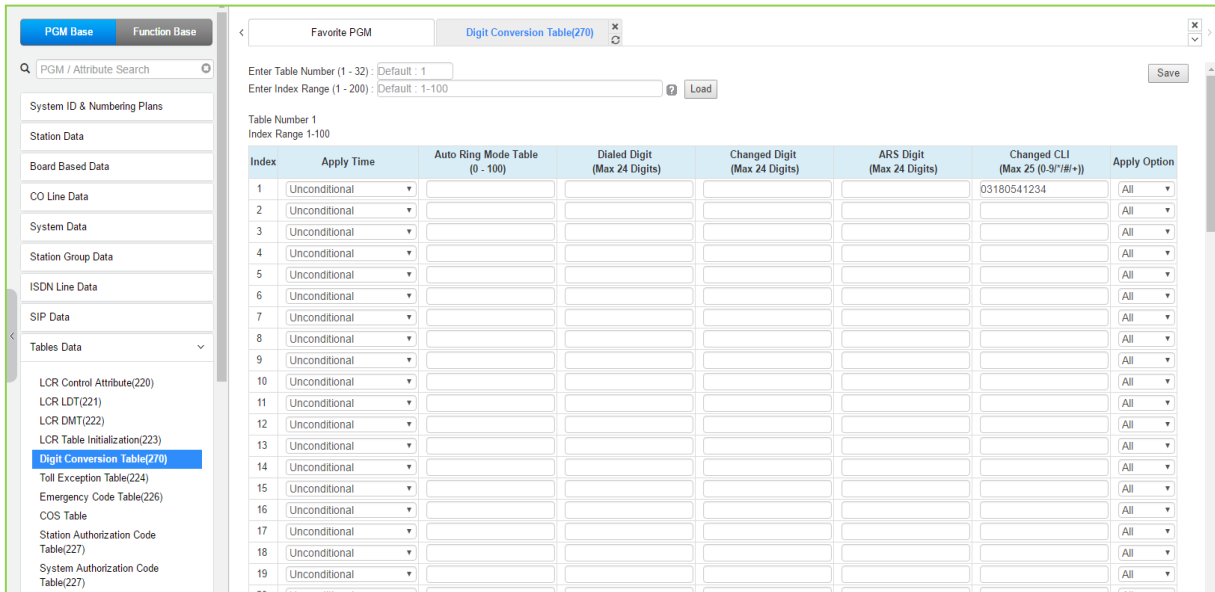

Figure 4.4.9.5-1 Digit Conversion Table

The Digit Conversion Table index is assigned to the Station and CO line. In addition, digit conversion can be applied according to the Apply Time Type (Unconditional, Day/Night/Timed or LCR/Time) as necessary. Each Table has 200 entries of up to 24 digits. Entries in the Tables can be any digit (0-9), “*”, “#”, “X” (Mask Digit), “F” (Ignore digit). Each Index can be applied by Apply Option (All/Station/CO line/Disable).

Table 4.4.9.5-1 Digit Conversion table

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Apply time	The Apply time type to be applied when the dialed digit is dialed. Unconditional, Follow Day/Night/Timed, Follow LCR	Refer to description	Unconditional
Auto Ring Mode table	Day/Night/Timed Time Table Index. N/A, eMG:00-15, UCP:00-100	Refer to description	
Dialed digit	Dialed digit to be compared.	Max. 24 Digits	
Changed digit	Changed digit.	Max. 24 Digits	
ARS Digit	If a selected path is not available for some reason (All Busy, Line Fault etc.) after digit conversion, Alternative Route Selection (ARS) will connect calls using predefined designated ARS digit in digit conversion table.	Max. 24 Digits	
Changed CLI	The different CLI as Changed CLI according to Dialed digit can be sent.	Max. 25 Digits	
Apply option	The Apply Option can be applied according to the caller. All, Station, CO line, Disable	Refer to description	All

4.4.9.6 Toll Exception Table - PGM 224

Selecting Toll Exception Table will display the Toll Table data entry page. Select the desired Allow or Deny Table, blue text above the table header, desired. Click **[Save]** button after changing Value.

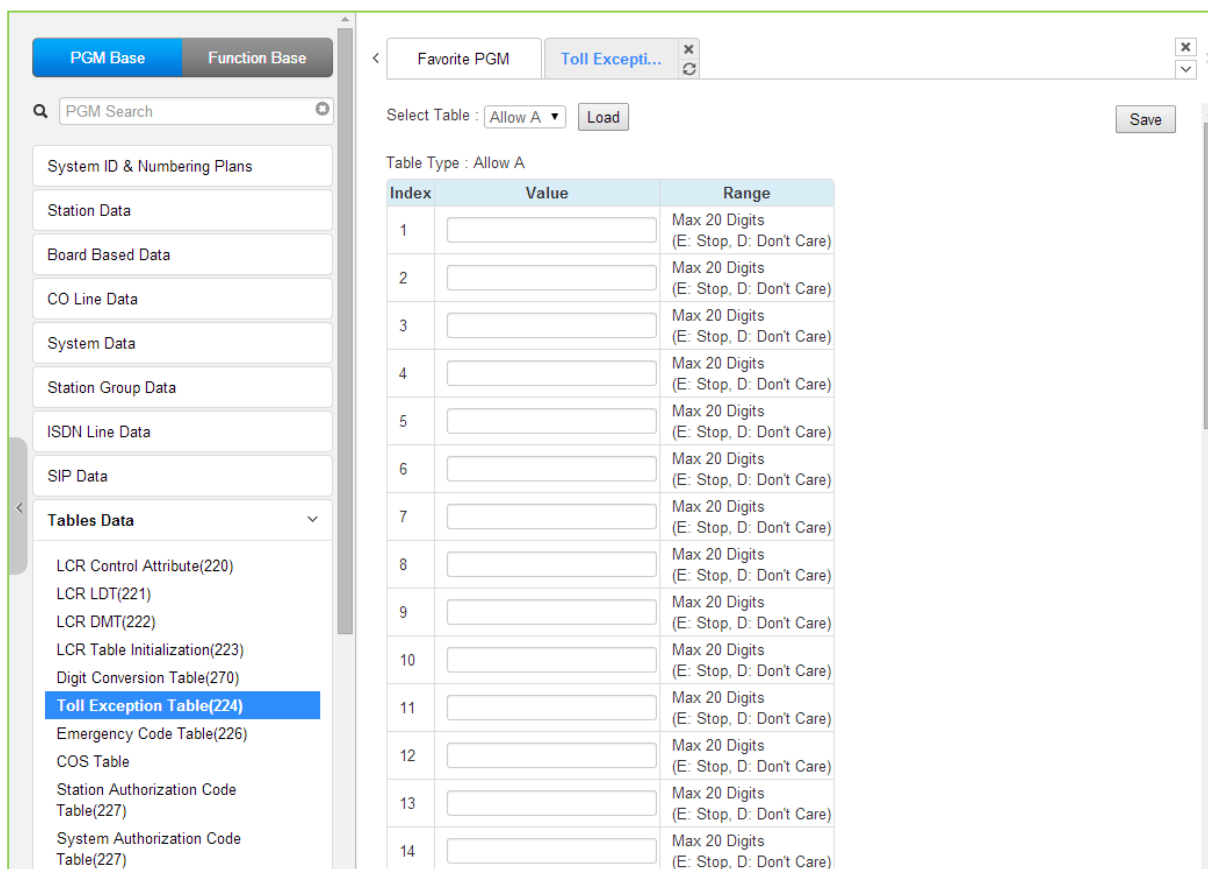

Figure 4.4.9.6-1 Toll Exception Table

There are ten Toll restriction Tables arranged in pairs. Each pair consists of an Allow Table and a Deny Table. Allow and Deny entries for Table `A` apply to Station and DISA Class of Service 2/4 and 11. Allow and Deny entries for Table `B` apply to Station and DISA Class of Service 3/4 and 11. Allow and Deny entries for Table `C` apply to Station and DISA Class of Service 5 and 6. Allow and Deny entries for Table `D` apply to Station and DISA Class of Service 8/10 and 11. Allow and Deny entries for Table `E` apply to Station and DISA Class of Service 9 to 11. The Allow and Deny Tables each permit up to 50 entries of up to 20 digits. Entries in the Tables can be any digit (0-9), “#” as a wild card (don’t care) digit, or “*” as an end of entry digit.

Based on Table entries, stations or DISA users are allowed or denied dialing specified numbers. The following rules apply to establishing restrictions based on the Table entries:

- If the appropriate Allow/Deny Table pair has no entries and COS is 2 to 4, no restrictions are applied. If the COS is 5 or 6, no Long Distance dialing is allowed.
- If entries are only made in the Allow Table, only those numbers entered can be dialed, all other dialed numbers will be restricted.
- If entries are only made in the Deny Table, only those numbers entered will be restricted and all other numbers can be dialed.
- When there are entries in both the Allow and Deny Table pair, if the number is in the Deny Table, the number will be restricted otherwise the number can be dialed without restriction.

4.4.9.7 Emergency Code Table - PGM 226

Selecting Emergency Code Table will display the Emergency Code Table data entry page. Click **[Save]** button after changing Value.

Index	Value	Range
1	911	Max 15 Digits (Include E: Stop, D: Don't Care)
2		Max 15 Digits (Include E: Stop, D: Don't Care)
3		Max 15 Digits (Include E: Stop, D: Don't Care)
4		Max 15 Digits (Include E: Stop, D: Don't Care)
5		Max 15 Digits (Include E: Stop, D: Don't Care)
6		Max 15 Digits (Include E: Stop, D: Don't Care)
7		Max 15 Digits (Include E: Stop, D: Don't Care)
8		Max 15 Digits (Include E: Stop, D: Don't Care)
9		Max 15 Digits (Include E: Stop, D: Don't Care)
10		Max 15 Digits (Include E: Stop, D: Don't Care)

Figure 4.4.9.7-1 Emergency Code Table

The Emergency Code Table is used to identify emergency numbers which, when dialed, will override all COS dialing restrictions. An Emergency Code number may be up to fifteen (15) digits in length.

4.4.9.8 COS Table

Selecting COS Table will display the COS Table data entry page. Data can be filtered to display specific modes and the values to change can be limited to a specific mode and type, Station or System Authorization codes.

The screenshot shows the 'COS Table' configuration page. On the left, a sidebar lists various data tables, with 'COS Table' selected. The main area contains filters for 'Day', 'Night', and 'Timed Ring', all currently set to 'N/A'. Below the filters, there are radio buttons for 'Station' and 'System' authorization types, with 'Station' selected. A 'Change' button is present. The central part of the page displays a table titled 'COS Table' with columns for 'Station Number', 'Day', 'Night', and 'Timed Ring'. The table shows a 'Station COS' section with values of '1' for all stations from 1000 to 1017 across all three time periods.

COS Table			
Station Number	Day	Night	Timed Ring
Station COS			
1000	1	1	1
1001	1	1	1
1002	1	1	1
1003	1	1	1
1004	1	1	1
1005	1	1	1
1006	1	1	1
1007	1	1	1
1008	1	1	1
1009	1	1	1
1010	1	1	1
1011	1	1	1
1012	1	1	1
1013	1	1	1
1014	1	1	1
1015	1	1	1
1016	1	1	1
1017	1	1	1

Figure 4.4.9.8-1 COS Table

Assignments for COS are made for the Day, Night, and Timed Ring for each station and system Authorization code. The standard Station COS 1 to 11 is assigned to each Authorization code. Note the COS may also be defined in the Station and System Authorization Code Tables.

4.4.9.9 Authorization Codes Table - PGM 227

There are two Authorization Code Tables, the System Authorization Code Table and Station Authorization Code Table.

Selecting Station Authorization Code Table will display the data entry page in Figure 4.4.9.9-1 and selecting System Authorization Code Table will display the page in Figure 4.4.9.9-2.

Enter a Station or System Index range and click **[Load]** to modify the data. For convenience, the copy, paste, and drag is available to enter or modify data. Please click **[Save]** button to apply after changing Value.

The screenshot shows the 'Station Authorization Code Table' interface. On the left is a sidebar with a search bar and a list of data tables. The 'Station Authorization Code Table(227)' is selected. The main area contains a 'Favorite PGM' dropdown set to 'Station Authoriza...', an 'Enter Station Range' input field with a 'Load' button, and a 'Save' button. Below this is a section titled 'Auth Code / COS value to change' with two radio buttons for selection. The first option is 'Enter Station Range : [] - [] Authorization Code : []'. The second option is 'Enter Station Range : [] - [] Day [1] Night [1] Timed Ring [1]'. A 'Range Save' button is located below these options. The main table has the following data:

Station Number	Authorization Code	Suffix Code	Day COS	Night COS	Timed Ring COS
1000			1	1	1
1001			1	1	1
1002			1	1	1
1003			1	1	1
1004			1	1	1
1005			1	1	1
1006			1	1	1
1007			1	1	1
1008			1	1	1
1009			1	1	1
1010			1	1	1
1011			1	1	1
1012			1	1	1
1013			1	1	1
1014			1	1	1
1015			1	1	1

Figure 4.4.9.9-1 Station Authorization Code Table

This close-up shows the 'Auth Code / COS value to change' section. It features two radio buttons. The first option is 'Enter Station Range : [] - [] Authorization Code : []'. The second option is 'Enter Station Range : [] - [] Day [1] Night [1] Timed Ring [1]'. A 'Range Save' button is positioned below these options.

User can change the authorization code and COS for the station range across the board and click the Range save button to save.

You can use the suffix code, which is 8 characters in length when the station user accesses to station web admin, user portal or click to call service for security enhancement.

A station user has to input the code after authorization code if the code is set. If you don't set the code, the station user doesn't need the code. The station user can access with only authorization code.

Enter System Index Range: eMG80/100: 1-360 / eMG800: 1-1200 / UCP: 1-2800

Index	Authorization Code	Day COS	Night COS	Timed Ring COS	Remark
1		1	1	1	
2		1	1	1	
3		1	1	1	
4		1	1	1	
5		1	1	1	
6		1	1	1	
7		1	1	1	
8		1	1	1	
9		1	1	1	
10		1	1	1	
11		1	1	1	
12		1	1	1	
13		1	1	1	
14		1	1	1	
15		1	1	1	
16		1	1	1	
17		1	1	1	

Figure 4.4.9.9-2 System Authorization Code Table

User can change COS for the system index range across the board and click the Range save button to save. Authorization codes are employed to control access to system resources and facilities. Walking COS, CO/IP Group access, DISA calls and certain Call Forward types may require input of a valid Authorization code. Codes up to 12 digits may be entered into the system database.

There are two types of Authorization codes, station and system. The Station entries are associated with individual stations. The number of system Authorization codes varies based on the configuration; the number of available codes is provided in Table 2.1-x. Each Authorization code may be assigned a separate COS for Day, Night and Timed Ring mode operation.

The system will allow the station associated Authorization codes to be duplicated. However, the iPECS will not allow duplicate or conflicting system level codes unless the "*" and Authorization table indexing is used to enter codes. Conflicting codes occur when a shorter code contains the first digits of a longer code, i.e. 12 conflicts with 1234.

Table 4.4.9.9-1 STATION/CO LINE COS TOLL RESTRICTIONS

	CO COS 1	CO COS 2	CO COS 3	CO COS 4	CO COS 5
STA COS 1	No Restriction	No Restriction	No Restriction	Only Local Call(LD code/counter) and Table C	No Restriction

16	Temporary Announcement No (0 - 200, 0: Unused)		0	
17	* Button Used As	Repeat First Announcement		
18	# Button Used As	Repeat First Announcement		

Figure 4.4.9.10-1 Customer Call Routing Table

The system incorporates IVR (Interactive Voice Response) capabilities called CCR (Customer Call Routing). After, or during a VSF Announcement, the caller may dial digits to select a destination or route for the call. The CCR Table defines the destination type and value associated with the digit dialed by the caller in response to the index, a VSF Announcement (01-200). The available destinations are shown in Table 4.4.9.10-1 below.

Up to 70 single-level Audio Text menus may be assigned or, multi-level menu structures (maximum 70 levels) can be established using one menu as a destination for the previous level. Each CCR announcement can have re-route destination – Busy / Error / No Answer case. Each re-routed destination types are Tone / Attendant / Station Group / VSF Announcement number / Station / System Speed / Networking / Voice Mail (Station group).

The table includes a “CCR 1 Digit Only” option. When this option is enabled, the system will accept only a single digit as the entry. When the option is OFF, the caller can dial multiple digits that are accepted as DISA dialing.

Temporary announcement can be used in holiday, or emergency case. When Temporary Announcement Usage is set to ON, programmed Temp Announcement is played instead of CCR table announcement. This Temporary Announcement can be set also by Remote Access - by using [Remote Access to Mobile Extension] feature.

After access to Mobile Extension,

- To turn On Temp Announcement, 8 + CCR Announcement Number.
- To turn Off Temp Announcement, 9 + CCR Announcement Number.

[*] Button Used As, [#] Button Used As has 3 available options for [*] or [#] button

- Repeat First Annc
- Repeat Current Annc

- Access Voice Mail Remotely

4.4.9.11 Executive/Secretary Table - PGM 229

Selecting Executive/Secretary will display the Executive/Secretary Table data entry page. Click **[Save]** button after changing Value.

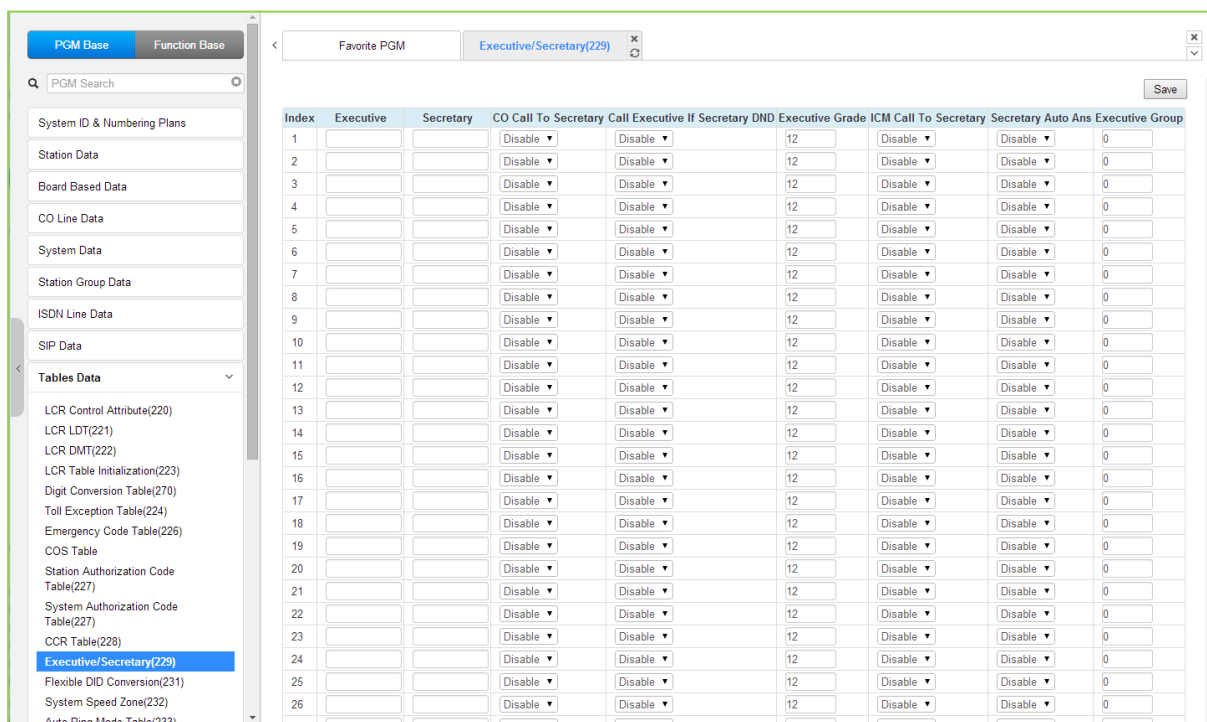

Figure 4.4.9.11-1 Executive/Secretary Table

Stations can be paired as Executive/Secretary pairs so that when the Executive enters DND, intercom and transferred calls are automatically routed to the Secretary. An Executive may have only one Secretary however, a Secretary can be assigned to multiple Executives. A Secretary of one pair may be the Executive of another however, assignments that form a loop-back are not allowed. In addition, when active, the Secretary can be assigned to receive the Executive’s voice messages, refer to Common Attributes section.

The “CO Call to Sec” option will route all CO calls to the Executive to the defined Secretary’s station regardless of the Executive’s station status. The “Call Executive if Secretary DND” option will route Executive calls back to the Executive if the Secretary is in DND.

The Exec Grade permits higher grade Executives to override the Executive/Secretary Forward feature to call a lower grade Executive (Korea only). The highest grade is 1 and the lowest grade is 12. The “ICM Call to Secretary” option will route all internal calls to the Executive(except for calls from higher or same grade executive) to the defined Secretary’s station regardless of the Executive’s station status.

Refer to the following table for a description of the Executive/Secretary parameters and the input required.

Table 4.4.9.11-1 Executive/Secretary Table

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Executive	Assign Executive.		
Secretary	Assign Secretary.		
Executive grade	Higher (or equal) grade Executives can override the Executive/Secretary Forward feature (5th: ICM call to SEC) to call a lower grade Executive. Highest grade: 01, Lowest grade: 12.	01~12	12

Table 4.4.9.11-1 Executive/Secretary Table

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Executive Group	If Group is greater than 1, it works that lower grade executive can call to higher grade executive directly when they are same group.	00-50	00
ICM Call to Secretary	If this option is ON, all internal calls to the executive station (except for calls from higher or same grade executive) are routed to the Secretary's station regardless of the Executive's status. 8801 Default value Korea, India, Israel, Turkey, Thailand : ON Otherwise : OFF	Enable/ Disable	Disable
CO Call to Secretary	If desired, all incoming CO calls to the Exec. The call is routed to the Secretary's station regardless of the Executive's status.	Enable/ Disable	Disable
Call Executive if Secretary is in DND	If the Secretary is in DND, Executive calls can be routed back to the Executive.	Enable/ Disable	Disable
Call Executive If High Secretary	If this value is set to ON, high grade secretary call to low grade executive although ICM Call To Secretary option is ON.	Enable/ Disable	Disable
Secretary Auto Answer	When executive call to the secretary who is in 'T' mode. The call will be answered by hands free mode if it is ON.	Enable/ Disable	Disable

4.4.9.12 Flexible DID Conversion Table - PGM 231

Selecting Flexible DID Conversion Table will display the Flexible DID Table data entry page. For convenience, the copy, paste, and drag is available to enter or modify data. Click **[Save]** button after changing Value. Click **[Initialize All table Data]** to initialize all table and Click **[Delete All Table Data]** to delete.

Index	Day Ring Mode Destination	Value	VMD	Night Ring Mode Destination	Value	VMD	Trunk Ring Mode Destination	Value	VMD	Route Destination	Value	VMD	ICLID Table Usage	ICM Termination Group	Digit conversion table Index	MON	Ring Time	Name

Figure 4.4.9.12-1 Flexible DID Conversion Table

When the received DID digits are converted, the resulting three-digit number may be used as an index to the Flexible DID Conversion Table.

The Flexible DID Table index is used when DID Line is assigned a Conversion type 2, refer to the DID Service attributes section 4.4.4.6. Using the index from the digit conversion a destination for the DID call is determined by a Look-up in the Flexible DID Table.

The destination for the call is generally defined as a type and a value. The type selects options such as station, station group, VSF, etc. The value specifies the particular station, station group, etc. In addition, ICLID routing can be enabled for DID lines or can be assigned as an index to the Auto Ring Mode table.

Table 4.4.9.12-1 FLEXIBLE DID CONVERSION

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Day Ring Mode Destination	Destination setting for Day Ring mode.	<ul style="list-style-type: none"> • N/A, • Station, • Station Group, • System Speed, • PABX transfer with system speed, • VSF announcement, • VSF announcement and Disconnect, • Networking • Conference room, • Internal page • External page, • All call page • Voice mail (Station group), • ICLID Table • Company Directory, • Record VM Greeting, • Room Type Conf Group Join 	N/A
Night Ring Mode Destination	Destination setting for Night Ring mode.		N/A
Timed Ring Mode Destination	Destination setting for Timed Ring mode.		N/A
Reroute Destination	Destination setting for Reroute Ring mode.		N/A
ICLID Table	Use ICLID Routing, section 4.4.7.4.	OFF/ON	OFF
ICM Tenancy Group (Auto Ring Table)	A DID Conversion Table Index can be assigned to employ an ICM Tenancy Group Auto Ring Table to determine Day/Night/Timed operation mode.	eMG80/100: 0~15 eMG800: 0~32 UCP: 0~100	N/A
Digit Conversion table index	A DID Conversion Table Index can be assigned to employ a digit conversion table	eMG80/100: 0~15 eMG800: 0~32 UCP: 0~32	N/A
MOH	A Music source is assigned so that calls to the destination receive audio from the source in place of ring-back tone.	<ul style="list-style-type: none"> • Refer to CO Hold • Internal/External Music 1 • External Music 2 • VSF MOH • SLT MOH 1~5 • VSF MOH 2~30 	Refer to CO Hold
Ring Tone	A call routed with the DID Conversion Table will employ the selected Ring tone to alert the destination.	0-16	0
Name	An eleven character Name can be configured for the Table bin.	11 characters	

4.4.9.13 System Speed Zone Table - PGM 232

Selecting System Speed Zone will display the System Speed Zone data entry page. Click **[Save]** button after changing Value.

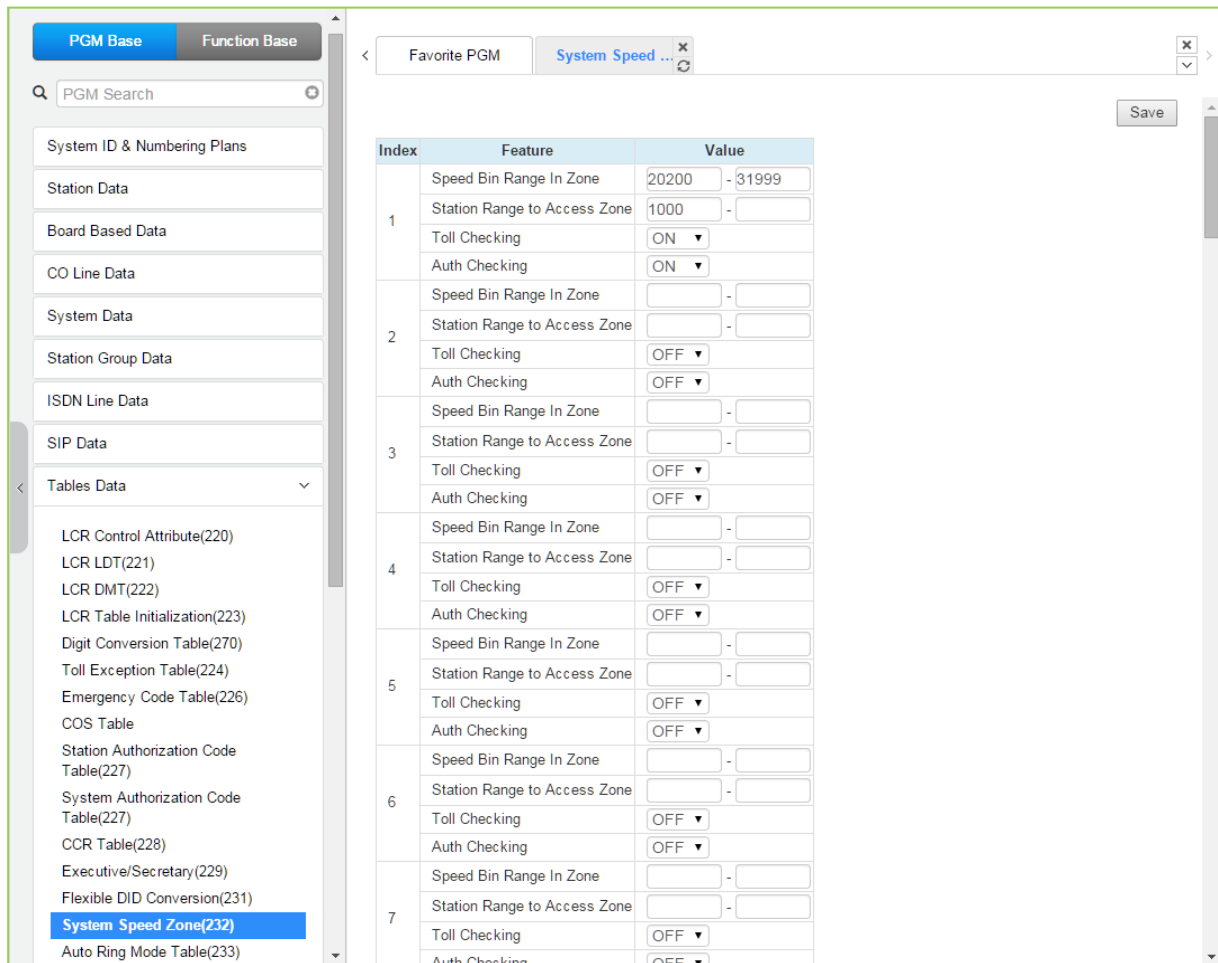

Figure 4.4.9.13-1 System Speed Zone

System Speed Dial Bins assigned to a zone are only available to stations allowed access to that zone. Each zone can be assigned to apply the appropriate Station and CO Line COS for the speed dial number prior to dialing. The speed Bin in Zone and Station Range to access zone is different according to selecting Speed Numbering; refer to 'Speed Numbering' in System ID (100)

Table 4.4.9.13-1 SYSTEM SPEED ZONES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Speed Bin Range in Zone	A range of Speed Dial Bins is assigned to a zone.		
Station Range to Access Zone	A range of Stations is permitted access to the System Speed dials in the Zone.		
Toll Checking	Toll restriction can be applied to Speed Dials in the Zone.	OFF ON	ON
Auth Checking	The user can be required to enter a valid Authorization code to use Speed Dials in the zone.	OFF ON	ON

4.4.9.14 Auto Ring Mode Table - PGM 233

Selecting Auto Ring Mode Table will display the Auto Ring Mode Table data entry page. Enter the desired index (Tenancy Group) and click **[Load]** to enter data. Click **[Save]** button after changing Value.

Enter Index: eMG80/100: 0-15 / eMG800: 0-32 / UCP: 0-100

Week	Index	Value	Range
Monday	Day Start Time	0900	Must be 4 Digits(hhmm) 0000-2359
	Night Start Time	1800	Must be 4 Digits(hhmm) 0000-2359
	Timed Ring Start Time		Must be 4 Digits(hhmm) 0000-2359
	Timed Ring End Time		Must be 4 Digits(hhmm) 0000-2359
Tuesday	Day Start Time	0900	Must be 4 Digits(hhmm) 0000-2359
	Night Start Time	1800	Must be 4 Digits(hhmm) 0000-2359
	Timed Ring Start Time		Must be 4 Digits(hhmm) 0000-2359
	Timed Ring End Time		Must be 4 Digits(hhmm) 0000-2359
Wednesday	Day Start Time	0900	Must be 4 Digits(hhmm) 0000-2359

Thursday	Day Start Time	0900	Must be 4 Digits(hhmm) 0000-2359
	Night Start Time	1800	Must be 4 Digits(hhmm) 0000-2359
	Timed Ring Start Time		Must be 4 Digits(hhmm) 0000-2359
	Timed Ring End Time		Must be 4 Digits(hhmm) 0000-2359
	Day Start Time	0900	Must be 4 Digits(hhmm) 0000-2359

Figure 4.4.9.14-1 Auto Ring Mode Table

The system can be programmed to automatically select the Ring and COS based on time of day and day of the week. Three Ring & COS modes are available, Day, Night, and Timed.

The Ring assignments are as defined in CO Ring Assignments. COS assignments are made in the Station COS and DISA COS programs discussed in sections, respectively.

The start times for Day, Night and start and end times for Timed modes are entered for each day of the week. After the Timed end time the mode returns to day if time is not in the Night mode.

The Attendant can override the Automatic selection and select the desired mode (Day, Night, and Timed) manually. A separate Auto Ring Table can be established for each ICM Tenancy Group in section (indices 1 ~ 15 for eMG80/100& indices 1~32 for eMG800& 1~100 for UCP) and for the system (index 00).

4.4.9.15 Voice Mail Dialing Table - PGM 234

Selecting Voice Mail Dialing Table will display the Voice Mail Dialing data entry page. Click **[Save]** button after changing Value.

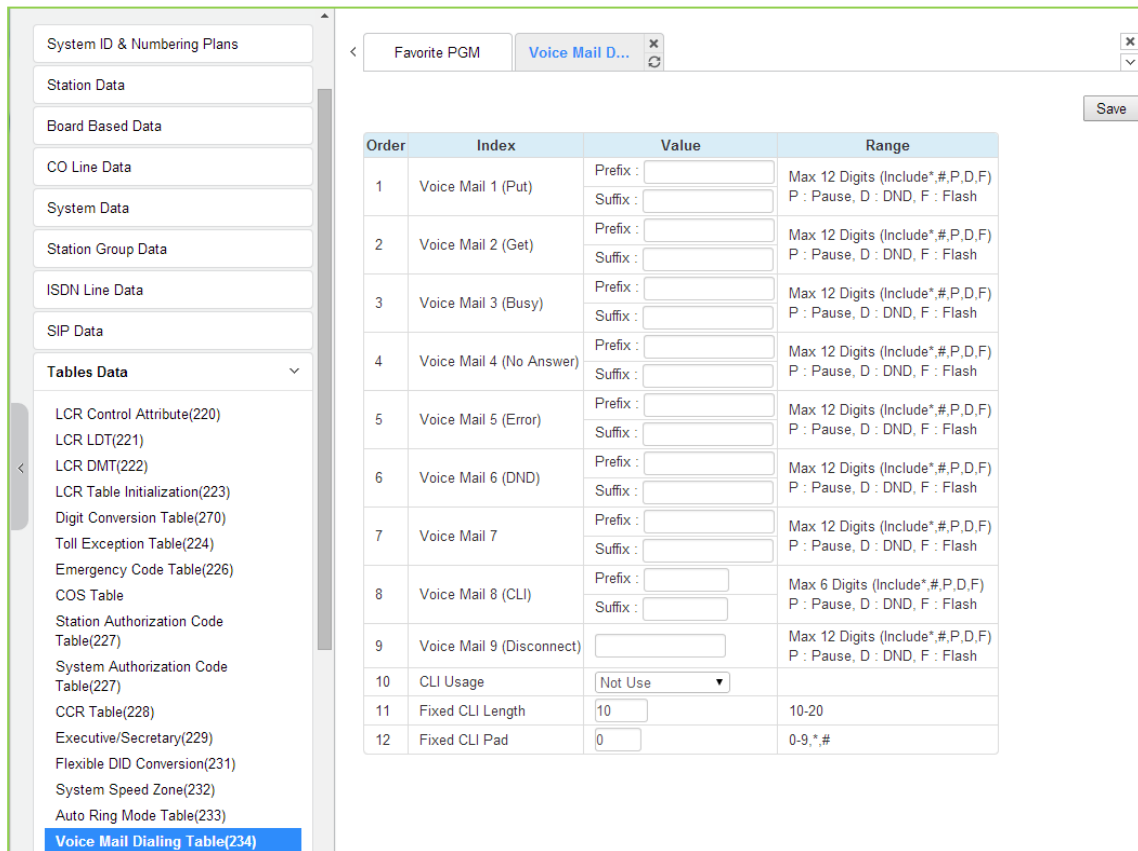

Figure 4.4.9.15-1 External Voice Mail Dialing Table

When an external Voice Mail system is used that connects to an SLT port, a digit sequence must be defined for the system to signal various call characteristics to the Voice Mail system. The external Voice Mail uses the sequences to determine appropriate announcements or further call routing. The Table permits the definition of digits as either a prefix or suffix to other digits (station number for mailbox identification). Sequences are defined for such call characteristics as Put Mail, Get Mail, No Answer call, etc. as described in the following table.

Table 4.4.9.15-1 VOICE MAIL DIALING TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Voice Mail1 (Put)	Code to send when the voice mail is to receive call to record a message. [Put Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 2 (Get)	Code to send when the voice mail is to playback a recorded message.[Get Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	

Table 4.4.9.15-1 VOICE MAIL DIALING TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Voice Mail 3 (Busy)	Code to send when the voice mail is to receive a call when the user is busy. [Busy Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 4 (No Answer)	Code to send when the voice mail is to receive a call when the user did not answer. [No Answer Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 5 (Error)	Code to send when the voice mail is to receive a call when a user dialing error exists. [Error Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 6 (DND)	Code to send when the voice mail is to receive a call when the user is in DND. [DND Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 7	When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 8(CLI)	When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
Voice Mail 9 (Disconnect)	Code for disconnect call. [Disconnect Mail] When you enter the Digit, the Digit means are P: Pause, D: DND, F: Flash	Prefix Suffix (Max. 12 Digits/ Include *, #, P, D, F)	
CLI Usage	<ul style="list-style-type: none"> • Not use: Do not send CLI • Real CLI length: Send CLI without padding before prefix code. • Fixed CLI length: Send CLI with fixed length. 	Not use, Real CLI length, Fixed CLI length	Not use
Fixed CLI Length	Define length of CLI.	10-20	10
Fixed CLI Pad	Define padding character for CLI.	0-9,*,#	0

4.4.9.16 Registration Table - PGM 235

Selecting Registration Table will display the Registration data entry page. Click **[Save]** button after changing Value.

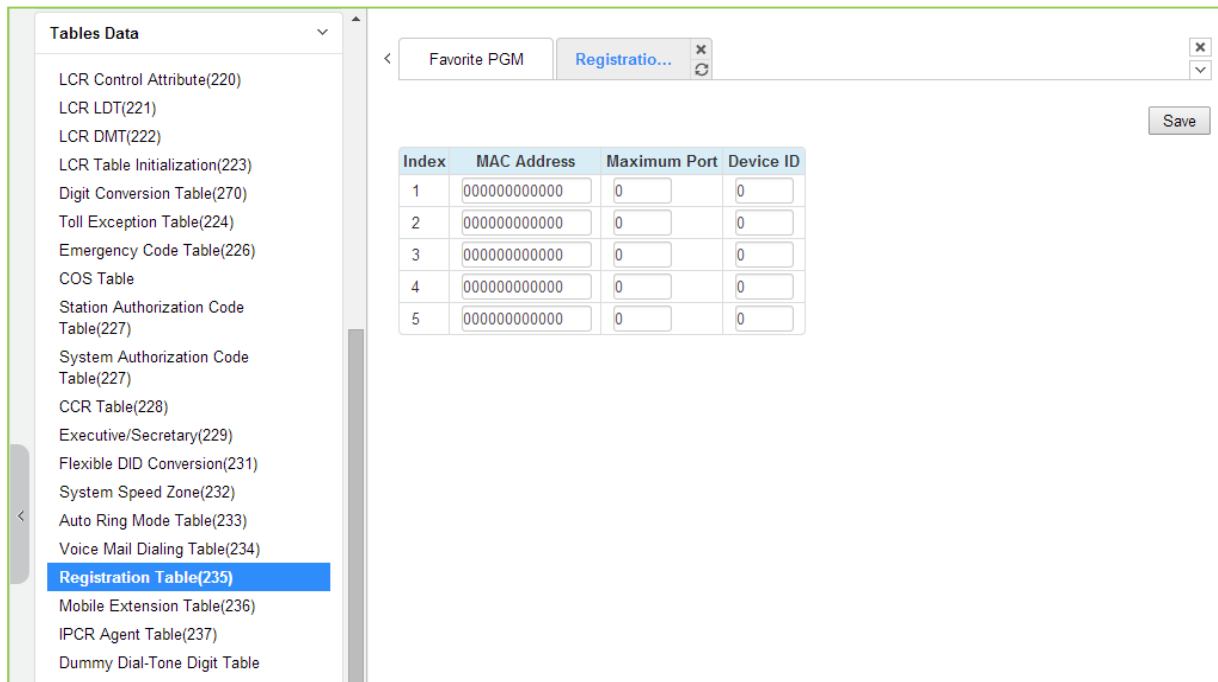

Figure 4.4.9.16-1 MAC Registration Table

When multiple iPECS systems are located on the same LAN, it may be desirable to register add-on devices employing the Registration Table.

Table 4.4.9.16-1 MAC REGISTRATION TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
MAC Address	Enter MAC address of a device to register		000000000000
Maximum Port	Enter maximum number of ports (channels) for the device.	00-99	00
Device ID	A device ID may be entered for registration. The Device ID available is shown at the bottom of the System Overview Web page.	0-255	0

4.4.9.17 Mobile Extension Table - PGM 236

Selecting Mobile Extension Table will display the Mobile Extension data entry page. Select the Station Order range desired, blue text above the table header. Selecting the blue colored text in the Table header will sort the table based on the selected column. Click **[Save]** button after changing Value.

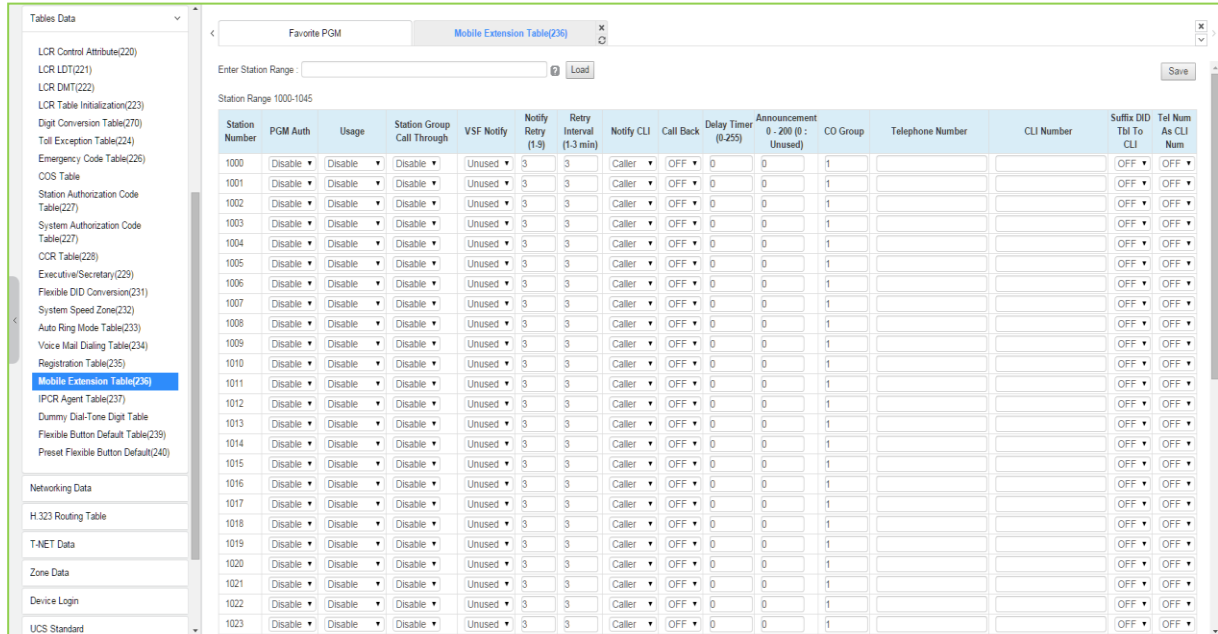

Figure 4.4.9.17-1 Mobile Extension Table

A mobile phone can be used in conjunction with an iPECS Phone. The Mobile phone can access system resources available to the user's wired phone and will receive ring for incoming iPECS calls. The user may be allowed to enable the Mobile extension and define the mobile number. The system can be defined to employ a specific CO/IP Line Group to place calls to the Mobile phone. In addition, the mobile phone can be assigned to receive Station group calls to the primary extension. Also, parameters for notification of new VSF voice mails can be defined.

Table 4.4.9.17-1 MOBILE EXTENSION TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
PGM Authority	The user may be allowed to activate the mobile extension feature.	Disable Enable	Disable
Usage	Mobile extension feature can be enabled and Fail Over to Mobile extension can be included.	Disable Mobile Ext Fail Over	Disable
StationGroup Call Enable	When the paired station is a member of a Station group (ACD, Circular, or Terminal), group calls can be sent to the active mobile extension.	Disable Enable	Disable
VSF Notify	When enabled the active Mobile Extension will receive notification by the system when the user has a new message in the built-in Voice Mail.	Unused Use	Unused
Notify Retry	The number of attempts the system will make to complete a notification when receiving busy/no-answer is defined.	1 – 9 Times	3 Times
Retry Interval	This field defines the time between notification attempts. If a notification fails, the system will retry after the timer expires.	1 – 3 minutes	3 Minute

Table 4.4.9.17-1 MOBILE EXTENSION TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Notify CLI	When the system sends CLI to the Mobile Extension, the CLI can be either the original caller's CLI or the CLI of the station.	Caller, My Ext.	Caller
Call Back	If "ON", an incoming Mobile Extension call will be released before answered and system places a call to Mobile Extension. After the Mobile answers, the dial tone is provided and the Mobile Extension can place internal or external calls.	OFF ON	OFF
Delay Timer	When the Mobile Extension requests a Call Back, the system will place the Call Back after expiration of this Delay timer.	0 ~ 255	0
Announcement	A system announcement can be recorded to provide the Mobile caller with a menu of dialing commands available to the remote Mobile user, remote control.	0-200	0
CO Group	The CO/IP Line group used to call (ring) the Mobile Extension is defined. eMG80/100:1~20, eMG800:1~200, UCP: 1~200	Refer to description	1
Telephone Number	The telephone number of the Mobile extension or Fail-over number of the station must be assigned for proper operation.		Not assigned
CLI Number	When the Mobile Telephone number and CLI do not match, the CLI entered here is used to authorize incoming calls from the Mobile.		Not assigned
Suffix DID table index to the CLI	An incoming DID call is passed to the Mobile Extension with the original caller's CLI and the Flexible DID Conversion Table index. (format: 'original CLI' + '**' + 'DID Table Index')	OFF/ON	OFF
Tel NumAs CLI Num	If this option is set to ON, Telephone Number is used the same as CLI Number. That means, when the mobile user calls to his station, if Telephone Number or CLI Number is matched with his mobile number, then the mobile user hears system dial tone, and calling to outside is available. If this option is set to OFF, only CLI Number is matched, system dial tone is served.	OFF/ON	ON

4.4.9.18 IPCR Agent Table - PGM 237

Selecting IPCR Agent Table will display the IPCR Agent data entry page. Select the Index and Agent ID Order range desired, blue text above the table header. Selecting the blue colored text in the Table header will sort the table based on the selected column. Click **[Save]** button after changing Value.

Enter the Agent order: eMG80/100: 1-140 / eMG800: 1-1200 / UCP: 1-2400

Index ^{1a}	Agent ID ^{1a}	Object Type	Linked Object	Announce Number
1	(ACR)	N/A		0
2	(ACR)	N/A		0
3	(ACR)	N/A		0
4	(ACR)	N/A		0
5	(ACR)	N/A		0
6	(ACR)	N/A		0
7	(ACR)	N/A		0

19	(ACR)	N/A		0
20	(ACR)	N/A		0
21	(ACR)	N/A		0

Figure 4.4.9.18-1 IPCR Agent Table

This table correlates an Object Type (Station or CO/IP Line) to the IPCR (Call Recording) Agent index in the IPCR server. The table is also employed with third-party servers for call recording. When a call is placed or received by the agent station or CO/IP Line, the call is recorded in the IPCR server under the Agent ID (Order number).

Multiple Announcement (1~9) in IPCR can be entered in 'Announce Number'.

4.4.9.19 Dummy Dial-Tone Digit Table

Selecting Dummy Dial-Tone Digit Table will display the Dummy Dial-Tone Digit data entry page. Click **[Save]** button after changing Value.

Index	Value	Range
1	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
2	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
3	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
4	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
5	<input type="text"/>	Max 6 Digits (0-9, *, #, X)

14	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
15	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
16	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
17	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
18	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
19	<input type="text"/>	Max 6 Digits (0-9, *, #, X)
20	<input type="text"/>	Max 6 Digits (0-9, *, #, X)

Figure 4.4.9.19-1 Dummy Dial-Tone Digit Table

When digit conversion is programmed, the CO line is seized after digit conversion is completed and therefore user cannot hear the CO dial tone from PX until completing digit conversion. For this case, a dummy dial tone can be programmed. Pressing one of pre-programmed digits ('0-9', '*', '#', X') will provide CO dial tone to the user regardless of CO line seizure.

4.4.9.20 Flexible Button Default Table– PGM 239

Selecting Flexible button defaulttable will display the below page. For convenience, the copy, paste, and drag are available to enter or modify data. Please click **[Save]** button to apply after changing Value.

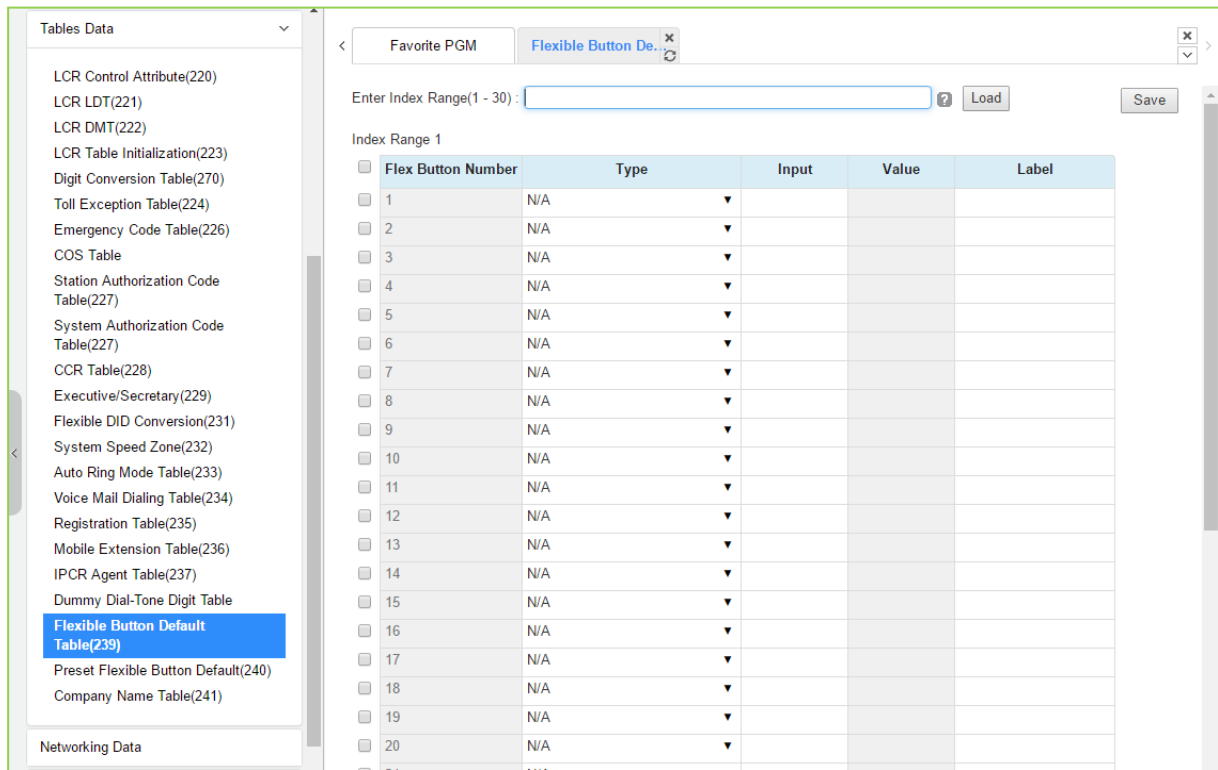

Figure 4.4.9.20-1 Flexible Button Default Table

The system provide 30 default flexible button table so administrator can be configured each table for using 'Preset Flexible Button Default (240)'. Administrator can assign the type among the below types on Flexible button.

Table 4.4.9.20-1 FLEX BUTTON TYPE

TYPE	REMARK
N/A	Empty (unassigned), may be defined by the user.
CO Line	Assigns button to access a defined CO/IP line.
CO Group	Assigns button to access a free line in the CO/IP Group.
Loop	Assigns button to access a loop line.
Station Number	Assigns button as DSS/BLF for the assigned station number.
Programming (Numbering Plan)	Assigns button to dial a code from the Flexible Numbering Plan, see Appendix section.
Programming (PGM)	Assigns button to perform a User Program function from the Fixed Numbering Plan, Appendix section.
Station Speed Bin	Station Speed Dial bin.
System Speed Bin	System Speed Dial bin.
Net Station Number	Refer to section Network Numbering Plan Table - PGM 324.
U-Loop	U-Loop button for call wait of internal & external call.
Dial Digit	Assign button for any dial digit.

4.4.9.21 Preset Flexible Button Default – PGM 240

Selecting Preset flexible button default will display the below page. Click **[Save]** button after changing Value.

Priority	Station Type	No. of Flexible Buttons	Station Range (Blank means all station range.)	Preset Index
1	All	All		N/A
2	All	All		N/A
3	All	All		N/A
4	All	All		N/A
5	All	All		N/A
6	All	All		N/A
7	All	All		N/A
8	All	All		N/A

15	All	All		N/A
16	All	All		N/A
17	All	All		N/A
18	All	All		N/A
19	All	All		N/A
20	All	All		N/A
21	All	All		N/A
22	All	All		N/A
23	All	All		N/A
24	All	All		N/A
25	All	All		N/A
26	All	All		N/A

Figure 4.4.9.21-1 Preset Flexible Button Default

Administrator can assign Preset flexible button table to the station automatically by default. Before connecting the station, administrator has to set this table according to Priority, Station Type, the number of Button, Station Range, and check the preset Index (1~30). The preset index means the range of Flexible Button Default Table (PGM 239).

4.4.9.22 Company Name Table – PGM 241

Selecting Company Name Table will display the below page. Click **[Save]** button after changing Company name. (eMG80/100: 16, eMG800/UCP: 100)

The screenshot shows a web-based configuration interface. On the left, a sidebar titled 'Tables Data' contains a list of various tables. The 'Company Name Table(241)' is highlighted in blue. The main content area is titled 'Company Nam...' and contains a table with the following structure:

Index	Company Name	Range
1	<input type="text"/>	Max 20 Characters
2	<input type="text"/>	Max 20 Characters
3	<input type="text"/>	Max 20 Characters
4	<input type="text"/>	Max 20 Characters
5	<input type="text"/>	Max 20 Characters
6	<input type="text"/>	Max 20 Characters
7	<input type="text"/>	Max 20 Characters
8	<input type="text"/>	Max 20 Characters
9	<input type="text"/>	Max 20 Characters
10	<input type="text"/>	Max 20 Characters
11	<input type="text"/>	Max 20 Characters
12	<input type="text"/>	Max 20 Characters
13	<input type="text"/>	Max 20 Characters
14	<input type="text"/>	Max 20 Characters
15	<input type="text"/>	Max 20 Characters
16	<input type="text"/>	Max 20 Characters
17	<input type="text"/>	Max 20 Characters
18	<input type="text"/>	Max 20 Characters
19	<input type="text"/>	Max 20 Characters
20	<input type="text"/>	Max 20 Characters
21	<input type="text"/>	Max 20 Characters
22	<input type="text"/>	Max 20 Characters
23	<input type="text"/>	Max 20 Characters
24	<input type="text"/>	Max 20 Characters
25	<input type="text"/>	Max 20 Characters
26	<input type="text"/>	Max 20 Characters

A 'Save' button is located in the top right corner of the main area.

4.4.10 Networking Data

Selecting the Networking Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

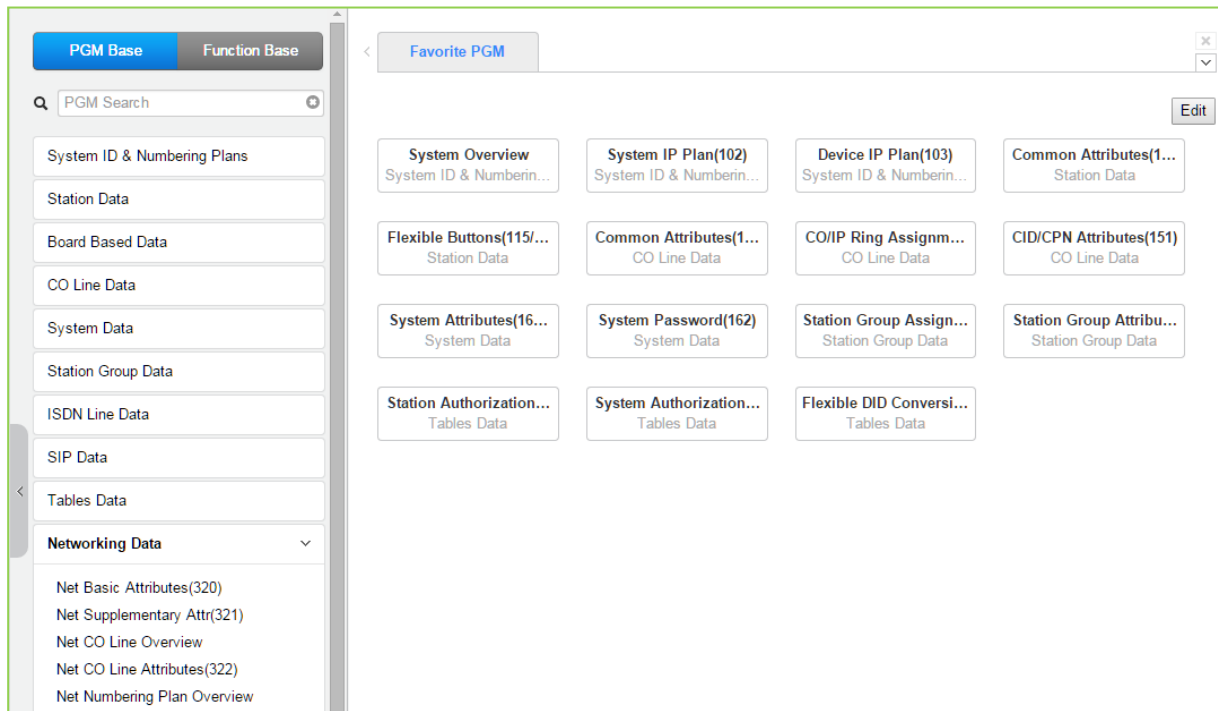

Figure 4.4.10-1 Networking Data

4.4.10.1 Network Basic Attributes - PGM 320

Selecting Network Basic Attributes will display the Network Basic Attributes entry page. Click **[Save]** button after changing Value.

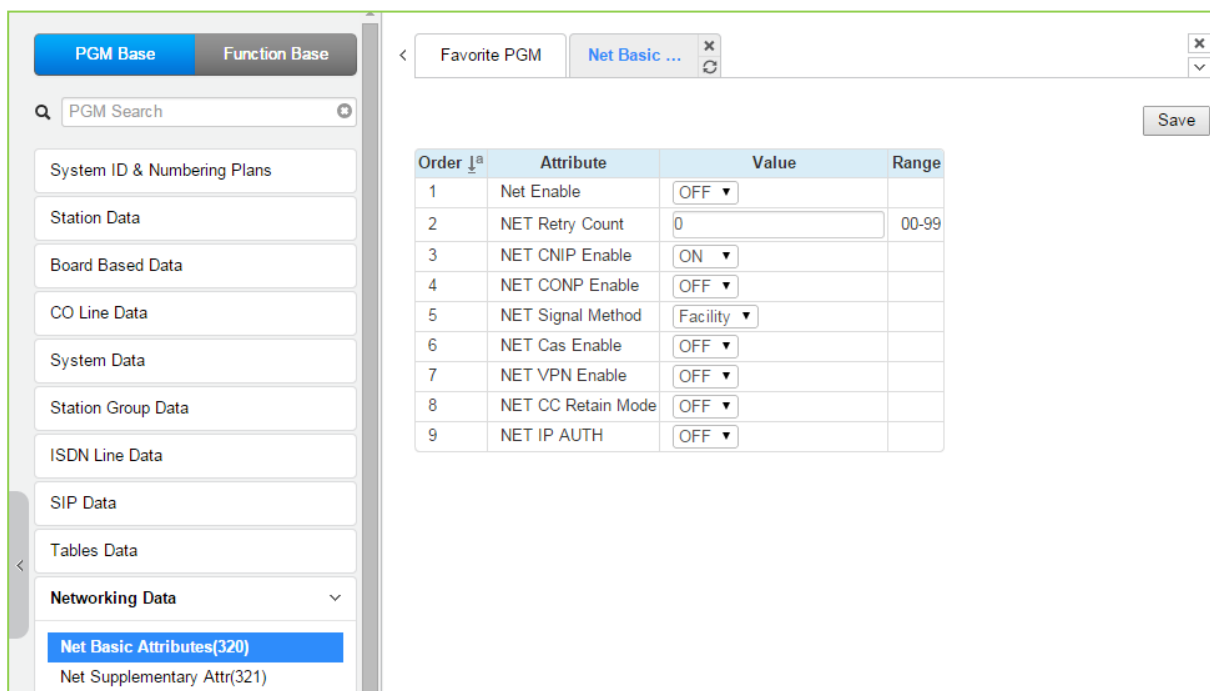

Figure 4.4.10.1-1 Network Basic Attributes

Table 4.4.10.1-1 NETWORK BASIC ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Net Enable	For operation, the Networking function must be enabled here. Note a license is required.	OFF ON	OFF
Net Retry Count	Not used.	00-99	0
Net CNIP Enable	The name of calling station is sent to the called iPECS UCP. CNIP is shown in the LCD of the called party's station.	OFF ON	ON
Net CONP Enable	The name of the connected station is sent to the calling iPECS system. The CONP is shown in the LCD of the calling party's station.	OFF ON	OFF
Net Signal Method	Network signaling can be sent in the Facility or User QSIG supplementary service message.	UUS/ Facility	Facility
Net Cas Enable	Not used.	OFF ON	OFF
Net VPN Enable	Not used.	OFF ON	OFF
Net CC Retain Mode	This field defines the Network signaling retain mode for CCBS service.	OFF ON	OFF
Net IP Auth.	For operation, the Networking function must be enabled here. Note a license is required.	OFF ON	OFF

4.4.10.2 Network Supplementary Attributes - PGM 321

Selecting Network Supplementary Attributes will display the Network Supplementary Attributes entry page. Click **[Save]** button after changing Value.

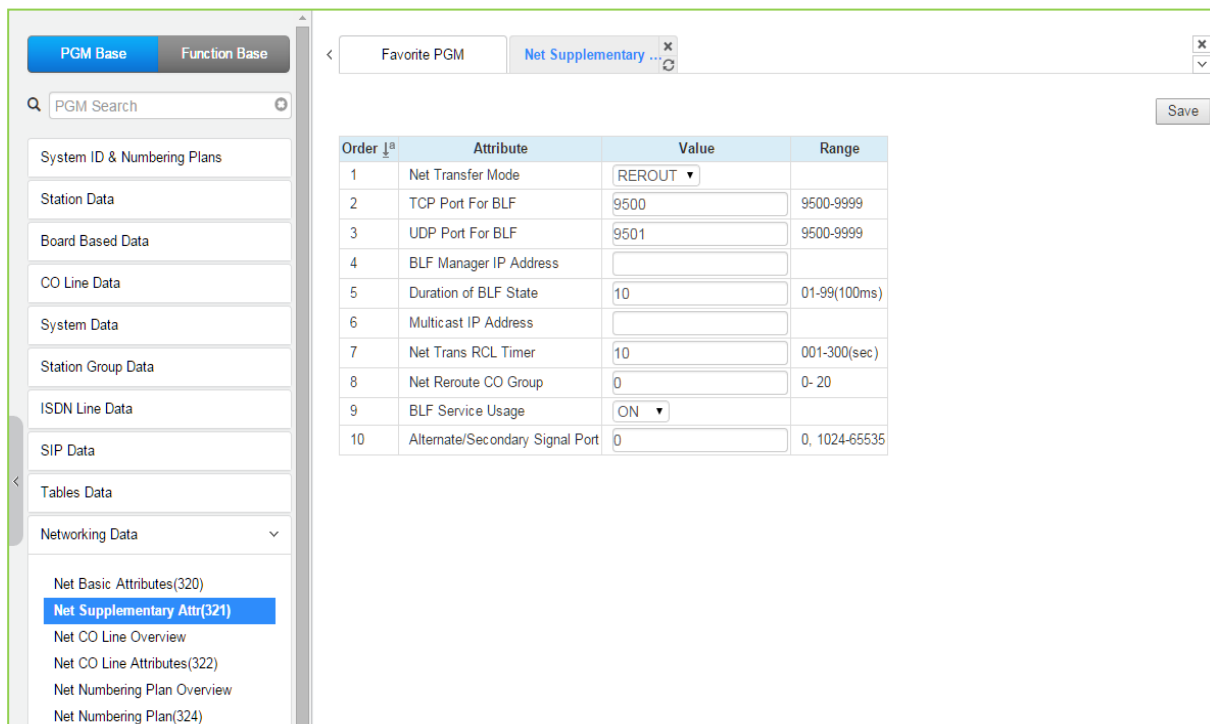

Figure 4.4.10.2-1 Network Supplementary Attributes

Table 4.4.10.2-1 NETWORK SUPPLEMENTARY ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Net Transfer Mode	Call Forward and Transfer over the network employs the selected Rerouting or Join method	REROUT/ JOIN	REROUT
TCP Port for BLF	The TCP/IP port for BLF message packets to BLF Manager is defined.	9500-9999	9500
UDP Port for BLF	The UDP port for BLF message packets to BLF Manager is defined.	9500-9999	9501
BLF Manager IP	The IP Address of BLF Manager server is required when iPECS UCP is configured with eMG systems in the Network.		0.0.0.0
Duration of BLF State	The system sends BLF messages to the BLF Manager at intervals of this timer.	01-99 (Sec.)	10
Multicast IP	The multicast IP address for BLF service.		0.0.0.0
Net Trans Recall timer	When a call forward or transfer does not receive a response for the Network system, the call recalls the transferring party at expiration of this timer.	001-300 (msec)	10
NET Reroute CO Group	If an outgoing SIP call receives no response after expiration of this timer, the call is rerouted to the alternate CO line. eMG80/100:0~20, eMG800:0~200, UCP:0~200	Refer to description	
BLF Service Usage	BLF Manager support must be enabled for use.	OFF, ON	ON

Table 4.4.10.2-1 NETWORK SUPPLEMENTARY ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Alternate/Secondary signal port	This signal port is used to add an alternate or secondary receiving signal port. A default receiving signal port is TCP 1720 and an additional signal port will be opened if this field is configured to valid value. When the system is installed behind xDSL modem, the problem of consecutive second call can happen by uncontrolled H.323 ALG function at xDSL modem. This field can be used to solve the problem of consecutive second call.	0, 1024-65535	0

4.4.10.3 Net CO Line Overview

Selecting Net CO Line Overview will be displayed as below.

The screenshot shows a software interface with a left-hand navigation menu and a main content area. The navigation menu includes categories like System ID & Numbering Plans, Station Data, Board Based Data, CO Line Data, System Data, Station Group Data, ISDN Line Data, SIP Data, Tables Data, and Networking Data. Under Networking Data, 'Net CO Line Overview' is selected. The main content area displays a table with the following columns: Device Type, CO Line, CO Type, Net CO Group, Net CO Type, and Interworking System. The table lists 33 rows of data, including various device types like VOIU, LGCM LOOP 4 GW, and MATM GW, all with a CO Type of 'Normal' and a Net CO Group of '0'. The Interworking System for all entries is 'iPECS (Basic Call, Supplementary Service)'.

Device Type	CO Line	CO Type	Net CO Group	Net CO Type	Interworking System
VOIU	1	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
VOIU	2	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
VOIU	3	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
VOIU	4	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
VOIU	5	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
VOIU	6	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
LGCM LOOP 4 GW	7	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
LGCM LOOP 4 GW	8	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
LGCM LOOP 4 GW	9	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
LGCM LOOP 4 GW	10	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	11	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	12	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	13	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	14	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	15	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	16	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	17	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	18	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	19	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	20	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	21	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	22	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	23	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	24	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	25	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
MATM GW	26	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
T11M GW	27	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)
T11M GW	28	Normal	0	PSTN	iPECS (Basic Call, Supplementary Service)

Figure 4.4.10.6-1 Network Numbering Plan Table

The Network Numbering Plan establishes the digit strings that make-up the numbering plan and associated routing for each Plan code.

Table 4.4.10.6-1 NETWORK NUMBERING PLAN TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Network Type	The type or use of the code is defined as directed to the PSTN (carrier) or a Networked system.	NET / PSTN	NET
Numbering Plan Code	This field defines the digits, 0 ~ 9 that make up a Network Numbering Plan code. An '*' will represent any digit. To assign the code for the stations in another system, enter the common station number digits followed by "#". Max. 16 digits(Include * and #)	Refer to description	
Networking CO Group	The Numbering Plan CO Group indicates the Network CO/IP Group that is used for the connection. A '00' entry is an internal net station number.	00-24	
CPN ISDN Information	When an ISDN Line is used to place a network call, the CPN ISDN Information and the network Number are used as the Called party number.	Max. 16 digits	
CPN Information	When a VoIP channel is used to place a network call, the CPN used is the IP address associated with the VoIP channel. <ul style="list-style-type: none"> • 1: 00 CPN INFORMATION 01 • 2: 00 CPN INFORMATION 02 • 3: 00 CPN INFORMATION 03 • 4: 00 CPN INFORMATION 04 	Enter IP address	
Setup Wait Response Time	Networking call-setup failure timer when there is no proceeding message from network (i.e. IP-Network is down)	0, 3~15 Sec.	0
ALT Speed Bin	Should the Network path fail, the system can place the call over an alternative path using a System Speed Dial number. eMG80/100:2000~4999, eMG800:2000~9999, UCP: 20000~31999	Refer to description	
MPB IP Address	This field is the IP Address of the destination system for the code		0.0.0.0
MPB Port number	The TCP/IP port number of destination system for the Net Numbering Plan code is defined.	0000-9999	5588
Digit Repeat	When the number plan code, see above, is for PSTN call or transit-call, the number code can be included in SETUP message.	Yes No	No
PSTN Enblock	When a PSTN receives a Transit-out call from a networked user, the digits can be sent En-block (YES) or Over-lap (NO).	Yes No	No
PSTN CLI Method	The CLI sent with the call for this code can be set as the NET CLI (station number) or PSTN, which sends the CLI configured for the CO/IP Line and Station CLI.	NET PSTN	NET
CO Attendant Code CLI	When a networked system places a transit out call, the Centralized ATD CLI can be sent.	OFF ON	OFF
Firewall Routing	When the system can communicate with the networked system directly, over a common VPN, the systems Non Firewall address is sent in IP packets (OFF). Otherwise, the Firewall IP address is sent (ON).	OFF ON	ON

Table 4.4.10.6-1 NETWORK NUMBERING PLAN TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Transit Out Auth COS	When a user requests a transit-out call by seizing a CO line, COS may be applied according to the authorization code.	Yes No	No
SMDR Digit Hide	For a Transit-out call from the iPECS, the networked system that places the call may desire to receive the Authorization code	Yes No	No
Site name	A twelve-character name can be assigned to the system for use with network calls.	Max. 12 characters	
Emergency reroute timer	When a networked station places an Emergency call and the "Emergency CO or Group" in the Station Common Attributes is a Transit-out CO/IP Line or group, the call will Fail-over to the "Fail-over CO Group" in PGM 133 or the "Net Reroute CO Group" in PGM 321 after this timer expires. The "Fail-over CO Group" will have priority.	0-10 (Sec.)	00
Tunneled SIG MSG	Send and Receive H323 message that include ISDN QSIG message. It is used to make networking with Panasonic system.	OFF ON	OFF
Alternate/Secondary signal port	This destination signal port is used on calling to remote network system. A default destination signal port is TCP 1720 but the port number is changed if this field is configured to valid value. When the system is installed behind xDSL modem, the problem of consecutive second call can happen by uncontrolled H.323 ALG function at xDSL modem. This field can be used to solve the problem of consecutive second call. Here, the value should be an alternate or secondary receiving signal port which is configured at remote system.	0-65535	
Local route ID	These two fields are used when a remote network system want to check the route ID value to authenticate the system. Here, 'Local Route ID' is the route ID string for local system. And 'Remote Route ID' is the route ID string for remote system.	Max. 15 characters	
Remote route ID		Max. 15 characters	
Sending Name option	Basically the calling party name is transferred in QSIG messages. This field is an additional way to send the calling party name. In some PBX systems, the Q.931 Display IE field is used to transferring the calling party name and this value can be used as an interoperating solution for displaying the calling party name. OFF, Display IE(CISCO)	Refer to description	OFF
Redundancy IP address	Redundancy IP address is used for Geographical redundancy in voice networking. If the called party system does not respond to the SETUP message, the system try to make a call with Redundancy IP address	Enter IP address	

4.4.10.7 Network Feature Code Table - PGM 325

Selecting Network Feature Code Table returns the data entry page. Click **[Save]** button after changing Value.

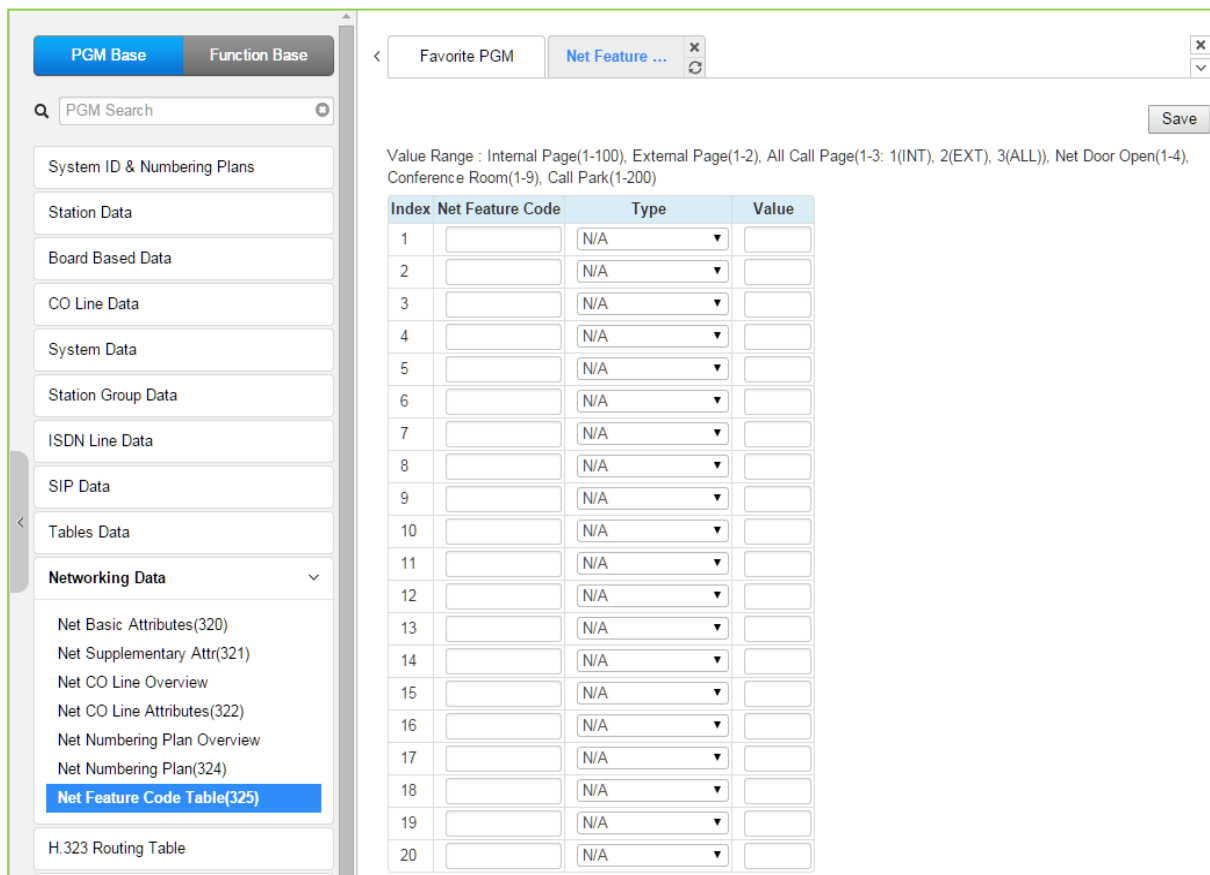

Figure 4.4.10.7-1 Network Feature Code Table

Table 4.4.10.7-1 NETWORK FEATURE CODE TABLE

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Net Feature Code	Digit sequence or code used to activate special Network Features.	16 digits	None
Net Feature type	Each Network Feature Code is assigned to activate a feature in the destination system. N/A, Internal Page, External Page, All Call Page, Net Door Open, Conference Room, Call Park,	Refer to description	N/A

eMG80/100 value range

Internal page: 1-35, External page (1), All Call page (1-3: 1(INT), 2(EXT), 3(ALL)), Net door Open (1-2), Conference Room (1-9), Call Park (1-19)

eMG80/100 value range

Internal page: 1-35, External page (1), All Call page (1-3: 1(INT), 2(EXT), 3(ALL)), Net door Open (1-4), Conference Room (1-9), Call Park (1-19)

eMG800value range

Internal page: 1-100, External page (1), All Call page (1-3: 1(INT), 2(EXT), 3(ALL)), Net door Open (1-2), Conference Room (1-9), Call Park (1-200)

4.4.11 H.323 Routing Table

Selecting the H.323 Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

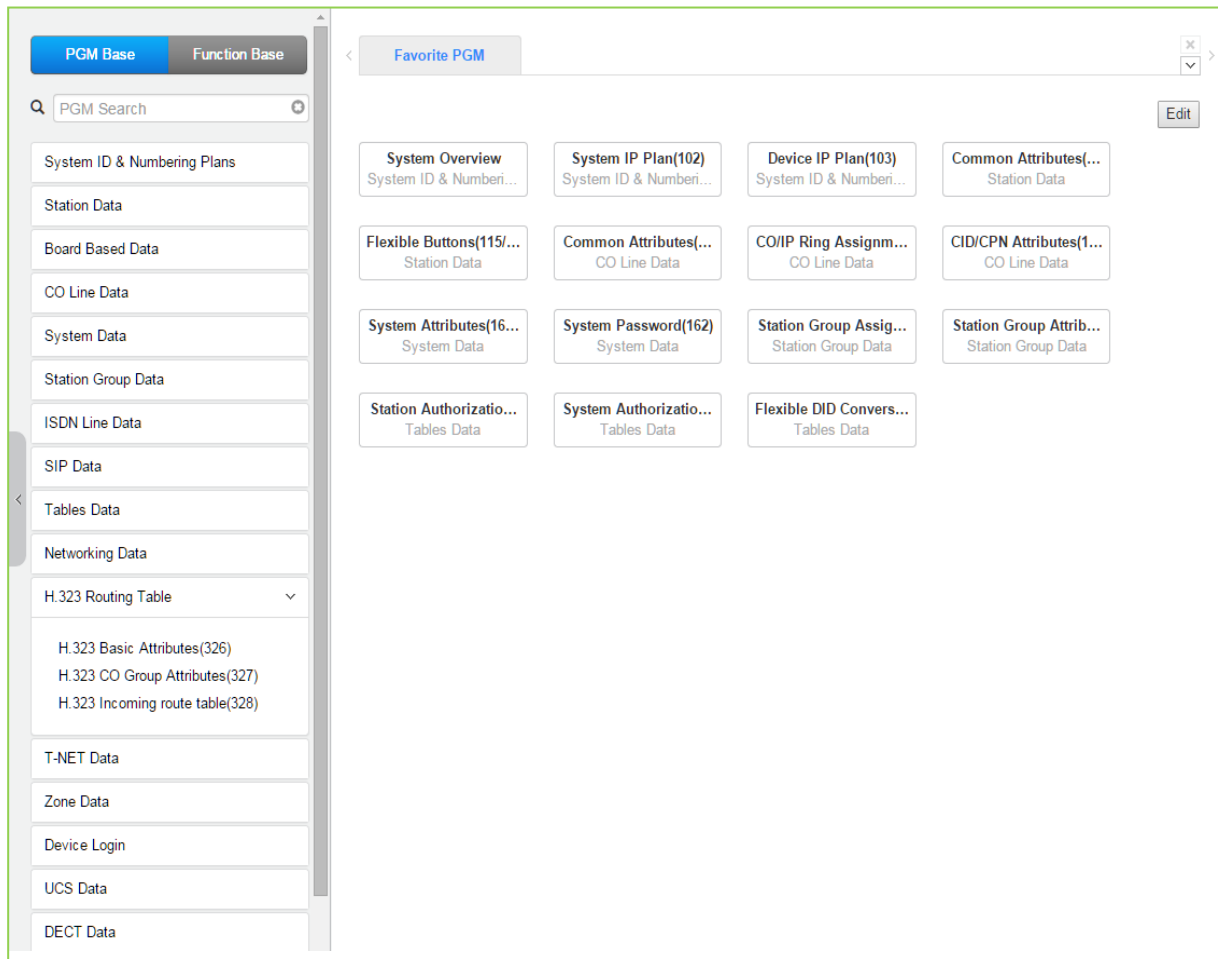

Figure 4.4.11-1 H.323 Routing Table Main Page

4.4.11.1 H.323 Basic Attributes -PGM 326

Selecting H.323 Basic Attributes will display the data entry page. Click **[Save]** button after changing Value.

Enter Device/GW slot sequence number: eMG80/100: 1-300 / eMG800: 1-2890 / UCP: 1-3688

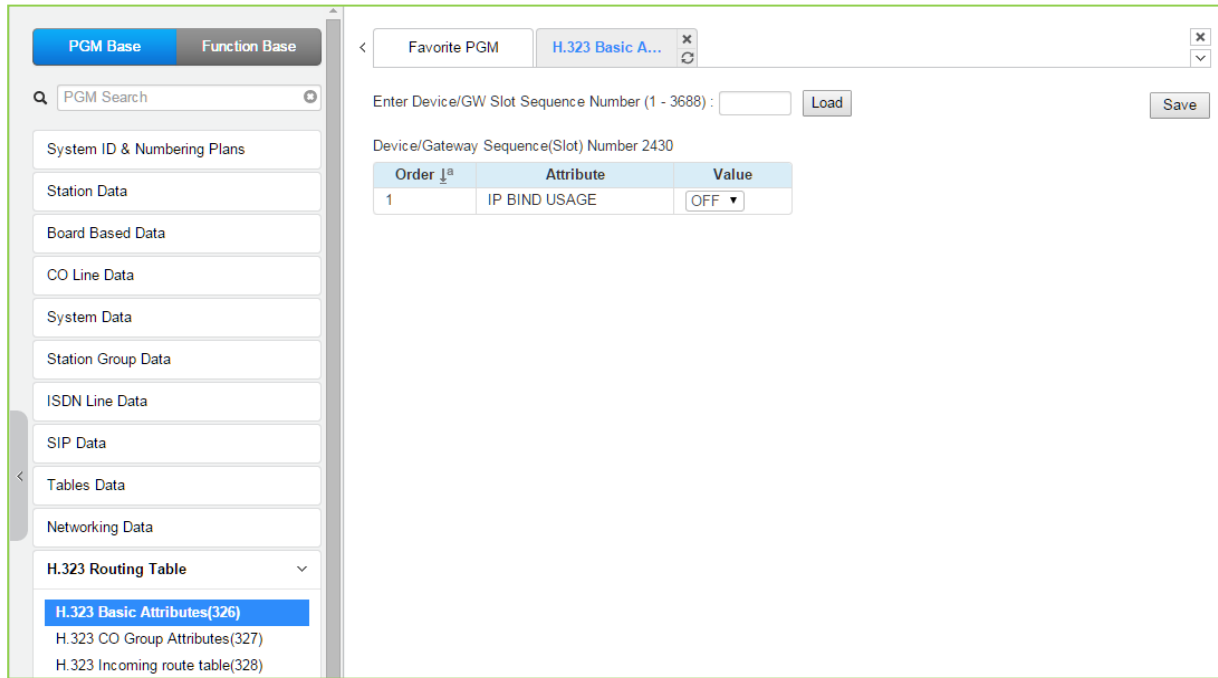

Figure 4.4.11.1-1 H.323 Basic Attributes

H.323 Signaling can be operated with each VOIB/VOIM or MPB/UCP.

Table 4.4.11.1-1 H.323 Basic Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
IP Band Usage	If it is set to ON, system allows H.323 signaling with system IP address. Or, each VOIB/VOIM IP Address can be used.	OFF ON	OFF

4.4.11.2 H.323 CO Group Attributes -PGM 327

Selecting H.323 CO Group Attributes will display the data entry page. Click **[Save]** button after changing Value.

Enter Group number: eMG80/100: 1-20 / eMG800: 1-200 / UCP: 1-200

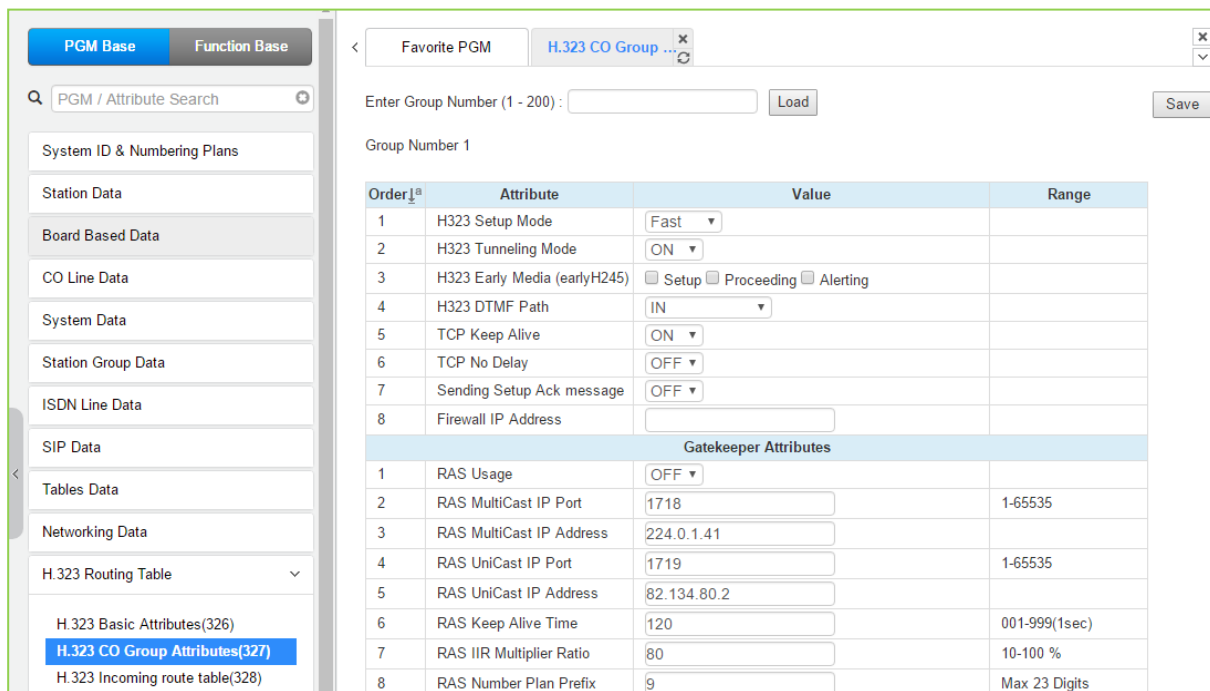

Figure 4.4.11.2-1 H.323 CO Group Attributes

The VOIP channels are used for Distributed Networking, access to SIP or H.323 networks and for remote iPECS devices. When the standard H.323 VoIP protocol is employed for an external VoIP call, several attributes of these channels can be assigned.

The H.323 call set-up mode and tunneling (H.245 Encapsulation) can be established. Also for H.323 support, a RAS (Registration, Admissions and Status) channel can be defined. The RAS channel IP addresses (uni-cast and multi-cast) as well as the IP port Numbering Plan and other H.323 set-up characteristics are defined.

Table 4.4.11.2-1 H.323 CO Group Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
H.323 Setup mode	H.323 IP calls can be set-up using the H.323 normal or Fast Start mode.	Fast Norm	Fast
H.323 Tunneling mode	H.323 IP calls can be set-up using the H.245 encapsulation (Tunneling).	OFF ON	ON
H323 Early Media (early H245)	This feature is the ability of two user endpoints to communicate before call is actually established in normal call mode. This feature is not used when 'H323 Setup Mode' is 'Fast'. <ul style="list-style-type: none"> Setup: Caller party tries to open early media on receiving the Setup message. Proceeding: Calling party tries to open early media on receiving the Proceeding message. Alerting: Calling party tries to open early media on receiving the Alerting message. 	Refer to description	

Table 4.4.11.2-1 H.323 CO Group Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
H.323 DTMF Path	During a connection, DTMF Digits can be sent in-band or out of band (H.245). IN, RFC2833, H245_ALNUM, H225_SIG, H245_SIG	Refer to description	IN
TCP Keep Alive	The system will send a polling message every 75 seconds to assure the status of the TCP connection.	OFF ON	ON
TCP No Delay	Normally small chunks of TCP (H323) messages are combined into one packet and be sent to remote party to improve the efficiency of network. Sometimes this action yields the H323 signaling problem when system is behind NAT router and there is H323 ALG is running. 'OFF' value can be a solution to overcome the problem.	OFF ON	OFF
Sending Setup Ack message	System provides SETUP ACK message when there is no'sending complete IE' in SETUP message.	OFF ON	OFF
Firewall IP Address	Enter the firewall IP Address.		
Gatekeeper Attributes			
RAS Usage	Determine whether VOIU/VOIB/VOIM will be used as a Gatekeeper.	OFF ON	OFF
RAS MultiCast IP Port	Multi-cast IP Port for RAS Information of Gatekeeper.	1~65535	1718
RAS MultiCast IP Address	Multi-cast IP address for RAS Information of Gatekeeper.	IP Address	224.0.1.41
RAS UniCast IP Port	Uni-cast IP Port for RAS Information of Gatekeeper.	1~65535	1719
RAS UniCast IP Address	Uni-cast IP address for RAS Information of Gatekeeper.	IP Address	82.134.80.2
RAS Keep Alive Time	The time between exchange of RAS Information between GK and VOIB/VOIU.	001-999 (SEC)	120
RAS IIR Multiplier Ratio	This feature is used when H323 call is routed by RAS gatekeeper. Keep alive interval time between the system and gatekeeper is provided by gatekeeper on registration time. This value of ratio is used to change the keep alive interval time from gatekeeper.	10~100%	80
RAS Number Plan Prefix	The numbering plan for Calling Number in RAS Setup.	Max. 23 digits	
RAS Light RRQ usage	The Gatekeeper ID (This can be programmed only via WEB Admin).	OFF ON	OFF
RAS Gateway ID	The system can be assigned to use the simple RRQ (Registration Request) message (ON) or the full RRQ message (OFF).	Max. 128 characters	
Fail over Usage	The H.323 call will be failover to another line (FAIL OVER USAGE: ON).	OFF ON	OFF
Call Setup No Response time	The H.323 call will be failover. The time will be set.	0, 3-15 (Sec.)	0

Table 4.4.11.2-1 H.323 CO Group Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Fail over CO Group number	If the H.323 call will be failover, assign another CO group. eMG80/100:1-20, eMG800:1-200, UCP:1-200	Refer to description	

4.4.11.3 H.323 Incoming Route table -PGM 328

Selecting H.323 Incoming Route table will display the data entry page. Click **[Save]** button after changing Value.

Enter CO Group number: eMG80/100 : 1-20 / eMG800: 1-200 / UCP: 1-200

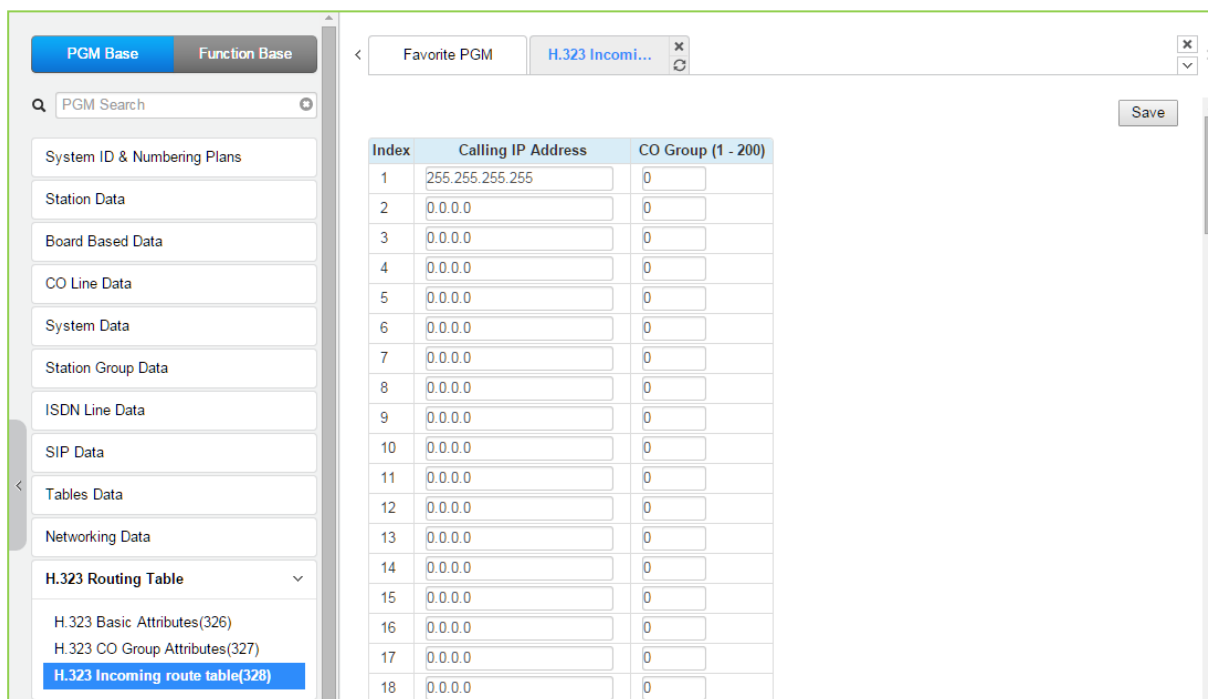

Figure 4.4.11.3-1 H.323 Incoming Route table

To get the direct H.323, the From IP-Address and 'incoming CO Group number' to be routed should be assigned.

Table 4.4.11.3-1 H.323 Incoming Route table

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Calling IP Address	IP address associated with H.323 incoming calls. 255.255.255.255 is used when external call comes from unknown IP Address which is not listed in this table entry.		0.0.0.0
CO Group	CO group number associated with H.323 incoming calls. eMG80/100:1~20, eMG800:1~200, UCP:1~200	Refer to description	0

4.4.12 T-NET Data

Selecting the T-NET Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

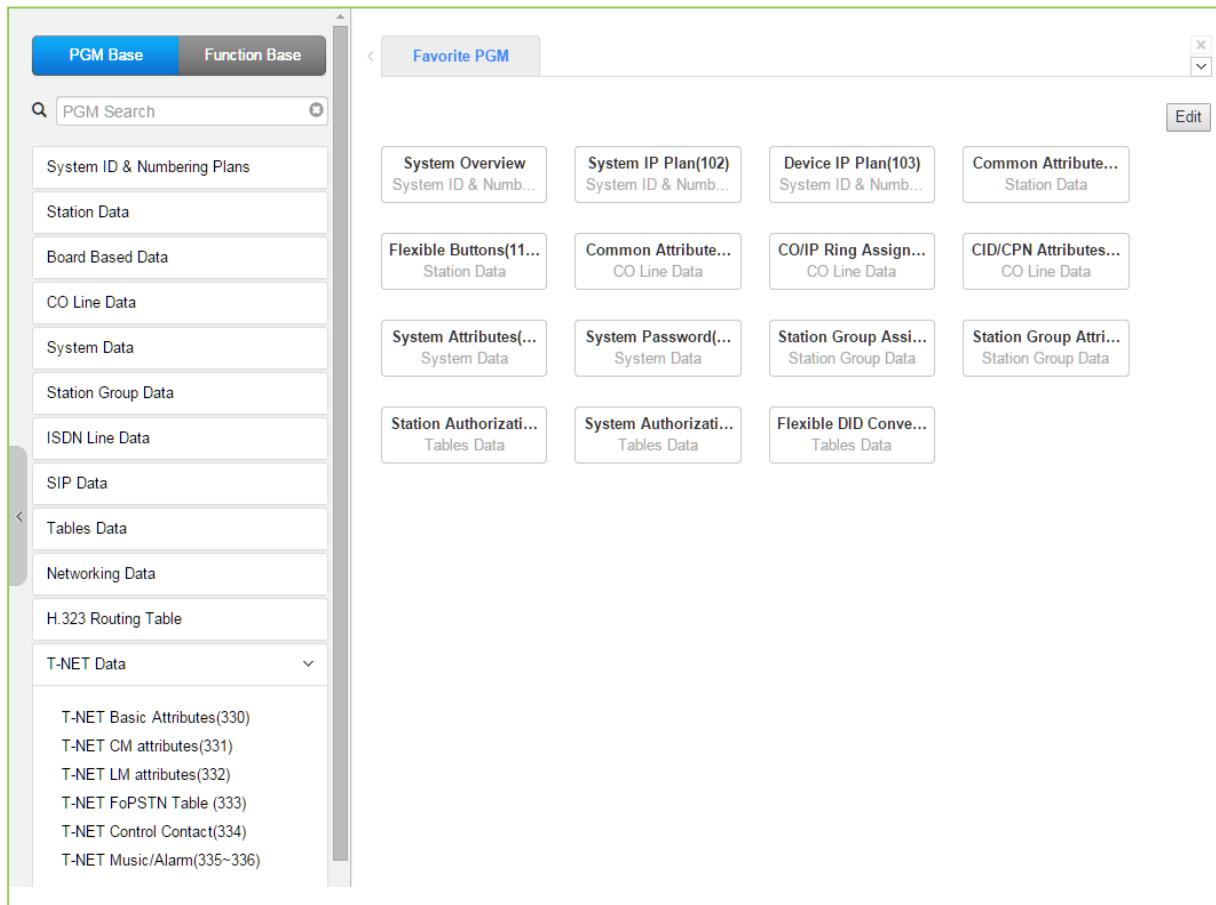

Figure 4.4.12-1 T-NET Data Main Page

In a Centralized Control T-NET (Transparent Network), remote devices may be registered to a Central iPECS system(CM) and to a Local iPECS system (LM). In this way, the CM maintains control of the remote device. Should the WAN connection between an LM and CM fail (polling error), the LM will initiate operational control of the locally registered devices. Calls between the systems (CM and LM) can automatically shift to PSTN Modules registered with the LM for Fail-over operation. The configuration and characteristics of LMs and CM are configurable as is Fail-over operation.

4.4.12.1 T-NET Basic Attributes -PGM 330

Selecting T-Net Basic Attributes will display the data entry page. Click **[Save]** button after changing Value.

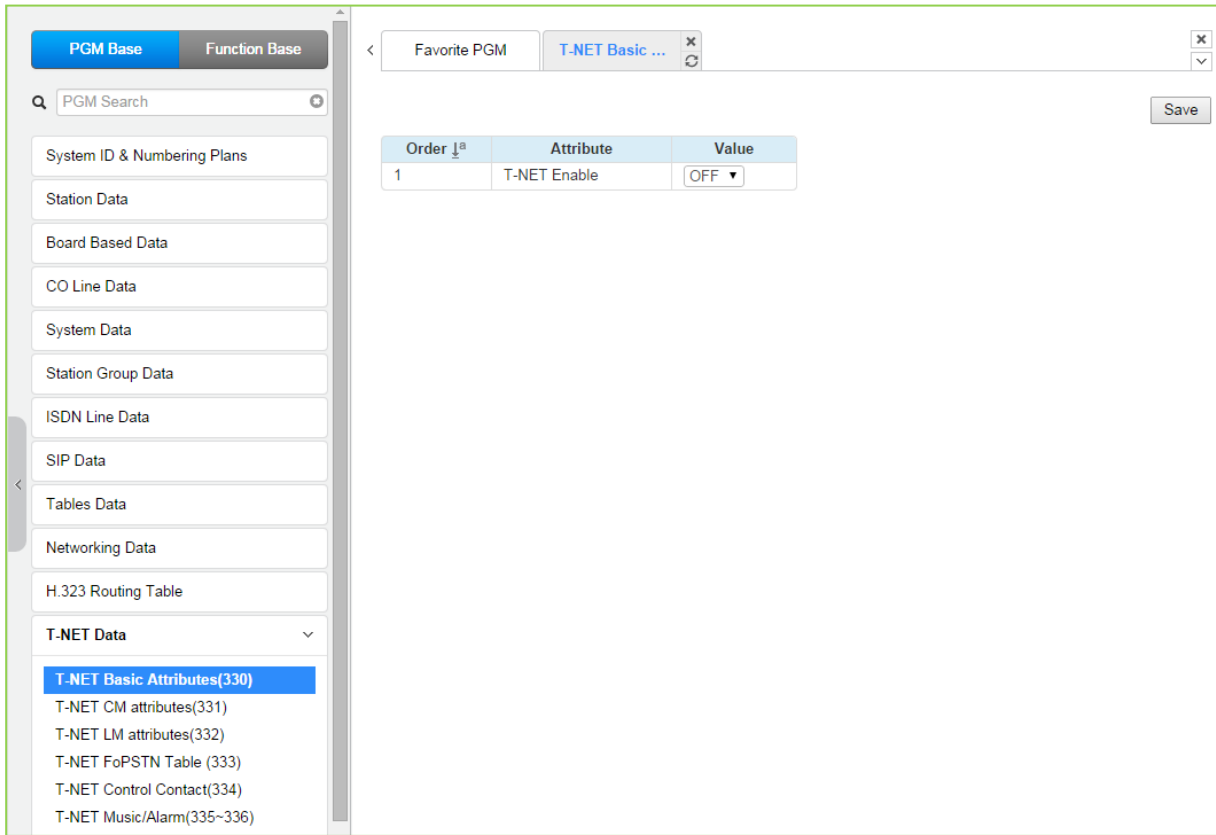

Figure 4.4.12.1-1 Zone number overview

Each iPECS system in a Central Control network environment must be enabled for T-NET operation in order to function as part of the network.

4.4.12.2 T-NET CM Attributes -PGM 331

Selecting T-Net CM Attributes will display the data entry page. Click **[Save]** button after changing Value.

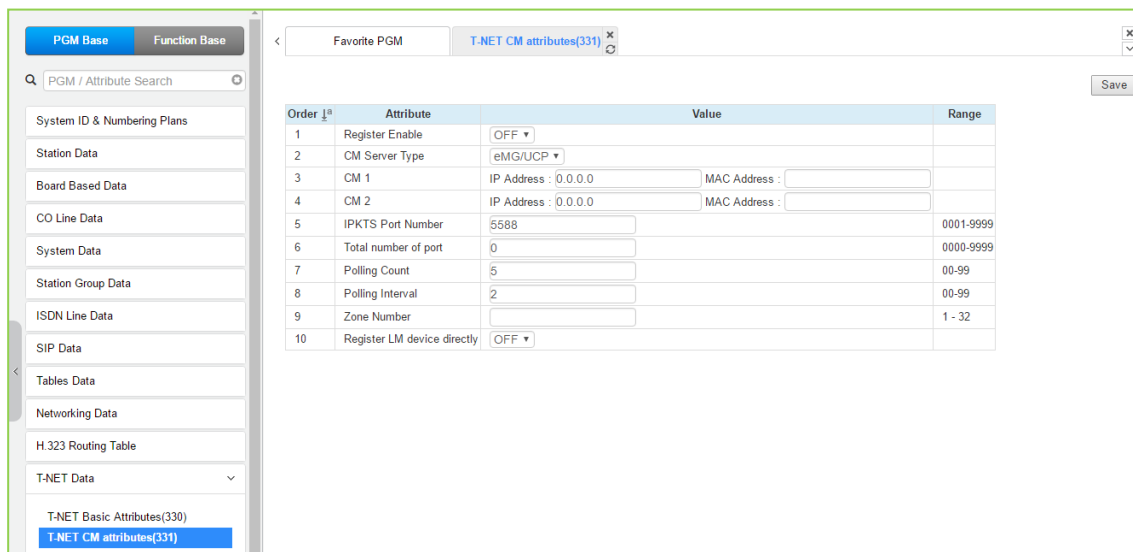

Figure 4.4.12.2-1 T-NET CM Attributes

Each LM (Local iPECS system), which is part of a Central Control Network, must be defined with the IP Address of the CM (Central iPECS system). The LM configuration data is sent to the CM at the time the LM registers with the CM. Total port counts define the ports, which are allocated in the CM database for use by devices registered to the LM. The number of ports defined in the database of each LM must be equal to or less than the ports defined in the CM for the LM, see PGM 332, in order to register properly.

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Register Enable	This field informs the LM to attempt registration with the CM. This field must be set to ON for proper registration.	OFF ON	OFF
CM server type	Assign the type of CM server; iPECS eMG/UCP or iPECS CM.	eMG/UCP, CM	eMG/UCP
IP Address	This field defines the IP address of the CM that will be used by the LM.	IPv4 address	
IPKTS Port number	In the TNET environment, the IPKTS protocol signaling UDP port is defined. At present this field is not used, do not change this port number.	0001-9999	5588
Total number of port	This field defines the total number of ports the LM will request be allocated by the CM for devices attached to the LM. This value must be equal to or less than the port count in the CM for the LM devices.	0000-9999	0
Polling Count	This field defines the maximum polling failures an LM considers a WAN fault.	00-99	5
Polling interval	This field defines the interval time between LM to CM polling attempts.	00-99	2
Zone Number	Zone number can be assigned to Device or GW.	1-32	
Register LM device directly	This option enables LM (Local system) device to register CM (Central system) directly without T-NET by setting ON.	OFF ON	OFF

4.4.12.3 T-NET LM Attributes -PGM 332

Selecting T-Net LM Attributes will display as below. Click **[Save]** button after changing Value.

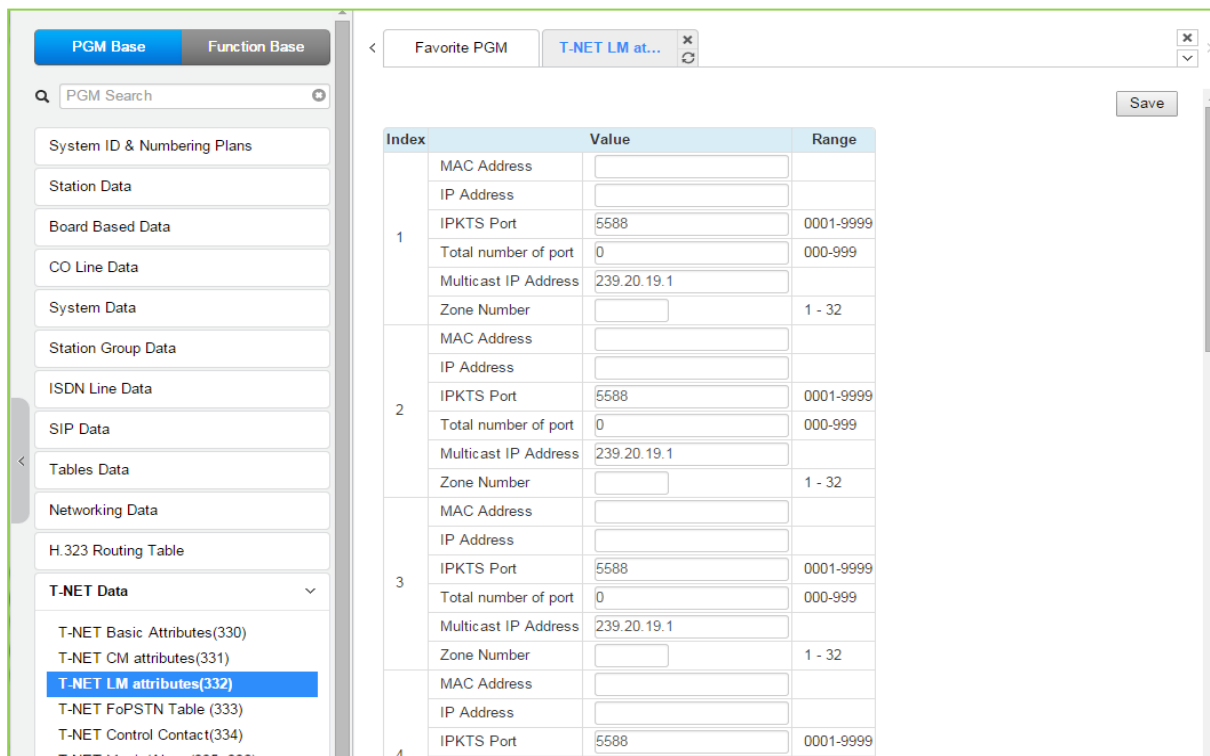

Figure 4.4.12.3-1 T-NET LM Attributes

The CM (Central iPECS system) must be programmed with the MAC and IP address of each LM (Local iPECS system) in the Centralized Control network as well as the maximum configuration of each LM. Up to 100 Local iPECS system(LMs) may be defined and configuration entered.

The port counts define the ports that are allocated in the CM database for use by devices registered to the LM. The number of ports defined in the database for each LM in PGM 331, must be equal to or less than the ports defined in the CM for the LM, in order to register properly.

Table 4.4.12.3-1 T-NET LM ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Mac Address	This field defines the MAC address of the LM that will be part of the T-NET environment and is used by the CM for authorization.	MAC address	
IP Address	This field is the IP address of the LM.	IPv4 address	
IPKTS Port	In the T-NET environment, the IP KTS protocol signaling UDP port is defined. At present this field is not used, do not change this port number.	0001-9999	5588
Total no of port	This field defines the total number of ports the LM will request from the CM for devices attached to the LM. This value must be equal to or more than the port count defined in the LM.	000-999	0
Multicast IP address	This field defines the multicast IP address that could be used in T-NET branch site.	IPv4 address	
Zone number	Zone number can be assigned to Device or GW.	1-32	

4.4.12.4 T-NET FoPSTN table -PGM 333

Selecting T-NET FoPSTN Table will display the data entry page. Enter an index range then click **[Load]** to modify the data. Click **[Save]** button after changing Value.

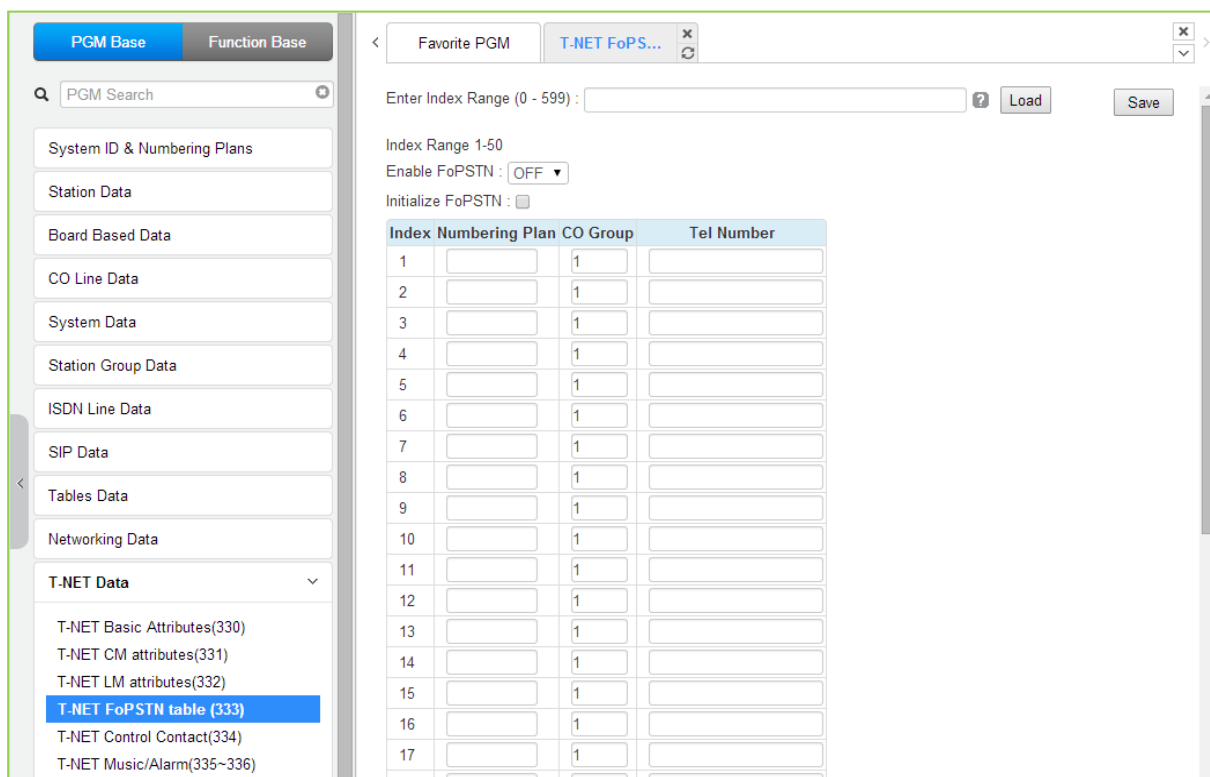

Figure 4.4.12.4-1 T-NET FoPSTN table

The Fail-over function allows the systems in T-NET environment to complete calls between systems over a PSTN (analog or digital) line should the WAN connection to the CM fail. A CO gateway Module must be registered to the LM for local CO services. Users may call others in the normal manner and the call is routed over CO facilities to the remote CM. When calls are directed to a DID line at the receiving system, the system will select a line from the assigned CO Group and dial the Tel Number with the station number dialed as the trailing digits.

Table 4.4.12.4-1 Fail Over to PSTN ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Numbering Plan	Station numbers associated with the remote system. A range can be indicated by using "*" to indicate the range. Example: 21* covers 210 to 219 or 2100 to 2199.	Station number	
CO Group	This field defines the CO Group of the local system that will be used to place calls to the stations entered in the Fail Over Numbering Plan above, should WAN failure occur. eMG80/100:1~20, eMG800:1~200, UCP:1~200	Refer to description	
Tel Number	This field defines the telephone number the system should dial to place a call to the stations entered in the FO Numbering Plan, should WAN failure occur. An "*" may be entered as a wild card to indicate insertion of the dialed station number.	24 digits	

4.4.12.5 T-NET Control Contact -PGM 334

Selecting T-NET Control Contact will display the data entry page. Enter the T-NET range from the T-Net LM Attributes then click **[Load]** to modify the data. Click **[Save]** button after changing Value.

Enter T-NET Range: eMG80/100: 1-15 / eMG800: 1-32 / UCP: 1-100

Figure 4.4.12.5-1 T-NET Control Contact

Each LM incorporates relay contacts that can be employed as a Door Lock Release. The contact activates a third party Door Lock Release mechanism activated by dialing the Door Unlock code at a local station. In case of selecting Alarm, you can choose the desired alarm types for association.

4.4.12.6 T-NET Music/Alarm -PGM 335 ~ 336

Selecting T-NET Music/Alarm will display the data entry page. Enter the T-NET range from the T-Net LM Attributes then click **[Load]** to modify the data. Click **[Save]** button after changing Value.

Enter T-NET Range: eMG80/100: 1-15 / eMG800: 1-32 / UCP: 1-100

The screenshot shows the configuration interface for T-NET Music/Alarm. On the left is a sidebar with a search bar and a list of categories including System ID & Numbering Plans, Station Data, Board Based Data, CO Line Data, System Data, Station Group Data, ISDN Line Data, SIP Data, Tables Data, Networking Data, H.323 Routing Table, and T-NET Data. The 'T-NET Data' category is expanded, showing sub-items like T-NET Basic Attributes(330), T-NET CM attributes(331), T-NET LM attributes(332), T-NET FoPSTN Table (333), T-NET Control Contact(334), and T-NET Music/Alarm(335-336), which is currently selected.

The main configuration area has a 'Favorite PGM' dropdown set to 'T-NET Music/Alar...'. Below it is a text input field for 'Enter T-NET Range (1 - 100):' with 'Load' and 'Save' buttons. The 'T-NET Range 1' section contains a table with the following data:

Order	Attribute	Value
T-NET Music Assign		
1	BGM Type	Internal/External Music 1
2	MOH Type	Internal/External Music 1
3	Internal/External Music	Internal Music
4	Internal Music Type	First
T-NET Alarm Attributes		
1	Alarm Enable	OFF
2	Alarm Contact Type	Close
3	Alarm Mode	Alarm
4	Alarm Single Mode	Repeat
5	Alarm 1 Display	
6	Alarm 2 Display	(UCP 600/2400 only)

Figure 4.4.12.6-1 T-NET Music/Alarm

To minimize WAN traffic, the CM does not provide BGM/MOH to an LM. The LM employs local BGM and MOH facilities to reduce traffic load on the WAN and IP channel processors. The LM uses IP Multicast for local BGM and MOH transport. In addition, the Alarm contacts of the LM can be defined for use as a local alarm or doorbell.

When alarm port 1 of the LM is activated, the string of {Alarm 1 Display} is displayed in assigned stations.

When alarm port 2 of the LM is activated, the string of {Alarm 2 Display} is displayed in assigned stations(if LM is UCP600/2400).

4.4.12.7 T-NET ISDN Clock Priority for eMG800 -PGM 337

Selecting T-NET ISDN Clock priority will display the data entry page. Enter the T-NET range from the T-Net LM Attributes then click **[Load]** to modify the data. Click **[Save]** button after changing Value.

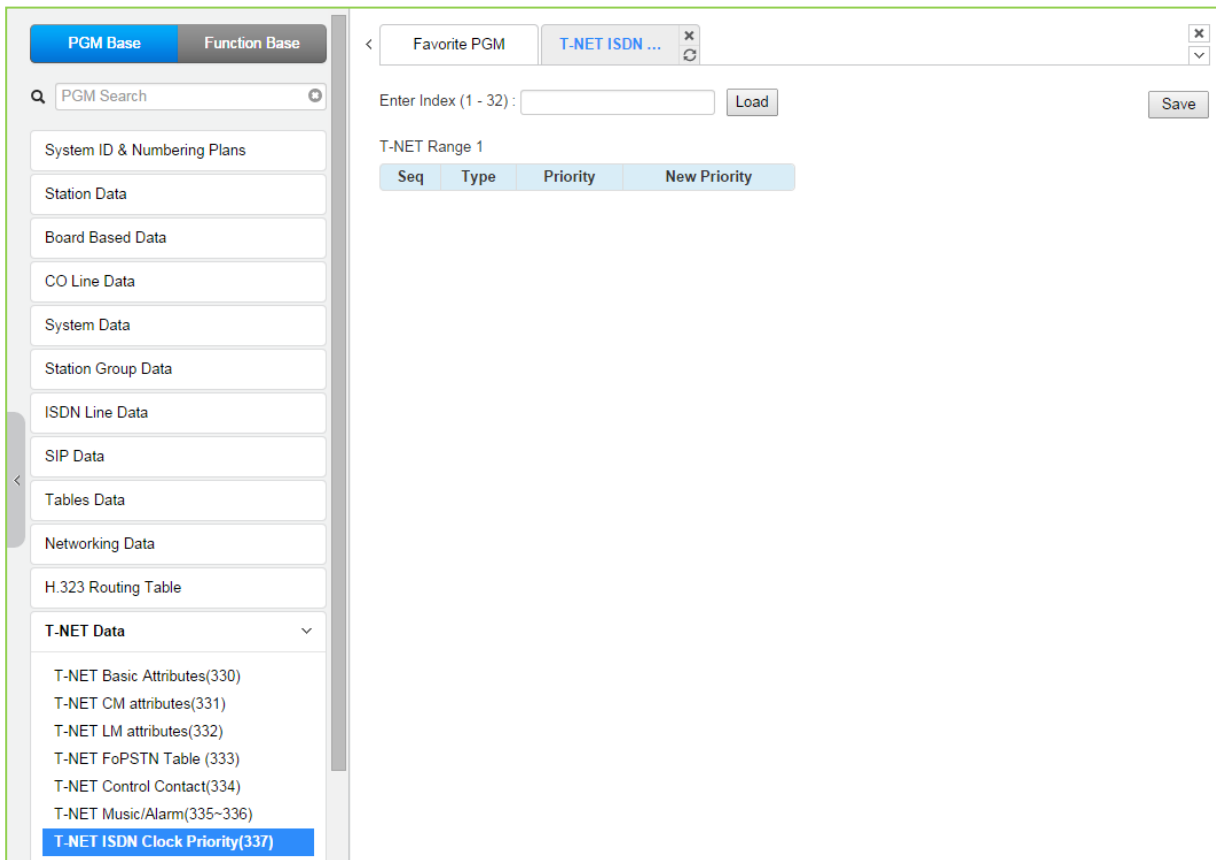

Figure 4.4.12.7-1 T-NET ISDN Clock Priority

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Priority	ISDN clock priority in a TNET site.	1-18	

4.4.13 Zone Data

Selecting the Zone Data program group returns the sub-menu displayed.

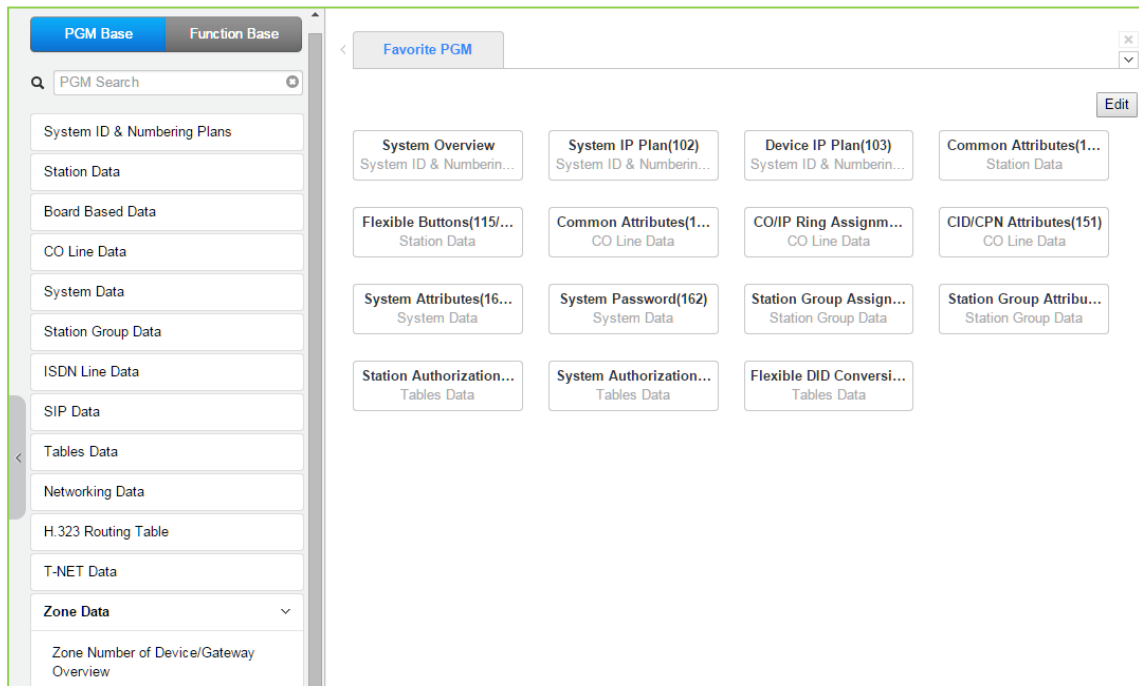

Figure 4.4.13-1 Zone Data Main Page

4.4.13.1 Zone Number Overview

Selecting Zone Number Overview returns the data entry page.

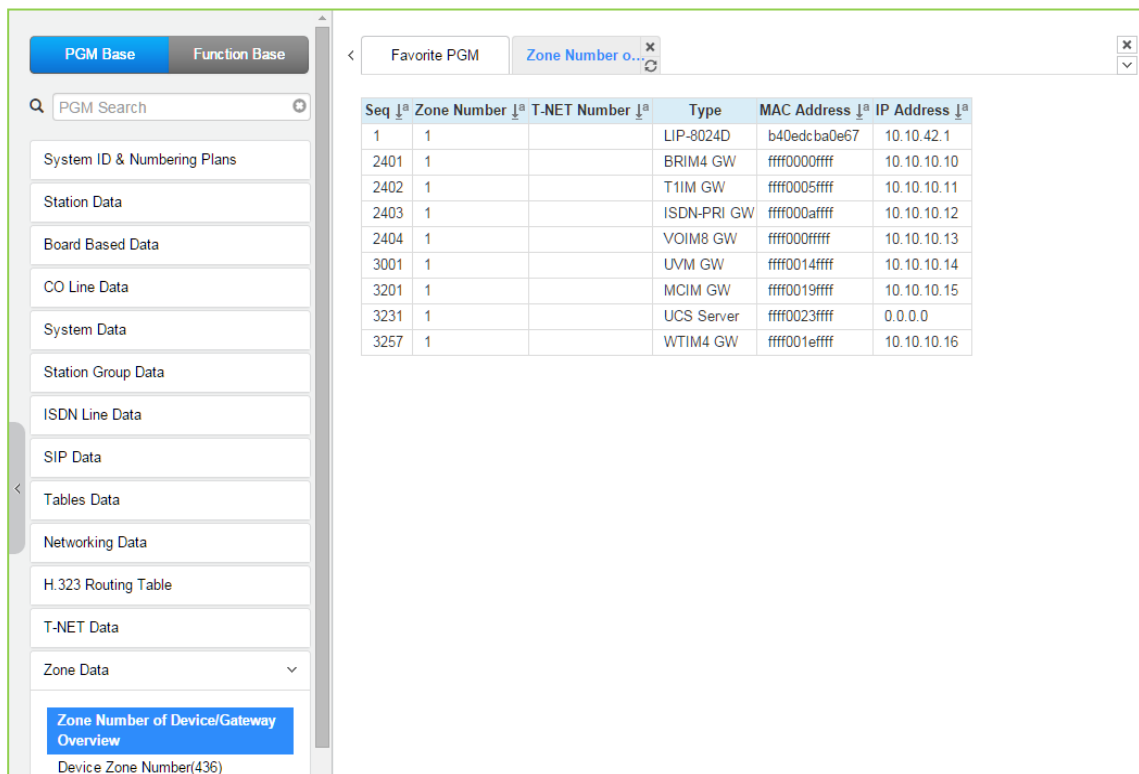

Figure 4.4.13.1-1 Zone number overview

Zone data is a tool employed to easily manage the characteristics of groups of devices under the control of an MPB/UCP. Such devices can be grouped to a Zone to define common characteristics including Country Code, DSCP, RTP packet handling, etc. Common attributes are defined at the device, Zone and Inter-zone level. Device settings have priority over system and Zone settings, while Zone settings have priority over system settings.

Generally, transport of RTP packets should be a peer-to-peer communication over either a LAN or VPN. If iPECS devices are separated by a NAPT server or direct peer-to-peer communications is not available, packet relay must be employed to assure communication. In packet relay, RTP packets are received by a local VoIP channel, which is under control of the MPB/UCP, and the IP address is translated from a public to the device's private address. The VoIP channel implements a secure channel using IPSec protocol. Devices can be assigned as part of an "RTP Relay group" to use the same VoIP channels to implement relay of RTP packets. Packet relay groups also provide for conversion of multi-cast packets from the MPB/UCP to uni-cast and back again at the group level to multi-cast. Note packet relay requires a VoIP channel be available locally for each simultaneous call that requires packet relay.

4.4.13.2 Device Zone Number – PGM 436

Selecting the Device Zone Number returns the Zone Number data input page. Enter the Sequence number range (refer to section 4.4.1.4 System & Device IP Address Plan - PGM 102 & 103) and click **[Load]** to assign a Zone number for the device. Click **[Save]** button after changing Value.

Enter Device/GW sequence Range: eMG80/100: 1-300 / eMG800: 1-2890 / UCP: 1-3688

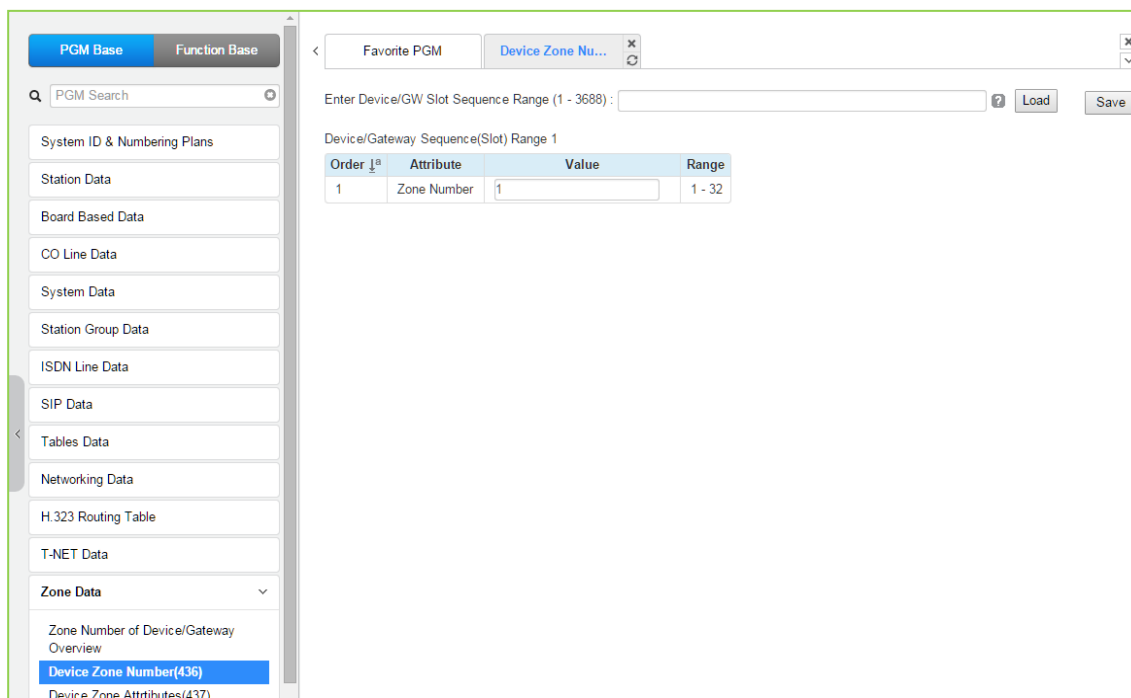

Figure 4.4.13.2-1 Device Zone Number

Device Zone Number assigns a device to one of up to 32 specific Zones.

Table 4.4.13.2-1 DEVICE ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Zone number	Zone number can be assigned to Device or GW.	1-32	1

4.4.13.3 Device Zone Attributes – PGM 437

Selecting the Device Zone Attributes returns the Device Zone Attributes data input page. Enter the Sequence number Range (refer to section 4.4.1.4 System & Device IP Address Plan - PGM 102 & 103) and click **[Load]** to assign a Zone number for the device. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter Device/GW sequence Range: eMG80/100: 1-300 / eMG800: 1-2890 / UCP: 1-3688

Order	Check All	Attribute	Value	Range
1	<input type="checkbox"/>	Remote Access Password		Max 12 Digits
2	<input type="checkbox"/>	Diff Serv	46	00-63
3	<input type="checkbox"/>	Nation Code	North America	
4	<input type="checkbox"/>	Language Code	English	
5	<input type="checkbox"/>	Codec Type	FOLLOW ME(ADM132)	
6	<input type="checkbox"/>	RTP Relay Group	RLY GRP 00	
7	<input type="checkbox"/>	Page Area Group	PAGE AREA 00	
8	<input type="checkbox"/>	VM Device Slot Seq.		3001
9	<input type="checkbox"/>	Select Default Multi Language	<input checked="" type="radio"/> English(North America) <input type="radio"/> Unknown <input type="radio"/> Unknown <input type="radio"/> Unknown <input type="radio"/> Unknown <input type="radio"/> Unknown	
10	<input type="checkbox"/>	VM Retry Count	3	0 - 9
11	<input type="checkbox"/>	Remark		Max 21 Characters

Figure 4.4.13.3-1 Device Zone Attributes

Device Zone Attributes define characteristics specific to the device including the registration password, DiffServ Code Point, Nation, etc. In addition, Zone characteristics set at the Device level take precedence over characteristics for the Zone Attributes. While a Zone may incorporate up to 15 different RTP packet Relay Groups, for clarity a single RTP Relay Group should be used within a Zone.

Table 4.4.13.3-1 DEVICE ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Remote Access Password	Registration password assigned in device for Remote stand-alone device only	Max. 12 digits	None
Diff Serv	MPB assigned code point will take precedence. Applies to all devices	0-63	4
Country Code	Country location of the device. Available selections are given in Country code table.	Country Code	Nation dependent
Language Code	Each device can be assigned a local language or English as the LCD Display Language.	Language Code	Nation dependent

Table 4.4.13.3-1 DEVICE ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Codec Type	The codec selection method can be defined as device based, see PGM 132, or based on the codec type assigned to the Zone. Follow Zone, Follow Me (ADM132)	Refer to description	Follow Me (ADM132)
RTP Relay Group	This attribute defines the RTP Relay group employed by the device, 00-no relay. Zone parameters define the VoIP device to employ.	00-15	00 (no relay)
Page Area Group	The Paging Area Group identity is employed to determine when multicast to unicast conversion is needed to relay paging data across the network using a VoIP channel of a VOIU/VOIM or Paging Agent (VoIP channel of an iPECS LIP Phone). 00: same paging relay area	00-15	00
VM Device Slot Sequence. (VMIU/VMIBSlot Sequence)	The VSF gateway used to support Voice Mail for a device is defined. The VSF/UVM must be under control of the same eMG/UCP as the device. eMG80/100: Max. 3 Digits, eMG800/UCP: Max. 4Digits	Refer to description	
Select Default Multi Language	The recorded language selection prompt is played to the user when accessing the built-in AA/VM. The system supports up to six languages.	1 ~ 6	1
VM Retry Count	The user may select an available language. If the language is unavailable, the user may attempt to enter a valid language type based on this retry counter. If the user cannot enter a valid language, the announcement is provided in the default language.	0-9	3
Remark	Descriptive information to help installer/programmer in identifying the device Zone, i.e. Branch1.	Max. 21 characters	

4.4.13.4 Access & Page Relay – PGM 438

Selecting Access & Page Relay returns the Access & Page RTP packet relay data input page. Enter the Sequence number Range (refer to section 4.4.1.4 System & Device IP Address Plan - PGM 102 & 103) and click **[Load]** to define packet relay characteristics for Paging between Zones. Click **[Save]** button after changing Value.

Enter Device/GW sequence Range: eMG80/100: 1-300 / eMG800: 1-2890 / UCP: 1-3688

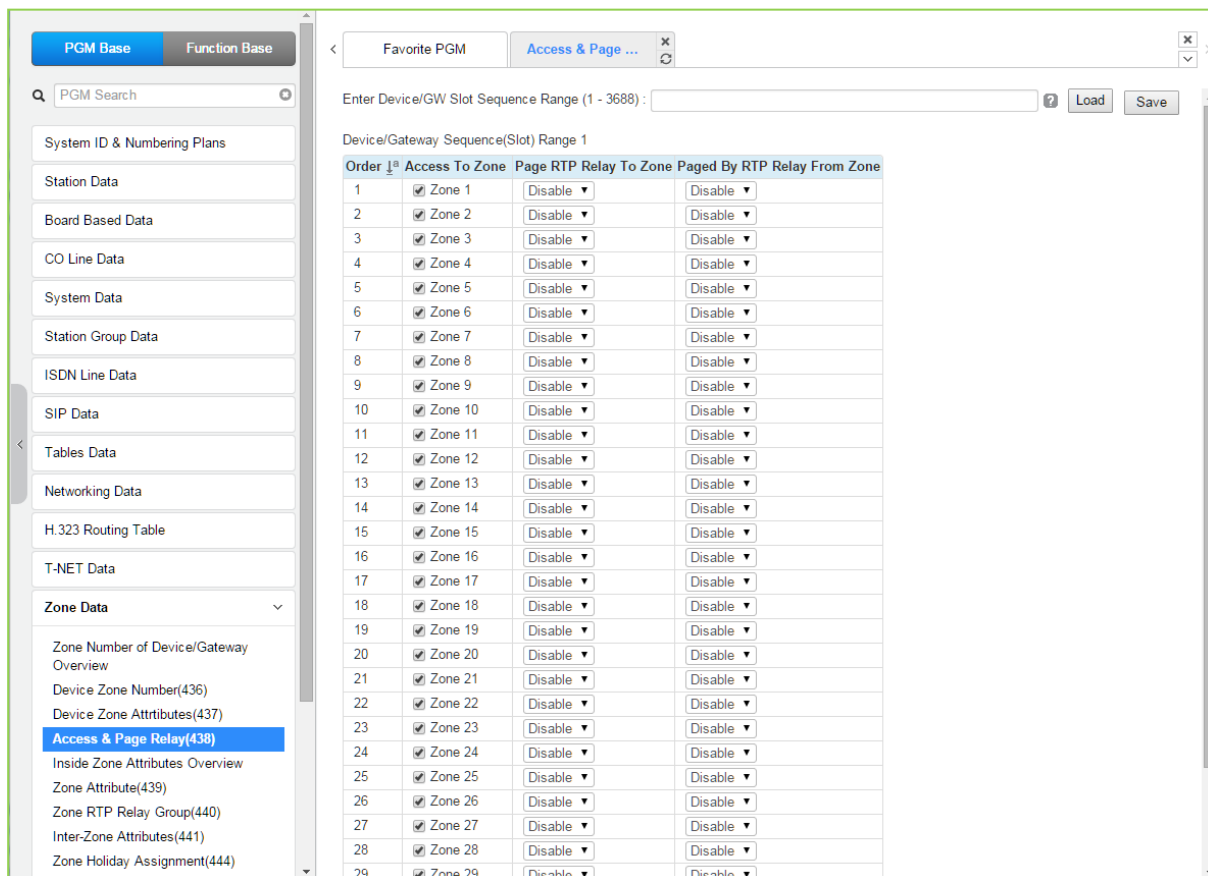

Figure 4.4.13.4-1 Zone Page RTP Packet Relay

iPECS protocol employs multi-cast to send of RTP packets to multiple devices at one time. This improves efficiency and lowers traffic by sending a single multi-cast packet to multi-cast group members. In particular, paging employs this multi-cast technique.

However, since multi-cast is not commonly supported outside of the LAN, uni-cast must be used to transport such signals between routers. At the receiving Zone, a local VoIP channel receives the uni-cast signal from the controlling MPB. The VoIP channel then converts the packet address to a multi-cast signal for delivery to devices in the same Zone RTP Relay Group.

Table 4.4.13.4-1 Zone Page RTP Packet Relay

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Page RTP Relay to Zone	The device can be configured to relay RTP packets for paging to other zone members, Paging Rely.	Disable Enable	Disable
Page By RTP Relay From Zone	The device can be configured to receive relayed packets from the assigned Zones(s).	Disable Enable	Disable

4.4.13.5 Inside Zone Attributes Overview

The screenshot displays a software interface for viewing zone attributes. On the left is a navigation menu with categories like 'PGM Base', 'Function Base', and 'Zone Data'. The main area shows a table with 18 rows of data. The table columns include Zone, Nation Code, Language Code, Codec, RTP Relay Rule, RTP Relay Device, VMIU/VMM, Remark, Time Zone, I-Z Conns, OGT Calls, MOH, Emer Noti, Emer Noti2, DCOB Noti, and SIP Noti. All rows show 'North America' as the Nation Code, 'English' as the Language Code, and 'System' as the Codec. The RTP Relay Rule is consistently 'If Need', and the RTP Relay Device is '13/ 14'. The VMIU/VMM column shows '15 / 16'. The Time Zone is 'Sys Time', I-Z Conns is '0', OGT Calls is '0', and MOH is 'Sys Hold'. The Emer Noti, Emer Noti2, DCOB Noti, and SIP Noti columns are all empty.

Zone	Nation Code	Language Code	Codec	RTP Relay Rule	RTP Relay Device	VMIU/VMM	Remark	Time Zone	I-Z Conns	OGT Calls	MOH	Emer Noti	Emer Noti2	DCOB Noti	SIP Noti
1	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
2	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
3	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
4	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
5	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
6	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
7	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
8	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
9	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
10	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
11	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
12	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
13	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
14	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
15	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
16	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
17	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				
18	North America	English	System	If Need	13/ 14	15 / 16		Sys Time	0	0	Sys Hold				

Figure 4.4.13.5-1 Zone Attributes Overview

4.4.13.6 Zone Attribute – PGM 439

Selecting the Zone Attributes returns the Zone Attributes data input page. Enter the desired Zone number range and click [Load] to assign Zone characteristics. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking [Save] button.

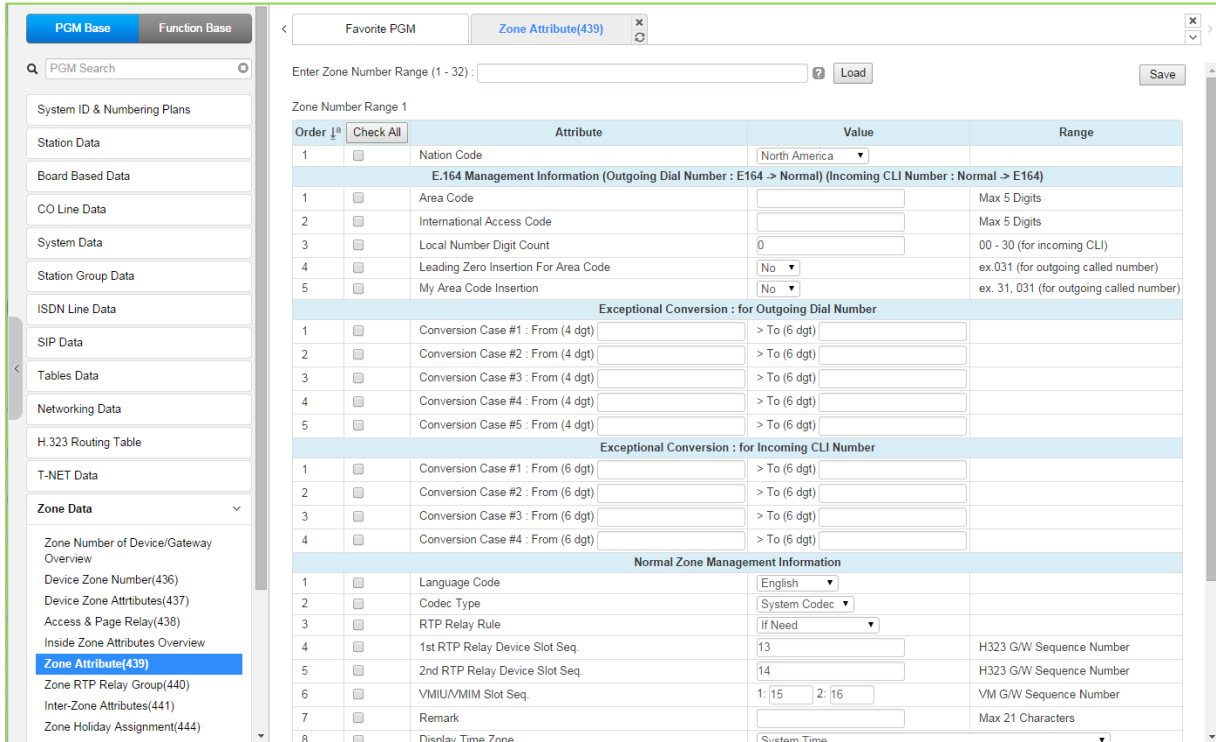

Figure 4.4.13.6-1 Zone Attributes

The nation code, codec and VMIU/VMIB assigned for a Zone will be employed by all devices in the Zone unless a different entry is made in Device Zone data. If the Device Zone data is default or assigned by the MPB, the Zone data will take precedence.

The Zone Attributes define when and which VoIP channels to use for RTP packet relay. Local VoIP channels are assigned to perform the packet relay function and the use can be defined as “if needed” or use the assigned RTP Relay Group. For “if Need”, the MPB will employ the IP KTS STUN protocol to determine when packet relay is required. If assigned “RTP Relay Group”, packet relay will always be employed for RTP packet receipt.

Table 4.4.13.6-1 ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Nation Code	Nation code of devices in the zone. Available selections are given in Country code table.	Country code	
E.164 Management Information (Outgoing Dial Number : E164-> Normal) (Incoming CLI Number: Normal ->164)			
Area Code	Assign area code that is use to convert CLI format (normal <-> E.164)	Max 5 Digits	
International Access Code	Assign international access code that is use to convert CLI format (normal <-> E.164)	Max 5 Digits	

Table 4.4.13.6-1 ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Local Number Digit Count	CLI length is over this count then it is long distance call otherwise it is local call. (it is for incoming CLI)	00-30	0
Leading Zero Insertion for Area code	For an outgoing call, the system can insert a zero ('0') in front of area code.	No Yes	No
My Area Code Insertion	For an outgoing call, the system can insert my area code in the CLI.	No Yes	No
Exceptional Conversion : for Outgoing Dial Number			
Conversion Case #1	The first digits, up to four (4), dialed by the user can be converted to a digit string of up to six (6) digits and may include a plus (+) sign. For example if the "From" digits are 00 and the "To" digits are +820, if the user dials 002233432, the system converts the number to +820 2233432.	From (4-digits) To (6-digits)	
Conversion Case #2			
Conversion Case #3			
Conversion Case #4			
Conversion Case #5			
Exceptional Conversion : for Incoming CLI Number			
Conversion Case #1	The first digits, up to four (4), received as the CLI can be converted to a digit string of up to six (6) digits and may include a plus (+) sign. For example if the "From" digits are 00 and the "To" digits are +820, if the user dials 002233432, the system converts the number to +820 2233432.	From (4-digits) To (6-digits)	
Conversion Case #2			
Conversion Case #3			
Conversion Case #4			
Normal Zone Management Information			
Language Code	Language code of devices in the zone.	Language Code	Nation dependent
Codec Type	Assigns the codec employed by devices in the Zone. System codec, G.711, G.723.1, G.729, G.722	Refer to description	System codec
RTP Relay Rule	Assigns when to use the packet relay function, with "If Need" the MPB will automatically determines when to use packet relay, while "RTP Relay Group" will always implement packet relay for RTP packets. If need, Relay Group, Forced to Relay	Refer to description	If need
1st RTP Relay Device Slot Seq.	Assigns the local VOIU or VOIB IP channels that will be used to implement packet relay for devices in the Zone. eMG80/100:13, eMG800:19	Sequence Number	Refer to description
2nd RTP Relay Device Slot Seq.	Back-up VoIP channels for RTP packet relay use in the Zone. eMG80/100:14, eMG800:NA	Sequence Number	Refer to description
VM Device Slot Sequence (VMIU/VMIB Slot Sequence)	Assigns the UVMU/UVM/VMIU/VMIB used to support Voice Mail for devices in the Zone. The UVMU/UVM/VMIU/VMIB must be under control of the same MPB/UCP as the device being assigned. eMG80/100: 2 (1:15/2:16), eMG800: 3	Sequence Number	Refer to description

Table 4.4.13.6-1 ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Remark	Descriptive information to help installer/programmer in identifying the device Zone, i.e. Branch1.	Max. 21 characters	
Display time zone	The time & date displayed at the station are based on the time zone selected or the system time Time zone, System time	Refer to description	System time
Max Total Inter Zone Connections	This parameter may be used to limit the number of maximum Inter Zone connections. When this value is set to 0, there is no limit on the total Inter Zone connections. eMG80/100:0-140, eMG800: 0-1200, UCP: 0-2400 (0: No limit)	Refer to description	0
Max Outgoing CO Calls	This field may be used to limit the number of outgoing CO/IP calls from the Zone. When this value is set to 0, there is no limit on the number of outgoing CO/IP calls. eMG80/100:0-74, eMG800: 0-600, UCP: 0-998 (0: No limit)	Refer to description	0
Zone MOH Assign	A Music source can be assigned so that calls to this zone. Refer to Sys Hold, Internal music, External Music, VSFMOH, SLT MOH1~5, VSF MOH2~30	Refer to description	Refer to Sys Hold
Emergency Call Notify Station	Assigns the destination station for Emergency Call Notification.	Station number	
Emergency Call Notify 2nd Station	This field assigns a secondary station to receive notification of an Emergency call from a device in the Zone.	Station number	
DCOB Fault Notify Station	This field assigns the station to receive notification of a DCOB (Digital CO Board) fault.	Station number	
SIP Registration Fault Notify Station	This field assigns the station to receive notification of a SIP Trunk registration fault.	Station number	
Daylight Saving Usage	If option is "System DST mode", the zone will follow the system DST mode(System Date&Time(178)).If option is "OFF", the zone will not apply the Daylight Saving Time. System DST mode, OFF	Refer to description	System DST mode

4.4.13.7 Zone RTP Relay Group – PGM 440

Selecting the Zone RTP Relay Group returns the RTP Relay ON/OFF data input page. Enter the desired Zone and Group numbers and click **[Load]** button to assign Zone characteristics. Click **[Save]** button after changing Value.

Figure 4.4.13.7-1 Zone RTP Packet Relay Groups

While it is strongly recommended that a Zone only have a single RTP Relay Group, up to 15 Groups can be assigned to a Zone. Devices in an RTP Relay Group should have common requirements for packet relay use. In some situations, it may be necessary to implement packet relay to groups in a Zone. Note that when “if Need” is assigned as the RTP Relay Rule in the Zone Attributes, assignments here are ignored.

4.4.13.8 Inter Zone Attribute – PGM 441

Selecting the Inter Zone Attribute returns the data input page. Enter the desired Source and Destination Zone number range and click **[Load]** to assign Zone characteristics. Click **[Save]** button after changing Value.

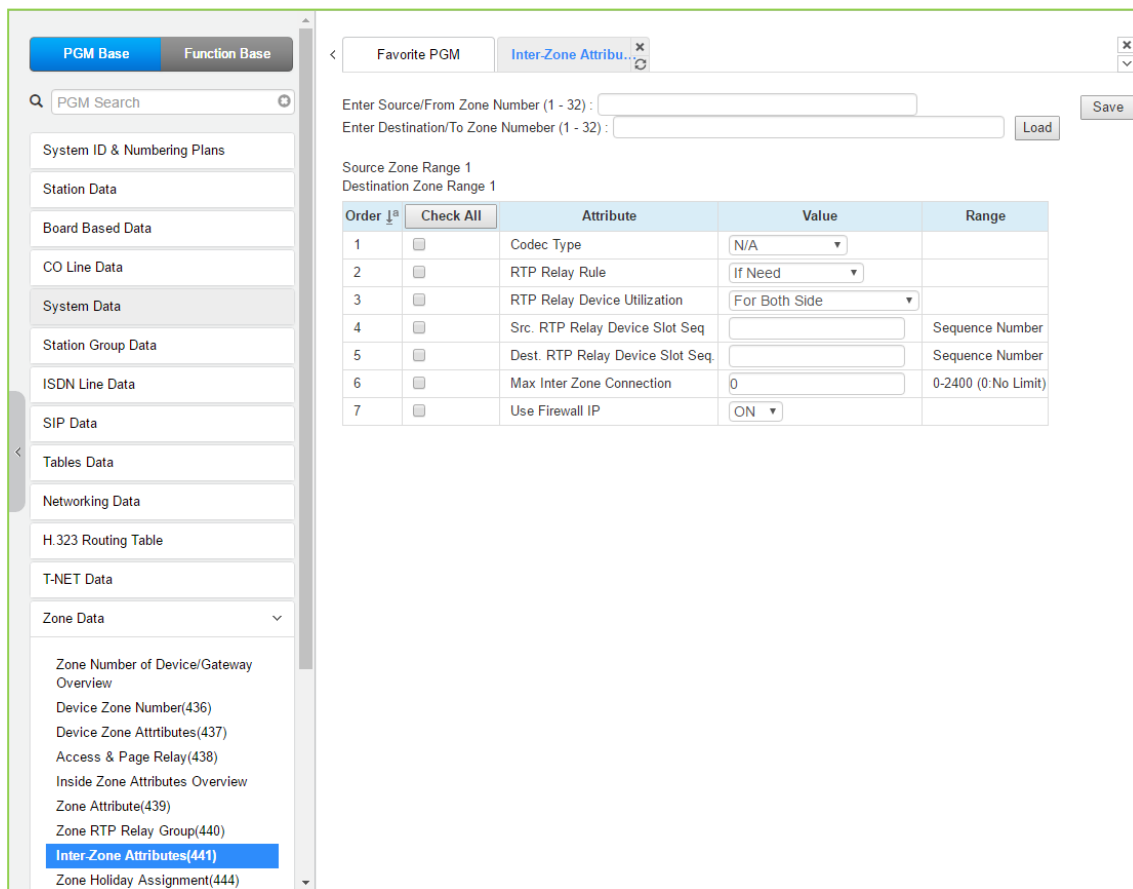

Figure 4.4.13.8-1 Inter-Zone Attributes

Inter Zone Attributes define RTP packet relay treatment for communications between devices in different Zones.

Table 4.4.13.8-1 INTER-ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Codec Type	Assigns the codec employed by devices in the Zone. System Codec, G.711, G.723.1, G.729, G.722	Refer to description	NA
RTP Relay Rule	Assigns when to use the packet relay function between Zones, with “If Need” the MPB will automatically determine when to use packet relay, while “RTP Relay Group” will always implement packet relay for RTP packets between the Zones. If need, Always not, Forced to do	Refer to description	If need
RTP Relay Device Utilization	Assigns how to employ the Source and Destination VoIP channels. The assigned Source channels may be used for both sides of the communication or separately only for a device in the Source Zone. The Destination channels are then used as back-up channels or only for devices in the Destination Zone. For Both Side, Separated(SRC to DEST)	Refer to description	For Both side

Table 4.4.13.8-1 INTER-ZONE ATTRIBUTES

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Src RTP Relay Device Slot Seq.	The Sequence number associated with the VoIP channels in the Source Zone that handle Packet Relay.	Sequence Number	
Dest. RTP Relay Device Slot Seq.	The Sequence number associated with the VoIP channels to handle packet relay for the Destination Zone is defined. When Utilization is Separate the channels are used for devices in the destination Zone, otherwise they are used as back up for both sides.	Sequence Number	
Max Inter Zone connection	This field determines the maximum Inter Zone connections between the source zone and destination zone. When this value is set to 0, there is no limit on the number of connections between the zones. eMG80/100:0-140, eMG800: 0-1200, UCP:0-2400	Refer to description	0
Use Firewall IP	If this option is set to ON, System use Firewall IP of VoIP board for RTP relay between Zones. But, if this option is OFF, System use Local IP of VoIP board for RTP relay between zones.	OFF ON	ON

4.4.13.9 Zone Holiday Assignment - PGM 444

Selecting the Zone Holiday Assignments returns the data input page. Enter the desired Source and Destination Zone numbers range and click **[Load]** to assign Zone holiday. Click **[Save]** button after changing Value.

The screenshot shows the 'Zone Holiday Assignment' configuration page. On the left is a sidebar with a search bar and a list of data categories. The main area has a 'Favorite PGM' dropdown set to 'Zone Holiday Assign...', an input field for 'Enter Zone Number Range (1 - 32):', and 'Load' and 'Save' buttons. Below is a table for 'Zone Number Range 1' with columns for Order, Attribute, Value, and Range.

Order	Attribute	Value	Range
1	Ring Mode	Timed Ring Mode	
2	Vacation	1: [] - [] 2: [] - [] 3: [] - [] 4: [] - [] 5: [] - []	YY/MM/DD - YY/MM/DD format (Must be 12 digits)
3	Holiday	01: [] 02: [] 03: [] 04: [] 05: [] 06: [] 07: [] 08: [] 09: [] 10: [] 11: [] 12: [] 13: [] 14: [] 15: [] 16: [] 17: [] 18: [] 19: [] 20: [] 21: [] 22: [] 23: [] 24: [] 25: [] 26: [] 27: [] 28: [] 29: [] 30: [] 31: [] 32: [] 33: [] 34: [] 35: [] 36: [] 37: [] 38: [] 39: [] 40: []	MM/DD format (Must be 4 digits)

Figure 4.4.13.9-1 Zone Holiday Assignment

Holidays and vacation day intervals for each zone can be established to define the Service mode (Day, Night, and Timed) Up to 40 holidays and 5 vacation intervals can be defined.

Table 4.4.13.9-1 ZONE HOLIDAY ASSIGNMENT

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Ring Mode	Enter the desired Service mode for the Holiday or Vacation. Day Ring Mode, Night Ring Mode, Timed Ring Mode, N/A	Refer to description	Timed Ring Mode
Vacation	Five ranges may be entered for vacation periods, enter the start and end dates as YY/MM/DD – YY/MM/DD.	Must be 12 digits	None
Holiday	Each Zone can have up to 40 holidays assigned, entering the date as MM/DD.	Must be 4 digits	None

4.4.14 Device Login

Selecting the Device Login Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

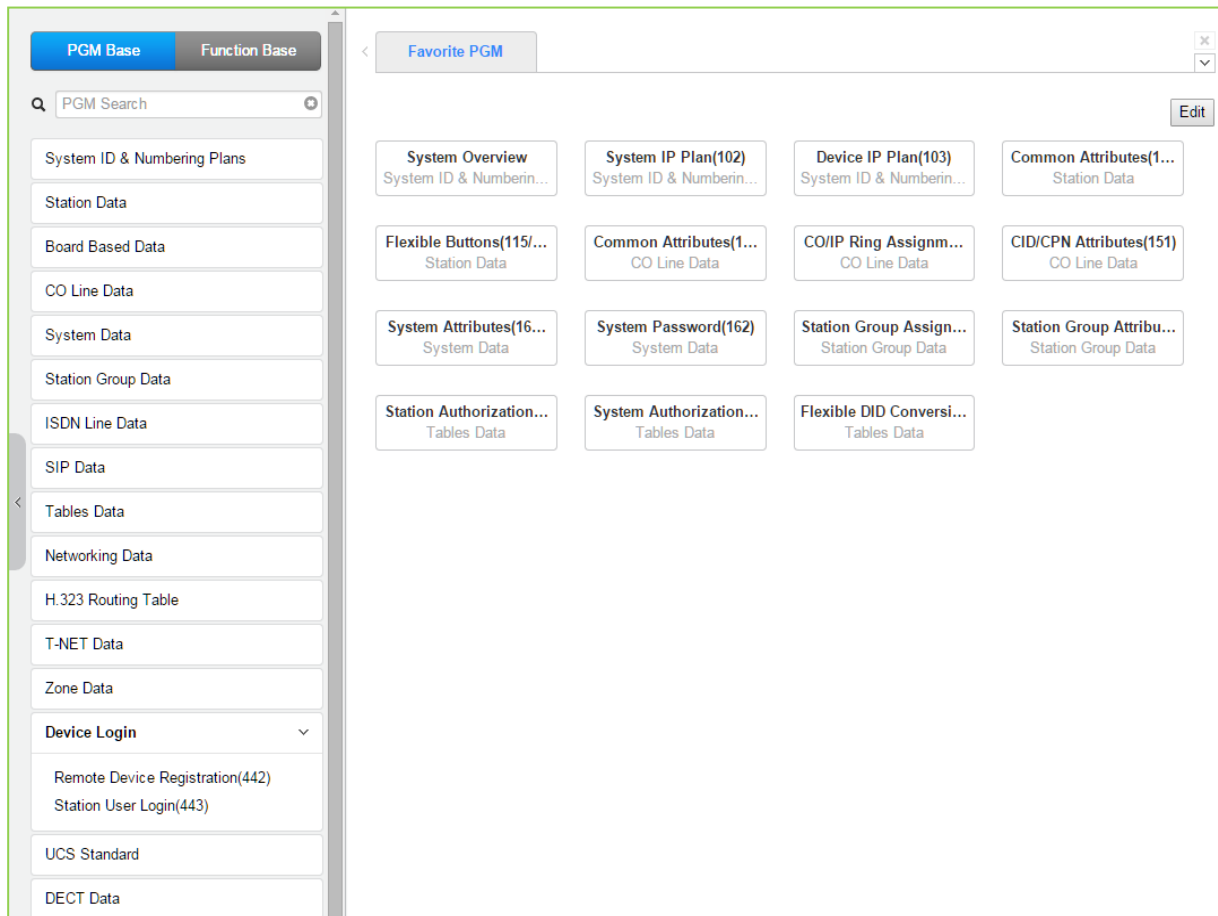

Figure 4.4.14-1 Device Login Data Main Page

4.4.14.1 Remote Device Registration – PGM 442

Selecting the Remote Device Registration will display the Remote Registration Table data input page. Enter a Table index range and select **[Load]** to enter MAC address information. For convenience, the copy, paste, and drag is available to enter or modify data. Click **[Save]** button after changing Value.

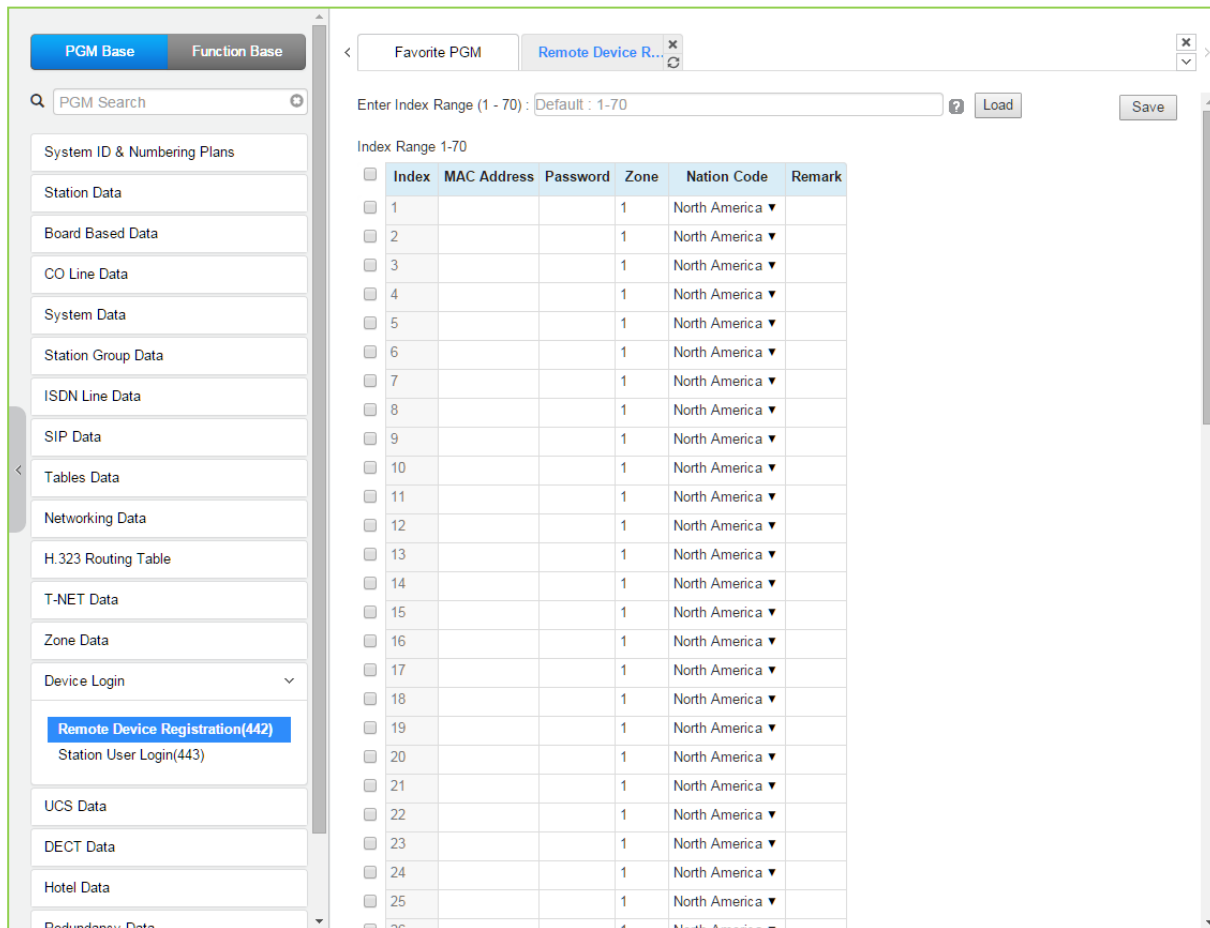

Figure 4.4.14.1-1 Remote Device Registration

When a device attempts to register with the controlling iPECS, the system will check the device MAC address and password against the Registration table. If a match is found, the device is registered regardless of Dip-switch 2 position of eMG and Dip Switch position 3 of UCP. The system database is updated and the device receives device specific configuration data from the MPB/UCP.

Table 4.4.14.1-1 REMOTE DEVICE REGISTRATION

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Mac Address	Mac address of remote device	MAC Address	
Password	Password, if any, assigned in the devices database via Device Web admin.	Up to 12 digits	
Zone	The Zone to be assigned to the device.	01-32	01
Nation code	Nation or country location of the device.		Assigned in System ID

4.4.14.2 Station User Login – PGM 443

Selecting the Station User Login will display the User Login Registration data input page.

Enter an index range then click **[Load]** to modify Station Login data.

For convenience, the copy, paste, and drag are available to enter or modify data. Click **[Save]** button after changing Value.

Enter Index Range: eMG80/100: 1-140 / eMG800: 1-1200 / UCP: 1-2400

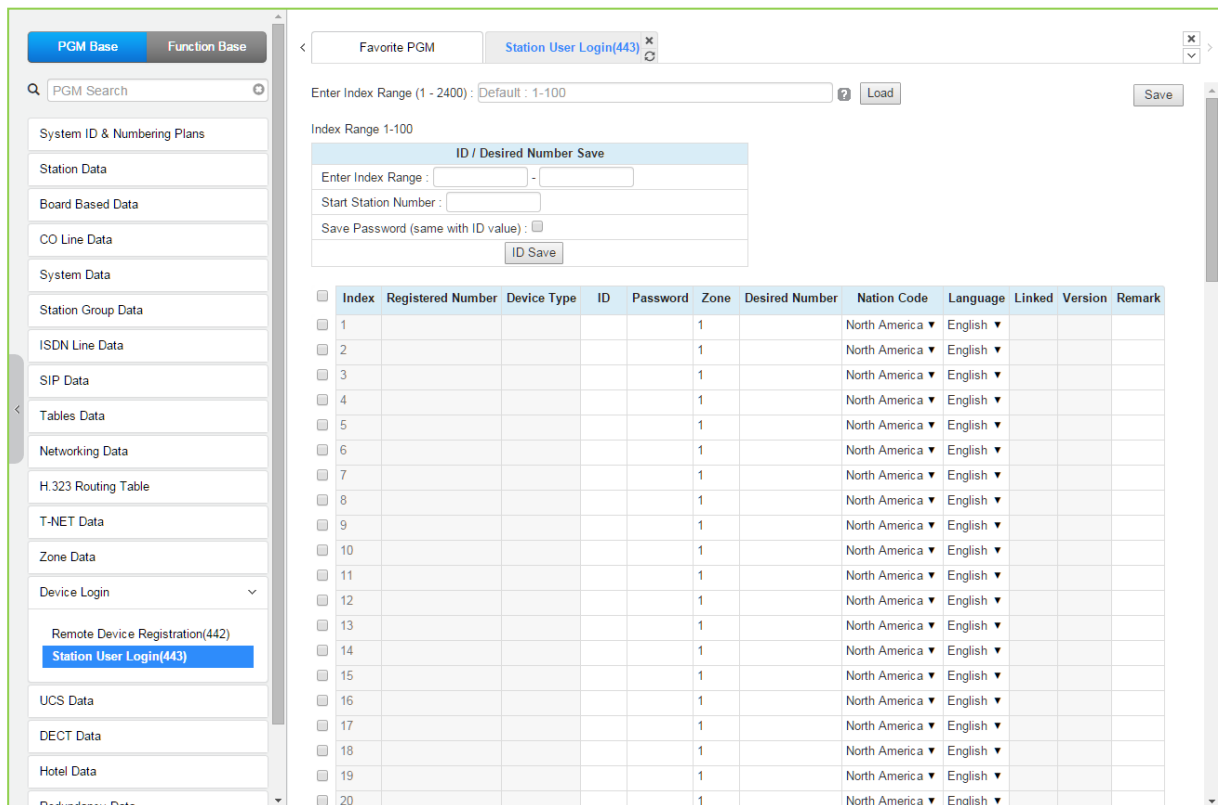

Figure 4.4.14.2-1 Station User Login

Station User Login configures User credentials for registration of iPECS UCS clients and initial registration of SIP phones. A station must register with the system each time it is connected to the system.

The ID and password are assigned along with other characteristics of the remote station such as Zone, desired station number, country code, Language and a remark can be defined.

The iPECS UCS Client can be configured as link-paired station by assigning the same Desired-Number as a registered desktop iPECS LIP Phone.

Note for the UCS Client, the UCS Standard Client Login, PGM 446, may be employed in place of PGM 443 as a single point to configure the client information.

Table 4.4.14.2-1 STATION USER LOGIN

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Registered Number	Station number registered to the station, displayed only after registration.	Station number	
Device Type	This field is indicated what kind of device type is.		

Table 4.4.14.2-1 STATION USER LOGIN

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
ID	The User Login ID must be entered for registration	12 Characters	
Password	The User Login password must be entered for registration.	12 digits	
Zone	The device can be assigned to a Zone.	1-32	1
Desired Number	The desired number can be entered for the device. To link an iPECS UCS and iPECS LIP Phone, enter the station number of the registered iPECS LIP Phone prior to registration of the iPECS UCS or the UCS Client, PGM 446 may be used as the single administration point.	Station number	
Nation code	The Nation code for the device is assigned.		Assigned in System ID
Language	The default Language type for system voice prompts can be assigned to the device from the available languages.	Language Code	Nation dependent
Linked	This field indicates the Linked pair status of the station.		

4.4.15 UCS Data

Selecting the UCS Data group returns the sub-menu displayed in the left frame as shown in the following figure.

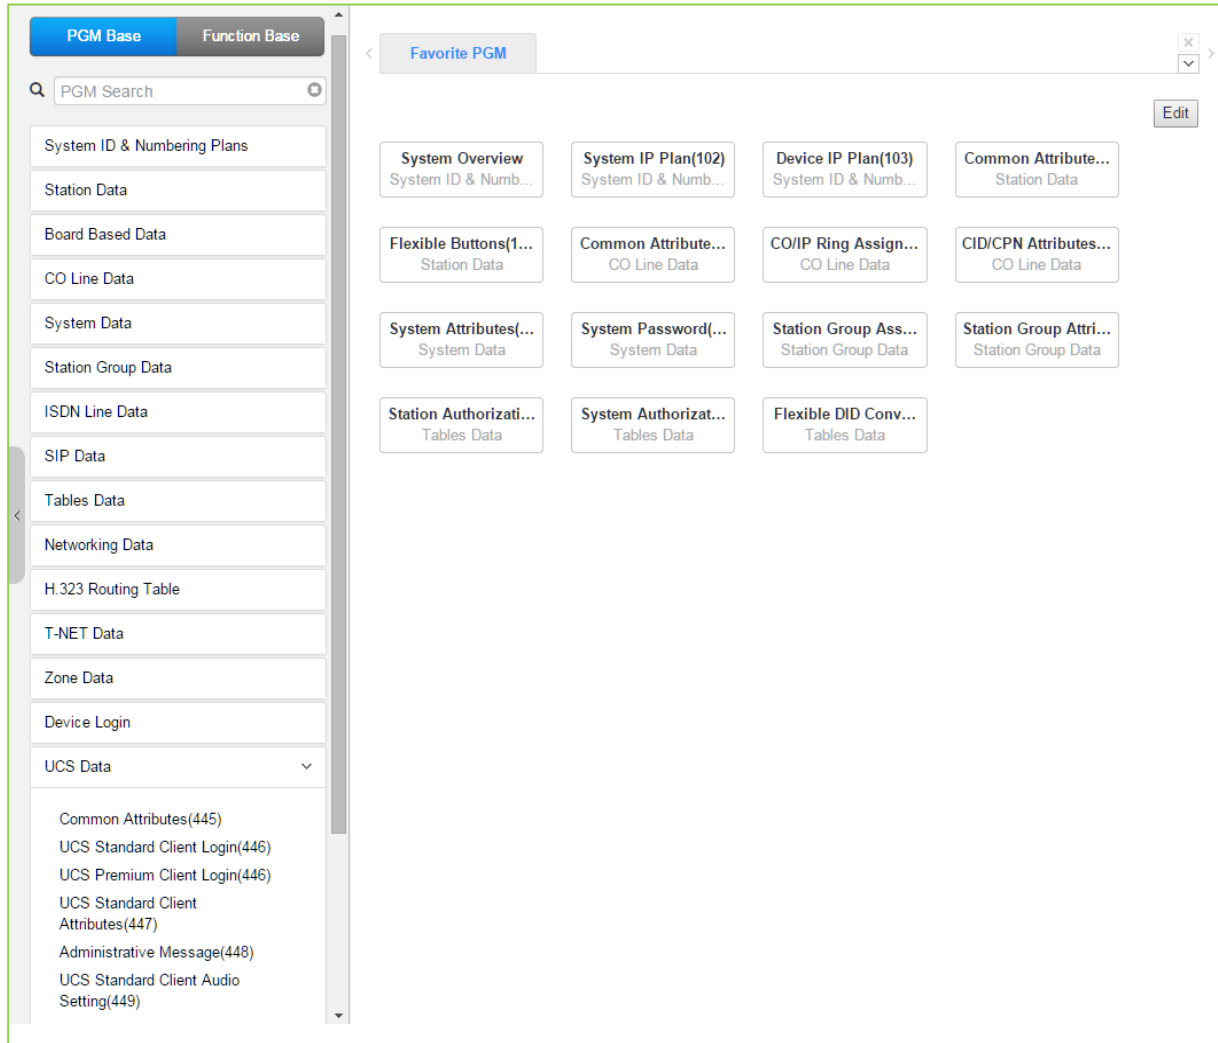

Figure 4.4.15-1 UCS Data Main Page

4.4.15.1 Common Attributes – PGM 445

Selecting Common attributes will display the common attributes input page.

Click **[Save]** button after changing Value.

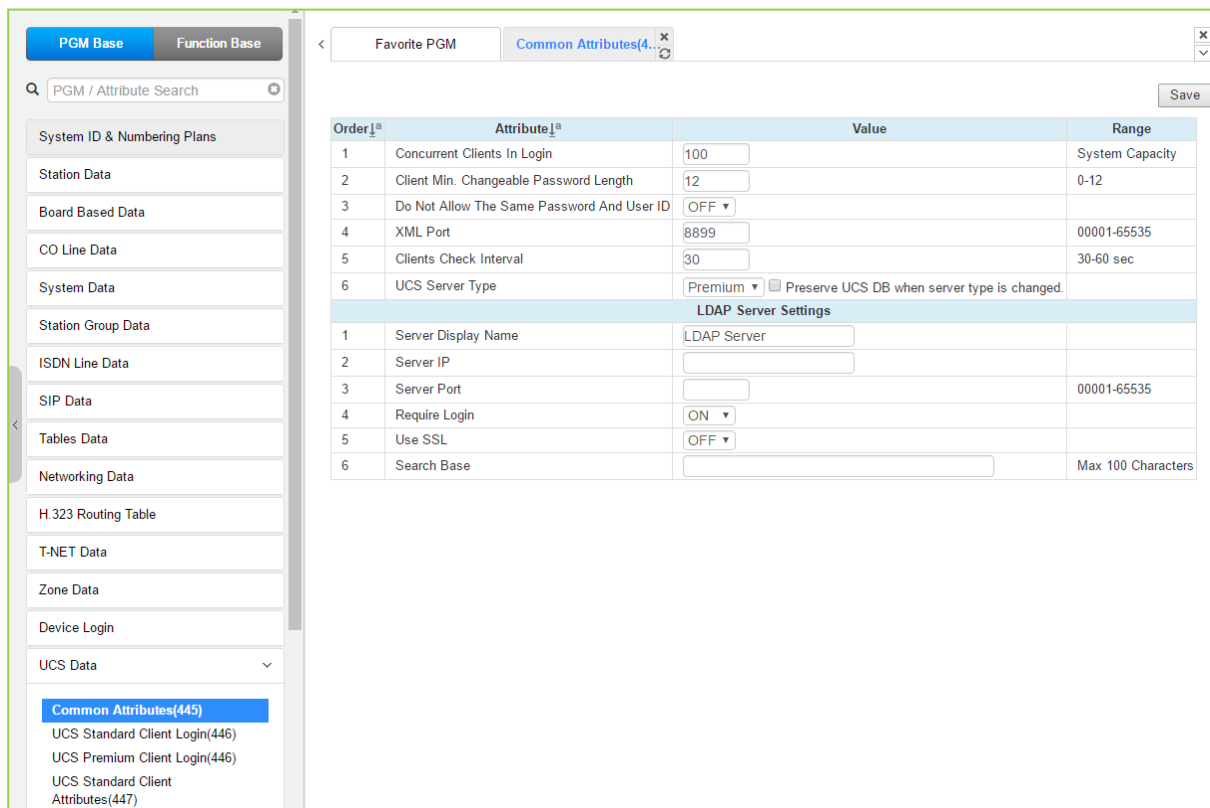

Figure 4.4.15.1-1 Common Attributes

Common Attributes for the UCS Clients include client login characteristics and LDAP server information shared with the clients as shown in the following table.

Table 4.4.15.1-1 Common attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Concurrent Clients in login	The iPECS system employs a per-seat license. The number of UCS Clients that are active at a time cannot exceed the licensed capacity.	System capacity	100
Minimum Password Length	The minimum length of a UCS Client password can be defined up to 12 characters.	0-12	12
Do Not Allow the Same Password and User ID	The User ID can be employed as the password if permitted (OFF).	OFF ON	OFF
XML Port	The system employs XML to send or request certain information such as the User picture. The TCP/IP port can be defined.		8899

Table 4.4.15.1-1 Common attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Security (option for UCS XML Port)	<p>It is security option for UCS XML Port. (8899) If it is "TLS1.2" then system accepts only TLS 1.2. Other TLS1.1(or below) and SSL will be rejected. "Default" option is used for application compatibility as below.</p> <p><u>UCS version that can support TLS1.2:</u></p> <ul style="list-style-type: none"> • UCS Win Client: 6.1.5 • UCS Mac Client: 6.1.3 • UCS Android Client: 6.1.6 • UCS iOS Client: 6.1.3 	DEFAULT TLS 1.2	DEFAULT
Clients Check Interval	Periodically, iPECS system will verify the status of logged in UCS clients.	30-60 Seconds	30
UCS Server Type	<p>The server that provides UCS service can be iPECS system (Standard) or the external UCS Server (Premium). Additional video and collaboration features are provided by the UCS Server as Premium service. When the UCS Server is employed, the Standard Client Login information (PGM 446) is transferred from iPECS system to the UCS Server after the client is registered.</p> <p>If "Preserve UCS DB when server type is changed" is checked, UCS DB will not be initialized when UCS server mode is changed.</p>	Standard Premium	Standard
LDAP Server Settings			
Server Display Name	When the UCS Client requires access to an LDAP server, the system will provide the LDAP server information to the client. The server name is defined in this field.	15 characters	
Server IP	When an LDAP server is employed, the IP address of the server must be defined.		0.0.0.0
Server Port	When an LDAP server is employed, the TCP/IP port of the server must be defined.	00001- 65535	
Require Login	The UCS Client ID and Password may be required for log in to the LDAP server.	OFF ON	ON
Use SSL	When supported by the server, the client can employ SSL (Secure Sockets Layer) for added security.	OFF ON	OFF
Search Base	Search base means Search option. You can get the search option from LDAP Server manager. For example, if OU (Organization Unit) is OC and DC (Directory Company) are ucapp and com, you can give the option "OU=OC, DC=ucapp, DC=com" in this field. You will get the desired directory.	Max. 100 characters	

4.4.15.2 UCS Standard Client Login – PGM 446

Selecting UCS Standard Client Login will display the UCS standard client login input page. Enter the Client index and click **[Load]** to modify the Client data. Use the check boxes to indicate the attributes to modify. Click **[Save]** button after changing Value. Click **[Delete]** button if you want to delete after checking the box.

Enter UCS Client Index: eMG80/100: 1-32 / eMG800: 1-200 / UCP: 1-200

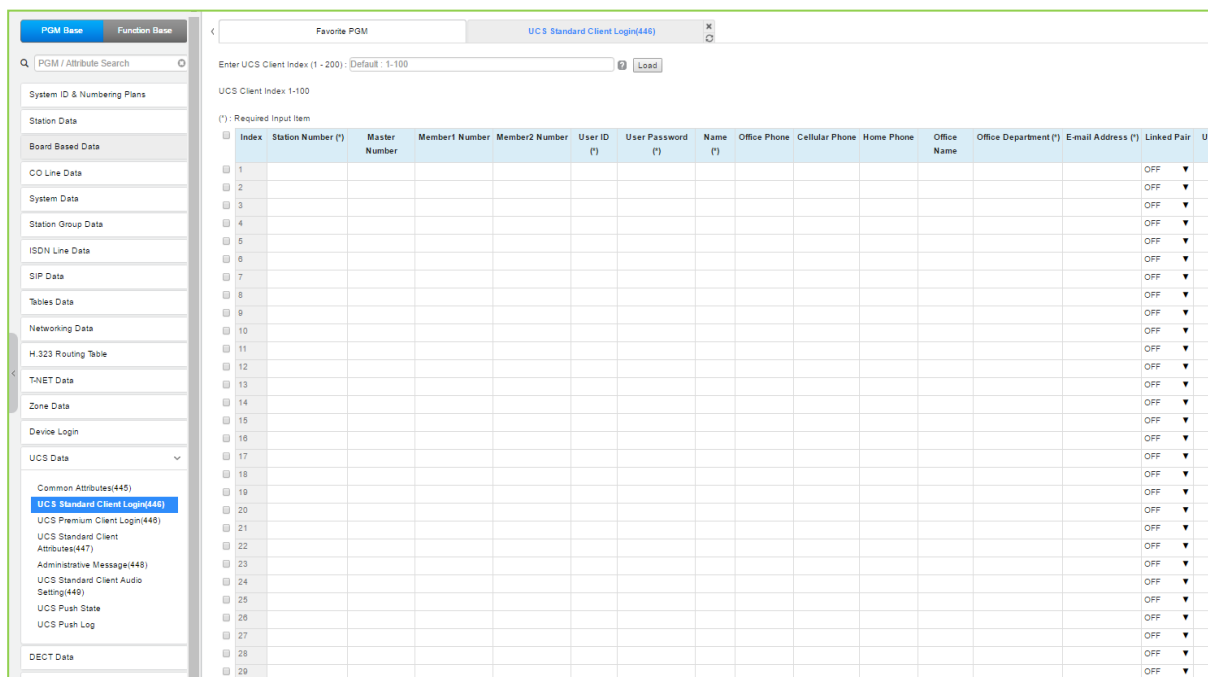

Figure 4.4.15.2-1 UCS Standard Client Login

The UCS Client information is configured for each client prior to registration. When the UCS Server is employed to provide Standard service, iPECS system will transfer the information to the server after the client registers and, after registration, any changes to the client configuration are accomplished in the UCS Server.

You can use the following items to log into multiple accounts at the same time such as PC, Mobile, Tablet, etc.

- **Master Number:** It is the key number for the related members. The master number can be the same as the station number. In this case, the master number is UCS Client. Or the master number can enter the other desired number. You can check the master and member in Personal Group (PGM 260) after finishing the value.
- **Member 1 Number:** In this field, you can enter the number for Mobile UCS Client.
- **Member 2 Number:** In this field, you can enter the number for Tablet UCS Client.

Table 4.4.15.2-1 UCS Standard Client Login

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Station Number	The station number for the UCS Client can be assigned here and will update PGM 103 and 443.		
Master Number	The master number can be the same as the station number, in this case, the master number is UCS Client. Or the master number can enter the other desired number.		
Member 1 Number	You can enter the number for Mobile UCS Client.		

Table 4.4.15.2-1 UCS Standard Client Login

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Member 2 Number	You can enter the number for Tablet UCS Client.		
User ID	The UCS Client Id for the UCS Client can be assigned here and will update PGM 103 and 443.	Min. 4 characters	
User PWD	The UCS Client password, up to 32 characters must be assigned.	Max. 32 characters	
Name	The user's name, up to 32 characters should be entered.	Max. 32 characters	
Office Phone	Set Office phone number.	Max. 32 characters	
Cellular Phone	Set Cellular phone number.	Max. 32 characters	
Home Phone	Set Home phone number.	Max. 32 characters	
Office Name	Set Office name.	Max. 32 characters	
Office Department	Set Office Department.	Max. 32 characters	
Email address	Set Email address.	Max. 64 characters	
Linked Pair	If the UCS Client is part of a Linked pair, it must be enabled here. By entering the Station number of iPECS IP Phone as the UCS Client Station Number, the stations will employ MAC linking.	OFF ON	OFF
Unique ID	When the UCS Server is employed, each client must have a unique Id of at least 40 characters, which identifies the clients to the UCS Server. Once the Client registers, iPECS system will send the information to the UCS Server. Note that the UCS Server Type in PGM 445 must be configured as "Premium".	Max. 32 characters	
Mutual presence permission	The presence status of the Client can be shared with other clients.	OFF ON	ON
License	The status of license will be displayed and select the license for usage among range.	ADVANCED BASIC POWER STD-V(M), STD-NV(M), MOBILE	ADVANCED

4.4.15.3 UCS Premium Client Login – PGM 446

Selecting UCS Premium Client Login will display the UCS Premium client login input page. Enter the Client index and click **[Load]** to modify the Client data. Use the check boxes to indicate the attributes to modify. Click **[Save]** button after changing Value. Click **[Delete]** button if you want to delete after checking the box.

Enter UCS Server ID: eMG80/100: 1-2 / eMG800: 1-5 / UCP: 1-16

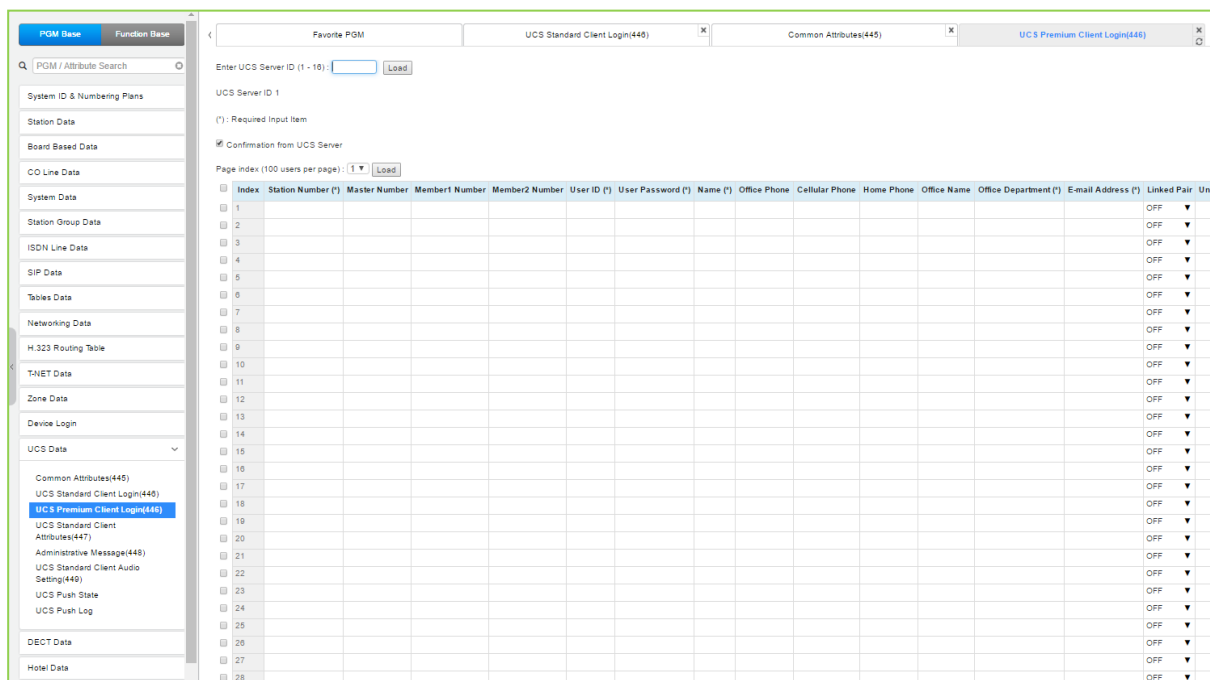

Figure 4.4.15-1 UCS Premium Client Login

The UCS Client information is configured for each client prior to registration. When the UCS Server is employed to provide Premium service, iPECS system will transfer the information to the server after the client registers and, after registration, any changes to the client configuration are accomplished in the UCS Server.

You can use the following items to log into multiple accounts at the same time such as PC, Mobile, Tablet, etc.

- **Master Number:** It is the key number for the related members. The master number can be the same as the station number. In this case, the master number is UCS Client. Or the master number can enter the other desired number. You can check the master and member in Personal Group (PGM 260) after finishing the value.
- **Member 1 Number:** In this field, you can enter the number for Mobile UCS Client.
- **Member 2 Number:** In this field, you can enter the number for Tablet UCS Client.

Table 4.4.15.3-1 UCS Premium Client Login

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Station Number	The station number for the UCS Client can be assigned here and will update PGM 103 and 443.		
Master Number	The master number can be the same as the station number, in this case, the master number is UCS Client. Or the master number can enter the other desired number.		
Member 1 Number	You can enter the number for Mobile UCS Client.		

Table 4.4.15.3-1 UCS Premium Client Login

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Member 2 Number	You can enter the number for Tablet UCS Client.		
User ID	The UCS Client Id for the UCS Client can be assigned here and will update PGM 103 and 443.	Min. 4 characters	
User PWD	The UCS Client password, up to 32 characters must be assigned.	Max. 32 characters	
Name	The user's name, up to 32 characters should be entered.	Max. 32 characters	
Office Phone	Set Office phone number.	Max. 32 characters	
Cellular Phone	Set Cellular phone number.	Max. 32 characters	
Home Phone	Set Home phone number.	Max. 32 characters	
Office Name	Set Office name.	Max. 32 characters	
Office Department	Set Office Department.	Max. 32 characters	
Email address	Set Email address.	Max. 40 characters	
Linked Pair	If the UCS Client is part of a Linked pair, it must be enabled here. By entering the Station number of iPECS IP Phone as the UCS Client Station Number, the stations will employ MAC linking.	OFF ON	OFF
Unique ID	When the UCS Server is employed, each client must have a unique Id of at least 40 characters, which identifies the clients to the UCS Server. Once the Client registers, iPECS system will send the information to the UCS Server. Note that the UCS Server Type in PGM 445 must be configured as "Premium".	Min. 40 characters	
Mutual presence permission	The presence status of the Client can be shared with other clients.	OFF ON	OFF
License	The status of license will be displayed and select the license for usage among range.	ADVANCED BASIC POWER PREM-V PREM-NV MOBILE	ADVANCED

4.4.15.4 UCS Standard Client Attributes – PGM 447

Selecting UCS Standard client attributes will display the UCS standard client attributes input page. Enter the UCS Client index then click **[Load]** to modify the client data. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

Enter UCS Client Index: eMG80/100: 1-32 / eMG800: 1-200 / UCP: 1-200

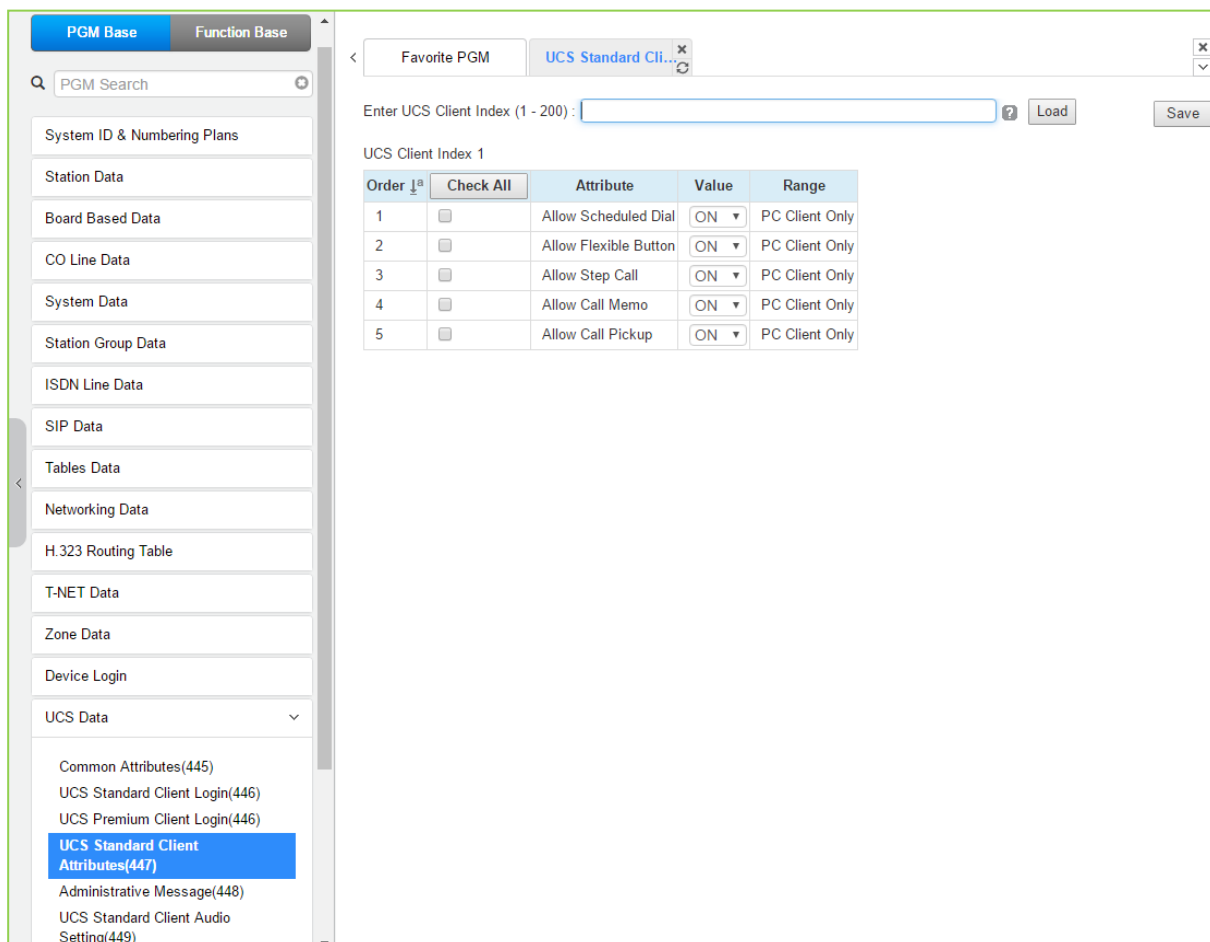

Figure 4.4.15.4-1 UCS Standard Client Attributes

The UCS Client can be allowed or denied access to several features as described in Table 4.4.15.4-1. The following attributes are available only for PC Client.

Table 4.4.15.4-1 UCS Standard Client Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Allow Scheduled Dial	Allows Scheduled Dialing from the client.	OFF/ON	ON
Allow Flexible Button	Allows the user to access Flex buttons on the UCS Client.	OFF/ON	ON
Allow Step Call	Allows access to the step-call feature by the UCS client.	OFF/ON	ON
Allow Call Memo	Allows the UCS Client access to the Call Memo feature.	OFF/ON	ON
Allow Call Pickup	Permits the UCS Client use of the Direct and Group Call Pick-up features.	OFF/ON	ON

4.4.15.5 Administrative Message – PGM 448

Selecting Administrative Message will display the administrative message input page. Click **[Send]** button after filling out the subject and Contents and checking the destination.

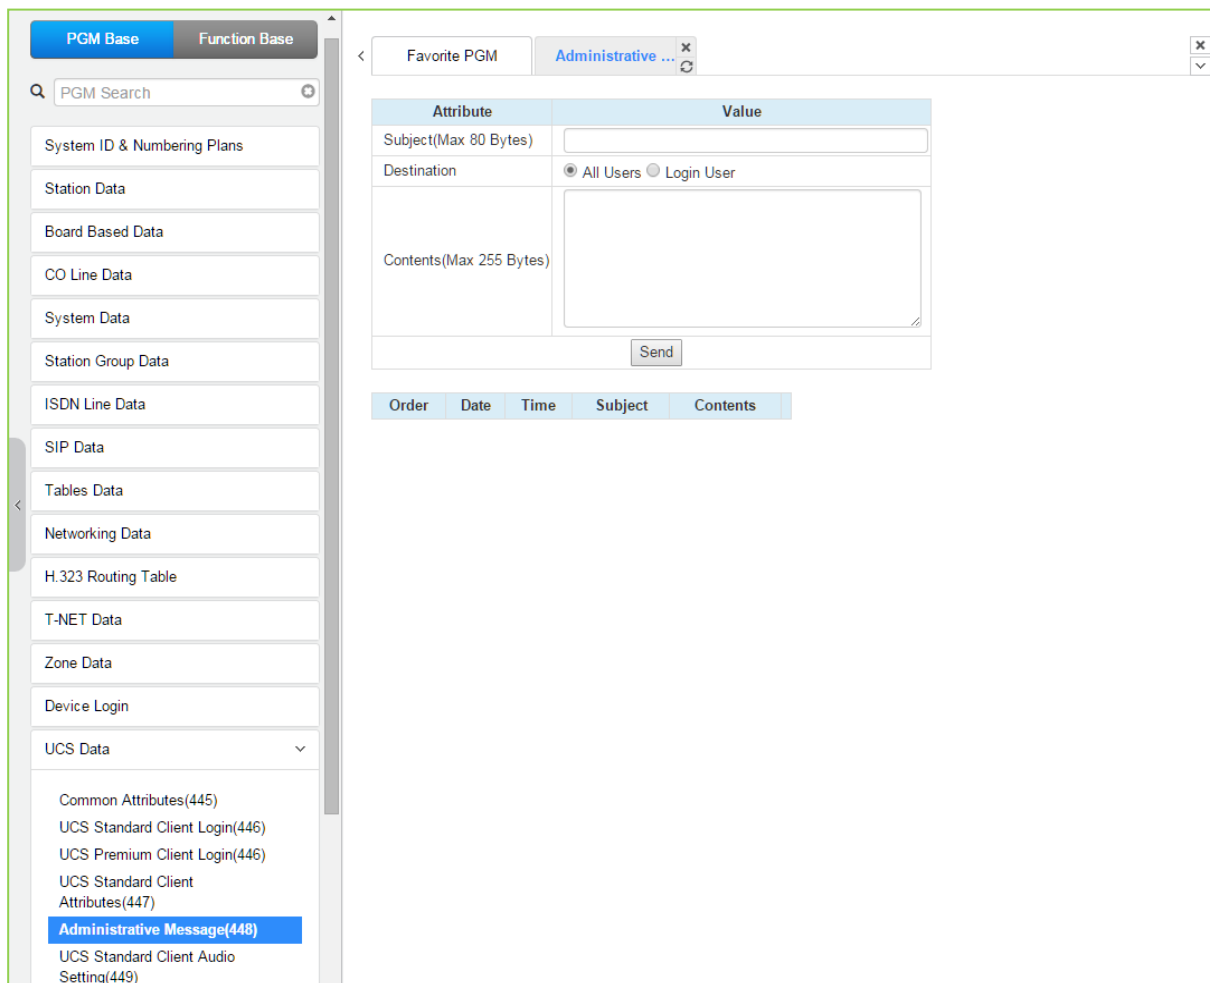

Figure 4.4.15.5-1 Administrative Message

An administrator can send a message to UCS Clients such as a Welcome message.

Table 4.4.15.5-1 Administrative Message

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Subject	Message subject.	Max. 80 bytes	
Destination	The message can be sent to currently active UCS Clients or to All Clients. For the All Clients selection, the message is sent to all active Clients and as each Client logs in.	Login user All users	All
Contents	Message body.	Max. 255 bytes	

4.4.15.6 UCS Push State

Selecting UCS Push State will display the related push attributes. Set Attributes and click **[Save]** to apply.

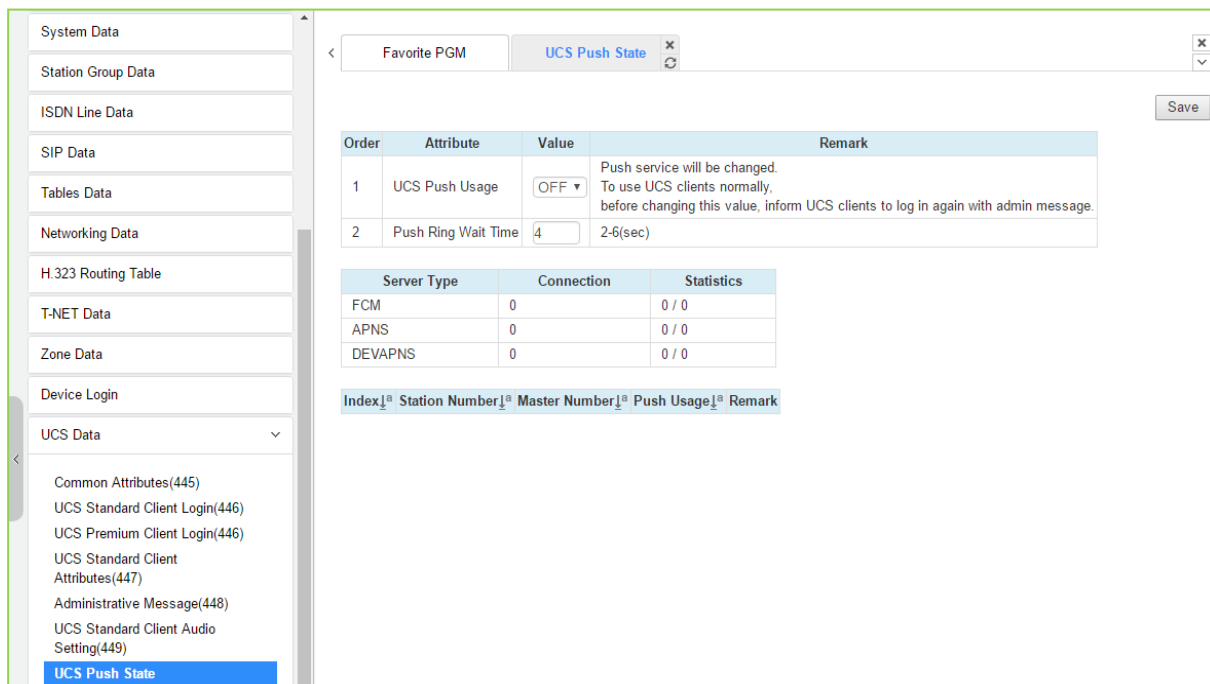

Figure 4.4.15.6-1 UCS Push State

You can see the current information such as Station number, Master number, and Push Usage on the last table.

Table 4.4.15.6-1 UCS Push State

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
UCS Push Usage	Mobile UCS client gets the push notification message for Ring, Voice mail, SMS, etc. by setting ON. You must log in again after changing the value.	OFF ON	OFF
Push Ring Wait Time	It is wait time after sending Ring push message.	6-12 (Sec.)	10
Server Type	You can see the server type for Push service. <ul style="list-style-type: none"> Connection: You can see the number of connection to the server. Statistics: You can see the statistics for Success and Fail. 		

4.4.16 DECT Data

Selecting the DECT Data program group returns the sub-menu displayed in the left frame as shown in the following figure.

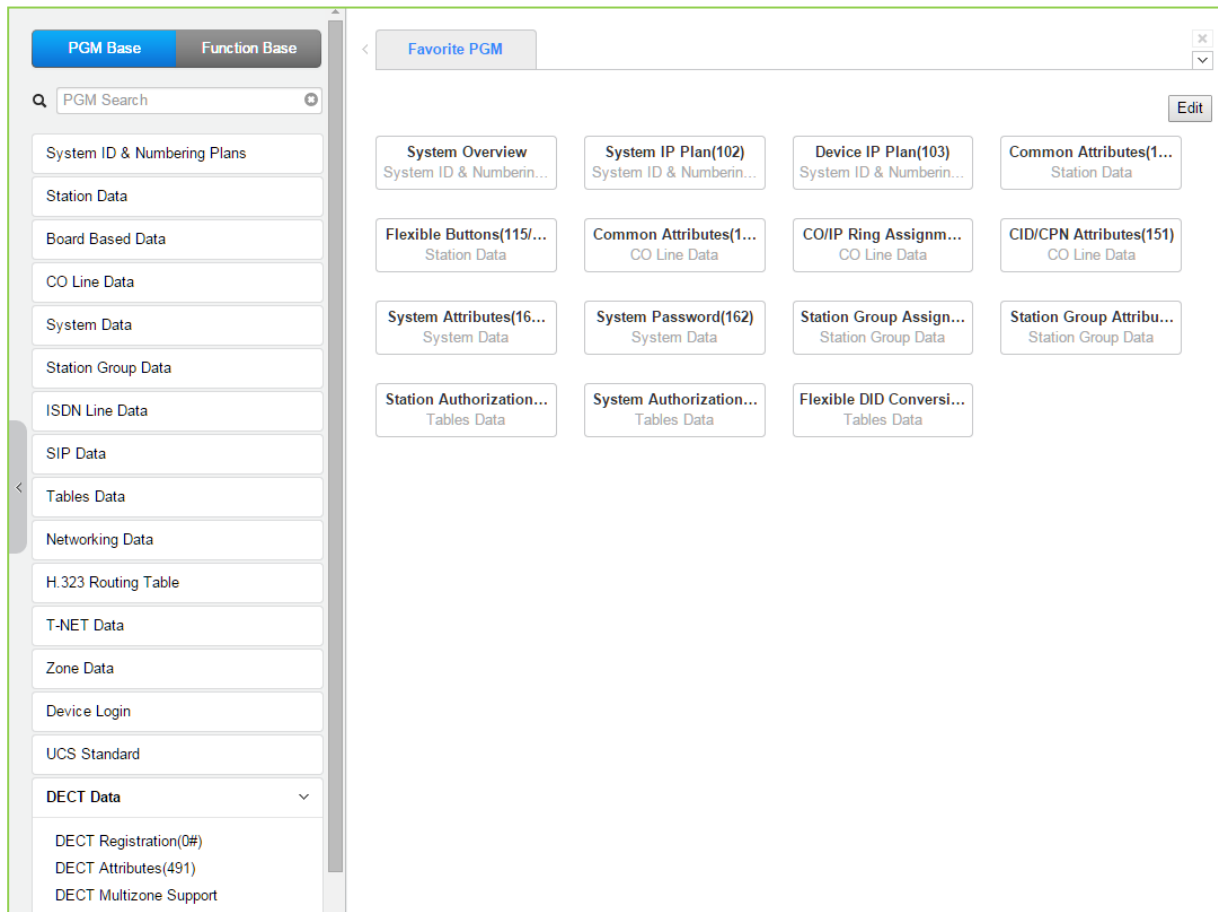

Figure 4.4.16-1 DECT Data Main Page

4.4.16.1 DECT Registration (0#)

Selecting DECT Registration returns the DECT Registration input page. Use the check mark to indicate which attributes to modify; data for checked attributes is stored by clicking **[Save]** button.

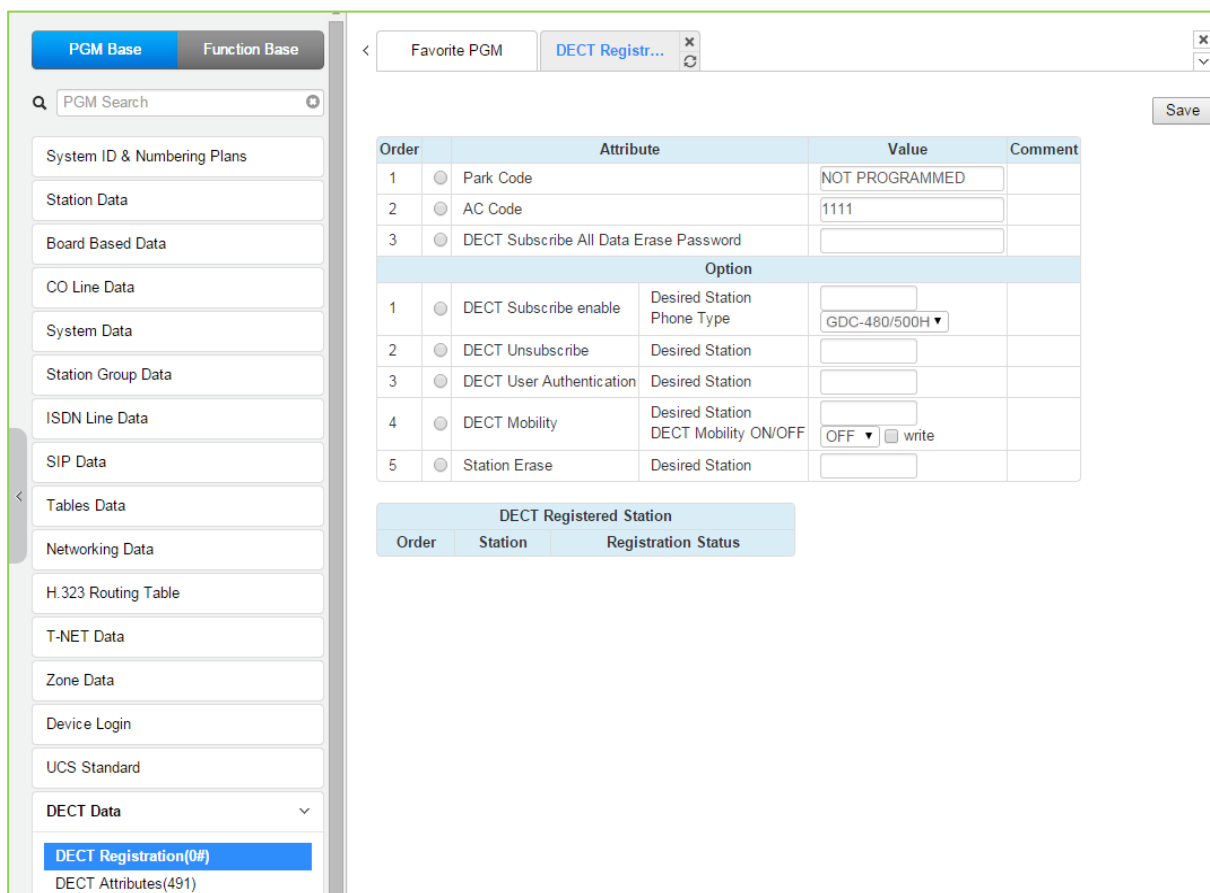

Figure 4.4.16.1-1 DECT Subscription Screen

On this page, the DECT PARK and authorization codes are defined. Several “Options” are available to enable subscription, unsubscribe a DECT station, enable mobility, etc. A chart is included displaying the registered and subscribed DECT terminals.

Table 4.4.16.1-1 DECT Registration

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Park Code	The PARK (Portable Access Rights Key) Code is a unique system Id entered at the DECT handset during the subscription process.	14 digits	Not programmed
AC Code	The Authentication Code is entered at a DECT handset to verify subscription.	Up to 8 digits	1111
DECT Subscribe All Data Erase Password	To erase all data of DECT, enter the password.		
Option			
DECT Subscribe Enable	Enables the system to accept subscription from a DECT handset.		
Desired Station	Desired station number for the wireless DECT handset.	Station Number	

Table 4.4.16.1-1 DECT Registration

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Phone Type	Several types of handsets may be selected. Press [Send] button after entering the number and type. GDC-480H/500H, GDC-400/450H, Standard GAP	Refer to description	GDC-480H/500H
DECT Unsubscribe	To terminate a subscription, enter the station number for the DECT handset. Note the Station must be connected, otherwise use Station Erase field below.	Station number	
DECT User Authentication	To subscribe successfully, the user will be required to enter the Station Authorization Code from PGM 227.		
DECT Mobility	When a DECT handset is registered to multiple systems that are networked, calls can be routed over the network to the DECT handset location.	Station number	
	Enter the registered station number, select Mobility ON or OFF and click [write] box then Save the page.	OFF ON	OFF
Station Erase	To terminate the registration for a DECT phone that is not connected, enter the registered station number and click [Save] button.	Station number	

4.4.16.2 DECT ATTRIBUTES - PGM 491

Selecting the DECT Attributes returns the DECT ATTRIBUTES input page. Click **[Save]** button after changing Value.

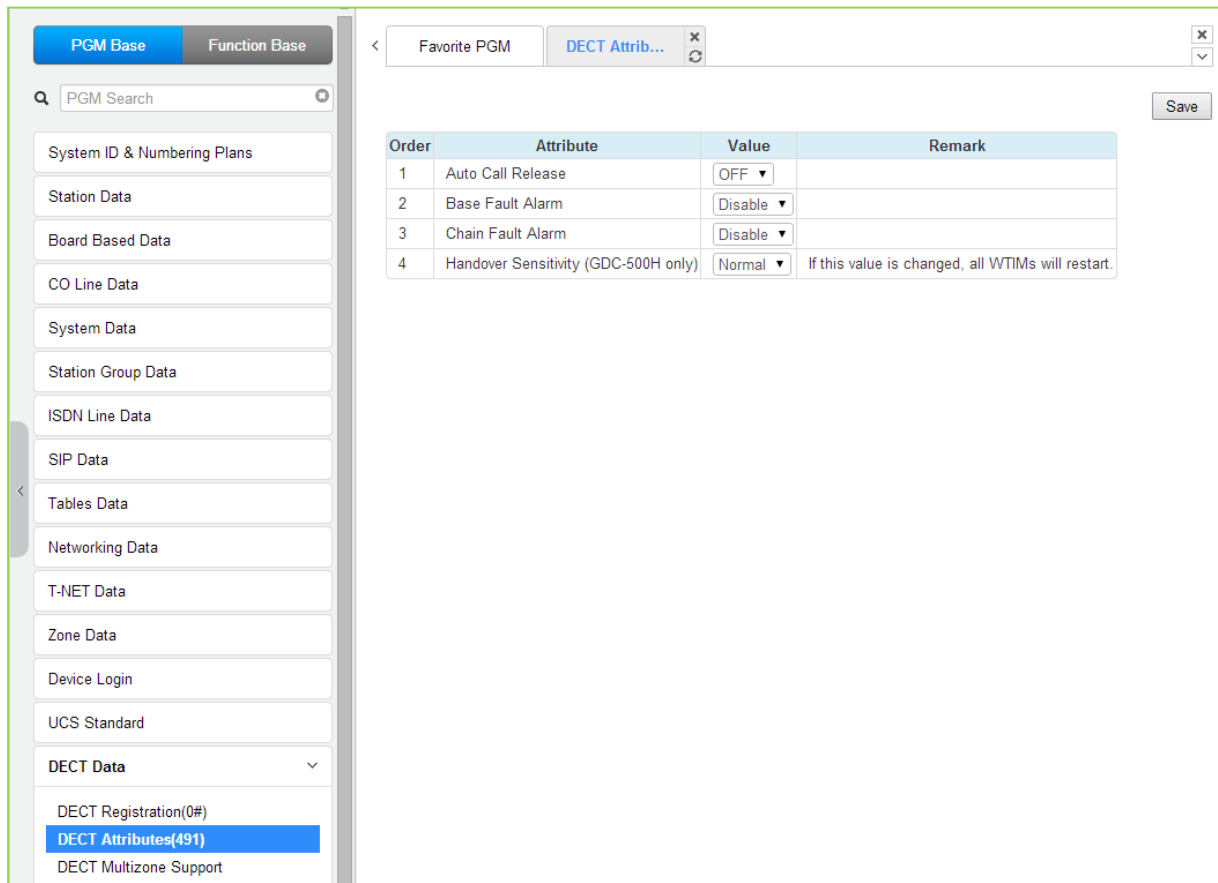

Figure 4.4.16.2-1 DECT ATTRIBUTES

DECT Attributes define functions associated with the DECT equipment and operation as shown in the following table.

Table 4.4.16.2-1 DECT Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Auto Call Release	If enabled, when the other party of an active internal call disconnects, DECT terminal returns to idle.	OFF ON	OFF
Base Fault Alarm	If enabled, DECT Base station alarms are sent to the Attendant.	Disable Enable	Disable
Chain Fault Alarm	If enabled, alarms are sent to the Attendant indicating a fault in the link between WTIM modules. This feature is only for UCP.	Disable Enable	Disable
Handover Sensitivity	The user can control the handover sensitivity of GDC-500H only. (Normal or Strong) If this value is changed, all WTIBs will restart.	Normal Strong	Normal

4.4.16.3 DECT Multi-zone support

Selecting the DECT Multi-zone support will display the DECT Multi-zone support input page. Click **[Save and All WTIM (WTIB) reset]** button after changing the Value

Figure 4.4.16.3-1 DECT Multi-zone support attributes

It is for roaming of DECT phones in large sites with more than 3 WTIM (WTIB).

For detailed information, you can get it from DECT Installation Guide.

It is recommended to use one type of WTIM (WTIM 24 or WTIM 4/8)

If both are used in a site then zone number of WTIM 4/8 should be lower than zone number of WTIM 24.

Maximum DECT phone number is 192 if WTIM is combined

Maximum DECT phone number is 254 if only WTIM 24 is used in a site.

4.4.17 Hotel Data

Selecting the hotel data returns the sub-menu displayed in the left frame as shown in the following figure.

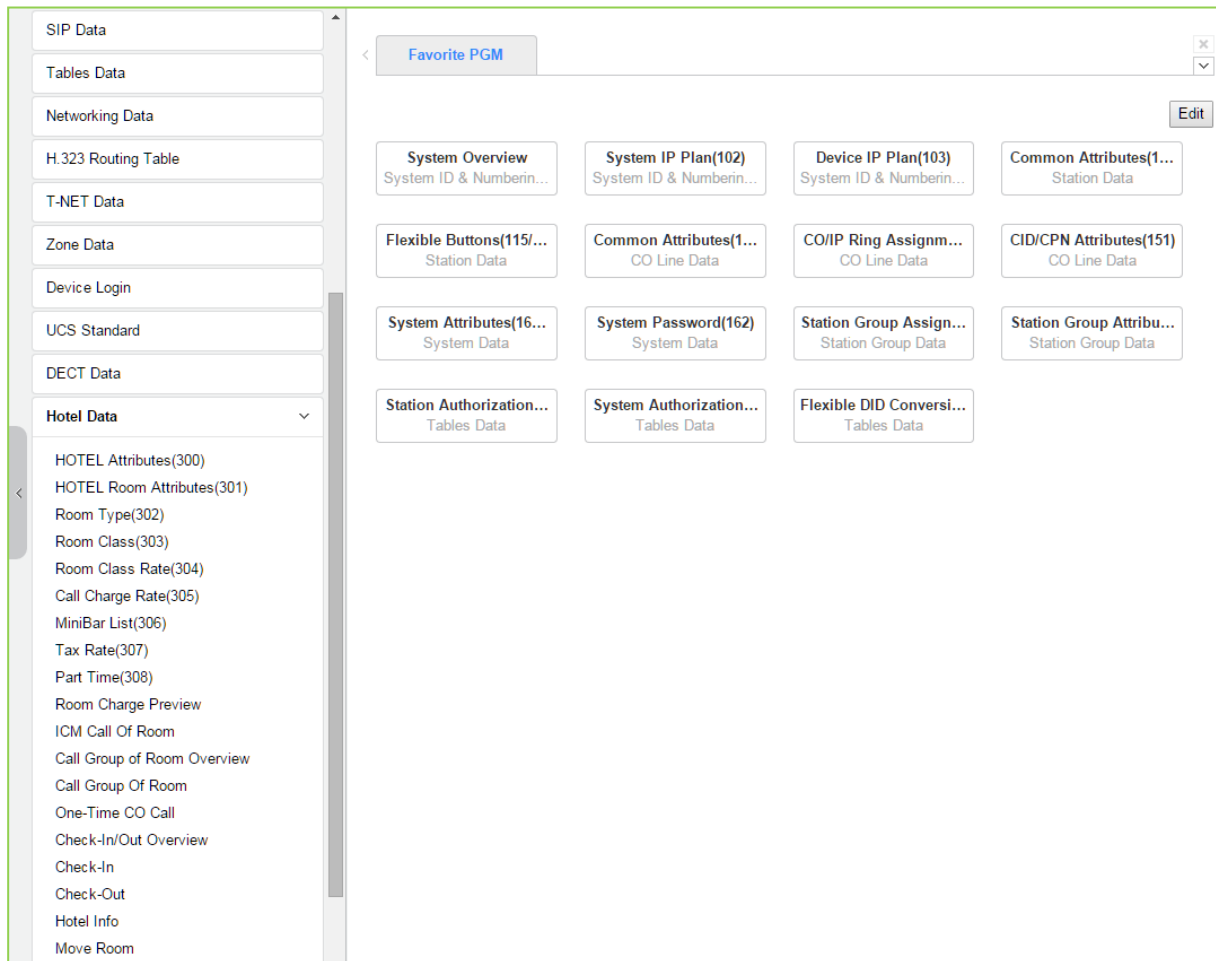

Figure 4.4.17-1 Hotel Data main page

With Hotel Data, we describe the function on another Hotel Feature and Programming manual. Refer to “Hotel Feature and Programming manual’.

4.4.18 Green Mode for eMG - PGM 500

Selecting the Green Mode program group returns the sub-menu displayed in the left frame as shown in the following figure.

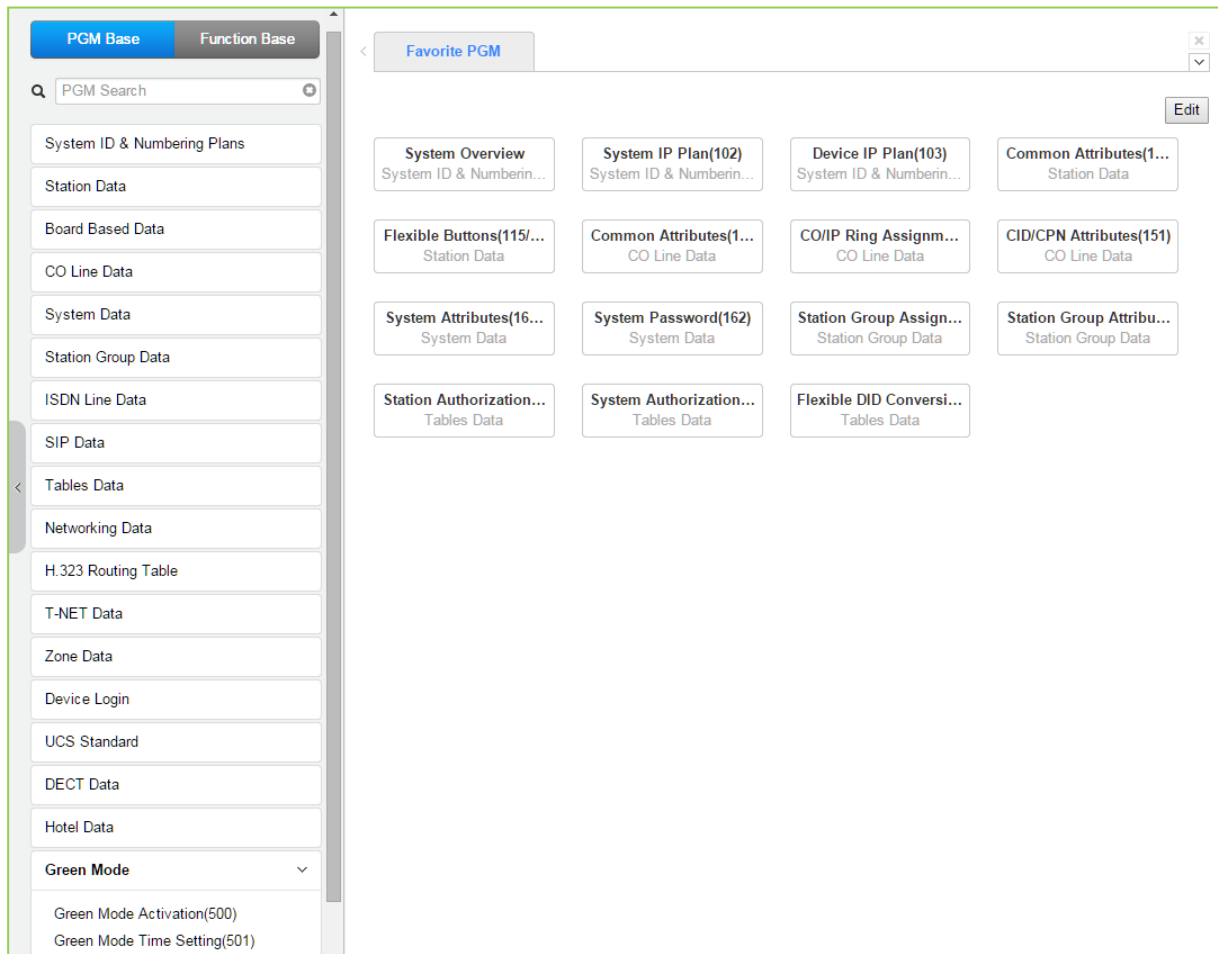

Figure 4.4.18-1 Green mode main page

4.4.18.1 Green mode activation

Selecting Green Mode Activation returns the page shown. Click **[Save]** button after changing Value.

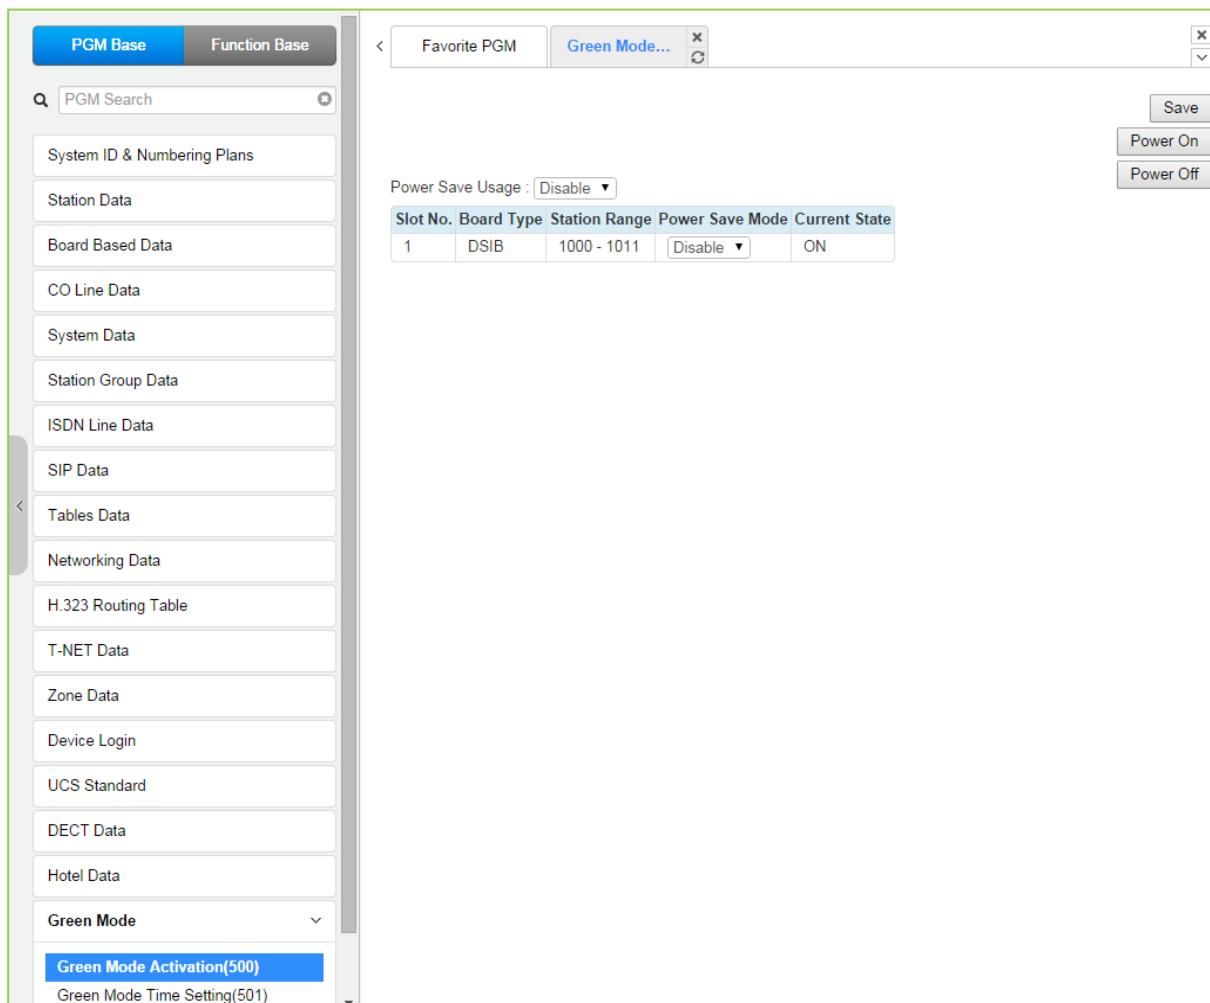

Figure 4.4.18.1-1 Green Mode Activation

The system can disable the power of a Digital Phone or Single Line Telephone (SLT) installed in the HYIB/SLIB/DSIB to save power during night or holiday mode. The power ON/OFF can be controlled by Web admin manually or automatically by assigning power ON/OFF time.

Table 4.4.18.1-1 Green Mode Activation Attributes

ATTRIBUTE	DESCRIPTION	DEFAULT
Power Save Usage	Enables or Disables Power Save usage.	Disable
Slot No.	The Slot Number of board supporting power control.	
Board Type	Board Type.	
Station Range	Station Number Range of board supporting power control.	
Power Save Mode	Enables or Disables Power Save Usage Mode of each board.	Disable
Current Status	Displays the current status of board power ON/OFF.	ON
Power ON button	Power ON manually all of stations in Power Save used board.	
Power OFF button	Power OFF manually all of stations in Power Save used board.	

4.4.18.2 Green Mode Time Setting

Selecting the Green Mode Time Setting returns the page shown. Click **[Save]** button after changing Value.

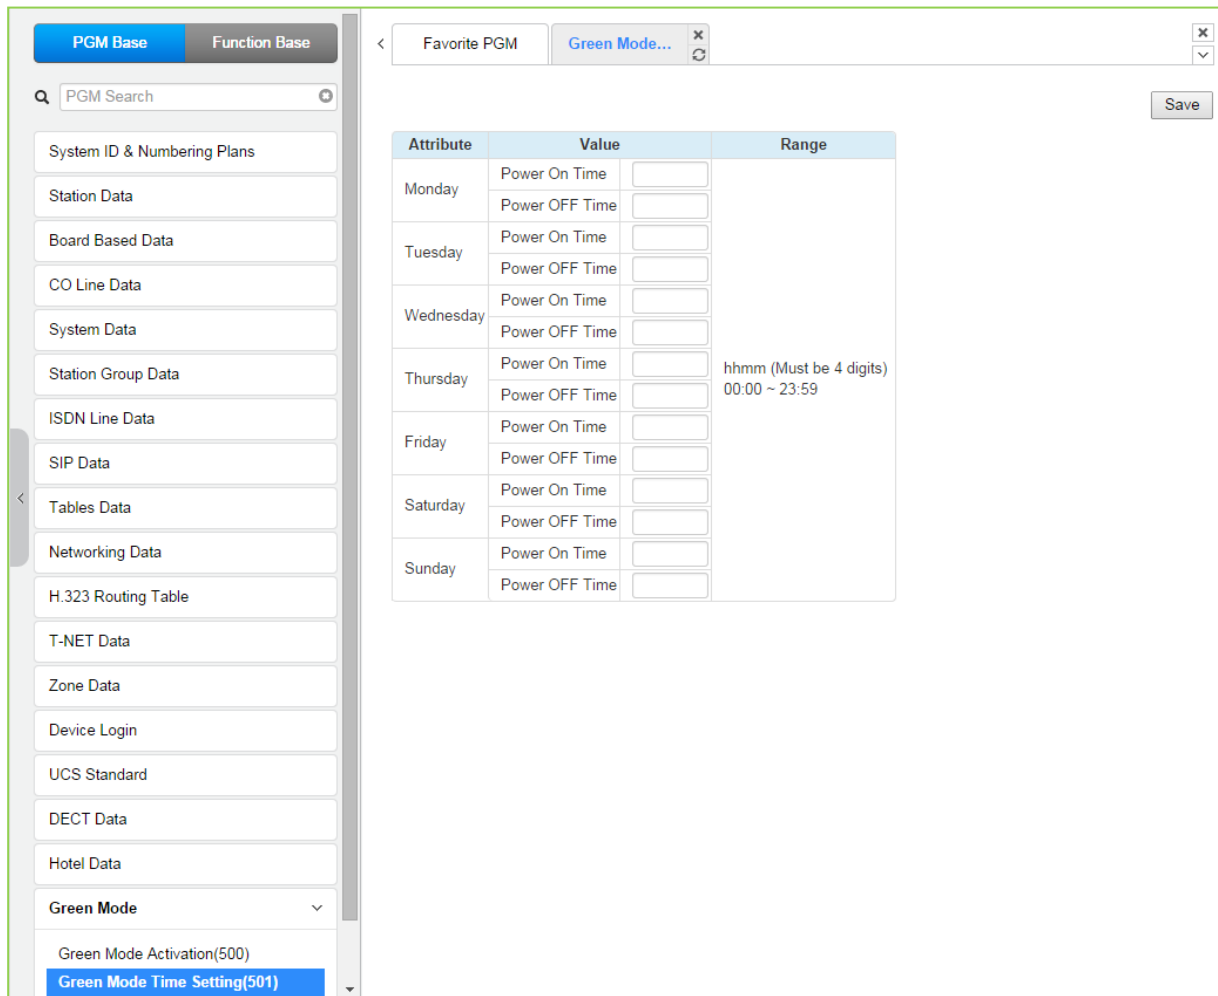

Figure 4.4.18.2-1 Green Mode Time Setting

The power ON/OFF time can be assigned to control Green Mode automatically. The power ON/OFF time can be defined at each day in a week. And when defined that time, power to assign board will be served or not.

Table 4.4.18.2-1 Green Mode Time Setting

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
Power ON Time	The time to start power supply to assigned board.	hhmm (Must be 4 Digits)	
Power OFF Time	The time to stop power supply to assigned board.	hhmm (Must be 4 Digits)	

4.4.19 Redundancy Data for UCP600 & 2400

Selecting the redundancy data returns the sub-menu displayed in the left frame as shown in the following figure.

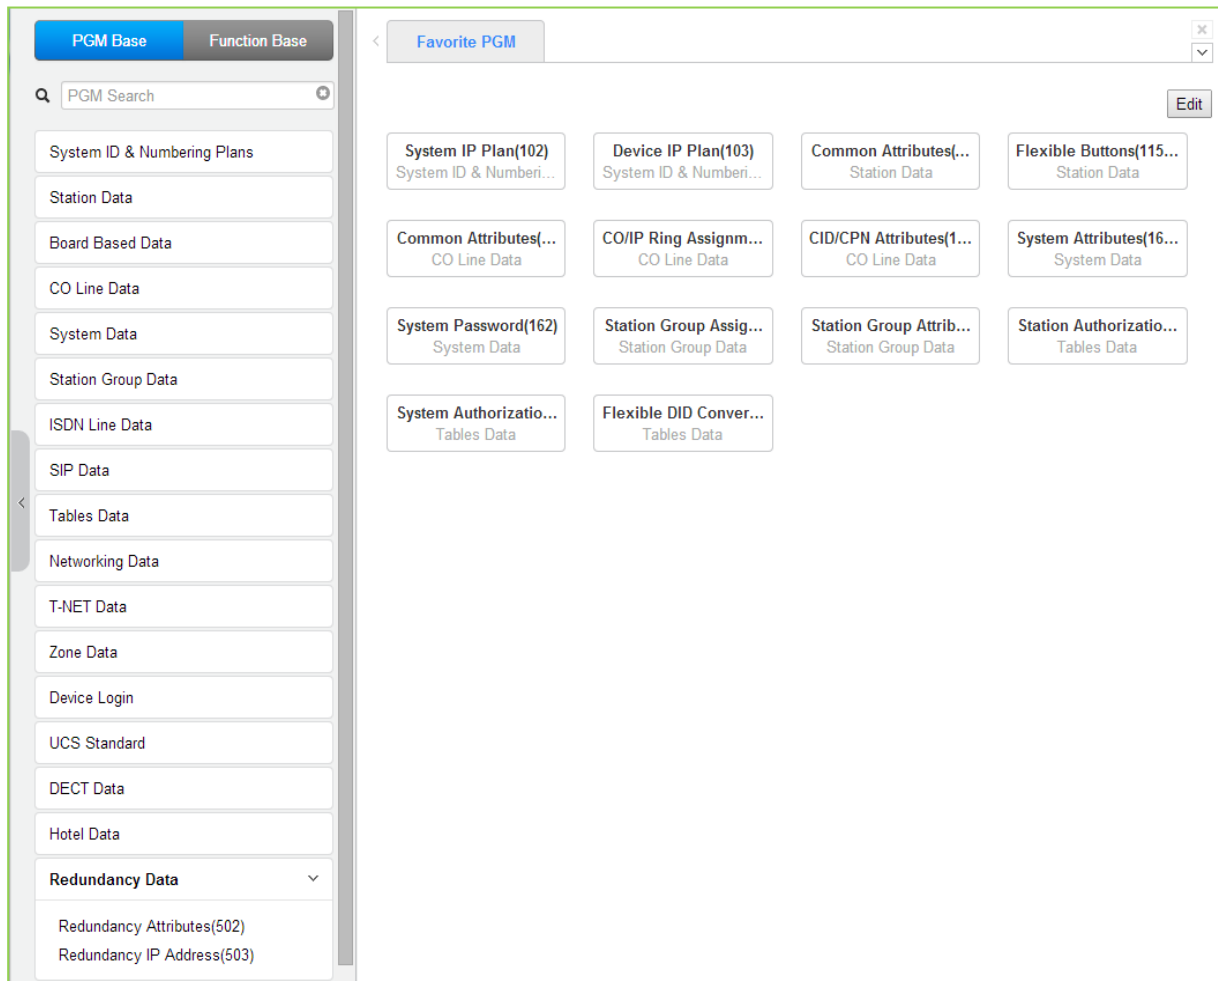

Figure 4.4.19-1 Redundancy Data main page

4.4.19.1 Redundancy Attributes – PGM 502

Selecting Redundancy attributes will display the page shown. Click **[Save]** button after changing Value.

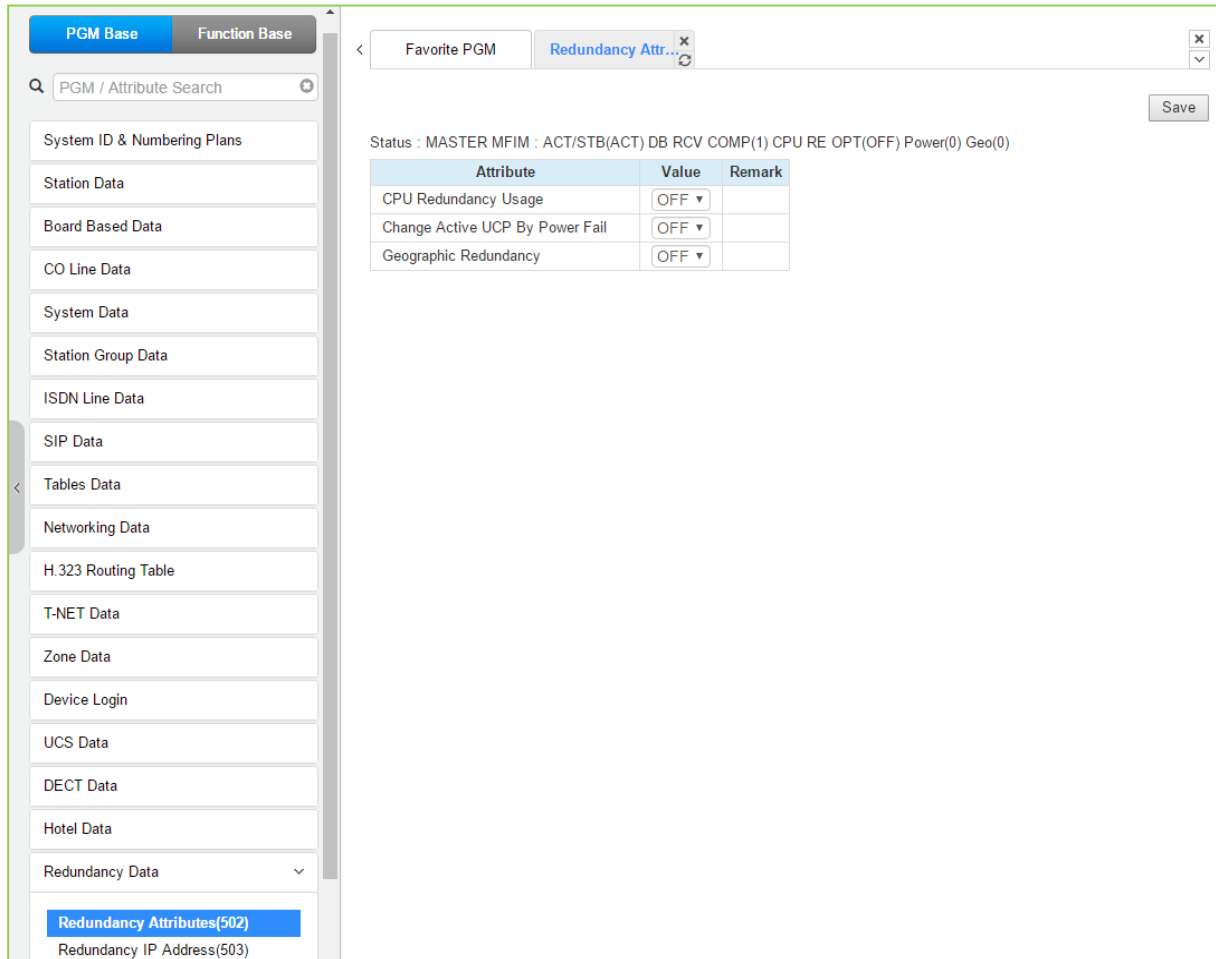

Figure 4.4.19.1-1 Redundancy Attributes

The Redundancy attributes enable redundancy and activate “Geographical” redundancy.

Table 4.4.19.1-1 Redundancy Attributes

ATTRIBUTE	DESCRIPTION	RANGE	DEFAULT
CPU Redundancy usage	When redundancy is employed, this field informs the master UCP that a redundant UCP is available.	OFF ON	OFF
Change Active UCP By Power Fail	When power fails, the active UCP is changed to the standby mode and the standby UCP becomes active.	OFF ON	OFF
Geographical Redundancy	Geographical redundancy permits remote location of the redundant UCP modules.	OFF ON	OFF

4.4.19.2 Redundancy IP Address – PGM 503

Selecting the redundancy IP Address will display the page shown. Click **[Save]** button after changing Value.

Attribute		Value	
My system	LAN1	IP Address	10.10.10.2
		Net Mask	255.255.0.0
		Gateway IP Address	10.10.10.1
		Firewall IP Address	0.0.0.0
My system	LAN2	IP Address	10.20.10.2
		Net Mask	255.255.255.0
		Gateway IP Address	10.20.10.1
		Firewall IP Address	0.0.0.0
Associate System	LAN1	IP Address	0.0.0.0
		Net Mask	0.0.0.0
		Gateway IP Address	0.0.0.0
		Firewall IP Address	0.0.0.0
Associate System	LAN2	IP Address	10.20.10.3
		Net Mask	255.255.255.0
		Gateway IP Address	10.20.10.1
		Firewall IP Address	0.0.0.0

Figure 4.4.19.2-1 Redundancy IP Address

For proper operation, the IP addressing parameters of the LAN1 ports of the redundant UCP modules must be defined for Redundancy.

4.4.20 Initialization - PGM 450

Selecting Initialization will return the sub-menu in the left frame in as shown in the following figure.

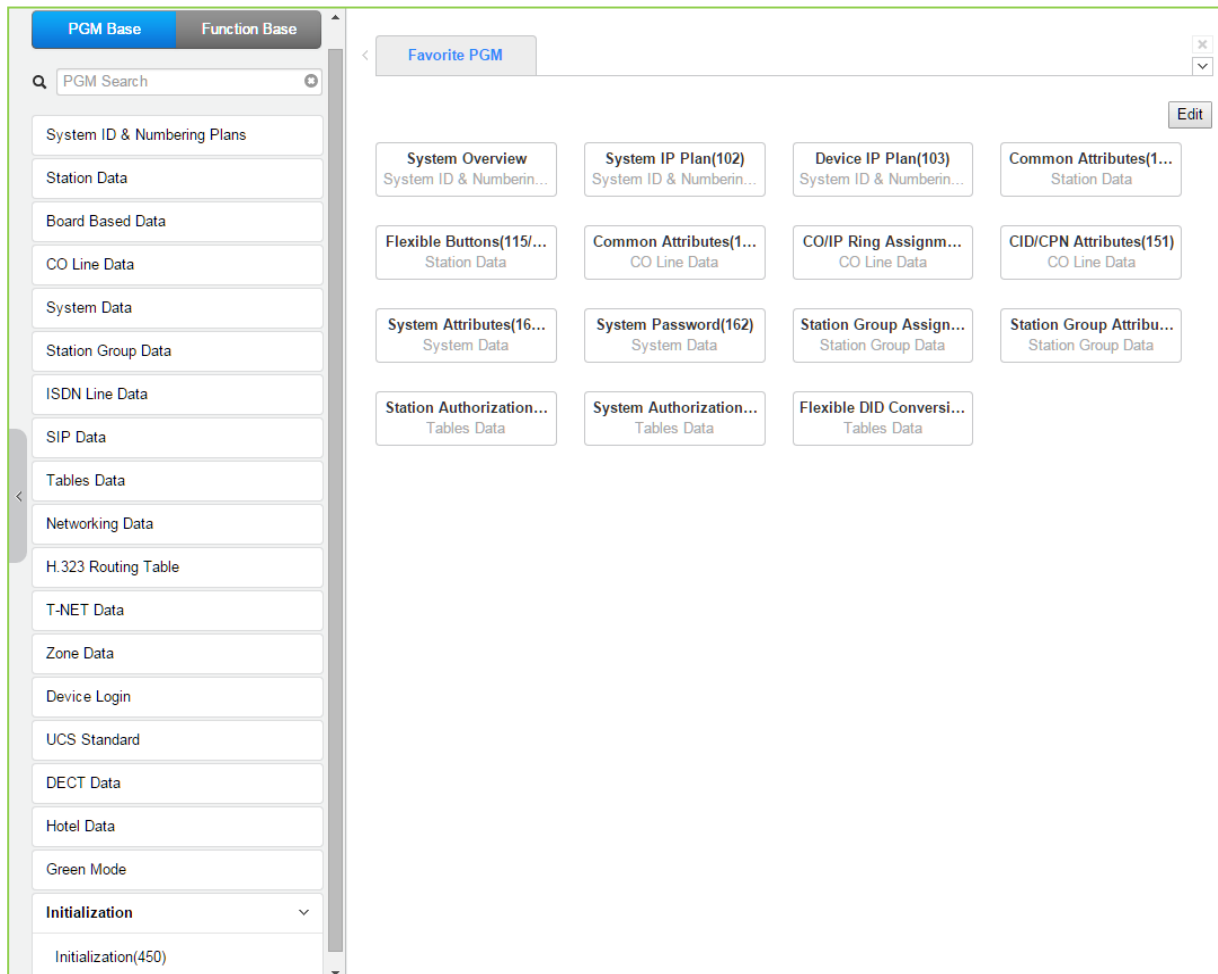

Figure 4.4.20-1 Initialization

4.4.20.1 Initialization Table - PGM 450

Selecting Initialization will display the Initialization Table data entry page. Use the check mark to indicate which attributes to modify; data for checked attributes is initialized by clicking **[Initialize]** button or reset system by clicking **[Reset system]** button.

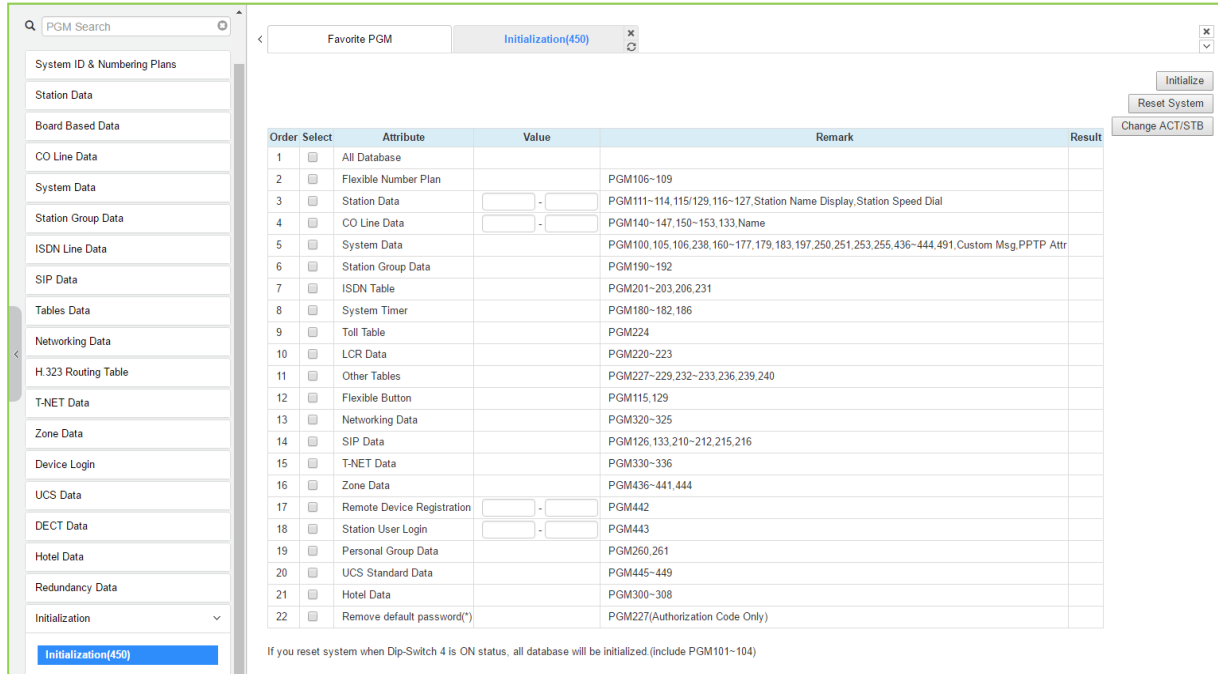

Figure 4.4.20.1-1 Initialization Menu

The system has been pre-programmed with certain features using the default data. The default data are loaded into memory when the system is initialized. The system should always be initialized when first installed or the database appears corrupted.

In addition, the UCP system can be restarted from this page and, if redundant processors are equipped, the active and standby UCP modules can be modified.

The system can be initialized manually during installation.

Note

If you reset eMG system when Dip switch 2 is On, all database will be initialized including PGM 101-104.

If you reset UCP system when Dip switch 4 is On, all database will be initialized including PGM 101-104.

4.5 Maintenance

The Maintenance tab main screen displays information on the system software versions as well as information on modules and terminals connected to the system.

From this page, the database upload/download, software upgrade, access control, license install and other management functions shown in Figure 4.5-1~ 4.5-3 are accessed.

In addition, at the top of the central screen, detailed software version information and system resource status (CPU, memory, storage and network) are provided. Also, you can monitor the device in real time by clicking **[Real-time Device Monitoring]**.

As eMG/UCP software is being upgraded regularly, we cannot guarantee the software version displayed and it may be different from the current version.

Among Menus on Maintenance, the following functions are not available at UCP2400.

- VSF Prompt message
- VSF System greeting
- Voice Mail USB Backup on VSF Mail Management (for eMG80/800, UCP)
eMG100/vUCP: Vocie Mail Web Backup/Restore

Real time monitoring for Device

You can monitor the current status about Device in real time. The new information is highlighted in red.

The screenshot shows the iPECS eMG80 Maintenance interface. The top navigation bar includes 'Administration' and 'Maintenance' (selected). A search bar is present on the left. The main content area is titled 'System Information' and displays the following details:

- Appl Version : S-eMG80-Tmp1902-3.5.13-App
- Appl Build Date : 2019/Feb/11 07:05
- Boot Version : 2.0Da APR/18
- Kernel Version : R1.1.29
- H/W Issue : 0
- System bootup time : 17-07-28 20:25:17
- CPU Usage : 1 %
- Memory Usage : 36 %
- Storage Usage : 25 %
- Network Usage : TX 0 bps, RX 0 bps

Below the system information is a table showing connected devices. The table has columns for Classification, Type, Logical Num, IP Address, Version, Connection, and State. The 'State' column contains detailed status information for each device.

Classification	Type	Logical Num	IP Address	Version	Connection	State
CO	PRIB	1 - 30	10.10.10.4	T3.5.13	Connected	[1:Wait Idle][2:Wait Idle][3:Wait Idle][4:Wait Idle][5:Wait Idle][6:Wait Idle][7:Wait Idle][8:Wait Idle][9:Wait Idle][10:Wait Idle][11:Wait Idle][12:Wait Idle][13:Wait Idle][14:Wait Idle][15:Wait Idle][16:Wait Idle][17:Wait Idle][18:Wait Idle][19:Wait Idle][20:Wait Idle][21:Wait Idle][22:Wait Idle][23:Wait Idle][24:Wait Idle][25:Wait Idle][26:Wait Idle][27:Wait Idle][28:Wait Idle][29:Wait Idle][30:Wait Idle]

Figure 4.5-3UCP Maintenance Main Page

4.5.1 S/W Upgrade

iPECS system employs a NAND based memory file system thus, html, UCP/MPB upgrade and iPECS appliance image files can be uploaded without impact to the current database. All of iPECS series modules can be upgraded by remote access through the system. Selecting S/W Upgrade from the Maintenance page displays the Appliance Version page and sub-menus display in the left frame as shown in the following figure.

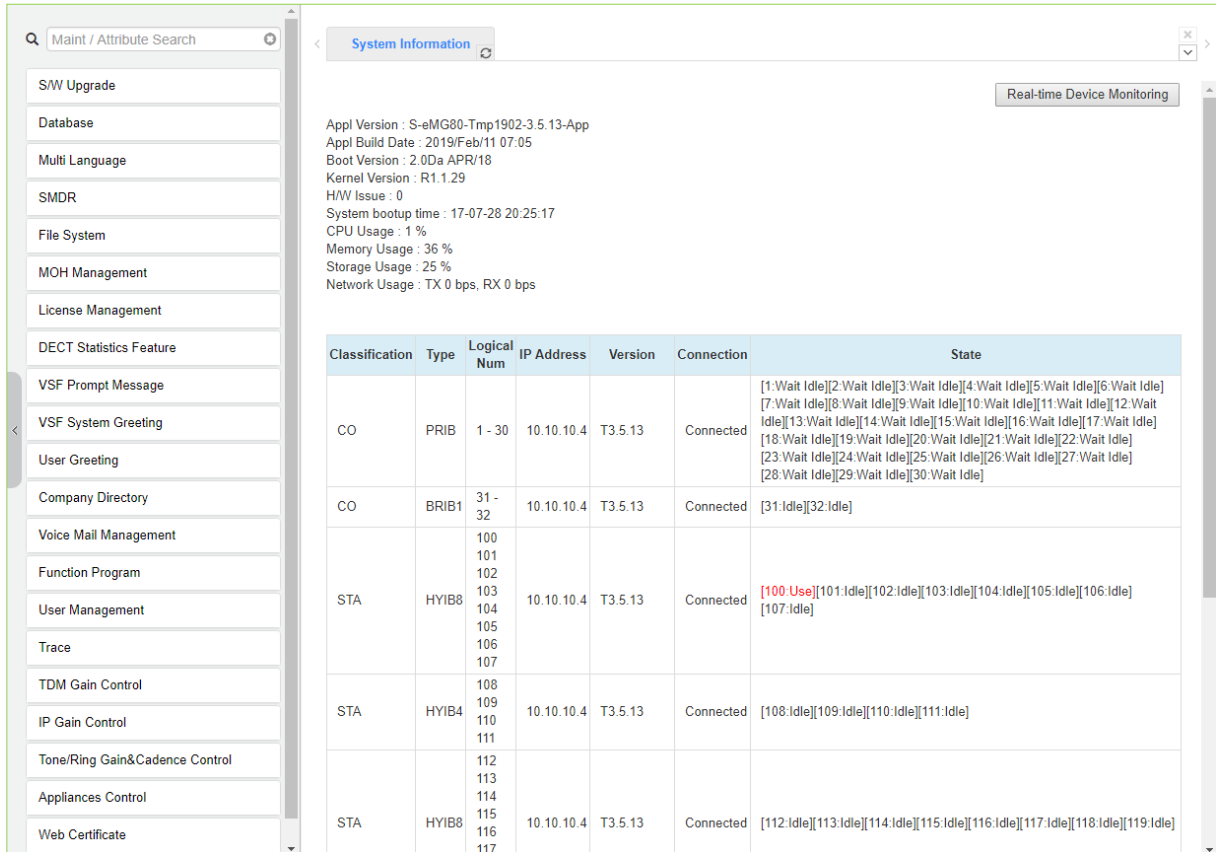

Figure 4.5.1-1 S/W Upgrade

There are two types of upgrade images: application and kernel image. If both are required, upgrade the kernel first and then the application.

The VMUI is part of the MPB and VSF prompts are upgraded by uploading prompt files to the MPB. VMIB prompts are upgraded by direct upload of prompt files to the VMIB.

4.5.1.1 File Upload

From the File Upload page, click **[Select file]** button and then open the pop-up folder. Select the desired file to upload to the system's memory and click the **[Start]** button. The file is sent to the system's memory, saved and automatically loaded upon a system reset or restart.

Prior to upload, verify sufficient memory is available in eMG/UCP File System for the files to be uploaded. Refer to 'File System section' to view the free disk space and delete any unused files. Note names of files required for normal system operation will be grey out and cannot be deleted.

Html image files are extracted and previous HTML files are deleted at completion of the upload process. New VSF prompt files are also available immediately upon successful upload. If file upload succeeds, a success page will be displayed.

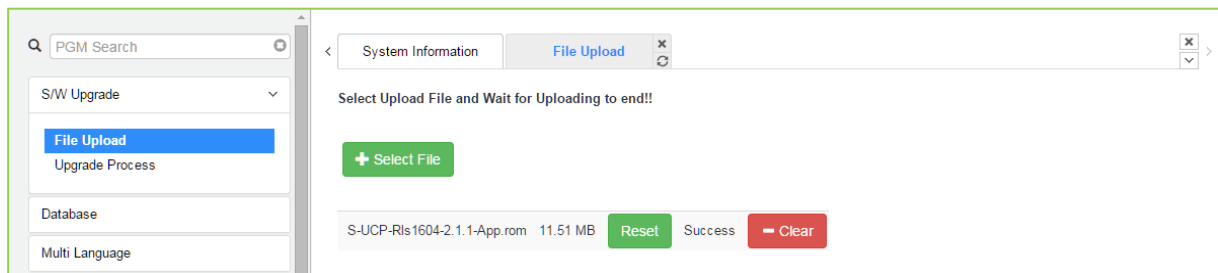

Figure 4.5.1.1-1 File Upload

4.5.1.2 Upgrade Process

If the iPECS Appliance image is uploaded, the appliances of the type for which an image was uploaded will be displayed and can be selected to upgrade, as shown in the following figure Upgrade Process. Select the desired appliance and click **[Upgrade]** button, the upgrade process will start and a progress screen will be displayed.

Figure 4.5.1.2-1 Upgrade Process

4.5.1.2.1 Upgrade Process View

The Upgrade Process View provides a status window; refer to the following Upgrade Process View, for Module and terminal upgrade activity in process.

Figure 4.5.1.2-1 Upgrade Process View

4.5.1.2.2 iPECS eMG/UCP Upgrade Process

iPECS Software Full Upgrade Sequence

The following shows the order in which the upgrade process proceeds and firmware files for iPECS and modules. Note the xxxx in the ROM file names indicates the version number of the file.

MPB/UCP Upgrade Process

- 1) Upload MPB/UCP application image.

iPECS UCP	UCP application image (Example, S-UCP-RIs1601-2.1.1-app.rom)
iPECS eMG	eMG 80/100/800 MPB application image (Example, eMG80: S-eMG80MPB-RIs1512-2.1.1-App) (Example, eMG100: S-eMG100MPB-RIs1512-2.1.1-App) (Example, eMG800: S-eMG800MPB-RIs1512-2.1.1-App)

- 2) Restart MPB/UCP.

Note)

If the new system database is not compatible with existing system database, it will be necessary to initialize the system database.

This can be done manually using the Initialize Dip Switch located on the UCP/MPB module or via the Initialization Web page.

Upgrade of the UCP/MPB includes HTML files; a separate upload of the HTML files is not required. HTML files can be separately upgraded under the File System

Appliances Upgrade Process

- 1) Upload Appliance application image to MPB

LIP 8012/8024/8040E application image:	GS98Pxxxx.rom (xxxx indicates the version)
LIP 8002E application image:	GS99Pxxxx.rom (xxxx indicates the version)

- 2) Select target appliances & Upgrade application image and click **[Upgrade]**.
- 3) Wait until upgrade process completes.
- 4) Automatically restart when upgrade completes successfully.

Upgrade of Voice Prompt for eMG

- 1) Access to VSF Prompt Upgrade page.
- 2) Select First/Second/Third for multiple language voice prompt.
- 3) Upload the proper prompt file.

VSF prompt file:	??96Wxxxx.rom (?? Is nation, i.e. GS, DM, KR, etc. ; xxxx indicates the version)
------------------	--

Upgrade of Voice Prompt to VMIU for eMG

- 1) Access to MPB.
- 2) Select First/Second/Third for multiple language of voice prompt.
- 3) Upload the proper prompt file to VMIU.

VMIB prompt file:	??96Wxxxx.rom (?? Is nation, i.e. GS, DM, KR, etc. ; xxxx indicates the version)
-------------------	--

4.5.1.3 Upgrade HTML Files

The “File View” Menu is used to upload file and reload the system’s html files. Upload time of html will take 5 ~ 10 minutes.

4.5.1.3.1 Appliances Upgrade (Device and iPECS Phone)

Upload appliance image, and click **[Upgrade process]** button to select upgrade appliances. If appliances are selected, click **[Upgrade]** button. The page shown in Figure 4.5.1.2-1 will be displayed indicating the Upload command has been sent and upgrade process is working.

This page will display the Upload status. When the appliance upgrade process is successful, the status is updated to “Success”. If the upgrade process fails, the process is attempted an additional three (3) times before abandoned.

4.5.1.3.2 Direct Appliances Upgrade

Should the above managed upgrade process fail, appliances (Devices and iPECS Phones) can be upgraded directly using the appliance IP address as the upgrade destination address. Note the later may require local access.

Figure 4.5.1.3.2-1 iPECS Phone Direct Connect Upgrade

4.5.1.4 WTIB Base upgrade Process for eMG800

Upgrade WTIB base image of eMG800.

- 1) Upload WTIB base image to MPB.
- 2) Select target base& Upgrade.
- 3) Wait until upgrade process completes.
- 4) Automatically restart when upgrade completes successfully.

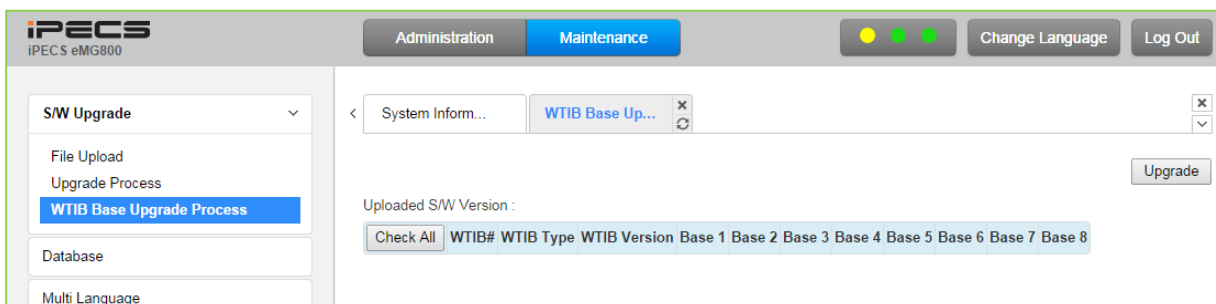

Figure 4.5.1.4WTIB Base Upgrade Process

4.5.2 Database

4.5.2.1 Database Upload

The Database Upload selection will display the Database Upload page as shown in figure. Select **[Select Files]** then select the database file desired from the local PC and click **[Start]** to upload the database to the system.

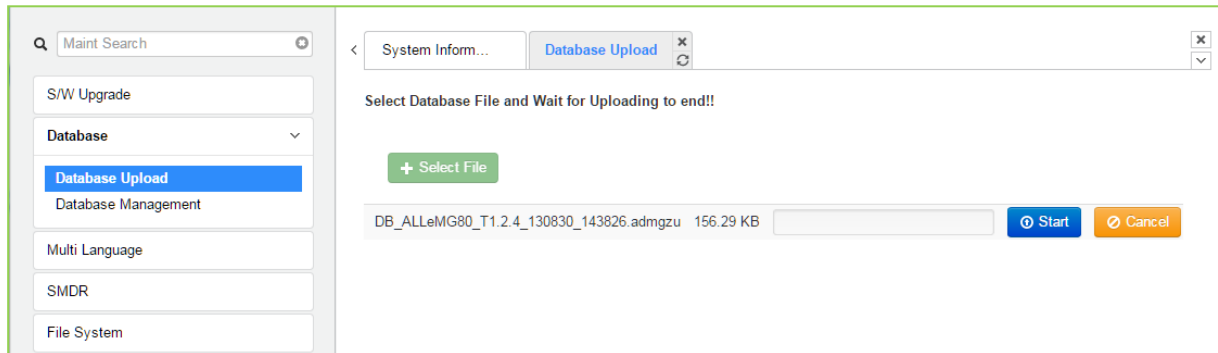

Figure 4.5.2.1-1 Database Upload

4.5.2.2 Database management

Selecting Database Management will display the Database Download page. Select the structure to determine the portion or structure of the download.

Click **[Download]** then select the directory and file name in the pop-ups that follow to save the file to the PC.

After building a database file, the download function will be available. A maximum of five downloadable files for various types of data and structure can be built; building additional files deletes the oldest.

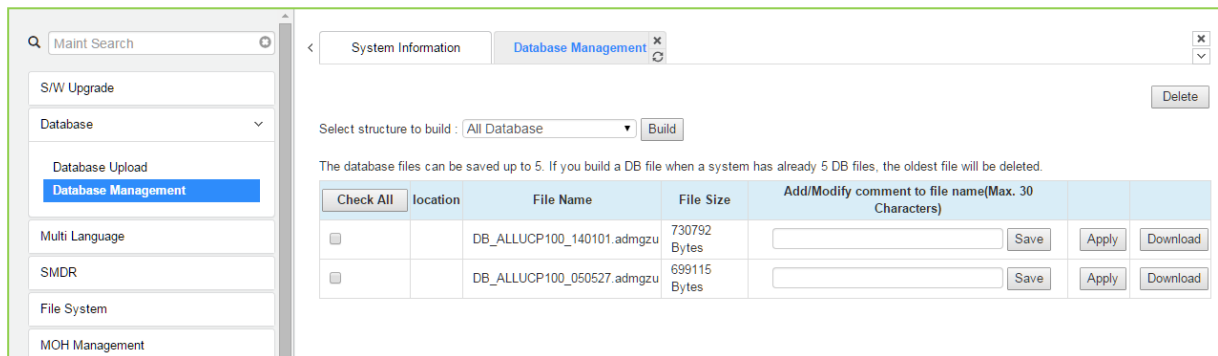

Figure 4.5.2.2-1 Database Download

You can add or modify the file name by entering the characters including special character (#, \$, %, &, ', (), -, ., @, _). The comment will be created as [XXXXXX] before '.admgzu'. It is useful to search DB after downloading.

Clicking on **[Download]** button will present the File Download window. Files should be saved to disk. Note that this screen will appear for all download processes.

4.5.3 Multi Language

The system can employ either English or a “Local Language” for the Web page displays. The multi-language file, which is a csv (comma separated variable) formatted file, is downloaded to a PC and the English terms are translated to the local language.

The modified file can then be uploaded to iPECS system. Once uploaded, the user can select the “Change Language” button and select either English or the Local Language translation for Web page displays.

4.5.3.1 Multi Language File Upload

The Multi Language File Upload selection returns the Multi Language File Upload page as shown in figure. By selecting the Multi Language File desired from the local PC, the desired Multi Language File can be uploaded to iPECS system.

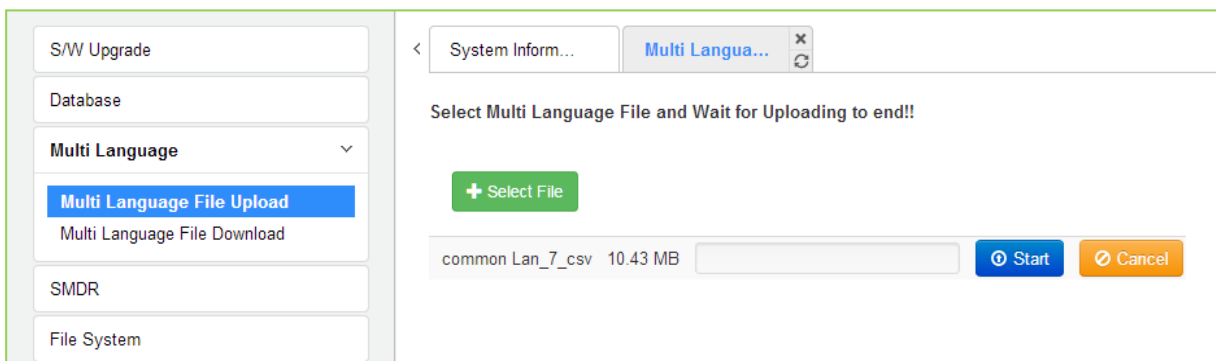

Figure 4.5.3.1-1 Multi Language File Upload

4.5.3.2 Multi Language File Download

Selecting Multi Language File Download will display the Multi Language File Download page figure. Selecting this option will download the entire iPECS system Multi Language File to the local PC.

This also allows the Multi Language File in the PC to be uploaded to iPECS system using the file upload procedures in S/W Upgrade section.

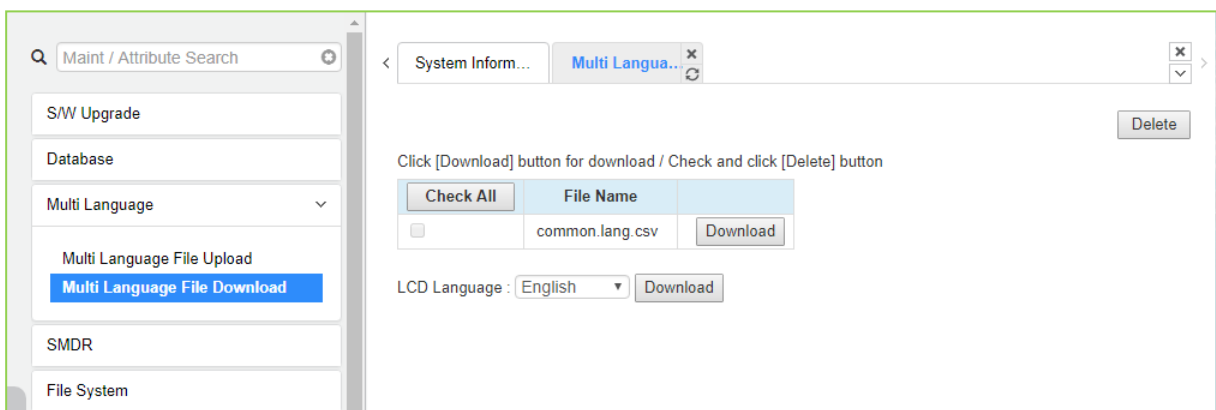

Figure 4.5.3.2-1 Multi Language File Download

4.5.4 SMDR

The iPECS system can download SMDR data in a SYLK format file (.slk). The file is compressed using the “gz” file format. After unzipping, the file can be opened under any common spreadsheet application. The system will provide a view of SMDR data for the station range entered in the Web page Figure. This page may also be employed to delete SMDR records for the station range entered.

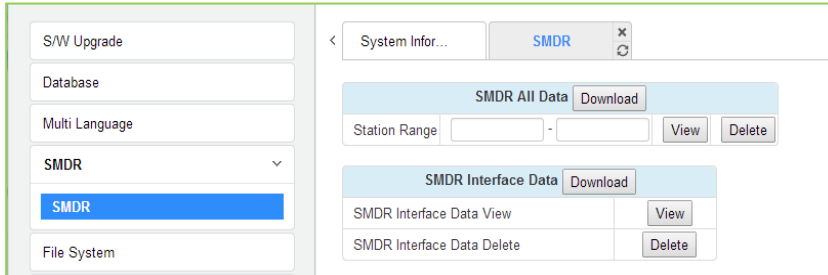

Figure 4.5.4-1 SMDR Access

4.5.5 File System

4.5.5.1 File View & Delete

The File View & Delete page displays a list of the various files stored in the file system memory. To delete a file, check the box for the file and click **[Delete]**. Files can also be downloaded to the PC using the **[Download]** button to the right of the file name. Note the system requires the files displayed in grey and the system will not allow deletion of these files.

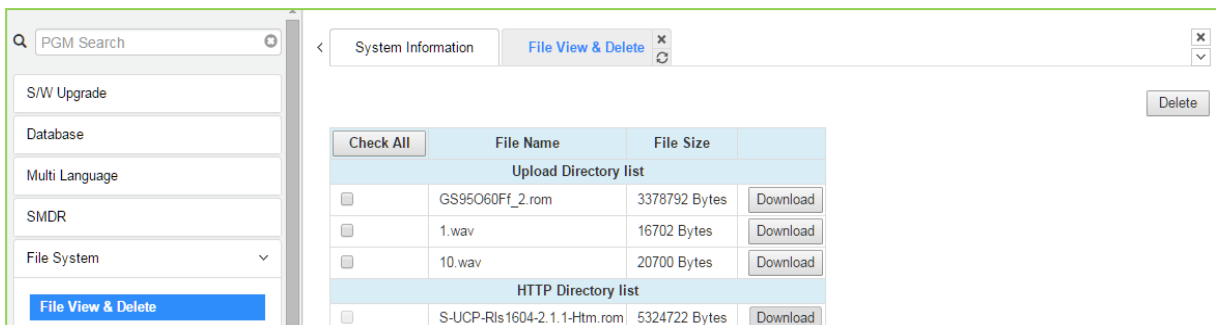

Figure 4.5.5.1-1 File View and Delete

4.5.5.2 File System Information

The File System Information page displays the disk status including the total and free disk space as shown in figure. Use this page to determine if the free space on the disk is sufficient for uploading Upgrade files, section 4.5.1.

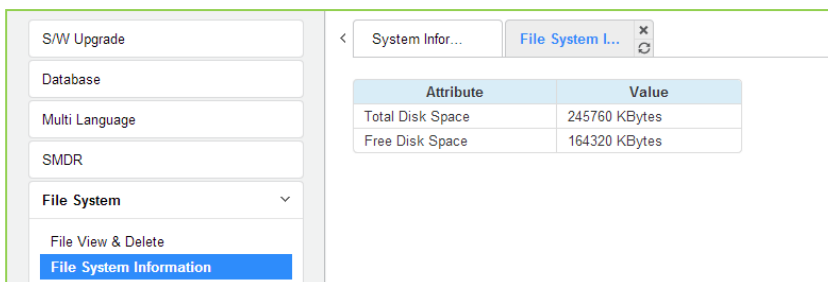

Figure 4.5.5.2-1 File System Information

4.5.6 MOH (Music On-Hold) Management

4.5.6.1 MOH Delete& Download

The MOH Delete& Download page displays a list of the thirteen files stored in the file system memory. To delete a file, check the box for the file and click **[Delete]**. Files can also be downloaded to the PC using the **[Download]** button to the right of the file name.

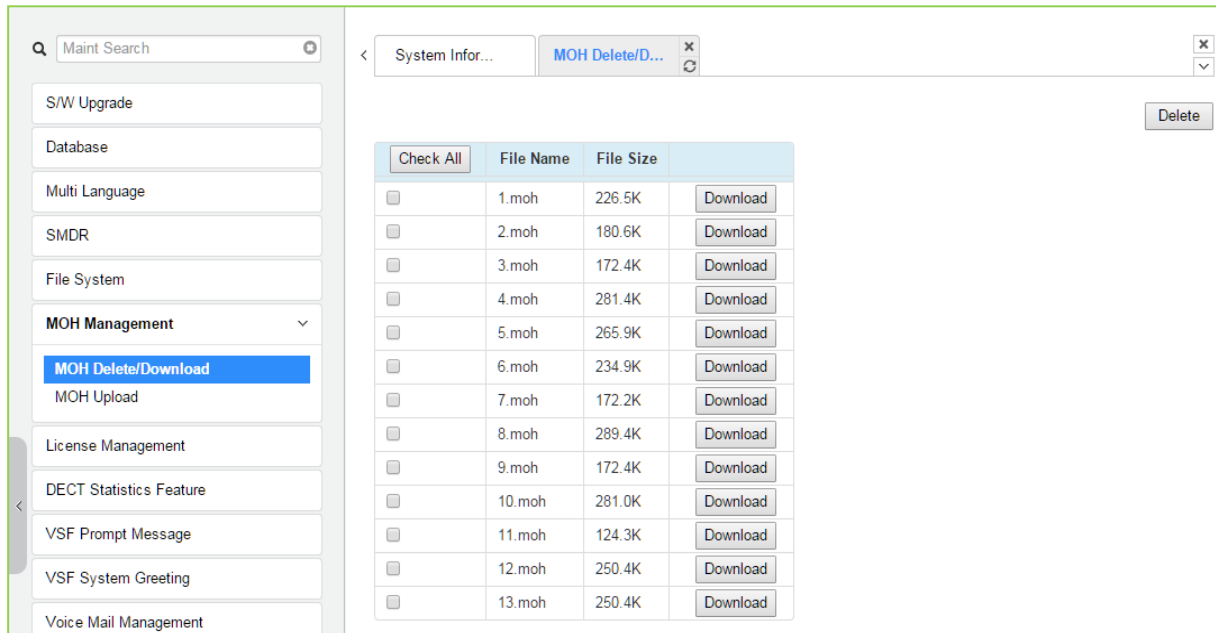

Figure 4.5.6.1-1 MOH Delete& Download

4.5.6.2 MOH Upload

Selecting “MOH Upload” will display the page shown in figure. Here MOH can be uploaded to the system for each of up to thirteen (13) MOH. MOH files format must be followed as shown in the page ‘G.711 a/u-Law wav (8000Hz, 16bit, mono)’.

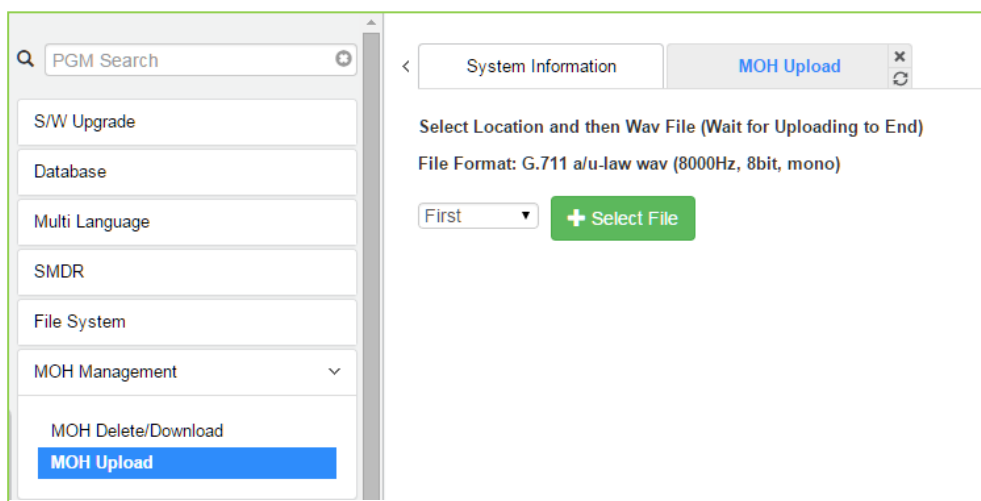

Figure 4.5.6.2-1 MOH Upload

4.5.7 License Install

Various licenses can be installed to expand capacity of the system and Auto Attendant/Voice Mail services available in the system as well as soft clients and feature applications. After obtaining a license, you can find the status of each license.

System License Overview			
Serial No. : 000E56F40D137213			
License	Status	Currently used	Purchased
Software Permissions	Activated		Not activated
Total System Port Expansion	199 copy(s)	50 (STN 1 + CO 49)	50 copy(s)
Total IP Extension	199 copy(s)	1 (LIP 1 + SIP1st 0)	30 copy(s)

Figure 4.5.7-1 License Install

4.5.7.1 License upload

Before License upload, make sure that the date of system is set correctly. Click the Select files button and then open the pop-up folder. Select a valid license file to upload to the system and click the **[Start]** button. If the file which is sent to the system is "System License File", it will be saved and automatically applied without restart. The enabled features by uploading license file can be shown in "System Overview" page.

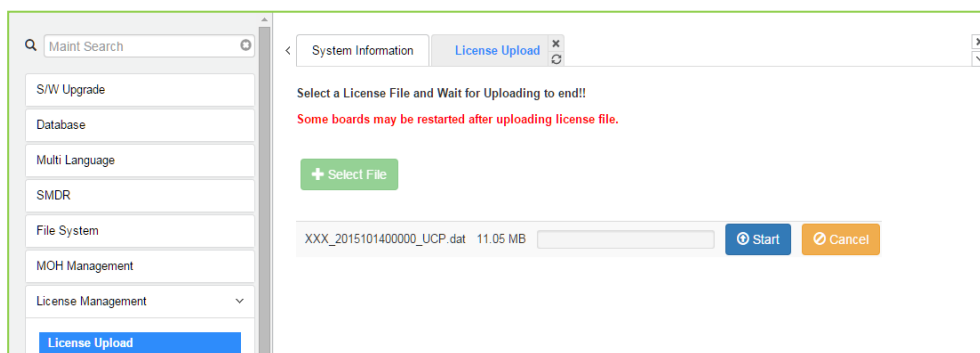

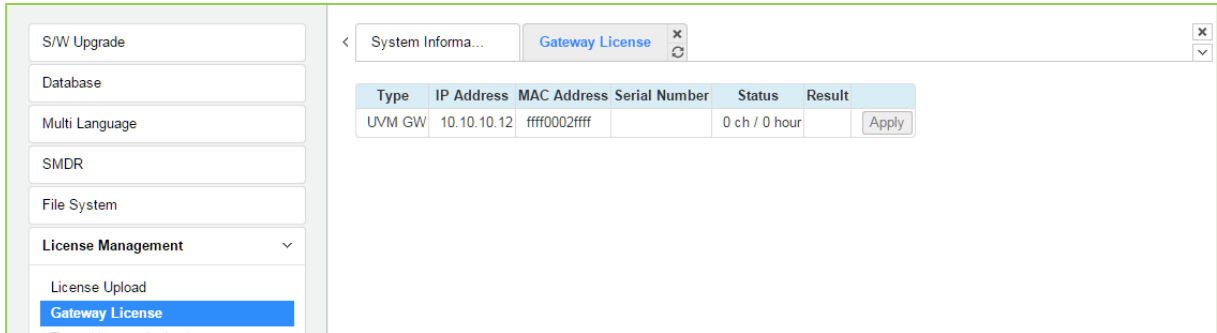

Figure 4.5.7.1-1 License Upload

You can check license upload detailed log by clicking "Log View" button.

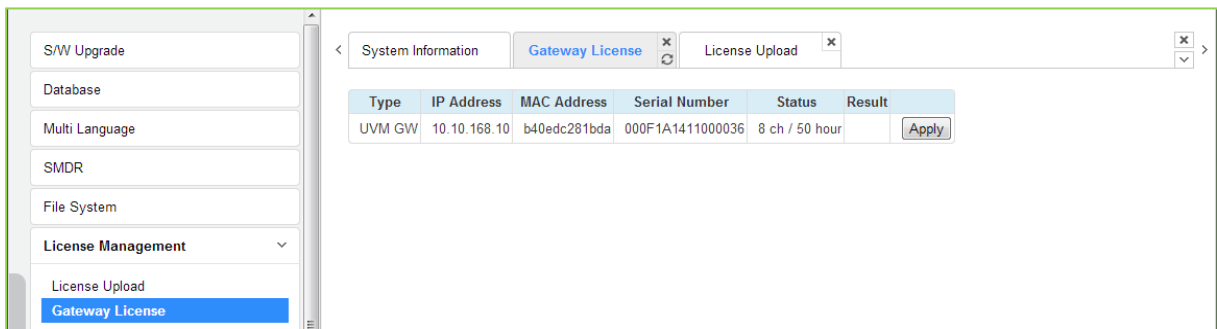

4.5.7.2 Gateway License for UCP

All gateways which can have gateway license type are displayed in this web page. If a valid gateway license file was uploaded by “License Upload” and a gateway with matched serial number is registered in system, **[Apply]** button will be activated. This button is used to send the license file to the gateway. After the license file is sent, it will be deleted and the gateway will be restarted to apply features of the license file.

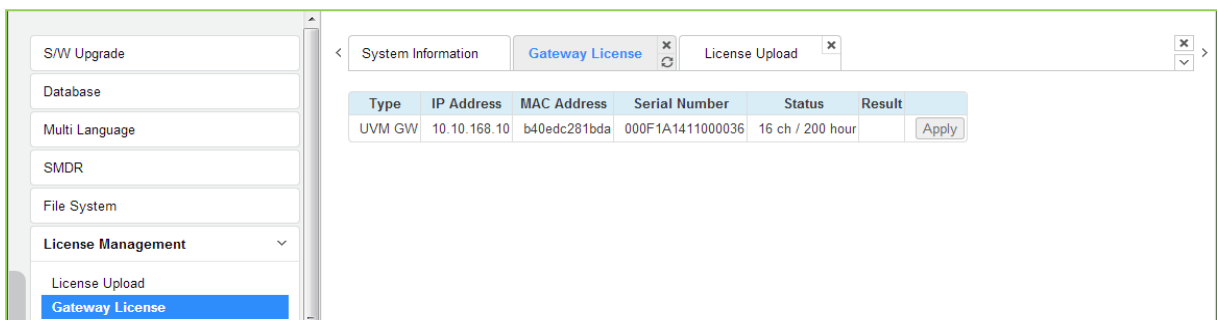

- 1) The following figure is before uploading the license.

- 2) After re fresh, the following figure is displayed and click the apply button to activate.

- 3) The final step is to reset the gateway license and then refresh. You can see the following figure for Gateway license.

4.5.7.3 User Base License

Selecting User Base License displays the license input page. Enter the station index range and click **[Load]** to assign the desired license for each station number. Click **[Save]** button after changing license.

Enter Station Index Range: eMG80/100: 1-140 / eMG800: 1-1200 / UCP: 1-2400

The license is the following type for UCS Client:

- Device: if "Device" is selected, it should be configured in PGM446. (Default : Device)
- Basic: The standard license is available for Desktop Call Control.
- Advanced: The advance license is available for Single login and multiple devices.
- Power: The standard license is available for multiple logins and multiple devices.

* Basic / Advanced / Power licenses are user base license

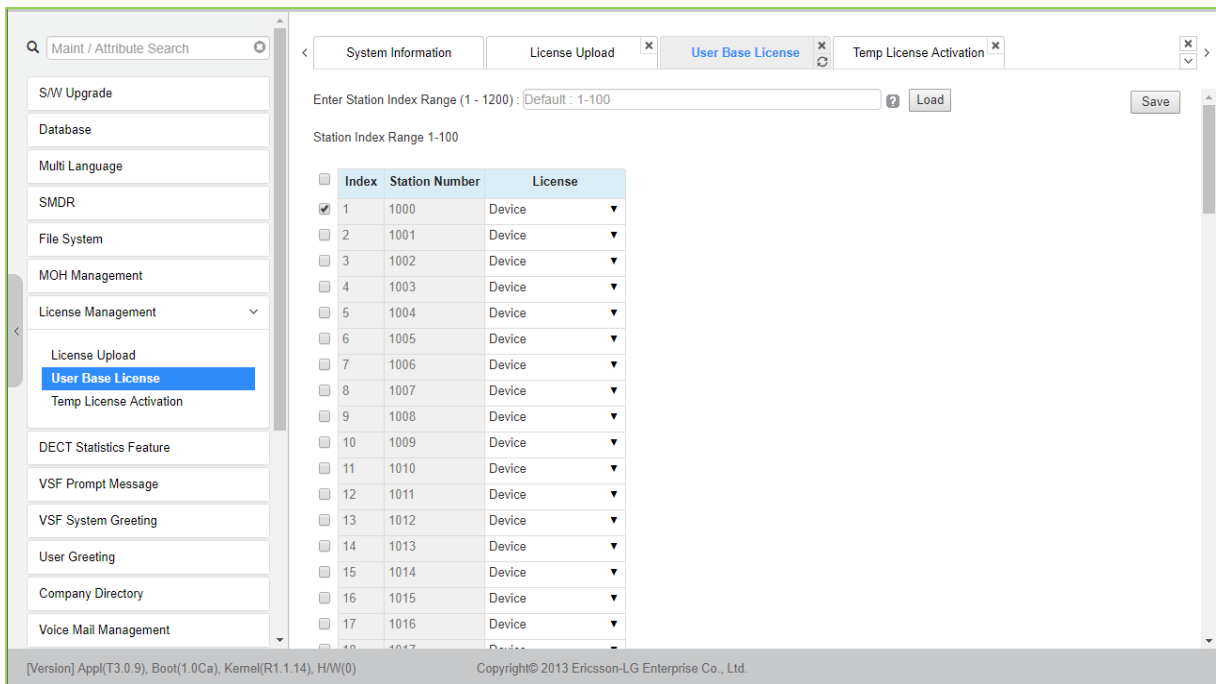

Figure 4.5.7.3-1 User Base License

4.5.7.4 Temp License Activation

Before Temp License Activation, make sure that the date of system is set correctly. In this page, Temp License can be activated by clicking **[Activation]** button. Remaining days and activation times are displayed in State column. The Temp License can be activated totally 6 times. It is valid for 60 days at first activation and is valid 30 days from second activation. Therefore the license file which has correct port number and features must be uploaded. Otherwise, system may enter “Limited Service Mode” due to the mismatched license.

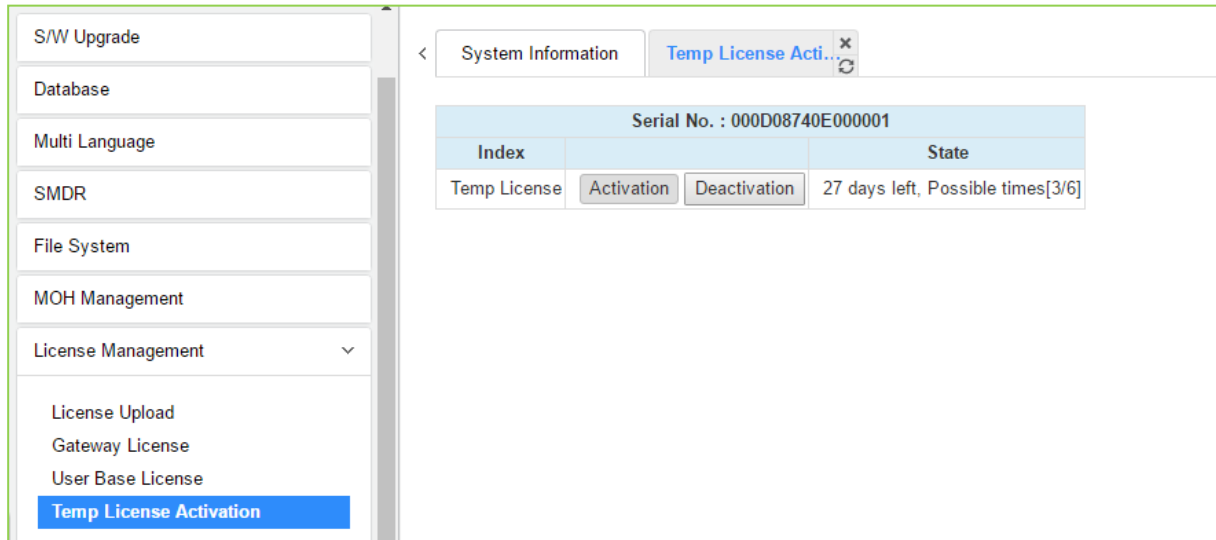

Figure 4.5.7.4-1 Temp License Activation

Notification

- Please backup your DB before you activate a temporary license.
- Must verify the present license before the temporary license expires.
- If a temp license expires, upload a new license file or use within the scope of current license file. Otherwise, the system may go to [Limited Service Mode].

4.5.8 DECT Statistics Feature

Selecting DECT Statistics Feature displays the page shown in figure. Select the desired radial button and, where needed, enter the WTIM/WTIB sequence number then click **[Send]** to view the statistics.

For example, the following box in red is information about the stateview of WTIM by entering Sequence number and clicking [Send] button. So you can get the information about all attributes.

The screenshot shows the DECT Statistics Feature interface. On the left is a navigation menu with options like S/W Upgrade, Database, Multi Language, SMDR, File System, MOH Management, License Management, DECT Statistics Feature (selected), VSF Prompt Message, VSF System Greeting, User Greeting, Company Directory, Voice Mail Management, Function Program, User Management, Trace, TDM Gain Control, and IP Gain Control. The main area contains a table of attributes with radio buttons and input fields for WTIM NO. The 'stateview' attribute is selected with WTIM NO '3257'. Below the table, a red box highlights the stateview output:

```

ws 3257 stateview

Figure 4.5.8-1 DECT Statistics (WTIM4/8 or WTIB4/8)

The screenshot shows the DECT Statistics Feature interface with the 'stateview' attribute selected. The table of attributes is as follows:

Attribute	WTIM NO	Description
<input type="radio"/> drop		Statistics data on UCP
<input type="radio"/> dclear		Clear statistics data on UCP
<input type="radio"/> version	<input type="text"/>	Version of WTIM and BASE
<input type="radio"/> linestart	<input type="text"/>	start line test between WTIM and BASE
<input type="radio"/> linestop	<input type="text"/>	stop line test between WTIM and BASE
<input type="radio"/> stateupload	<input type="text"/>	Upload WTIM's state
<input checked="" type="radio"/> stateview	<input type="text"/>	View WTIM's state
<input type="radio"/> stateclear	<input type="text"/>	Clear WTIM's state

Figure 4.5.8-2 DECT Statistics (WTIM24)

4.5.9 VSF Prompt Upload

The iPECS system delivers system prompts in up to six (6) languages. The prompts for each language are stored in a separate file. Files for each of the languages supported are available from the local Ericsson-LG Enterprise representative. The entire prompt file or individual prompts may be uploaded to the system. Once uploaded to the system the file is employed to play prompts to iPECS eMG/UCPuser.

UCP2400 doesn't support VSF prompt message.

VSF prompt sub-menu is a little different among eMG80/100, eMG800, and UCP.

- Prompt selection: eMG800 and UCP are available.
- Prompt Upload /Delete: Available.
- Individual upload: Available.

4.5.9.1 Prompt selection

Selecting Prompt Selection displays the page shown in figure. The System Voice Prompt language files are stored in the VSF memory and are enabled with the Prompt Selection page. A reference "Position" is assigned a language selected from the drop-down menu. Once the language for each position is selected, saving the page enables all the languages selected.

The screenshot shows the 'Prompt Selection' page in the iPECS administration interface. On the left is a sidebar with a search bar labeled 'PGM Search' and a menu containing items like 'S/W Upgrade', 'Database', 'Multi Language', 'SMDR', 'File System', 'MOH Management', 'License Management', 'DECT Statistics Feature', 'VSF Prompt Message', and 'Prompt Selection' (which is highlighted in blue). Below 'Prompt Selection' are sub-options: 'Prompt Upload / Delete' and 'Individual Upload'. The main content area has a breadcrumb trail 'System Information > Prompt Selection' and a 'Save' button. Below the breadcrumb is the instruction 'Select Language of each position and press [SAVE] button'. A table with two columns, 'Position' and 'Language', is displayed. The 'Language' column contains dropdown menus. The first dropdown is set to 'English(North America)', while the others are set to 'Unknown'.

Position	Language
First	English(North America) ▼
Second	Unknown ▼
Third	Unknown ▼
Fourth	Unknown ▼
Fifth	Unknown ▼
Sixth	Unknown ▼

Figure 4.5.9.1-1 Prompt Selection for eMG800& UCP

4.5.9.2 Prompt Upload/Delete

Selecting Prompt Upload/Delete displays the page shown in Figure 4.5.9.2-1 & Figure 4.5.9.2-2. From this page, the entire prompt file for selected languages can be deleted and updated prompt files uploaded to the system. The Select file button is used to upload files. The check box and Delete button are used to delete old or unused language files.

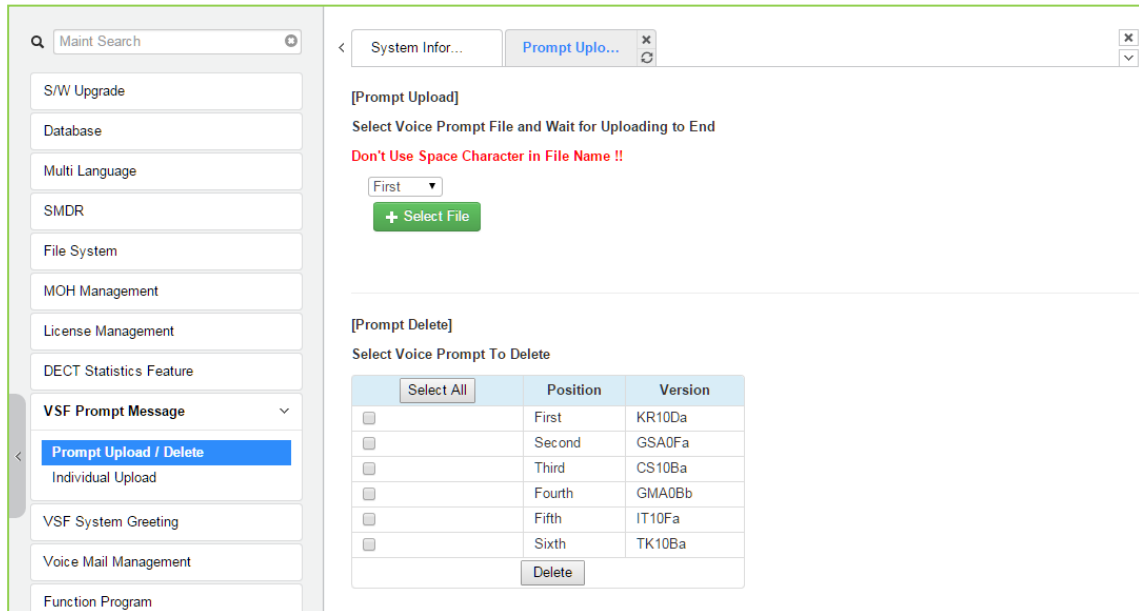

Figure 4.5.9.2-1 Prompt Upload& Delete for eMG80/100

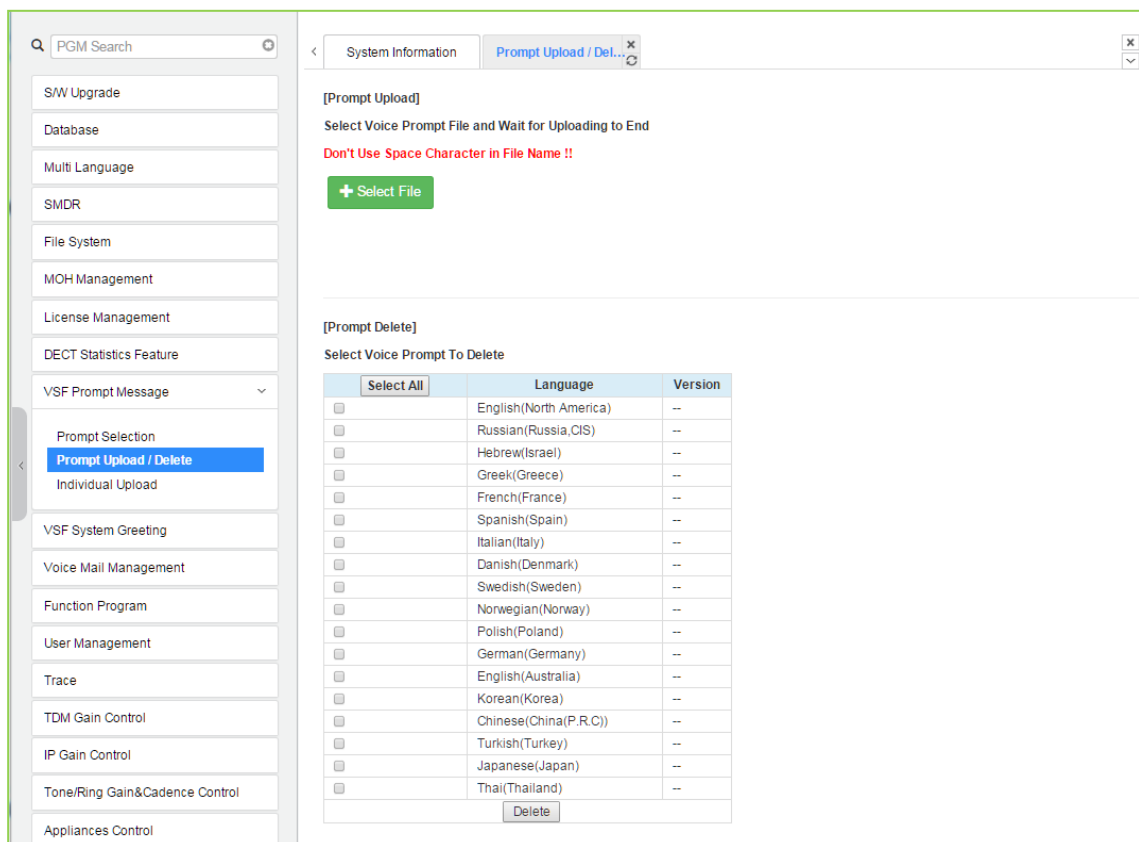

Figure 4.5.9.2-2 Prompt Upload& Delete for eMG800& UCP

4.5.9.3 Individual Upload

Selecting “Individual Upload” will display the page shown in figure. Here individual system prompts can be uploaded to the system for each of up to six (6) languages. Prompt files must be appropriately named and must be in a G.711 a/u-Law format.

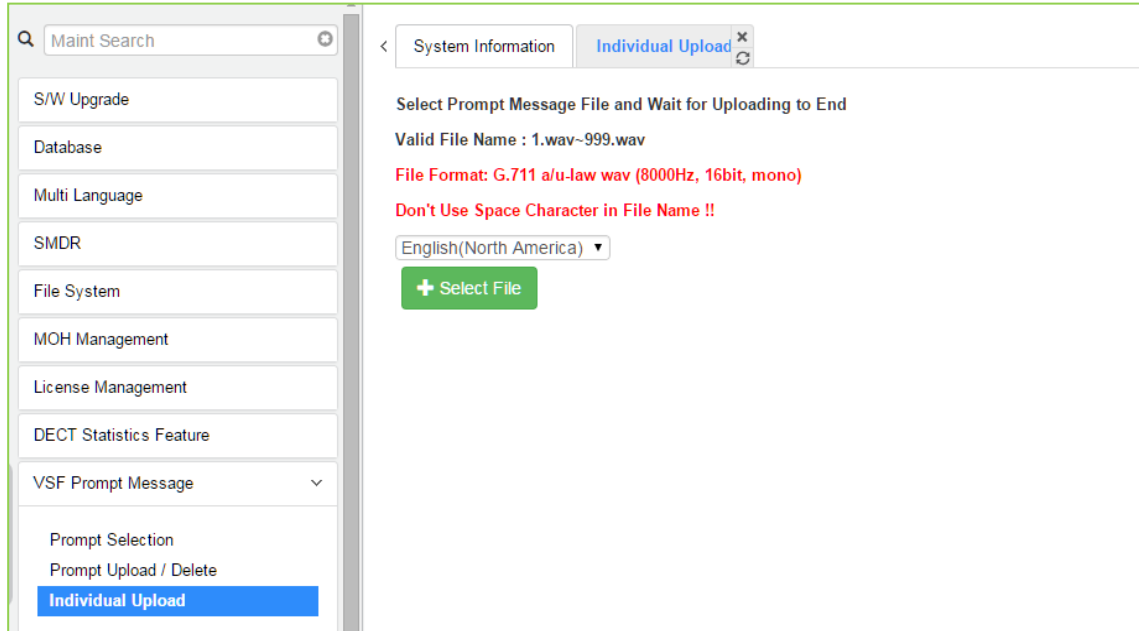

Figure 4.5.9.3-1 Individual Upload

4.5.10 VSF System Greeting

The System Greetings (Announcements) can be downloaded from the system or Uploaded to the system. Individual announcements can be recorded externally and then uploaded to the system. Like prompts, the individual announcement files must be in a .wav format using the g.711 codec. Individual greetings for each Language position can be uploaded as well as downloaded. Clicking on the message will download the message to the browser, which will play the message. To save the message, right click and select save as. Locate a directory and change the file name, if desired and click save.

All announcements can be downloaded from the system as a back-up file and uploaded to the VSF memory as required.

UCP2400 doesn't support VSF system greeting.

4.5.10.1 Individual Upload

Selecting Individual Upload displays the page shown in Figure 4.5.10.1-1. From this page, individual pre-recorded announcements for each language position can be uploaded from the PC to the VSF gateway. Select the language position and assure the file name matches the appropriate System Announcement number. The file format must be shown on the page.

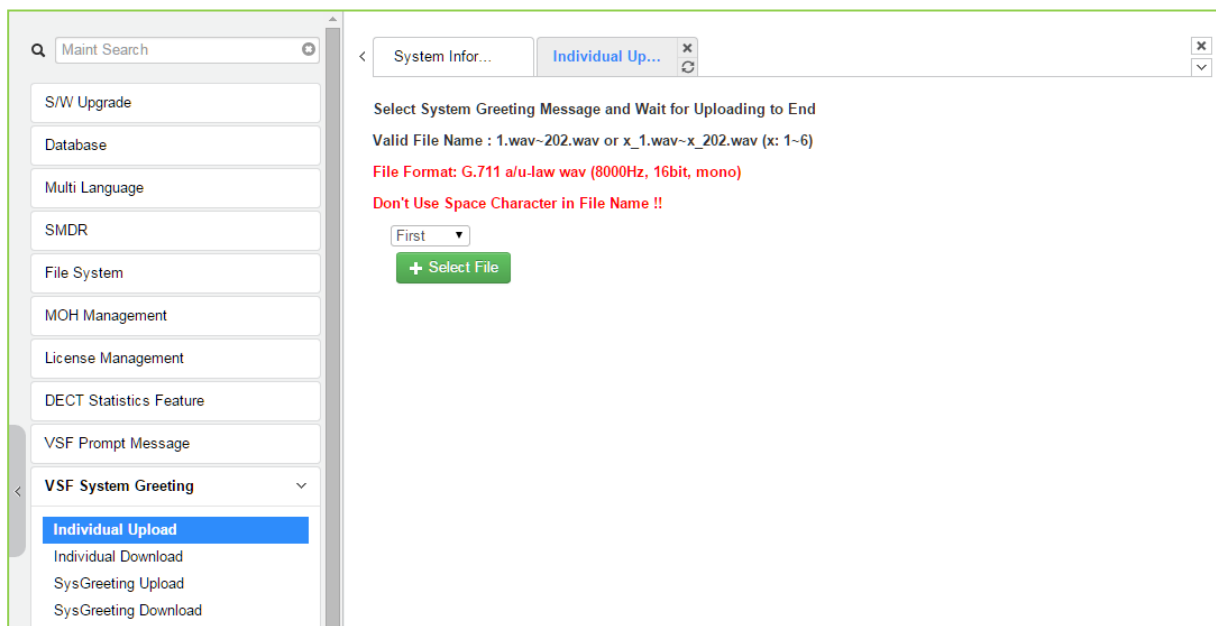

Figure 4.5.10.1-1 Individual Upload

4.5.10.2 Individual download

Selecting Individual Download displays the page shown in figure. The page will display a list of System announcement in the VSF memory. Individual files may be downloaded with the Download button next to the announcement file name or using the checkbox and the delete button the announcement can be deleted from the VSF memory.

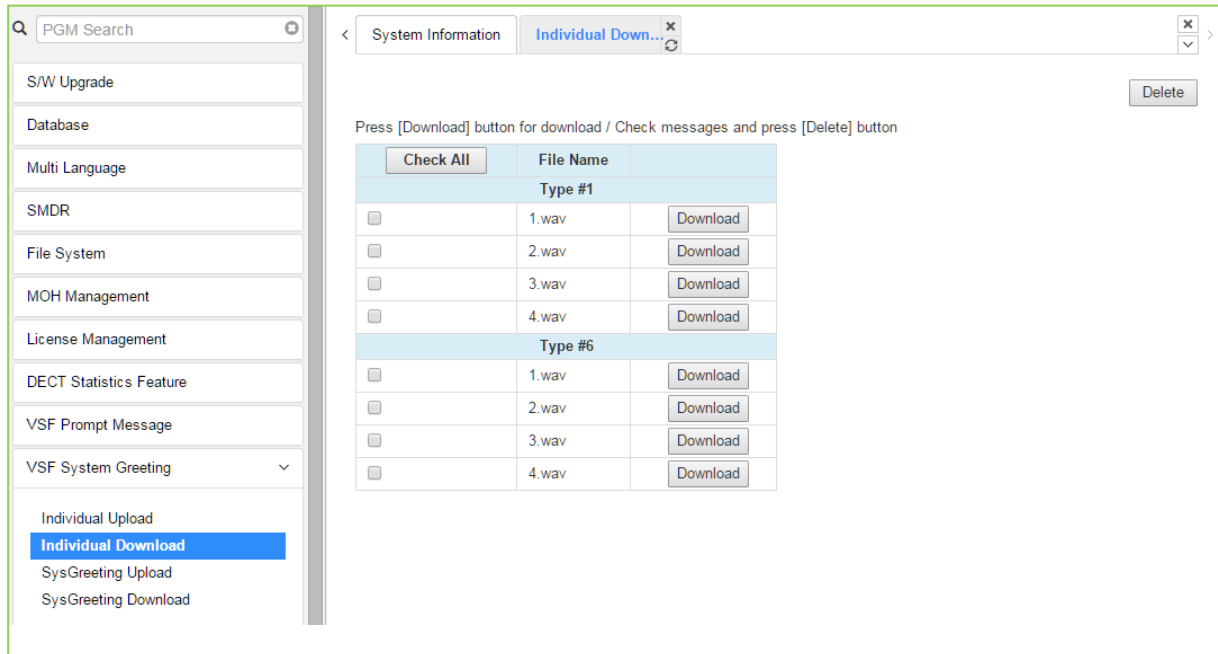

Figure 4.5.10.2-1 Individual Download

4.5.10.3 System greeting Upload

Selecting System Greeting Upload displays the page shown in figure. From this page, announcements for each language “Position” can be uploaded to the VSF memory. First, select the language position then click the Select Files button to select the file to upload from the PC.

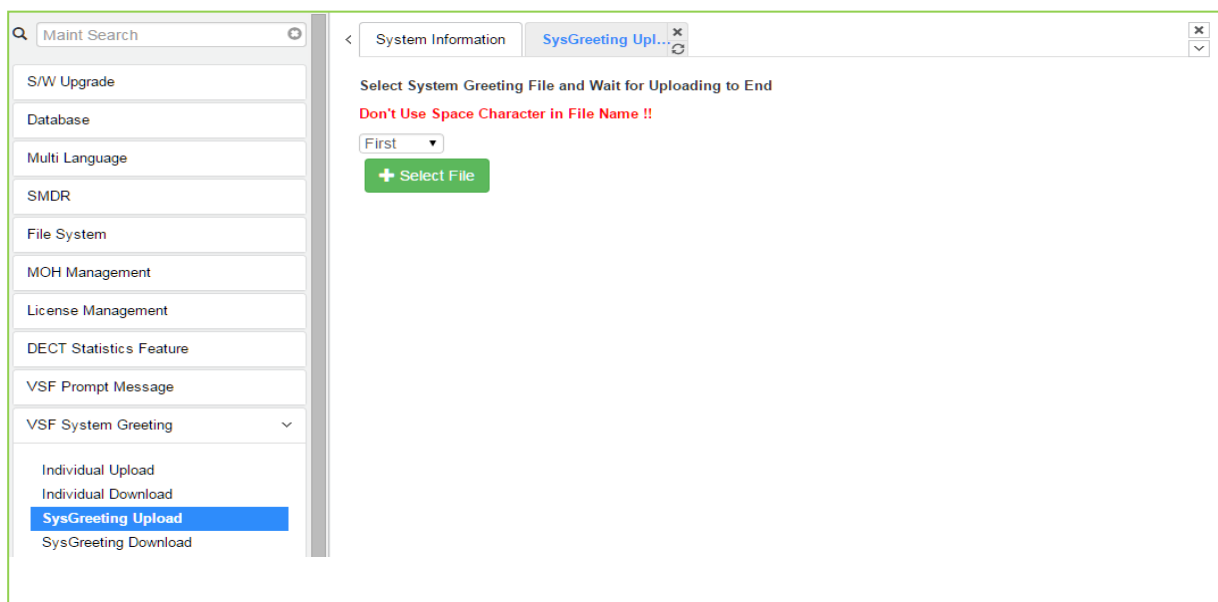

Figure 4.5.10.3-1 System Greeting Upload

4.5.10.4 System greeting Download

Selecting System Greeting Download displays the page shown in figure. From this page, announcements for each language “Position” can be downloaded from the VSF memory as a back-up file. First, select the language position, click the Download button then follow the normal save file process to store the file to the PC.

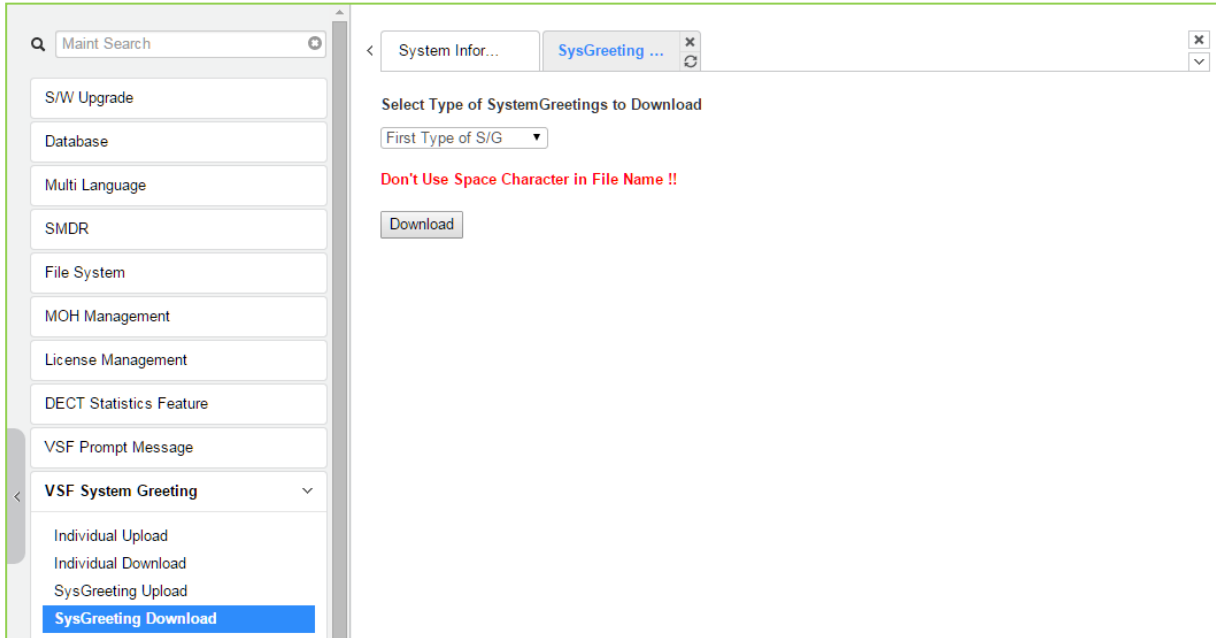

Figure 4.5.10.4-1 System Greeting Download

4.5.11 User Greeting

Administrators can upload or download User greeting to System. So User greetings are available to use at iPECS phones.

4.5.11.1 User Greeting Upload

To upload the User Greeting, complete the following steps:

- 1) Click **[Select File]** button.
- 2) Select **the User greeting file (rom file)** from folder.
- 3) Click **[Start]** to upload and then display the following figure 'success'.

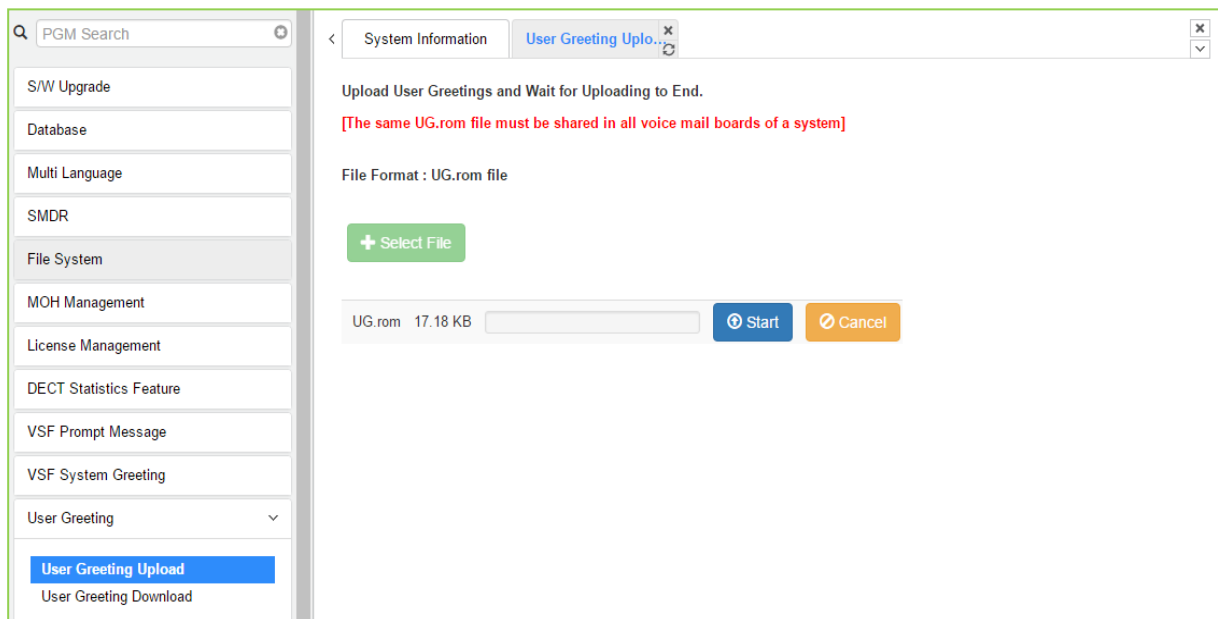

Figure 4.5.11.1-1User Greeting Upload

4.5.11.2 User Greeting Download

To download the User Greeting from System, complete the following steps:

- 1) Click **[Download]** button.
- 2) The tab will be displayed at the left bottom of page. Click the arrow box and select **[Open]** to show.

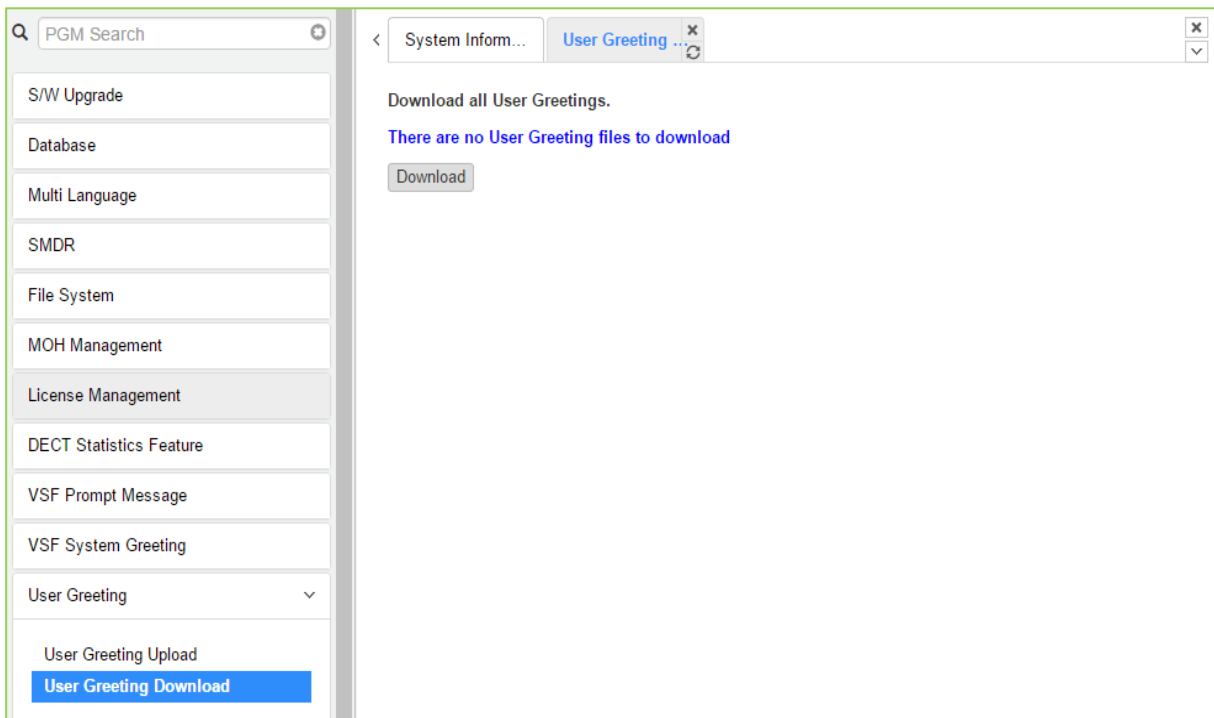

Figure 4.5.11.2-1 User Greeting Download

4.5.12 Company Directory

Administrators can upload or download company directories to System. So company directories are available to use at iPECS phones.

4.5.12.1 CDN Upload

To upload the Company Directory, complete the following steps:

- 1) Click **[Select File]** button.
- 2) Select **the Company Directory file (rom file)** from folder.
- 3) Click **[Start]** to upload and then display the following figure 'success'.

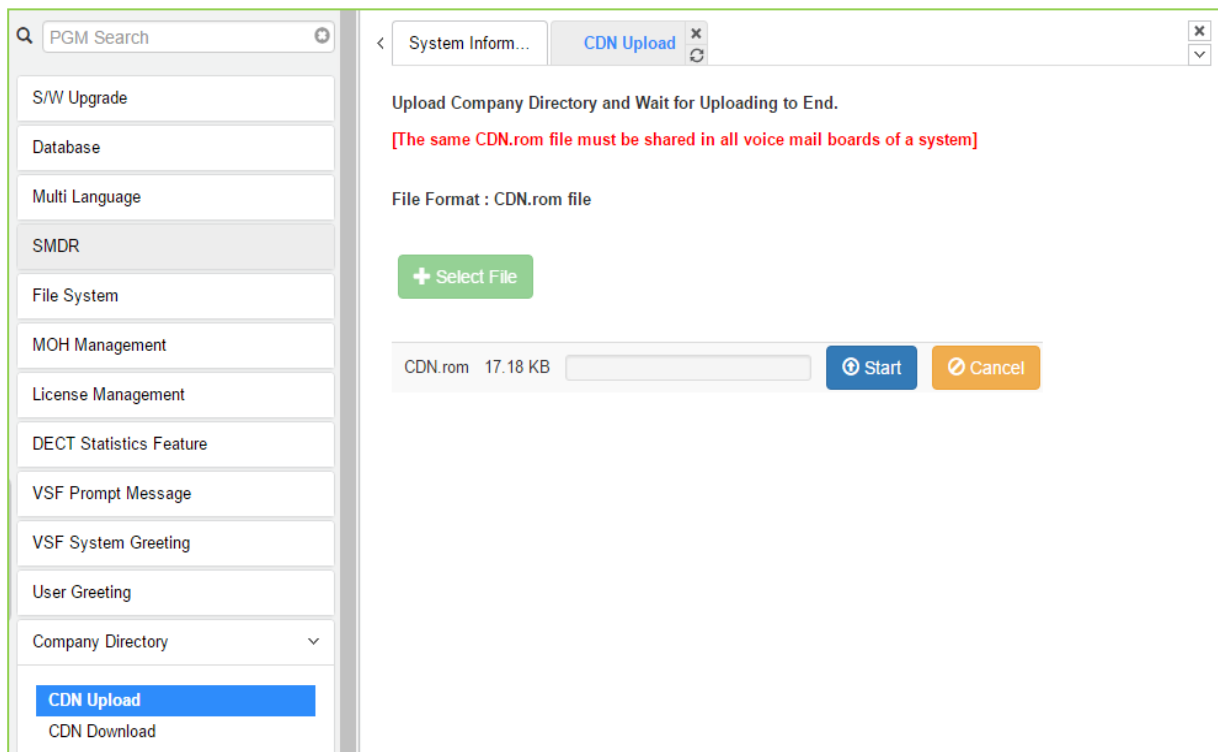

Figure 4.5.12.1-1CDN Upload

4.5.12.2 CDN Download

To download the Company Directory from System, complete the following steps:

- 1) Click **[Download]** button.
- 2) The tab will be displayed at the left bottom of page. Click the arrow box and select **[Open]** to show.

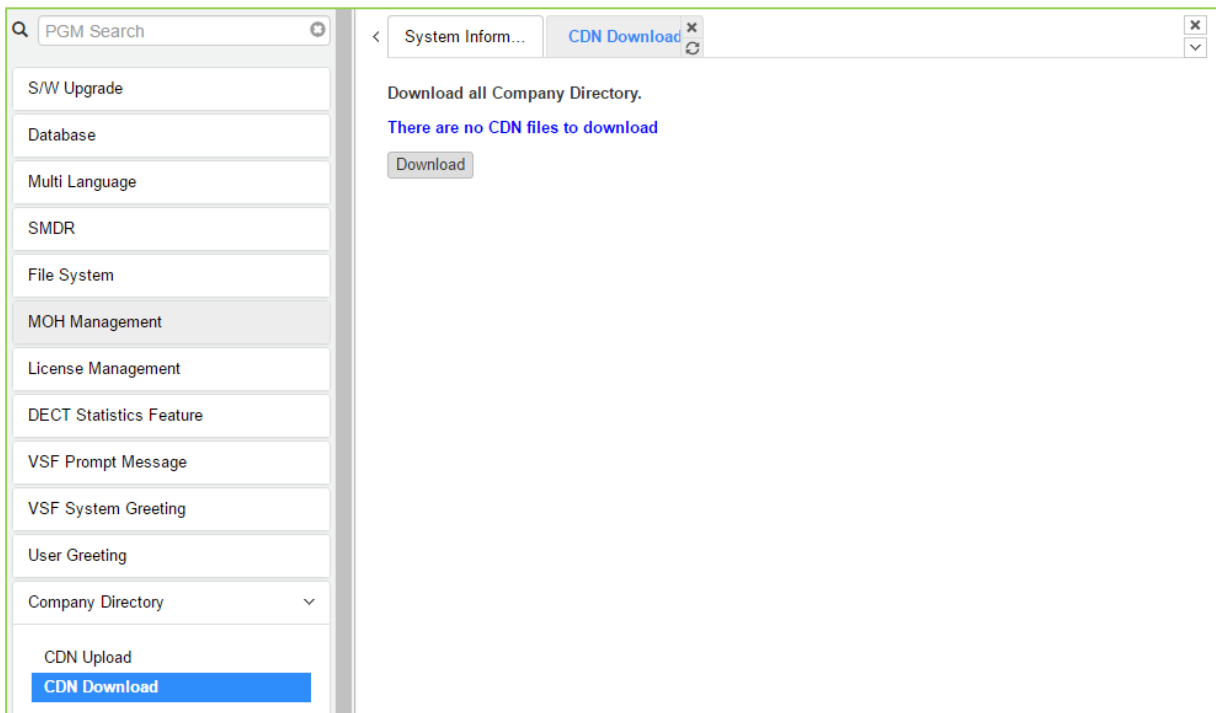

Figure 4.5.12.2-1CDN Download

4.5.13 Voice Mail Management

The Voice Mail Management permits the administrator to view the status of the built-in Voice Mail boxes and delete the all messages, delete messages for specific stations, or back-up all the messages to the PC.

4.5.13.1 Voice Mail Delete

Selecting Voice Mail Delete displays the page as shown in figure. From this page, messages stored in the VMIU (VMIB) can be deleted for all stations or a station range. In addition, using the “Display Station Voice Mail Status” button, the number of messages for each station is displayed.

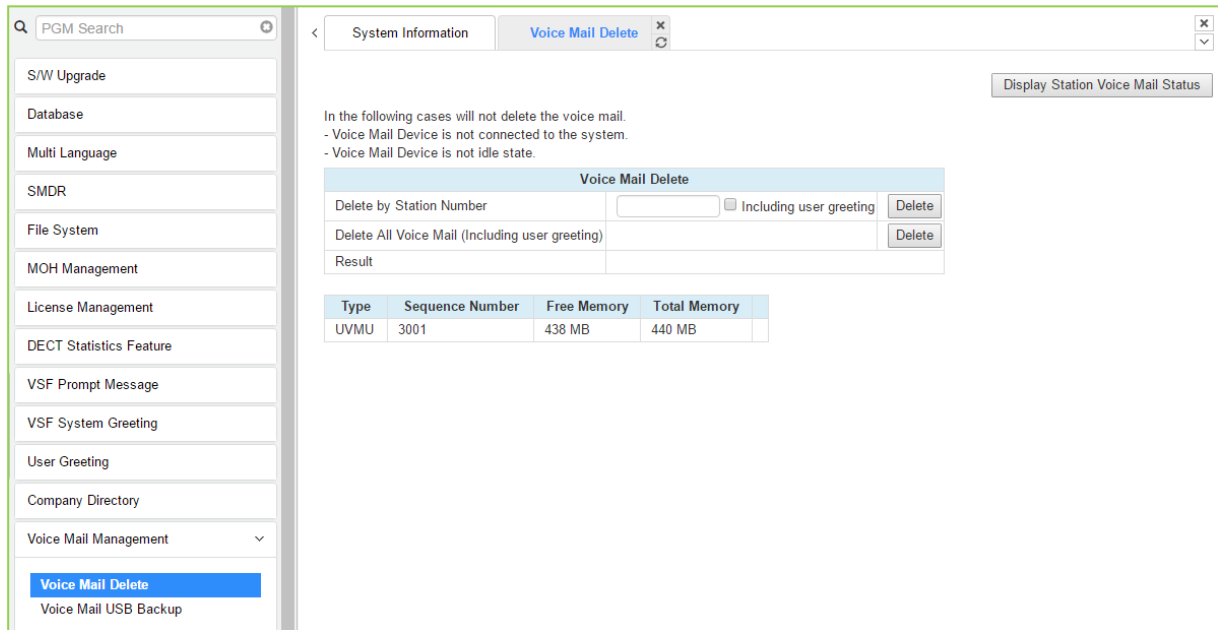

Figure 4.5.13.1-1 Voice Mail Delete

A user can delete user greeting if you set "Including user greeting" option when a user delete voice mail.

4.5.13.2 Voice Mail USB Backup

Selecting Voice Mail Backup displays the page shown in figure.

In case of eMG, this page permits the Administrator to send all Voice messages in the VMIU/VMIB memory to the USB port of the KSU. Note the VSF must be idle and a USB memory device installed in the system. The eMG800 has only [Backup Voice Mail to USB (VMIU)].

In case of UCP, this page permits the Administrator to send all Voice messages in the VSF gateway memory to the USB port of the UCP module. Note the VSF gateway must be idle and a USB memory device installed in the UCP module. The UCP2400& vUCP and eMG100 doesn't support Voice mail USB Backup.

vUCP/eMG100 support Voice Mail Web Backup/Restore.

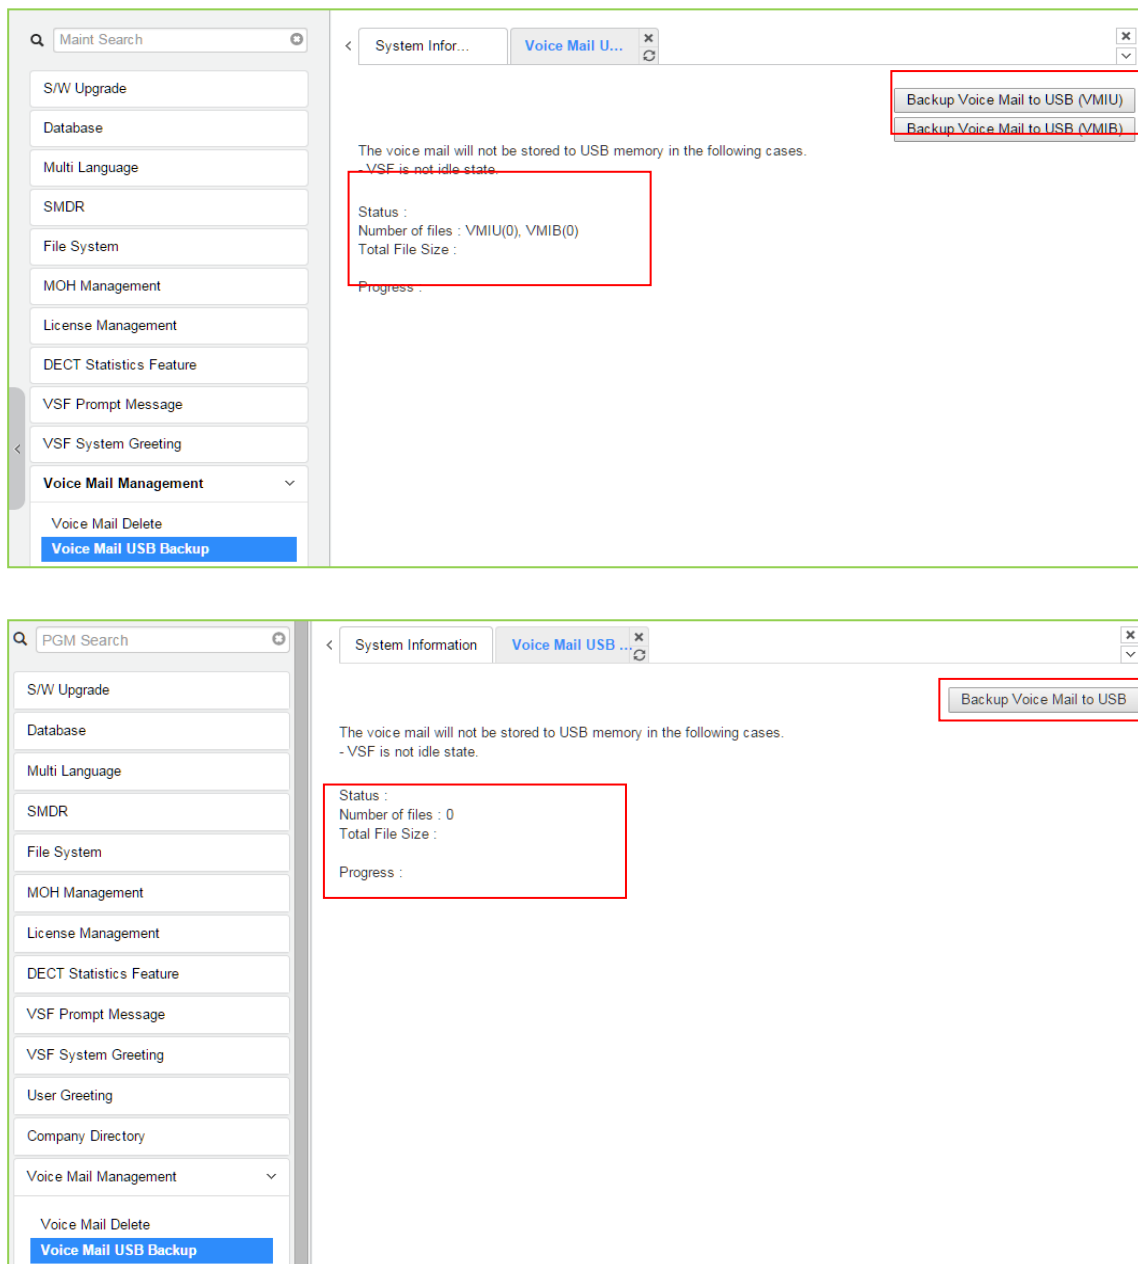

Figure 4.5.13.2-1 Voice Mail USB Backup

To back up Voice Mail, click the backup Voice Mail to USB button. User can find all information about the status, Number of files, Total file size, and the percentage of Progress by text.

4.5.14 Function program

The Function Program allows the administrator to build a set of programs with attributes in a structure customized to the administrator. The Function programs can then be accessed under the Administration pages using the “Function Base” button at the top of the left navigation page. Single level and multi-level programs can be structured. The User Function Management permits functions to be deleted or, with the “Add Function” button, new program functions can be added.

4.5.14.1 User Function Management Page

Selecting User Function Management displays the page shown in figure. Using the check box and Delete button Function programs previously saved can be deleted.

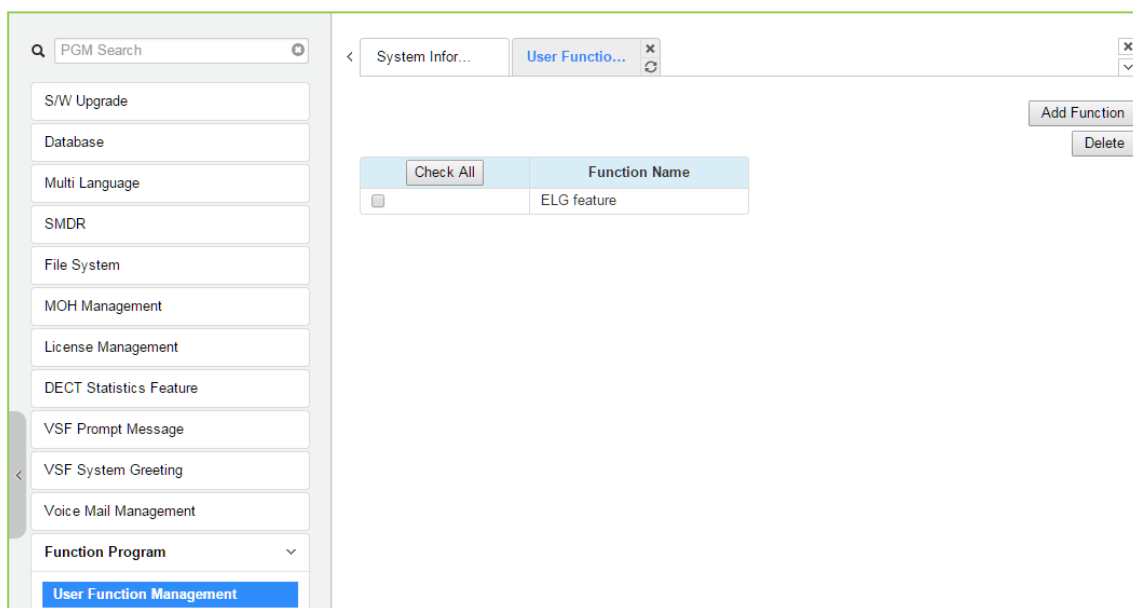

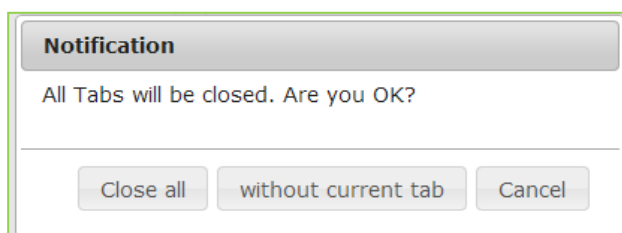

Figure 4.5.14.1-1 User Function Management Page

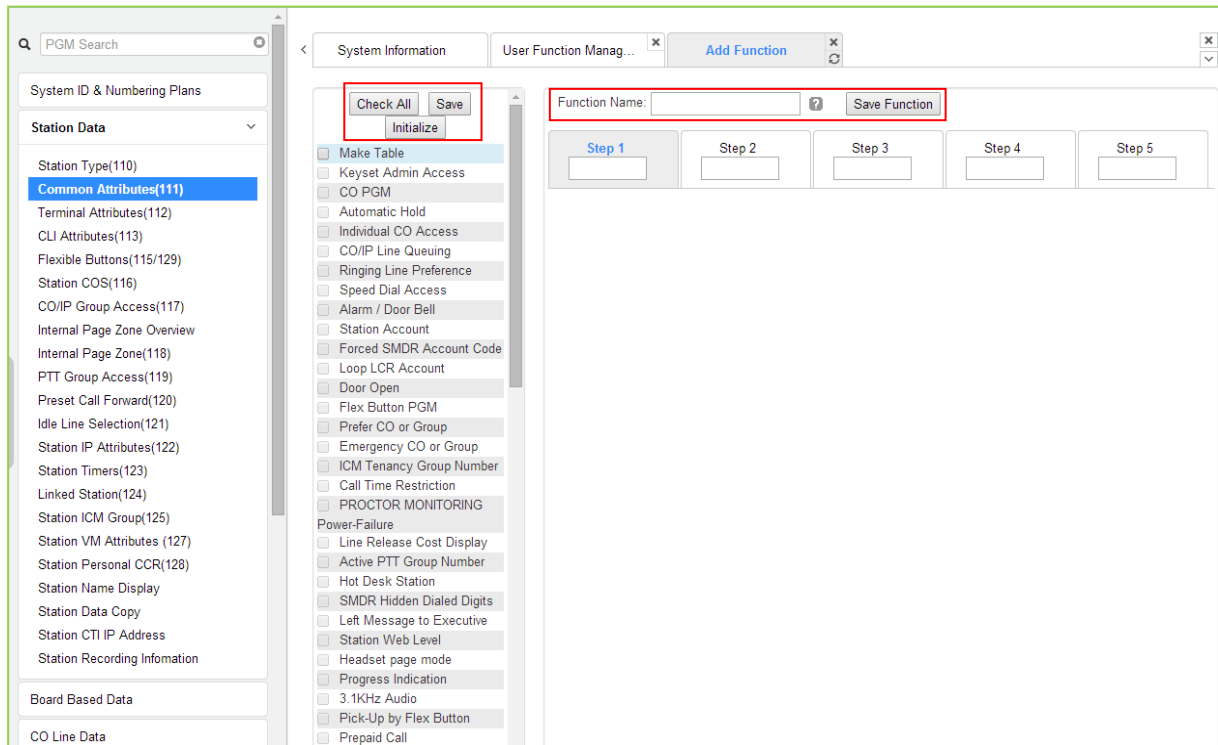

Adding Function

This step is divided into 5 steps and you can make the desired function each step. The following is the guide to make Name and add the function on each step:

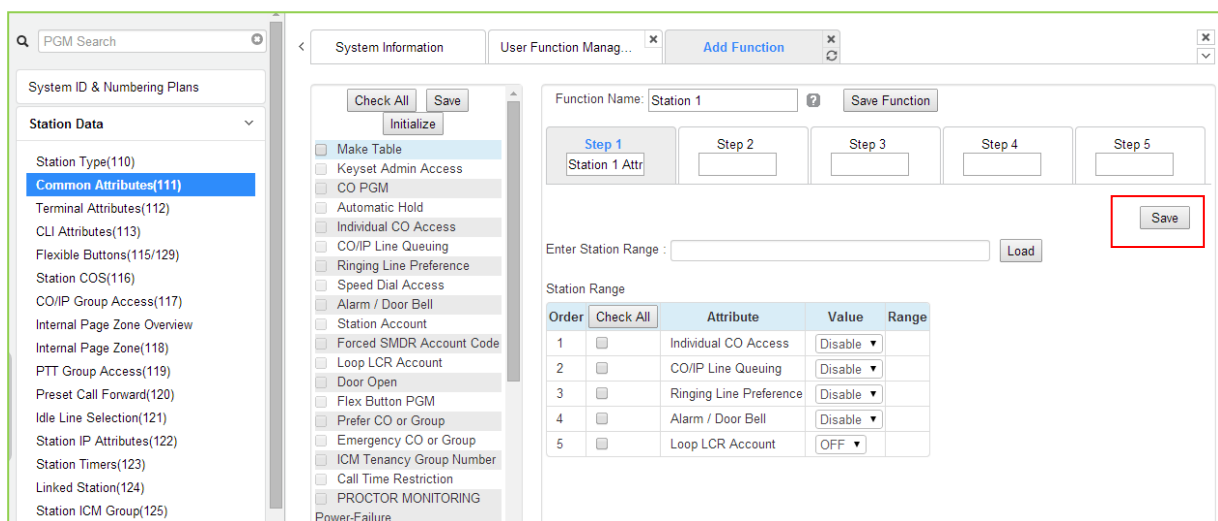

- To enter the function name, English, Numbering, Underscore (_) and Parentheses are available. Function name has to be filled out.
- To enter the step name, English, Numbering, and Special letters except Double quotation marks are available.
- The step name doesn't need to be filled out, but the function has to be configured each step.
- To cancel or close this tab, click the close button (X) and pop up the blow;

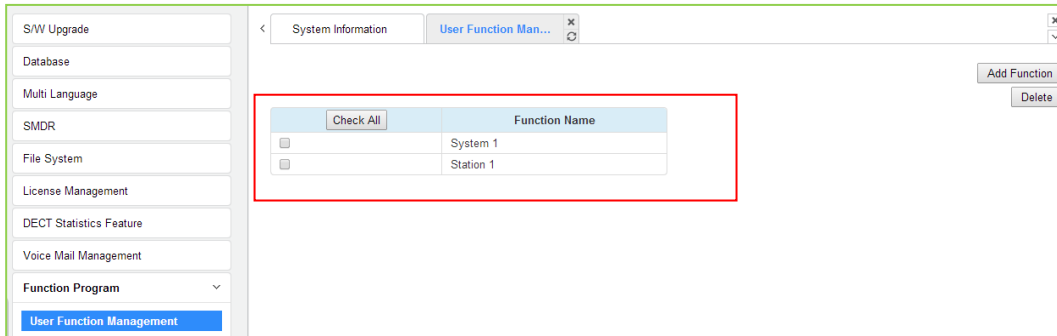

- 1) Click the Add Function button.
- 2) On the below window, click the desired PGM in the left frame. First fill out the function name and step name. To configure the step 1, click the Make table to check the desired function and then click the Save button.
 - Check All: check all functions
 - Save: Save the checked functions
 - Initialize: Initialize the checked functions

- 3) The selected functions are displayed and click the Save button after checking each functions. The rest steps are the same as the step 1.

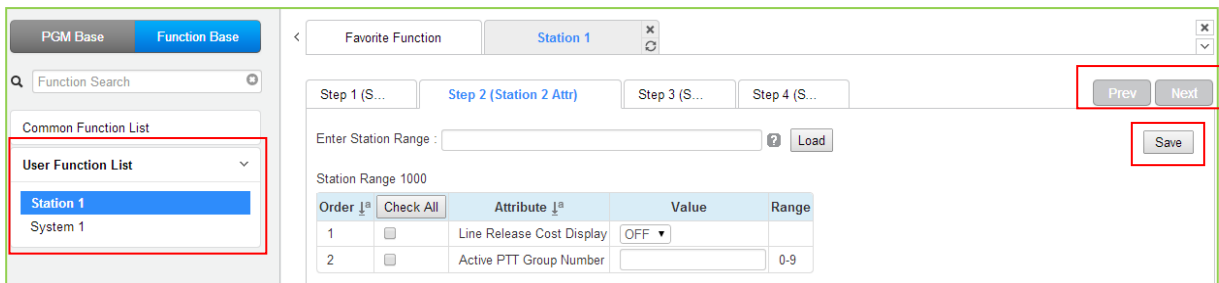

- 4) Finally, click the Save Function to save and then click the OK button.

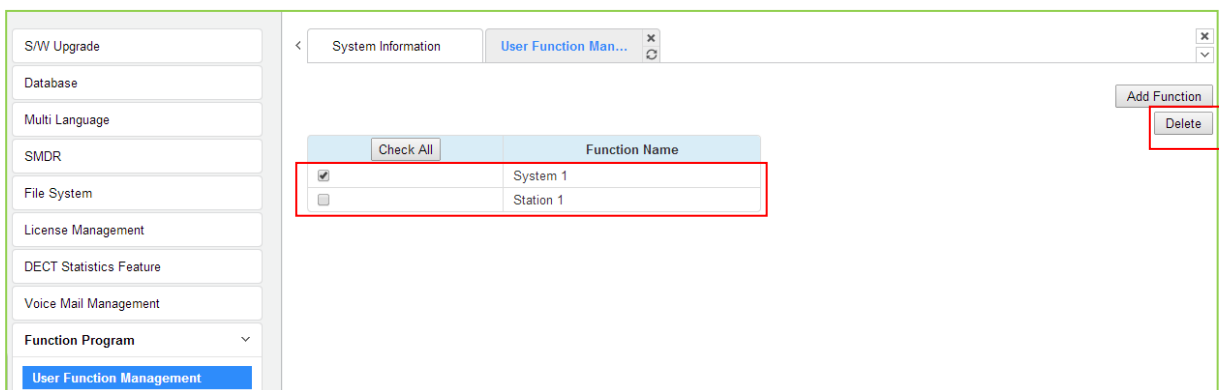

- 5) To check the function, click Function Base button in the left frame and User Function List and you will see the following figure.

You can enable or disable the function by checking each function and then click the save after setting Value. Also move to each step by clicking the next button or Previous button.

Deleting Function

To delete the user function, click Maintenance at the top of window and then click the Function Program -> User Function Management. Check the desired function to delete and click the delete button.

4.5.15 User Management

The iPECS UCP supports up to 50 system accounts and up to ten (10) users may simultaneously access system Web services. The default ID is 'admin' and the password is '1234'. The Access privilege is determined based on the entered system account (ID/Password) and the privilege assigned for the user.

The REST API privilege is for REST API access account. The user can access and use REST API features.(SMDR, FLEXPAGE and CALL-API)This user can't access web admin.

Please follow up the below instructions to make User ID:

- Maximum 16 characters & digits.
- In English only.
- First letter must be Alphabet. The rest are available: Alphabet, number, underscore (_).
- Don't use 'blank'.

It is strongly recommended that a unique User ID and strong password be entered to minimize the risk of admin and maintenance access by unauthorized personnel.

User should register more than a maintenance ID.

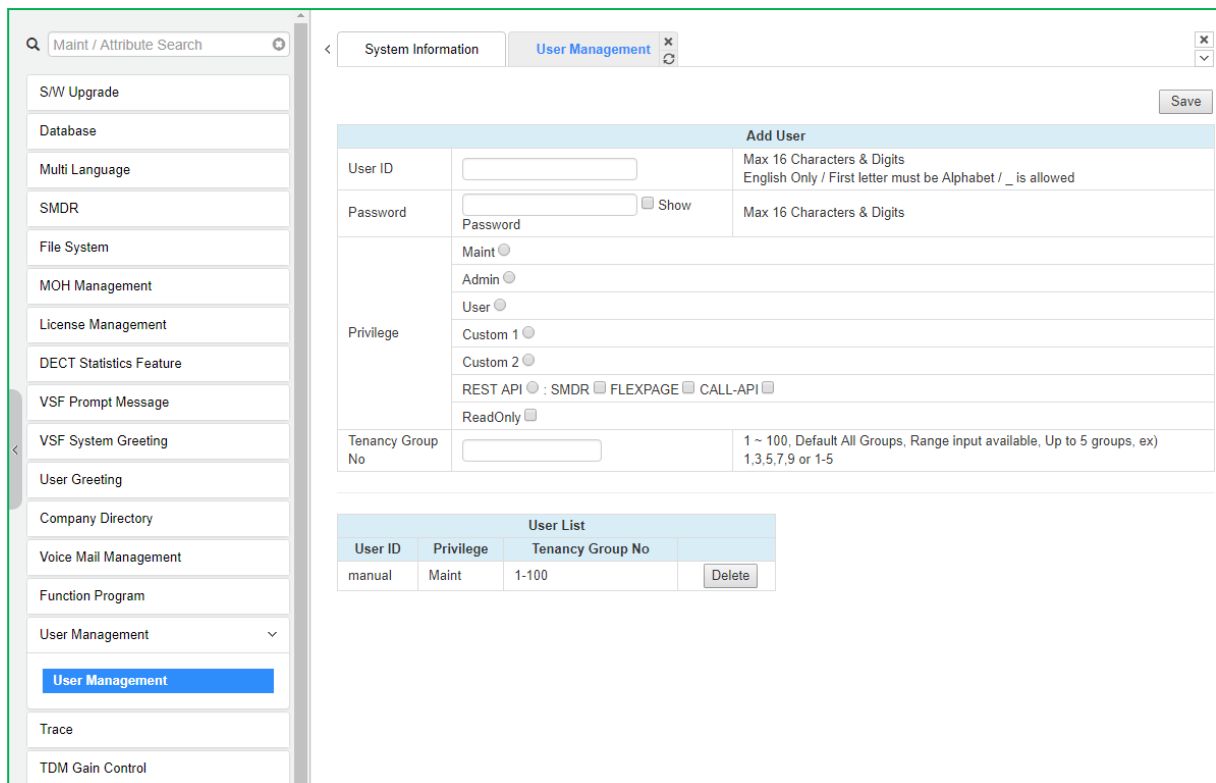

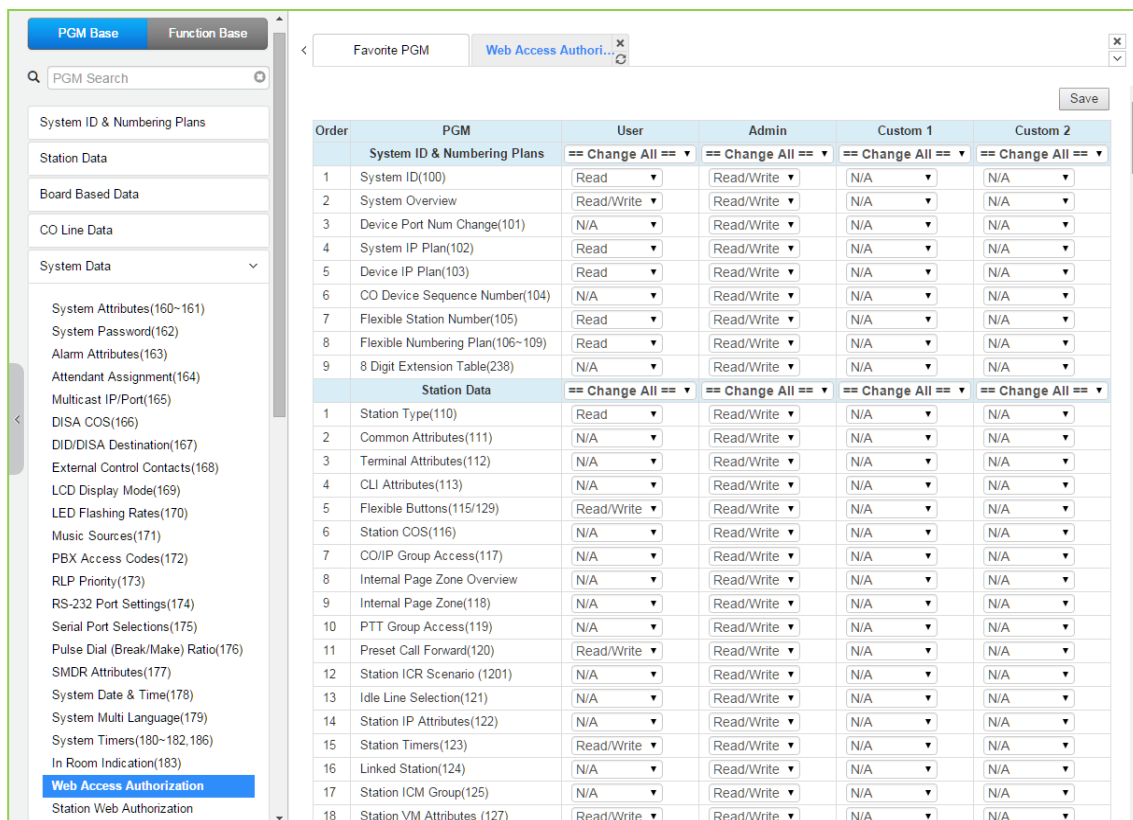

Figure 4.5.15-1 User Management

4.5.15.1 Company (Tenant group) Administrator Account

The main (maintenance) administrator of the system can make new administrator account for each tenant group. The tenant group administrator can configure the system according to tenant group and 'Web access authorization' in System Data. Managing the available feature will be assigned Web Access Authorization in System Data.

Web Access Authorization

>Program Custom#1 and #2 privilege columns by selecting N/A, Read, Read/Write for Tenant group administrator.

User Management: add User account for Tenant group administrator.

- 1) Enter ID and Password.
- 2) Select Custom 1 or Custom 2.
- 3) Enter the desired Tenant group number.
 - UCP100/600/2400: 100 Groups
 - eMG800: 32 Groups
 - eMG80/100: 15 Groups

Note) Maximum 50 users (including Maintenance, Admin and User privilege).The main administrator can't add Tenant group administrator account for all tenant group because the number of tenant group of UCP is 100.

- 4) Click **[Save]** button to create Account.
- 5) Log in with the account.
- 6) The available PGM menu will be displayed by assigning 'Web Access Authorization'.

4.5.16 Trace

The system software incorporates routines to monitor and output detailed call and feature processing information, and event logs. Information is provided on a system or device level as requested. Administrators can find the information on this page.

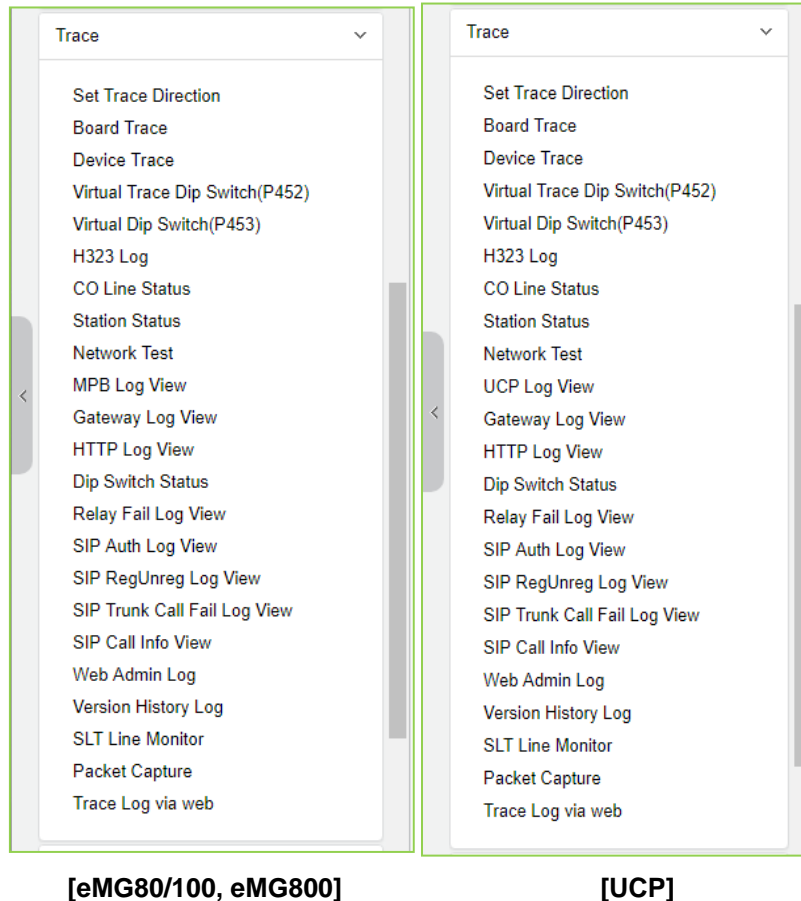

Figure 4.5.16-1 Trace Main Page

We explain [Packet Capture] and [Trace Log via web] among them because it is very useful to use Web admin.

Packet Capture

A user can start and stop capturing packets and download packet capture result. The dump file will be replaced when new capturing is started.

Default option is included. The file name is packetdump.cap. `-i eth0 -w packetdump.cap -c 10000`

Option explanation

protocol filter: tcp or udp or icmp

port filter: both source and destination port -> port #number, source port -> src port #number, destination port -> dst port #number

IP filter: both source and destination host IP -> host #IP_ADDR, source host IP -> src host #IP_ADDR, destination host IP -> dst host #IP_ADDR

Example) UDP and Port 5588 and Source IP address 10.1.1.100: `udp and port 5588 and src host 10.1.1.100`

Trace Log via web

A user can start and stop logging and download trace log result. The log file will be replaced when new logging is started.

- 1) Set 'Trace Attribute' to 'COM1(UART1)' from 'Set Trace Direction' menu.
- 2) Set 'Board Trace', 'Device Trace' and 'Virtual Trace Dip Switch(P452)' menu.
- 3) Click [Start] button.

4.5.17 TDM Gain Control

Control voice gain of TDM device for each direction. For more information to change Value, it is recommended that you ask your dealer or an authorized Ericsson-LG Enterprise representative. We can't guarantee the damage according to changing Value arbitrarily.

Figure 4.5.17-1 TDM Main Page

4.5.18 IP Gain Control

Audio gain for signals from and to each type of device is adjustable through the IP Gain Control page. The default gain values for the system are set to match the Nation Code. For more information to change Value, it is recommended that you ask your dealer or an authorized Ericsson-LG Enterprise representative. We can't guarantee the damage according to changing Value arbitrarily.

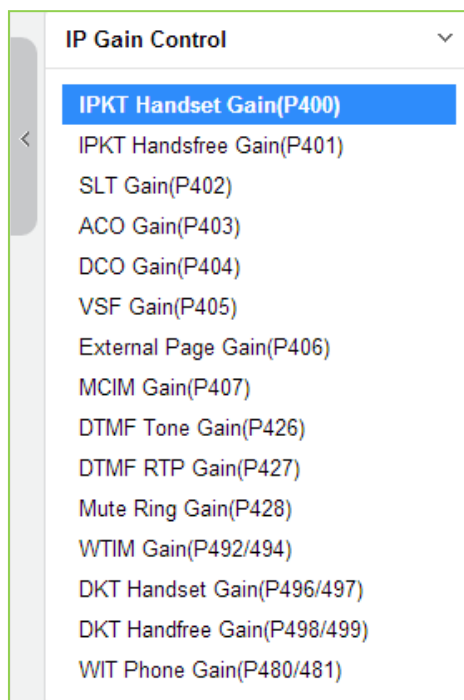

Figure 4.5.18-1 IP Gain Control Main Page

4.5.19 Tone/ Ring Gain & Cadence Control

Selecting Tone Table will display the page shown. Here the tones, cadence and gain used with features can be managed. For more information to change Value, it is recommended that you ask your dealer or an authorized Ericsson-LG Enterprise representative. We can't guarantee the damage according to changing Value arbitrarily.

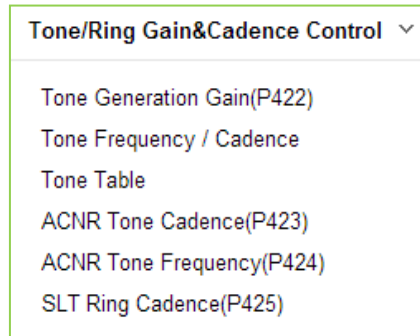

Figure 4.5.19-1 Tone/Ring Gain & Cadence Control Main Page

Control system tone/ring cadence and frequency.

System announcement or music can be provided instead of system ring/tone if it is assigned in tone table.

4.5.20 Appliances Control

The Appliances Control page permits control of several characteristics of IP phones and analog CO lines such as Comfort Noise level and side tone. For more information to change Value, it is recommended that you ask your dealer or an authorized Ericsson-LG Enterprise representative. We can't guarantee the damage according to changing Value arbitrarily.

Figure 4.5.20-1 Appliances Control Main Page

4.5.21 Web Certificate

SSL stands for Secure Sockets Layer, a global standard security technology that enables encrypted communication between a web browser and a web server. It is utilized by millions of online businesses and individuals to decrease the risk of sensitive information (e.g. credit card numbers, user names, passwords, emails, etc.) from being stolen or tampered with by hackers and identity thieves. In essence, SSL allows for a private “conversation” just between the two intended parties. To create this secure connection, an SSL certificate (also referred to as a “digital certificate”) is installed on a web server and serves two functions:

- It authenticates the identity of the website (this guarantees visitors that they're not on a bogus site)
- It encrypts the data that's being transmitted.

The web server certificated must have a domain name however default web certificate of a system has no information for domain. So, a web browser displays warning message about ERR_CERT_AUTHORITY_INVALID.

To clear this warning, an administrator has to issue a certificate for the system. There is a need to generate own self signed certificate in order to mitigate the vulnerability of security and do not display the caution pop-up such as 'un-trusted site' because the system use IP address or URL. This certificate is needed to use 'https://XXX' , not 'http://xxx'.

To create Certificate

Please must check date and time. The certificate will not operate well on PC or Mobile device if the time of certificate issued on between system and PC or Mobile device is different.

- 1) **Step 1:** Enter Domain name and then click **[Issue]** button. The certificate will be used for IP address of this system if Domain name is not entered as blank.

Step 1 : Input Domain Name. The certificate will be issued for IP address of this system if domain name is empty value.

- The following result is displayed on browser.

```

- 2) **Step 2:** Install Certificates into the Trusted Root Certification Authorities certificate store after downloading directly as below picture or sending to email for installing the desired devices if you want to get the certificates via email.
- The way to install Certificates is followed by the type of Windows OS, Android OS, or iOS OS.

Step 2 : Install certificates into the Trusted Root Certification Authorities certificate store after downloading directly or sending to email. Input email address if you want to get the certificates via email.

Download certificate directly.

- 3) **Step 3:** Restart Web server to apply New certificate by clicking **[Web Server Restart]** button.
Note) Clean up all certificate and file by clicking **[Server Certificate Clean up]** button.

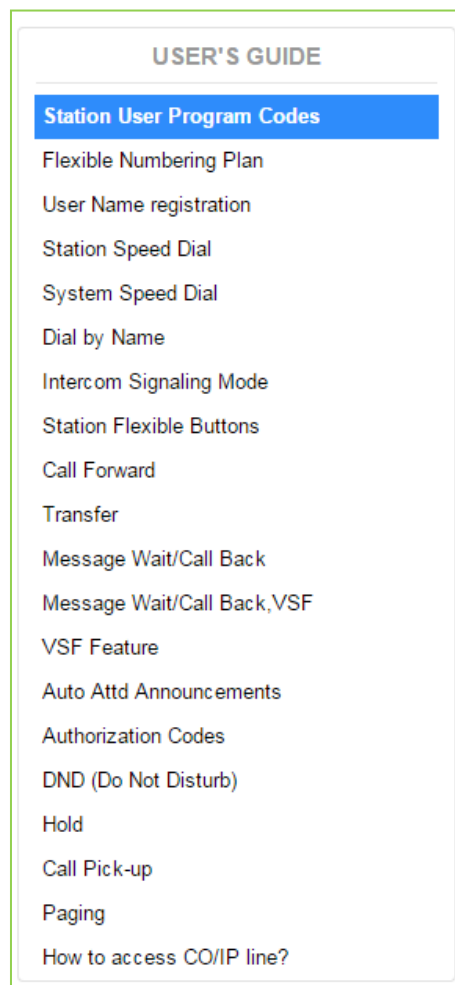

Figure 4.5.21-1 Web Certificate Issue

4.6 On-Line web user guide

We provide On-line web user guide about the frequent use of features to a user.

You can access it in the login page as below without entering ID and Password.

We didn't explain the user guide because you can easily get the information on the following features on the web.

5 Appendix A: Program Codes

User and Attendant Program Codes, refer to Table A-1 and A-2, are digit sequences users and the Attendant may dial while in the User Program Mode to assign Flex buttons and affect the status of a feature or setting. For more information on the User Program Mode, refer to the iPECS Features and Operation Manual. Many of these codes may be assigned to a button of an iPECS IP or LDP Phone by pressing the **[PGM]** button as the first entry of a Flexible button assignment, see Flex button Programming in the iPECS Features and Operation Manual.

Table A-1 Station User Program codes

Code	Description	Code	Description

6 Appendix B: Flexible Numbering Plan (Web based)

The System Numbering Plan can be selected from 1 of 9 basic Numbering Plans. Table B-1 provides a brief description of the plans and Table B-2 for eMG and Table B-3 for UCP provide the Numbering Plan codes for each of the nine basic plans. The Number Plan is selected in Program 100 and individual codes in the plan can be changed using the Flexible Numbering Plan Programs 106 to 109.

Table B-1 Numbering Plan Description

Plan Number	Description	eMG80/100	eMG800	UCP
1	Basic Numbering Plan	100 - 239	1000-2199	1000 – 3399
2	The station number can be within 799	100 - 239	1000-2199	1000 – 3399
3	Australia Default	100 - 239	1000-2199	1000 – 3399
4	New Zealand Default	700– 839	7000-8199	1000 – 3399
5	Italy Default	200– 339	2000-3199	2000– 4399
6	Finland Default	210 – 349	2100-3299	2100 –4499
7	Default for Sweden	100– 239	1000-2199	1000 – 3399
8	Default for Norway	100– 239	1000-2199	1000 – 3399

7 Appendix C: Database Details & Default for Station Admin for eMG

The following Tables, divided based on the Program group and Program, provide the default values assigned to all Admin entries. Prior to changing an entry during programming assure you have an understanding of the PROGRAM and its purpose.

Table C-1 SYSTEM ID

BTN	SUB-MENU	DEFAULT	REMARK
PGM: 100 -System ID			
1	Country Code	1	Maximum 4 digits
2	Customer Site Name		Maximum 24 characters
3	My Area Code		Maximum 6 digits
4	Numbering Plan Type	1	Overall default Numbering Plan, the 1st station digit should be 1 – 4.
		2	The station number can be from 100~799.
		3	Australia Default
		4	New Zealand Default
		5	Italy Default
		6	Finland Default, Max Station Ports is 60. Stations above Max ports will be displayed “****”.
		7	Max Station Ports 70 Stations above Max ports will be displayed “****”.
		8	The station number can be from 100~ 999.
5	PRIFIX Usage		
6	System ID reset		System reset

Table C-2 Numbering Plans

BTN	SUB-MENU	DEFAULT	REMARK
PGM: 102 -System IP Address Plan			
1	MPB Address	10.10.10.2	Public IP Address for H.323 calls
2	MPB Subnet mask	255.255.255.0	
3	Router IP Address	10.10.10.1	Router IP Address for WAN access
4	System start IP address	10.10.10.10	Private start address for system to module & terminal communications
5	System end IP address	10.10.10.254	Private end address for system to module & terminal communications
6	System Subnet mask	255.255.255.0	
7	Automatic IP Address Assignment	ON	
8	Second System IP Address	0.0.0.0	Second Private IP Address for modules
9	Second System Net Mask	255.255.255.0	Second Private Sub-net Mask for modules
10	Firewall IP Address	0.0.0.0	IP Address of firewall for external network (WAN/IP) access

Table C-2 Numbering Plans

BTN	SUB-MENU	DEFAULT	REMARK
